THE OHIO FUEL GAS COMPANY, DOCKET NO. CP63–266

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1963)

On March 26, 1963, as supplemented on April 12, 1963, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP63–266 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of transmission facilities necessary to provide additional points of delivery for rendition of service to new industrial customers, during the calendar year 1963, all as more fully set forth in the application, as supplemented.

The application states that normally, industrial customers are served from distribution systems, but that from time to time Applicant is requested to serve additional industrial customers where transmission facilities provide the most economical and desirable source of supply. In order to expedite planning, reduce time and related expense of extending service, and to reduce the volume of applications, Applicant seeks authority herein for the installation of routine budget-type facilities such as main line taps or valve settings, lateral lines, and measuring and regulating equipment, all for the extension of service to miscellaneous directly-connected industrial customers.

The application further states that no facilities constructed as a result of authorization in this docket will be used to furnish boiler fuel service to any electric power company for the generation of electricity.

The cost of the proposed facilities will be limited to a maximum of $100,000 for any one project, with a maximum of $425,000 covering the entire construction. Deliveries will be limited to a maximum of 600,000 Mcf annually for any individual customer, and 1,200,000 Mcf annually for all customers connected hereunder.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 1, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition

to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit prior to March 1, 1964, a statement showing by projects: (a) a description of the facilities constructed pursuant to this authorization, (b) the location of said facilities, including delivery points, (c) actual final costs of facilities, (d) names of customers served, (e) volume of gas sold and revenues from each customer and (f) nature of use of gas.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities constructed thereunder should be limited to $425,000, with no single project to exceed a cost of $100,000, and the total deliveries of natural gas thereunder should be limited to a maximum of 1,200,000 Mcf annually, with deliveries to any individual customer limited to a maximum of 600,000 Mcf annually.

(7) The sales and deliveries of natural gas through the facilities herein authorized should be subject to curtailment and interruption if required to meet the existing or future contract demands of The Ohio Fuel Gas Company's customers for firm resale service.

(8) A request during the public hearing by Staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Ohio Fuel Gas Company, to construct during the calendar year 1963, the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, and to operate such facilities only to deliver natural gas to new direct industrial customers along or in the vicinity of Applicant's existing pipeline system.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, prior to March 1, 1964, a statement showing by projects: (a) a description of the facilities constructed pursuant to this authorization, (b) the location of said facilities, including delivery points, (c) actual final costs of facilities, (d) names of customers served, (e) volume of gas sold and revenues from each customer and (f) nature of use of gas.

(D) The authorization granted in paragraph (A) above is hereby limited to maximum total expenditures of $425,000, with no single project to exceed a cost of $100,000, and total deliveries of natural gas thereunder are hereby limited to a maximum of 1,200,000 Mcf annually, with deliveries to any individual customer limited to a maximum of 600,000 Mcf annually. Further, none of the facilities constructed pursuant to this authorization shall be used for the delivery of natural gas for use as boiler fuel for the generation of electricity.

(E) The sales and deliveries of natural gas through the facilities herein authorized shall be subject to curtailment and interruption if required to meet the existing or future contract demands of The Ohio Fuel Gas Company's customers for firm resale service.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

AMENDING REGULATIONS TO GOVERN THE PRESERVATION OF RECORDS OF PUBLIC UTILITIES AND LICENSEES AND PRESCRIBING REGULATIONS TO GOVERN THE PRESERVATION OF RECORDS OF NATURAL GAS COMPANIES, DOCKET NO. R-195

ORDER NO. 258-A

ORDER AMENDING REGULATIONS TO GOVERN PRESERVATION OF RECORDS OF PUBLIC UTILITIES AND LICENSEES

(Issued August 22, 1963)*

On December 12, 1962, after notice of proposed rule making and consideration of comments submitted in response thereto, the Commission issued Order 258, in this docket, amending regulations to govern preservation of records of public utilities and licensees, Part 125—Preservation of Records of Public Utilities and Licensees, of Subchapter C—Accounts, Federal Power Act, of Chapter I of Title 18 of the Code of Federal Regulations, which became effective December 12, 1962 (27 F.R. 12241).

That order inadvertently omitted a paragraph from Section 125.2—General instructions. The omitted paragraph, (d) is similar to paragraph 225.2(d) of the Regulations to Govern the Preservation of Records of Natural Gas Companies, also promulgated in Order 258.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act that Section 125.2—General instructions, of Part 125—Preservation of Records of Public Utilities and Licensees, of Subchapter C—Accounts, Federal Power Act, of Chapter I, Title 18 of Code of Federal Regulations be amended as hereinafter provided.

---

*Published in the Federal Register on August 29, 1963 (28 F.R. 9477).

The Commission acting pursuant to the Federal Power Act, as amended, particularly Sections 301, 304 and 309 thereof (49 Stat. 854, 855 and 858; 16 U.S.C. 825, 825c and 825h) *orders:*

(A) Section 125.2—General instructions, of Part 125—Preservation of Records of Public Utilities and Licensees, of Subchapter C—Accounts, Federal Power Act, of Chapter I of Title 18 of the Code of Federal Regulations is amended to include, following Paragraph (c) of Section 125.2, the following Paragraph (d):

(d) *Index of records.* At each office of the public utility or licensee where records are kept or stored, such records as are herein required to be preserved shall be so arranged, filed and currently indexed that they may be readily identified and made available to representatives of the Commission.

(B) This order shall be effective upon the date of issuance thereof.

(C) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PUGET SOUND POWER & LIGHT COMPANY AND PUBLIC UTILITY DISTRICT NO. 1 OF CHELAN COUNTY, WASHINGTON, PROJECT NO. 943

ORDER FURTHER AMENDING LICENSE

(Issued August 22, 1963)

Joint application was filed March 18, 1963, under Section 6 of the Federal Power Act, by Puget Sound Power & Light Company and Public Utility District No. 1 of Chelan County, Washington, joint licensees for Project No. 943, for amendment of Article 27 of their license for the project and to render inapplicable to such license amortization reserve Regulation 17 in effect when the license was issued under the Federal Power Act.

The purpose of the amendment is to make the license subject to the current regulations of the Commission with respect to the establishment and maintenance of a reserve for amortization.

The Commission finds:

(1) Public notice of the application has been given. No protests have been received.

(2) The license for Project No. 943, amended as hereinafter provided, is in the public interest.

The Commission orders:

(A) The license for Project No. 943 is hereby amended, effective as of January 21, 1930, the effective date of the license, as follows:

PARAGRAPH I. The paragraph of the license beginning "NOW, THEREFORE" is amended by inserting the words "except Regulation 17" after the phrase "being subject to all the terms and conditions of the Act and of the rules and regulations of the Commission pursuant thereto as amended and made effective on the first day of May, 1928".

PARAGRAPH II. Article 27 of the license is amended to read as follows:

ARTICLE 27. After the first 20 years of operation of the project under the license, namely, July 31, 1952,[1] six (6) percent per annum shall be the spec-

[1] In its order decided July 28, 1952, in the *Matter of Puget Sound Power & Light Company*, EF 943 (3 FPC 231, 235) the Commission fixed July 31, 1932, as the end of the construction period for the entire project, including the transmission lines.

ified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after July 31, 1952, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided, that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after July 31, 1962, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63-136; UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-137

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 22, 1963)

On November 19, 1962, as supplemented on March 8, 1963, Transcontinental Gas Pipe Line Corporation (Transco) in Docket No. CP63-136 and on November 19, 1962, as supplemented on February 15, 1963, United Gas Pipe Line Company (United) in Docket No. CP63-137, filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the construction and operation of certain facilities on their respective transmission systems in Terrebonne Parish, Louisiana, in order to deliver gas purchased by Transco and United from various fields in southern Louisiana, to the North Terrebonne Gas Processing Plant, Terrebonne Parish, Louisiana, for the extraction of liquid hydrocarbons, all as more fully set forth in the respective applications.

The plant, to be built in the Gibson Field, Terrebonne Parish, will be owned by many of the independent producers supplying Transco and United. Shell Oil Company will be the plant operator. The applications indicate that the gas purchased and transported by Transco and United from these producers in various fields will be processed in said plant by the producers who will keep the liquids and return the gas to United and Transco, as provided in the gas purchase contracts between United and Transco and the independent producers.

United and Transco request authorization to install valves and pipe necessary to deliver gas to said plant. The estimated costs of facilities for Transco and

United are $25,500 and $16,618, respectively. Applicants will be reimbursed for all costs by the plant owners.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 12, 1963, respecting the matters involved in and the issues presented by the applications, as supplemented, herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 139).

(2) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G–216 (3 FPC 3).

(3) The facilities hereinbefore described, as more fully described in the applications, as supplemented, in these proceedings, are to be used for the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Transco and United are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Transco and United are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Transco's and United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, and Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities in order to transport and deliver natural gas as hereinbefore described, all as more fully described in the applications, as supplemented, in Docket Nos. CP63–136 and CP63–137, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Transco's and United's compliance with all

applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63-330

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 23, 1963)

On May 31, 1963, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP63-330 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a new delivery point and the necessary metering and regulating facilities for delivery of natural gas to the Indiana Gas and Water Company, Inc. (Indiana Gas), all as more fully represented in the application in this proceeding.

Applicant proposes to construct the new facilities in Clay Township, Hamilton County, Indiana, to sell natural gas for resale for residential and commercial general and space heating purposes in Clay Township. The third year annual requirement is estimated to be 149,319 Mcf of natural gas, and no change is contemplated in Indiana Gas' presently authorized contract demand. Indiana Gas informed Applicant that it maintains and operates LPG peak-shaving with substantial storage, equipment sufficient to render satisfactory service to its present and future customers without an increase in contract demand. The total estimated cost of the facilities proposed by Applicant is $20,000, to be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 8, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to be the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof as well as the sale of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the related sale of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the authorization hereinafter granted that Applicant submit a statement showing the total cost of its installed facilities within 90 days after completion thereof and showing the initial date of service by means of such facilities.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate natural gas facilities, to sell and deliver natural gas to Indiana Gas and Water Company, Inc. as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit a statement showing the total cost of the installed facilities within 90 days after completion and showing the initial date of service by means of such facilities.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

SINCLAIR OIL & GAS COMPANY, DOCKET NO. G-9291 AND G-9292, ET AL.

ORDER GRANTING REHEARING FOR PURPOSES OF RECONSIDERATION

(Issued August 23, 1963)

On July 26, 1963, a joint petition for rehearing was filed by Long Island Lighting Company and The United Gas Improvement Company of this Commission's order, issued July 1, 1963, 30 FPC 5, conditionally approving a settle-

ment proposal filed by Sinclair Oil & Gas Company (Sinclair) on April 8, 1963. On July 31, 1963, the Public Service Commission of New York filed a similar petition. Each of said petitions requested this Commission to reconsider the manner by which it ordered Sinclair in said order of July 1, 1963, to distribute refunds to its pipeline purchasers. In its settlement proposal, Sinclair set forth three alternative methods of distribution of the agreed amount of refunds. It would appear that the petitioners object to this Commission not having adopted one of the three proposed methods. In our order of July 1, 1963, we said that the three alternative methods of distribution did not appear to be feasible or proper in the circumstances. However, petitioners aver that reconsideration of said alternative methods may cause us to reach a different conclusion. Accordingly, because of said averments, and to allow further time for reconsideration of the proposed methods of distribution of refunds in the light of any comments which might be filed by the other parties, it is appropriate that we grant rehearing in these proceedings.

The Commission orders:

Rehearing is hereby granted in these proceedings to permit reconsideration of Sinclair's settlement proposal, and the issues raised by the petitions for rehearing filed herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP63-111

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 23, 1963)

On October 31, 1962, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP63-111 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to sell and deliver an additional 539 Mcf of natural gas per day to Lynn Gas Company (Lynn), an existing customer of Tennessee, all as more fully set forth in the application.

It appears that the proposed additional service will increase Lynn's natural gas supply from 10,906 Mcf to 11,445 Mcf per day (at 14.73 psia) and will enable Lynn to meet the peak day requirements of its customers, particularly during the Winter months. The proposed additional service can be rendered on a long term basis through utilization of a portion of the unallocated pipeline capacity that the Commission authorized Applicant to construct and operate in Docket No. CP63-247.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 13, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware Corporation having its principal place of business in Houston, Texas, is a "natural-gas

company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sale and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, are to be made in interstate commerce, subject to the jurisdiction of the Commission, and will, therefore, be subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale and delivery proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery hereby authorized shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP63-328

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 23, 1963)

On May 28, 1963, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP63-328 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale and delivery of additional volumes of natural gas to four existing general service customers and to one new contracted demand customer, all as more fully set forth in the application.

The proposed service is as follows:

Type of service	*Proposed additional service Mcf/day at 14.73 psia*
General Service customers:	
Clarksville, Tennessee (City of)	880
North Shore Gas Company:	
Gloucester Service area	281
Pennsylvania Gas & Water Company	2,033
Western Kentucky Gas Company:	
Danville service area	335
Lebanon service area	42
Contracted demand customers:	
T. W. Phillips Gas and Oil Co.	2,040
Total proposed additional service	5,611

The proposed service is required to enable the foregoing customers to meet their estimated natural gas requirements commencing with the 1963–64 winter heating season. The increased requirements of the four existing customers are a result of recent market studies that reflect requirements in excess of those shown in Applicant's application in Docket No. CP63–247. The proposed service can be rendered by Applicant through utilization of a portion of the unallocated annual average day delivery capacity provided in Docket No. CP63–247.

Applicant proposes to construct and operate a 4-inch flow control meter tube in an existing meter station building at the terminus of Applicant's Pittsburgh spur at an estimated cost of $9,500 to serve T. W. Phillips Gas and Oil Company, a new customer. T. W. Phillips' major source of supply has heretofore been from local producers; however, due to the decline in deliveries from these fields, it is necessary for T. W. Phillips to purchase a firm supply from Applicant.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 8, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application has been received. Pennsylvania Gas and Water Company filed a petition to intervene in support of the application which states that petitioner does not object to the hearing and disposition of the subject application under the abridged hearing procedure but that petitioner desires to preserve its rights to appear and to participate fully in the event that the subject application is considered in a formal hearing. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct and operate the proposed facilities and to sell natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the facilities placed in actual operation, as required by Section 157.20(b) of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

CI60–505; UNION TEXAS PETROLEUM, A DIVISION OF ALLIED CHEMICAL CORPORATION, DOCKET NO. CI61–462; M. F. MCCAIN, ET AL., DOCKET NO. CI62–582

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT AGREEMENTS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 23, 1963)

Motions for severance, for approval of settlement proposals and issuance of certificates in their respective dockets were filed in the above-captioned proceedings on May 10, 1963, by Harvey Peltier, (Peltier) on June 27, 1963, by Union Texas Petroleum, a Division of Allied Chemical Corporation (Union Texas), M. F. McCain, *et al.* (McCain), C. H. Lyons, Sr., *et al.* (Lyons), Agnes Cullen Arnold, *et al.* (A. Arnold) and Isaac Arnold, *et al.* (I. Arnold), on June 28, 1963

by Sunray DX Oil Company (Sunray), on July 15, 1963, by Southern Natural Gas Company (Southern) and on August 1, 1963, by Zapata Off-Shore Company (Zapata).

The settlement proposals are similar to those previously approved by the Commission[1] and provide for the following:

(1) Effective April 1, 1963, the rates under Peltier's Rate Schedule No. 7 (Docket No. CI60-505), A. Arnold's Rate Schedule No. 3 (Docket No. G-17207), I. Arnold's Rate Schedule No. 1 (CI60-237), Union Texas' Rate Schedule No. 57 (CI61-462), Lyons Rate Schedule No. 14 (CI60-329) and Sunray's Rate Schedule No. 196 (CI60-250) will be 20.625¢ per Mcf. Effective August 1, 1963, the rate under Zapata's Rate Schedule No. 1 (Docket No. G-18369) will be 19.0¢ per Mcf.[2] The presently effective rate under McCain's Rate Schedule No. 4 (CI62-582) and Southern's Rate Schedule No. F-4 (G-18129) will remain at 20.25¢ per Mcf.[3]

(2) A moratorium on rate increase filings from April 1, 1963, through March 31, 1968, inclusive in all dockets except Southern's Docket No. G-18129 in which case the moratorium runs from the date of initial delivery, May 22, 1959, through July 31, 1968, and Zapata's Docket No. G-18369 in which case the moratorium is proposed to run from August 1, 1963 through July 31, 1968.

(3) Extension of make-up periods for gas paid for but not taken to 4 years in Docket Nos. CI60-237, CI60-250, and CI60-505.[4]

The settlement rates are subject to prospective changes during the moratorium periods according to any applicable area rate determined in the South Louisiana Area Rate Proceeding, AR61-2.

Rate increase filings may be made (1) prior to the end of moratorium periods to the extent that the maximum suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State and Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which the applicant is entitled by contract.

Each of these applicants is presently selling under a temporary authorization without refund condition and none of these applicants proposes to make refunds for amounts above the settlement rates collected for deliveries made prior to April 1, 1963, or in Zapata's case, August 1, 1963.

Since payments for gas delivered by each of the applicants except Zapata subsequent to March 31, 1963, have been made at rates above the settlement rates the differences will be refunded by each of said applicants to the various pipeline purchasers within 30 days from the date of this order.[5]

We note one additional problem. Zapata proposes to make its reduced rate effective August 1, 1963 and to extend its moratorium period from August 1, 1963 through July 31, 1968. The various settlement proposals presented by

[1] See orders in *Union Texas Petroleum et al.*, Docket No. G-13221, *et al.*, issued June 24, 1963, 29 FPC 1279 and 1283, concerning Union Oil Company of California and Tenneco Corporation and order issued August 7, 1963, 30 FPC 456, concerning Humble Oil & Refining Company.

[2] All prices expressed inclusive of tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details.

[4] The contracts in Docket Nos. G-17207, G-18129, and CI62-582 do not contain take-or-pay-for provisions. The contract in Docket No. CI61-462 contains a provision for make-up of gas not taken for the life of the contract. The contracts in Docket Nos. CI60-329 and G-18369 provide for a 5-year make-up period.

[5] Except in Docket Nos. G-18129 and CI62-582 in which the settlement rates are the presently effective rates.

producers in these consolidated proceedings have progressively extended the effective date of the reduced settlement rates until, in this case, Zapata has sought an August 1, 1963, effective date. The effect is that those producers who have filed settlement proposals at a later date stand to obtain an advantage not enjoyed by those producers who have, in good faith, filed earlier, since refunds would be made only in those instances where the temporary authorizations contained refund conditions. We recognize that although Zapata and the producers filing later propose to extend the moratorium periods to five years in any event, the Area Rate Proceeding, Docket No. AR61–2, will certainly be completed prior to that time. The extended moratorium period therefore will have little value.

Accordingly, we hereby limit our approval of the Zapata settlement proposal so as to make the reduced rates effective no later than April 1, 1963. Consistent therewith, we hereby provide that the moratorium period shall extend from April 1, 1963 through March 30, 1968 for Zapata. Since payments for gas delivered subsequent to March 30, 1963 may have been made at rates above the settlement rate, the differences will be refunded to Transcontinental Gas Pipe Line Corporation within 30 days from the date of this order.

Answers were filed by the Pennsylvania Public Utility Commission (Pennsylvania) opposing the settlement proposals of Lyons (July 10, 1963), Union Texas (July 10, 1963) and Peltier (May 17, 1963). However, on July 31, 1963, Pennsylvania withdrew its objections to these settlement proposals. No other party filed an answer to any of these motions.

We find these settlement proposals, as herein modified, in the public interest.

In keeping with our present policy we shall require that the applicants pay interest on the amounts to be refunded at 7 per cent per annum, such interest to accrue through the last day of the month in which the respective settlement proposals were filed.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets [6] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

---

[6] The hearings in the Union Texas Petroleum, *et al.* consolidated proceeding concluded July 25, 1963.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in the Docket Nos. G–17207, G–18129, G–18369, CI60–237, CI60–250, CI60–329, CI60–505, CI61–462, CI62–582 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that the applicants comply fully with the terms of the settlement proposals which settlements are expressly approved, as modified by this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity to the settlements and the conditions of this order.

(F) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and the proceedings in Docket Nos. G–17207, G–18129, G–18369, CI60–237, CI60–250, CI60–329, CI60–505, CI61–462 and CI62–582 shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the

Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(I) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(J) Interest on amounts to be refunded to the pipeline purchasers shall accrue through the last day of the month in which the respective settlement proposals were filed, May 31, 1963 in Docket No. CI60–505, June 30, 1963 in Docket Nos. G–17207, CI60–237, CI60–250, CI60–329 and CI61–462 and August 31, 1963 in Docket No. G–18369.

UNITED FUEL GAS COMPANY, DOCKET NO. CP61–21

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 23, 1963)

On April 22, 1963, United Fuel Gas Company (Applicant) filed in Docket No. CP61–21 an application to amend the Commission's order issued October 14, 1960, in said docket to operate an experimental 1,050 horsepower turbine driven centrifugal compressor unit on a permanent basis at Applicant's Spencer compressor station, Roane County, West Virginia, and to retire three 500 horsepower compressor units at said station, all as more fully set forth in the application to amend.

The order issued October 14, 1960, 24 FPC 885, authorized Applicant to install and operate for test purposes the experimental 1,050 horsepower unit and to retire three 1000 horsepower units of the 4,500 horsepower then installed at the Spencer station. Applicant states that the test operating period has been

completed and that the manufacturer has completed its final inspection and tested and re-installed the new unit at Spencer station. Applicant states that the new unit has operated satisfactorily, and, therefore, requests authorization to operate said unit on a permanent basis and to retire the three remaining 500 horsepower units.

Applicant states further that the annual operating costs for the new unit are estimated to be $46.122, or approximately $57,000 less each year than operation with the three old 500 horsepower units.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 16, 1963 (28 F.R. 7270). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued October 14, 1960, in Docket No. CP61–21 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued October 14, 1960, in Docket No. CP61–21 be and the same is hereby amended to authorize Applicant to operate an experimental 1,050 horsepower turbine driven centrifugal compressor unit on a permanent basis at Applicant's Spencer station and to retire three 500 horsepower compressor units at said station, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP63-312

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 26, 1963)

On May 20, 1963, Central Illinois Public Service Company (Applicant) filed in Docket No. CP63–312 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Natural) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in the Villages of Strasburg and Stewardson, and environs, Shelby County, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate lateral transmission facilities from a proposed metering and regulating station of Natural to the villages. Applicant will also construct and operate the necessary distribution facilities to provide the proposed service.

The application shows the combined estimated third year annual and peak day natural gas requirements for the two villages are 89,975 Mcf and 858 Mcf, respectively.

The total estimated cost of transmission and distribution facilities to be constructed by Applicant for the proposed service is $239,240, which cost will be financed from internal funds.

Applicant has received appropriate authorization from the two villages and from the Illinois Commerce Commission.

On May 29, 1963, Natural filed an answer to the subject application stating that it is willing to provide the proposed service and the new point of connection. Natural estimates its cost of installing facilities at the new delivery point at $18,060.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on July 13, 1963 (28 F.R. 7238). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) Applicant, Central Illinois Public Service Company, is a public utility duly organized and existing under the laws of the State of Illinois and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Natural be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 858 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(5) The requirement that Natural serve Applicant, as proposed, will not place any undue burden upon Natural nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 858 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(C) Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-288

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 26, 1963)

On July 23, 1963, the Commission issued a certificate in Docket No. CP63-288 to El Paso Natural Gas Company (Applicant) authorizing the construction and

operation of a measuring and regulating station and the delivery of natural gas to Moon Lake Electric Association, Inc. (Moon Lake), for use in Moon Lake's electric generating plant located near Rangely, Colorado. Paragraph (2) of the findings appearing on page 390 of the subject order recites that the measuring and regulating facilities ". . . are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission . . ." Inasmuch as the sale of natural gas by Applicant to Moon Lake is a direct sale, rather than a sale for resale, it is not subject to the jurisdiction of the Commission and is not subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

The Commission orders:

(A) Findings paragraph (2) of the Commission's order issued July 23, 1963, 30 FPC 389, in Docket No. CP63–288 be and the same is hereby amended to read as follows:

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(B) In all other respects the order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP63–310

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 26, 1963)

On May 17, 1963, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP63–310 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities necessary to render natural gas service to the U.S. Government and its employees at the government-owned townsite of Riverdale, McLean County, North Dakota, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 11.7 miles of 2-inch and 3-inch lateral pipeline extending from its existing lateral serving Underwood, North Dakota, to the city gate station at Riverdale. Applicant will also construct and operate a distribution system and a city gate station for Riverdale.

The application indicates that the third year estimated peak day and annual requirements for Riverdale are 550 Mcf and 53,420 Mcf, respectively.

The proposed service will be rendered pursuant to a contract dated January 14, 1963, between Applicant and the U.S. Government.

Applicant states that a central steam plant is presently being utilized to supply the heating requirements at Riverdale and that the Government will abandon said plant when natural gas service commences.

The application shows the total estimated cost of the proposed facilities is $176,700, which cost will be financed through internally generated funds and a $48,825 contribution in aid of construction by the Government.

By letter dated June 7, 1963, Applicant was granted a temporary certificate authorizing the subject proposals.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 6, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G–220 and G–402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Co., to construct and operate the subject facilities necessary to render natural gas service for Riverdale as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. G-19461

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 26, 1963)

On May 24, 1963, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. G-19461 an application to amend the Commission's order, issued May 25, 1961, in said docket to renew and extend for one year the certificate authorization granted by said order, all as more fully set forth in the subject application to amend.

The subject order, among other things, authorized Applicant to construct and operate facilities to test and develop by May 25, 1963, the Waverly Storage Field, located in Morgan and Sangamon Counties, Illinois. Applicant was authorized to inject and withdraw up to 6,000,000 Mcf of natural gas.

To meet a portion of the increased 1963-64 winter requirements of its utility customers, for which Applicant is preparing a substantial expansion application, Applicant seeks a one year extension of renewal of the testing and developmental authorization. The application indicates that it is essential that storage cycling be continued while the said expansion application is being prepared and also during the period in which such application is pending before the Commission. Applicant states further that it has not yet injected the full 6,000,000 Mcf of gas authorized by the subject order. Further, it appears that Applicant has the capacity to provide the injection volumes.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 9, 1963 (28 F.R. 6998). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued May 25, 1961, in Docket No. G-19461 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 25, 1961, in Docket No. G-19461 be and the same is hereby amended to renew and extend to May 25, 1964, the certificate authorization to test and develop the subject storage field, all as hereinbefore described and as set forth in the subject application to amend.

(B) The extension and renewal authorized by paragraph (A) above is granted subject to the same conditions heretofore imposed by the order of May 25, 1961, issued in this docket.

(C) In all other respects said order shall remain in full force and effect.

OPINION NO. 401

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-161

OPINION AND ORDER REVERSING IN PART AND ADOPTING IN PART INITIAL DECISION OF PRESIDING EXAMINER DETERMINING JURISDICTIONAL ISSUES

(Issued August 26, 1963)*

Syllabus

1. Section 2(7) provides no clear or adequate test for determining whether *present* sales in Jackson District are in interstate commerce. P. 563.
2. Most important consideration leading to conclusion that sales are in interstate commerce is that gas sold is part of a single, uniform stream flowing through United's interstate pipeline from point of purchase in Louisiana to United's customers in other states. P. 563.
3. Removal of a portion of the gas thus flowing in interstate commerce does not change such gas to intrastate gas. P. 563.
4. Conclusion that instant sales are in interstate commerce reflects substantial impact these sales can have on United's interstate operations. P. 565.
5. Commission *discusses* implications on its certificate jurisdiction should it lack rate jurisdiction over instant sales. P. 565.
6. *Distinguishing Shreveport Rate Case*, Commission *observes* that until gas reaches point of separation there is no way of knowing which part will not continue into other states—stream once having acquired interstate character, a part of it cannot be said to lose same by virtue of being sold within state of production. P. 566.
7. In interpreting intent of Congress, Commission *concludes* that had Congress considered instant sales it would have treated these as "in interstate commerce". P. 568.
8. Commission *determines* jurisdictional issues in proceeding arising under Section 16 of the Natural Gas Act and Section 1.7(c) of the Regulations thereunder. P. 568.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

Ross, *Commissioner:*

The question presented by this case is whether this Commission has jurisdiction over certain sales of natural gas for resale made by United Gas Pipe Line Company (United) to 21 Louisiana communities in United's Jackson District,

*Initial decision appears on p. 580. Rehearing granted on October 24, 1963, 30 FPC 1073. See Opinion No. 401-A, denying rehearing, 31 FPC 1152. Petition to Review pending in CA5, No. 21705, *Louisiana Public Service Commission* v. *F.P.C.*

which encompasses northern Louisiana and Mississippi. The communities involved are located in that part of Louisiana lying north of Lake Pontchartrain and east of the Mississippi River known as the Florida Parishes area.[1]

This Commission has exercised jurisdiction over sales to the communities at issue since inception of federal regulation of United under the Natural Gas Act. The problem arises by virtue of an order issued June 8, 1961, by the Louisiana Public Service Commission which directed United to publish and apply intrastate rates prescribed by the Louisiana PSC to the sales at issue. These rates substantially differ from those presently in effect and United was granted a court order staying the effectiveness of the Louisiana PSC order. United also filed a Petition for Declaratory Order under Section 16 of the Natural Gas Act requesting the Commission to determine whether or not it has jurisdiction over the sales to the aforementioned 21 communities. In the petition, United takes no position on the issue but indicates that it is faced with conflicting orders of two regulatory Commissions, which forecast the possible imposition of severe penalties because of its obvious inability to comply with both orders.

Pursuant to our order of April 13, 1962, a hearing on United's petition was held. The uncontroverted evidence reveals that United is engaged in the transportation and sale for resale of natural gas in interstate commerce. By means of a fully integrated pipeline system, it transports and sells natural gas from fields in Texas, Louisiana and Mississippi to industrial and distribution purchasers in the foregoing states and in Alabama and Florida, and to other pipelines in Louisiana and Texas. We officially note that United also operates intrastate pipeline facilities which are completely separate from its interstate system and which are not under our jurisdiction.

Most of the Louisiana communities here involved are located on a line extending southward from Mississippi to a point northward of Lake Pontchartrain where it curves westward and later northward, forming a loop connected at both ends to United's 30-inch interstate Kosciusko line. United's line from Lirette in southern Louisiana to Mobile, Alabama is connected to the bottom of the loop by means of a short lateral. United's more recently constructed Kosciusko line extends northeasterly from the offshore producing areas south of Louisiana and forms part of the loop. See appended map, page 569.

Prior to 1951, United's Florida Parishes customers were served with gas, a portion of which was produced in Mississippi. Since the loss of a large sale in the Bogalusa area, most—but not all—of the gas to the communities located on the eastern part of the loop originates in Southern Louisiana. The evidence shows that the six communities having short laterals to the Kosciusko line (Port Vincent, Livingston, Doyle, Greensburg, Kentwood and Roseland) are served with gas, part of which is produced in offshore fields. In addition, gas from this line serves some of the communities located on the southern and western part of the loop extending possibly as far east as Slidell. Thus the communities of Amite, Independence, Natalbany, Hammond, Pontchatoula, Madisonville, Mandeville, Abita Springs, Covington and Slidell can receive, and, to some extent do receive service from the Kosciusko line.[2]

As stated above, the customers on the eastern part of the loop receive gas which is produced principally in on-shore southern Louisiana. But they have also received, at times, gas which flowed back across the Mississippi line. Here

[1] The communities are Abita Springs, Amite, Bogalusa, Covington, Doyle, Franklinton Greensburg, Hammond, Independence, Kentwood, Livingston, Madisonville, Mandeville Montpelier, Natalbany, Pearl River Pontchatoula, Port Vincent, Roseland, Slidell, and Walker.

[2] It was impossible for United's Chief Engineer to estimate the extent of the flow from Kosciusko towards Slidell because United's system is automated and gas automatically flows through its interstate lines depending on the pressures in the various lines.

again it was not possible to determine with accuracy the extent of the backflow in view of the automated nature of United's interstate system. The record also shows that these customers possibly still receive Mississippi produced gas from the north-south line extending to Louisiana and Mississippi and gas flowing westerly from Mississippi in United's Lirette-Mobile line.

Following the submission of briefs, the Examiner issued his initial decision in which he divided his consideration of the issue into two parts. He held that sales made from United's Lirette-Mobile line are not subject to this Commission's jurisdiction and that sales made from its Kosciusko line are subject to our jurisdiction.

With respect to the former conclusion, the Examiner reasoned that United's Lirette-Mobile sales represent gas which is produced, transported and sold within a state and are not in interstate commerce as defined in Section 2(7) of the Natural Gas Act. He further relied on the Shreveport case [*Houston, E. & W.T.R. Co.* v. *U.S.*, 234 U.S. 342, (1914) and *North Carolina* v. *U.S.*, 325 U.S. 507 (1945).] The Examiner rejected the argument that these sales are interstate in character because some of the Louisiana produced gas sold within the state is associated in an interstate pipeline with gas destined for use beyond the State. Finally, the Examiner concluded that Congress did not intend to give this Commission the fullest power possible under the Commerce Clause of the Constitution, but intended only to "plug the gap" comprising the area which certain early Supreme Court decisions had held the states constitutionally powerless to regulate.[3] The Examiner therefore determined that the Act provides no basis for the exercise of jurisdiction by this Commission over sales which have an impact on interstate commerce.

With respect to sales made from the Kosciusko line, the Examiner considered these sales in interstate commerce because some of the gas in the line originated at a point outside the state, i.e., offshore fields.

The case is now before us on exceptions to the Examiner's decision. Louisiana Gas Service Company, the Louisiana Public Service Commission, and Hammond-Baton Rouge Brick Company generally agree with the reasoning of the Examiner in his findings of lack of jurisdiction but disagree with his finding of jurisdiction regarding Kosciusko sales. The Commission's Staff and Willmut Gas and Oil Company contend that the Commission has jurisdiction over all the sales in question.

For the reasons discussed hereinafter, we conclude that the Commission has jurisdiction over all the sales to the communities here in issue. In our opinion, the Examiner fundamentally erred in segregating the issue into sales characterized as being made from the Lirette-Mobile line or the Kosciusko line. As the evidence shows, such a dichotomy is illusory and fails to give due recognition to the fully integrated nature of United's interstate pipeline operation.

At the outset, we point out that we have previously held in *United Gas Pipe Line Company*, Docket No. G–1142, *et al.*, 13 FPC 398, 405 (1954), that "the sales and service rendered in United's . . . Jackson districts are subject to the jurisdiction of this Commission." We have not deviated from this holding. The rate issues involved in that case were, however, substantially disposed of within the framework of the settlement process so that the question of jurisdiction was not discussed in detail. Therefore, we deem it appropriate in this proceeding to set forth fully the reasons for holding the disputed sales to be jurisdictional.

---

[3] The familiar "Attleboro gap", see *P.U.C.* v. *Attleboro Steam and Electric Co.*, 273 U.S. 83 (1927), *Missouri* v. *Kansas Gas Co.*, 265 U.S. 298 (1924), cited conspicuously in the legislative history of the Act. And see *P.U.C.* v. *Landon*, 249 U.S. 236 (1919).

Section 1(b) of the Act provides:

> The provisions of this act shall *apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale* for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distriubtion or to the facilities used for such distribution or to the production or gathering of natural gas. [Emphasis added.]

Since these sales are admittedly for resale, the only issue before us is whether the gas sold is "in interstate commerce", as that term is defined in Section 2(7) of the Act.[4] However, that section provides no clear or adequate test for determining whether the *present* sales are in interstate or intrastate commerce.

Various tests are proposed by the examiner and the parties for determining the intra or interstate character of the onshore gas involved in the disputed sales. The examiner found the gas to be intrastate in nature because it was produced, transported and sold all within the confines of Louisiana. That the gas never left the state was, to the examiner, conclusive. Willmut argues that the fact of the indistinguishable mixing of all the gas in a single stream going outside of the state is determinative. Finally, Staff applies an "interdependence-substantial impact" test, emphasizing the interdependence of the disputed sales with, and their impact on, United's *integrated*, interstate operation.

In reaching the conclusion that the gas here in question is "in interstate commerce," we feel that narrow "tests" should be avoided and instead, that the entire spectrum of pertinent factors should be examined.[5]

The most important consideration leading to the conclusion that these sales are in interstate commerce is that the gas sold is part of a single, uniform stream flowing through United's interstate pipeline from the point of purchase in Louisiana, whether onshore or offshore, to United's customers in other states. Thus, the entire gas stream is, in the most literal sense, "in interstate commerce". The removal of a portion of the gas thus flowing in interstate commerce does not change the gas removed from the stream into intrastate gas. This conclusion is buttressed by the fact that the transactions between United and the producers who sold the gas in question are clearly within our jurisdiction. Underlying the decisions which establish our jurisdiction over such sales is the assumption that once gas has been sold by a producer to an interstate pipeline "it had commenced its journey in interstate commerce", even though some of that gas was sold in the states in which it was produced. [*Deep South Oil Co.*, v. *F.P.C.*, 247 F. 2d 882, 888 (CA5, 1957)] Thus, in *Deep South Oil Co.* v. *F.P.C.*, *supra*, the court held that Deep South's sales to an interstate pipeline were sales for resale in interstate commerce. The court noted that the pipeline might resell some of the gas within the state in which it was purchased. 247 F. 2d at 887–88. So too, in *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954), the Supreme Court held that Phillips' sales to interstate pipelines

---

[4] Section 2(7) of the Act provides:

> "Interstate Commerce" means commerce between any point in a State and any point outside thereof, or between points within the same State but through any place outside thereof, but only insofar as such commerce takes place within the United States.

[5] In *Atlantic Coast Line Railroad Co.* v. *Standard Oil Co.*, 275 U.S. 257 (1927), the Court said, per Taft, J. (268–269), that "The question whether commerce is interstate or intrastate must be determined by the essential character of the commerce . . . "and" . . . the determination of the character of the commerce is a *matter of weighing* the whole group of facts in respect to it." [Emphasis added.]

were sales for resale in interstate commerce. The Court wrote (347 U.S. at 692):

> . . . [T]he legislative history [of the Natural Gas Act] indicates a Congressional intent to give the Commission jurisdiction over the rates of all wholesales of natural gas in interstate commerce, whether by a pipeline company or not and whether occurring *before, during, or after transmission by an interstate pipe line company.* [Emphasis added.]

The Court was apparently untroubled by the fact that some of the purchasing pipelines resold the gas bought from Phillips within the state in which it was purchased. Finally, we held in *Lo-Vaca Gathering Co.*, Docket No. CI60-693, 26 FPC 606 (1961), petition for review filed February 8, 1962, No. 19478 (CA5) [Commission reversed Sept. 24, 1963, 323 F. 2d 190, petition for certiorari filed March 13, 1964, pending], that sales by producers to an interstate pipeline under contracts which expressly provided that the gas would be sold intrastate were sales for resale in interstate commerce, since they entered the stream of interstate commerce at the point of sale. It follows that the gas United sells here is "in interstate commerce".

Secondly, as we have pointed out above, at times some of these communities have received gas from points outside the state of Louisiana. Thus gas from offshore Louisiana moves through the Kosciusko line, serving customers along that line. In addition, gas flows from that line into the lateral which serves the remaining Florida Parishes communities. That lateral is also connected to the Lirette-Mobile line. Thus, as United states in its exceptions:

> Increasing volumes of gas automatically flow from the Kosciusko line into lines in the Florida Parishes as the pressure values in those Florida Parishes lines decline. This circumstance will cause some towns normally receiving gas transported through the Lirette-Mobile line occasionally to receive gas transported through the Kosciusko line. In addition, the distance gas from the Kosciusko line flows into the Florida Parishes lines will vary from time to time, as the automatic result of changes in demand and operating conditions, so that the number of Florida Parishes towns receiving some Kosciusko line gas does not remain constant.

This statement is supported by the record. (Tr. 134–136)

The Examiner recognized that communities served with gas from the Kosciusko line received gas that had moved in interstate commerce, but he apparently did not realize how many communities received such gas from time to time.

In addition, some gas has flowed back from Mississippi and reached towns along the eastern portion of the loop for brief periods during 1958, 1959, and 1960.[6] The location of United's check meters makes it impossible to say how far the backflow reached, Tr. 148–49, but it may well have gone beyond Bogalusa. Tr. 87–88. Conceivably, the gas could have flowed back to any or all of the communities lying east of United's 6-inch lateral extending from the Kosciusko line to Amite, thus including most or all of the Florida Parishes area.

Since the frequency and extent to which Florida Parishes customers receive gas from outside the state depend upon pressure changes along United's line, it seems clear that these sales are within the stream of interstate commerce. *Cf. Kentucky Natural Gas Corp.* v. *Public Service Commission*, 28 F. Supp. 509, 511 (1939). These changes in the direction of the flow of gas, moreover, illustrate the extent to which the sales in question are an integral part of United's interstate operations.

---

[6] Tr. 87–88, 125, 126–27, 129–30, 132–33.

Though the amount of gas involved in these occurrences was small,[7] they serve to point out the possible hotchpot which could occur by allowing two different and completely independent authorities to regulate sales of gas coming from the same pipeline. Because United's system is fully integrated, there is nothing to prevent gas flowing from different sources each day to the towns involved. This result would necessarily require the changing of jurisdiction at the same time. The consumers and the pipe line company should not be subjected to such contingencies which can be caused, as was the fact in one instance, by the mere loss of one customer.[8]

Our conclusion that these sales are in interstate commerce reflects the substantial impact sales such as those in dispute here can have on United's interstate operations. The gas used in making such sales is purchased by United under producer rate schedules subject to FPC jurisdiction, for its overall system supply without distingnishing between the Louisiana markets and the out-of-state markets. There is also an inter-relation between the rates for these sales in Louisiana and United's sales outside the state, for if Louisiana sets rates that are too low, and United's return is consequently reduced, its capital costs may rise.[9] Increased capital costs would normally be reflected in higher interstate rates.

In concluding as we have that the sales in question are in interstate commerce we are mindful of the implications of a contrary holding for our certificate jurisdiction—which also extends to sales and transportation "in interstate commerce". If we lack rate jurisdiction over these sales, we would also apparently lack power to require that they be certificated. Absent such authority, we might be powerless to prevent United from selling gas in the producing state even though, as here, that gas has been dedicated to the interstate market by a certificate of public convenience and necessity and even though we relied upon the availability of that gas in authorizing sales for resale to customers in other states. In this case, Louisiana has set rates below the level we think just and reasonable.[10] Consequently, there is no incentive to United to divert interstate gas to the Louisiana market. But it is certainly conceivable that in the future Louisiana might feel impelled to direct United to increase deliveries to these communities even though United would then be required to deliver gas already dedicated to the interstate market. In the light of these considerations, and because we think the gas United sells is clearly in the stream of interstate commerce, we conclude that the sales in question are subject to our jurisdiction.

Our view is supported by two court decisions almost directly in point. One, *Kentucky Natural Gas Corporation* v. *Public Service Commission*, 28 F. Supp.

---

[7] In *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U.S. 515, 535–536 (1945) "only about one-fifth of one per cent of all the energy received and generated by the Company throughout the State of Connecticut was transmitted out of the State." The Court disposed of the company's contention that this volume was insignificant as follows: "We do not find that Congress has conditioned the jurisdiction of the Commission upon any particular volume or proportion of interstate energy involved, and we do not think it would be appropriate to supply such a jurisdictional limitation by construction." See also *Wisconsin-Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472, 478 (1952), cert. denied, 345 U.S. 934 (1953).

[8] Tr. 133.

[9] The rate set by the Louisiana Commission for the gas involved in the disputed sales is almost 9¢ per Mcf lower than that set by this Commission. This will result in a revenue loss to United of about $304,000 annually.

[10] See footnote 9, *supra*.

509 (D. Ky. 1939) aff'd. *per curiam*, 119 F. 2d 417 (CA6), was handed down shortly after the Natural Gas Act was passed. In that case the gas company argued that its sales for resale in Kentucky were not subject to state regulation, even though it sold gas produced in Kentucky. Instead, it argued, the sales were subject to the exclusive jurisdiction of this Commission because the company was an *interstate* pipeline. The state argued:

> (1) that in transporting gas from fields in Kentucky to purchasers within the state, the complainant is engaged in intrastate commerce;
>
> (2) that such transactions are and should be treated as separate and distinct, notwithstanding their relation to interstate business, and as such are subject to regulation and control by the Kentucky Commission . . . . [28 F. Supp. 512.]

The Court rejected these contentions, noting that the Company's fully integrated character and predominant interstate features required federal regulation.[11] We completely agree with the Court's conclusion set forth at page 513: "The established course of business being predominantly interstate, the mere fact that some gas from the interstate stream is sold and delivered in the state of its origin affords that state no superior power to regulate or control the transaction." [12]

Kentucky Natural Gas Corp. was followed by the Kentucky Supreme Court on similar facts in *Columbian Fuel Corp.* v. *Public Service Commission*, 333 S.W. 2d 945 (Ky. Sup. Ct., 1959).

We do not accept the view that because the gas did not leave the State, it cannot be "in interstate commerce". In placing substantial reliance upon this factor, the examiner cited as his authority *Houston, E. & W.T.R. Co.* v. *United States* (the *Shreveport Rate Case*), 234 U.S. 342 (1914) and *North Carolina* v. *United States*, 325 U.S. 507 (1945). In those cases passengers who embarked and disembarked from a train before that train had crossed a state boundary were said to have "an admittedly intrastate character". *Wickard* v. *Filburn*, 317 U.S. 111, 123 (1942). There is a sharp distinction between these cases and the present one. Those cases involved passengers who from the outset had interstate or intrastate identities. From the very moment a ticket was purchased, it could be determined whether the passenger was interstate or intrastate. But in the instant case there is only one uniform and indistinguishable flow of gas, a very small portion of which is siphoned off before leaving the state. Until the gas reaches the point of separation, there is no way of knowing which part of the gas will not continue into other states.[13] The stream of gas

---

[11] In structure and operation, such continuity exists throughout the system that regulation at one point or control of a single activity would necessarily affect the whole structure. The sale and delivery of gas at wholesale from the interstate pipeline to local distributing companies is an integral part of the major enterprise, commerce between the states. Under such circumstances, regulation in the public interest is national rather than local demanding a standard of uniformity unattainable except through a single paramount authority. [28 F. Supp. 512–13.]

[12] In the present case, less than 3% of the gas flowing through United's interstate pipeline is sold in Louisiana. This figure is derived from an exhibit in a pending United rate case, Docket No. RP62–161. The exhibit shows United Sales in the Florida Parishes for the twelve months ended November 30, 1959. The net flow into Florida Parishes was 282,759,136 Mcf while the line flow at the Louisiana-Mississippi State lines is 278,933,384 Mcf.

[13] Therefore, a case where two different gases were contractually separated by the producer at the time of sale to the pipe line, so that the gas which was designated "intrastate" was at all times identifiable and determinable despite the physical commingling, even if correctly decided, is inapposite here. *State of North Dakota* v. *F.P.C.*, 247 F. 2d 173 (CA8, 1957).

once having acquired an interstate character, a part of it cannot be said to lose that character by virtue of being sold within Louisiana.

As noted earlier, whether or not the disputed sales are subject to this Commission's jurisdiction cannot be determined from the language of the Act alone. In addition, we feel that the legislative history of the Natural Gas Act is also inconclusive. We agree that Congress' primary purpose in enacting the Natural Gas Act was to "plug the regulatory gap" created by a series of Supreme Court decisions prohibiting the states from regulating wholesale sales in interstate commerce while leaving them free to regulate retail sales to local consumers. Thus in House Report No. 709, 75th Cong., 1st Sess., April 28, 1937, the Committee on Interstate and Foreign Commerce stated at p. 2–3:

> The States have, of course, for many years regulated sales of natural gas to consumers in intrastate transactions. The States have also been able to regulate sales to consumers even though such sales are in interstate commerce, such sales being considered local in character and in the absence of Congressional prohibition, subject to state regulation. There is no intention in enacting the present legislation to disturb the States in their exercise of *such jurisdiction*. However, in the case of sales for resale, or so-called wholesale sales, in interstate commerce (for example, sales by producing companies to distributing companies) the legal situation is different. Such transactions have been considered to be not local in character and, even in the absence of Congressional action, not subject to State regulation. See *Missouri* v. *Kansas Gas Co.*, 265 U.S. 298 (1924) and *Public Utilities Commission* v. *Attleboro Steam and Electric Co.*, 273 U.S. 83 (1927). The basic purpose of the present legislation is to occupy this field in which the Supreme Court has held that the States may not act. [Emphasis added.]

The state jurisdiction which the report says was not to be disturbed was jurisdiction over intrastate consumer sales and sales by interstate pipelines *directly* to consumers. But the report does not state whether the Committee considered gas sold for resale by interstate pipelines in the states in which it was purchased—intrastate or interstate—although federal regulation of such sales would clearly be within Congress' power.

In the absence of a direct statement of what Congress intended, we must attempt to determine what Congress would have said about this particular problem if it had been brought to its attention.[14] We do not think it is sufficient to ask simply whether the states could constitutionally have regulated the sales at issue here.[15] Rather we are compelled to ask whether a statutory scheme which would include wholesale sales at one end of a pipeline[16] but would exclude the same sales, from a common stream, if made at the other end of a pipeline,

---

[14] The "divination of legislative design" requires "an effort to penetrate imaginatively into an assumed mind of an assumed collectivity called Congress in order to conceive what that assemblage would have thought about this particular detail had it thought in such particularity rather than in categories considerably more general". Powell, *Physics and Law-Commerce in Gas and Electricity*, 58 Harv. L. Rev., 1072, 1092 (1945).

[15] See *Illinois Natural Gas Co.* v. *Central Illinois Public Service Co.*, 314 U.S. 498, 504–06, 509 (1942); *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954); *Northern Natural Gas Co.* v. *State Corporation Commission of Kansas*, 372 U.S. 84 (1963). The Supreme Court has said:

> . . . the Court, in determining the validity of state regulations, has been less concerned to find a point in time and space where the interstate commerce in gas ends and intrastate commerce begins, and has looked to the nature of the state regulation involved, the objective of the state, and the effect of the regulation upon the national interest in the commerce. [*Illinois Natural Gas Co.* v. *Central Illinois Public Service Co.*, *supra*, at 505.]

[16] See H.R. Rep. No. 709, *supra*, and cases cited therein.

would make sense. We think it would not. The impact of federal regulation over all of these sales on interstate and local consumers, as well as on the distribution of regulatory power between the states and the federal government, is identical. We conclude that had Congress considered the sales here in question, it would have treated them as "in interstate commerce". See *Illinois Natural Gas Co. v. Central Illinois Public Service Co., supra.*

Other Matters

The matters raised and argued in the parties' briefs and exceptions are, we think sufficiently disposed of by the foregoing discussion. United requested in its exceptions that, if we adopt the examiner's decision, we designate specifically which of the twenty-one disputed sales are jurisdictional because some of them are made on some occasions by gas from the Lirette-Mobile line and on other occasions by gas from the Kosciusko line. However, in view of our decision, the above facts no longer present any problem.

The Commission orders:

(A) The Federal Power Commission has jurisdiction under the Natural Gas Act, and particularly Sections 2(7) and 1(b) thereof, over the transportation and sales for resale of natural gas by United Gas Pipe Line Company by means of and from its interstate facilities within that part of United's Jackson District located within the Florida Parishes area of the State of Louisiana.

(B) The presiding examiner's initial decision issued February 25, 1963, in this proceeding is reversed in part and affirmed in part as more fully set forth hereinabove. Except to the extent hereinabove granted, the exceptions to the said examiner's decision are denied.

Commissioner O'Connor, with whom Commissioner Woodward joins, *concurring in part* and *dissenting in part.*

Commissioner O'CONNOR, with whom Commissioner WOODWARD *joins, concurring in part* and *dissenting in part:*

[The map attachment appears on page 569.]

I respectfully dissent from the majority's decision that all of United's sales for resale in the Florida Parishes of Louisiana to the 21 communities in issue are subject to Federal Power Commission jurisdiction. As to United's sales in issue from its Kosciusko line, I conclude that, although the question is not without doubt, those sales are jurisdictional. Accordingly, I would affirm the examiner's decision. The discussion which follows is confined principally to the sales by United from its Lirette-Mobile line.

I am convinced that, under the law and on the facts, United's Lirette-Mobile sales in issue are not interstate under Section 2(7) of the Natural Gas Act but are intrastate and, accordingly, are not subject to Commission regulation under Section 1(b) of the Act.[1] Since they are intrastate, these sales are subject to regulation by the State authorities, which indeed have regulated sales of this character for many years.

The majority's error is of grave importance, for it expands Commission jurisdiction to embrace a whole new, broad class of sales heretofore considered subject to State and not federal regulation. Thus, it will have a national impact with consequences far transcending the importance of this particular case, effecting a fundamental change in the distribution of authority between the federal and State governments in the regulation of the natural gas industry. I firmly believe that due and proper regard for law compels vigorous regulation of the matters committed by law to Commission jurisdiction. By the same token, due and proper regard for principles of law, for the legal process and for the

[1] Sections 2(7) and 1(b) of the Act are quoted *infra*, footnote 5, p. 571.

distribution of law making power between the branches of our government compels my opposition to the assertion of Commission power over matters which the law has not made subject to Commission jurisdiction.

I. *Source of Gas for the Disputed Sales*

It is clear from the record that United's sales in issue fall into two distinct categories which differ materially as to the facts. First, United makes sales to certain of the 21 Louisiana communities from its Lirette-Mobile line. The Lirette-Mobile line originates in an *onshore* production field in Louisiana. It transports gas from those fields and delivers it for the disputed sales, after

which it proceeds outside the State to serve certain out-of-state markets not here in issue. Thus, the gas for these disputed sales is *produced solely* in Louisiana, is *transported solely* in Louisiana and is, of course, *sold solely* in Louisiana. En route to Louisiana markets, the gas for these sales is commingled in the Lirette-Mobile line with other gas destined for out-of-state markets; but none of the gas for the disputed sales *ever* leaves the State of Louisiana. These sales the examiner held are intrastate on their face; indeed, it is difficult to conceive of sales that are more clearly intrastate.

Second, United makes sales for resale to some communities in the Florida Parishes from its Kosciusko line. The gas for these sales is produced, in part, from fields some 15 to 38 miles off the Louisiana coast. En route to Louisiana markets, it also is transported in a large, high-pressure line which ultimately goes outside the State, the Kosciusko line, and is commingled with gas destined for out-of-state markets. These sales the examiner correctly held are interstate and jurisdictional because a significant portion of the gas involved is produced outside Louisiana.

The majority concludes that *all* the above sales are interstate and jurisdictional on the theory, among others, that United's system is "fully integrated." And seeking to substantiate this theory, the majority rejects the examiner's analysis of the sales in issue in the above two categories involving different facts and separate questions. Instead, the majority implies that all the sales are materially alike factually, in that all do, or did, or possibly can at times receive service with offshore gas. However, it is clear from the record that the sales to the 21 Louisiana communities in issue include one group of sales involving onshore gas transported through the Lirette-Mobile line, and another group involving offshore gas transported through the Kosciusko line.

Considering the latter group first, the record shows that offshore gas transported through the Kosciusko line is delivered to Kentwood and Roseland (Tr. 97, 134), and also to Doyle, Livingston, Port Vincent and Walker (Tr. 109). In addition, substantial offshore gas is delivered to Amite and Independence, which also receive onshore gas from the Lirette-Mobile line (Tr. 92–93). Under the principles of law discussed and applied by the examiner, the record supports a holding that these sales are interstate and jurisdictional.

In contrast, the record shows that as a matter of regular operation, onshore gas transported through the Lirette-Mobile line is used to supply Abita Springs, Bogalousa, Covington, Franklinton, Hammond, Madisonville, Mandeville, Natalbany, Pearl River, Ponchatoula and Slidell. Although there was testimony that on peak days some offshore gas from the Kosciusko line flows south of Independence a distance *toward* some of the above towns in accordance with demands and operating conditions, it was stated that the quantities of such gas could not well be determined (Tr. 135). And there was no evidence establishing which of these towns, if any, receive such offshore gas, or the quantities, if any, they receive. Thus, the compelling inference from the record is that these eleven towns receive no significant quantities of offshore gas. And this, in substance, was the conclusion of the presiding examiner who heard the testimony

A careful reading of the majority opinion (pp. 564–565) will reveal the rather surprising basis upon which it finds that these eleven towns were sold interstate gas and that the sales therefore are jurisdictional. There is no finding that significant amounts of interstate gas are regularly delivered to the towns.[2] There is not even a finding that *any* amounts have *ever in fact* been

[2] If such a finding could be made, I would agree that sales to these towns, like the sales discussed *supra*, would be jurisdictional.

delivered under present operating arrangements. Piecing together the critical findings, the strongest case assembled by the majority is that "for brief periods during 1958, 1959 and 1960" (meaning five occasions in a four-year test period), a "small amount of gas" (meaning 2 to 10 hours service on each occasion) "conceivably" "could have" flowed (meaning the evidence did not establish that this *de minimus* amount of gas *in fact* flowed or even *probably* flowed [3]) to these eleven towns. Stated more directly, the majority grounds its jurisdiction on a *remote possibility* (the word "conceivably" was well chosen) that during the four-year period covered by the testimony, an infinitesimal amount of interstate gas *might have* gotten to these towns on five brief occasions. It hardly seems necessary to draw the conclusion that this theory in support of jurisdiction does not merit serious consideration.[4]

II. *Statutory Provisions*

Whether or not the Commission has jurisdiction over United's sales of Louisiana-produced gas delivered from the Lirette-Mobile line—the question in dispute here—is to be determined on the basis of Sections 1(b) and 2(7) of the Natural Gas Act.[5] Section 1(b) gives the Commission jurisdiction over "the sale in interstate commerce of natural gas for resale," with "interstate commerce"

[3] The quotation from United's *brief* (Mimeo p. 7) is erroneously relied upon by the majority. It is not evidence upon which findings can be based, it was not subject to cross-examination and it is factually inconsistent with the carefully worded testimony in the record.

[4] The majority's quotation from *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515 (1945), like others used in its opinion, seems impressive only if taken out of context. Significantly (and consistently—see Part IV, *infra*), the majority does not explain the issues and holding of the case. The case presented a question arising under the Federal Power Act, not the Natural Gas Act. Moreover, it dealt with the jurisdictional basis for accounting regulation, not with jurisdiction over sales. At issue was the status of a primarily intrastate electric system which included facilities in a small town which *actually received* interstate electricity and received it exclusively for 24 hours per day and 365 days per year—not one that "conceivably" "could have" received it on five brief occasions in a four-year period. The Court held that if this town's facilities were not solely for "local distribution" (an issue it remanded to the Commission), then the company owned facilities for the transmission of electricity in interstate commerce and was therefore a jurisdictional company for accounting purposes, notwithstanding the fact that the rest of the system was intrastate in character.

Therefore, even if an analogy can be drawn between these two different jurisdictional issues (a highly questionable matter which need not be resolved here), the case relied upon by the majority *at most* supports only the proposition that jurisdiction attaches where a gas stream consists primarily of intrastate volumes but includes a small interstate portion which is *actually* and *regularly* present. On this much the Commission is unanimous, for this is the case in several of the towns discussed on page 570, *supra*. However, as the majority's own carefully worded findings clearly show, the evidence here does not establish that *any* interstate gas was in fact delivered or even probably delivered to the 11 towns listed above; and the evidence flatly contradicts the possibility that whatever deliveries "conceivably" "could have" occurred were regular. Thus, the majority's decision finds no real support in *Connecticut Light & Power Co.*

[5] Section 1(b) of the Act provides:

> The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution or to the facilities used for such distribution or to the production or gathering of natural gas.

Section 2(7) of the Act provides:

> "Interstate commerce" means commerce between any point in a State and any point outside thereof, or between points within the same State but through any place outside thereof, but only insofar as such commerce takes place within the United States.

defined by Section 2(7) as "commerce between any point in a State and any point outside thereof." Section 1(b) further *excludes* from coverage "any other . . . sale of natural gas," i.e. any intrastate sale.

These clear and unambiguous provisions standing alone are sufficient to establish that United's Lirette-Mobile sales are *not* in interstate commerce, and so are excluded from our jurisdiction by the last clause of Section 1(b). For as described above, the gas for these sales moves *solely within one State*, the State of Louisiana, being produced in Louisiana fields, transported solely within Louisiana and sold solely in the Florida Parishes area, still in Louisiana. Clearly, therefore, these sales do not involve "commerce between any point in a State and any point outside thereof" within the terms of Section 2(7), but only commerce between two points in the same State.

The majority finds that our jurisdiction "cannot be determined from the language of the Act alone" (pp. 566–567). But Congress felt exactly the opposite. The reports from the House and Senate Committees both stated that the provision defining interstate commerce was "*self-explanatory*." H.R. Rep. 709, 75th Cong. 1st Sess., p. 4; S. Rep. 1162, 75th Cong., 1st Sess., p. 4. Obviously the only self-explanatory interpretation of "commerce between any point in a State and any point outside thereof" is one which is confined to exactly those events—and which patently excludes the disputed sales involving only commerce between two points in the same State.

Conspicuously absent from the majority opinion is *any* interpretation of the words with which Congress carefully defined interstate commerce, much less an explanation of how that interpretation could be "self-explanatory." Instead, the majority attempts to delete this inconvenient provision from the statute by stating that "narrow 'tests' should be avoided" (p. 563).

Even United Gas—contrary to the majority's suggestion that it has taken no position on the issues before us—finds this question so clear as to be indisputable. "Certainly gas sold by the United Gas Pipe Line Company which is produced, transported, sold and consumed all within one state does not come within the definition of interstate commerce contained in the Natural Gas Act." Original Brief of Petitioner, p. 33.

III. *Intent of Congress*

The legislative history of the Natural Gas Act emphatically confirms the conclusion that the Congress meant what it said in limiting this Commission's jurisdiction to gas flowing "between any point in a State and any point outside thereof."

The predominant theme of the legislative history is that Congress by this Act did not intend to give the Commission the fullest power possible under the Commerce Clause of the Constitution, but explicitly intended only to "plug the gap" left by certain Supreme Court decisions prior to 1938.[6] As stated in the Senate Interstate Commerce Committee report, "the basic purpose of the present legislation is to occupy this field in which the Supreme Court has held that the States may not act. . . . The bill takes *no authority* from State commissions, and is so drawn as to complement and *in no manner usurp* State regulatory authority." S. Rep. 1162, 75th Cong., 1st Sess., p. 2. (Emphasis added.) The House Committee report, H.R. Rep. 709, 75th Cong., 1st Sess., p. 2, included identical language. This explicit purpose not to interfere in any way with

[6] H.R. Rep. 709, 75th Cong., 1st Sess., pp. 1–2. S. Rep. 1162, 75th Cong., 1st Sess., pp. 1–2. The relevant decisions are *Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U.S. 23 (1920); *Missouri* v. *Kansas Natural Gas Co.*, 265 U.S. 298 (1924); *Public Utilities Commission* v. *Attleboro Steam & Electric Co.*, 273 U.S. 83 (1927).

constitutional State regulation is recognized by numerous decisions of the Supreme Court stating that the Act had "no purpose or effect to cut down State power," but was to "aid in making State regulation effective" and was "drawn with meticulous regard for the continued exercise of State power, not to handicap or dilute it in any way."[7]

The gap referred to was a regulatory vacuum created by Supreme Court decisions holding that in certain circumstances the States were constitutionally powerless to regulate sales of gas. Each of these cases reversed an attempted regulation by a State of gas which came from beyond that State or which was destined beyond its borders. This and this only was the regulatory gap which Congress intended to fill and beyond which Congress explicitly stated our power was not to extend. These and these only were the cases discussed by Congress in considering this legislation.

The case before us plainly does not involve regulation of gas which originated outside of Louisiana or which is destined beyond that State's borders. Therefore, *prima facie*, the case does not fall within the class of cases to which Congress directed its attention and to which its legislation was specifically limited.

The majority argues, however, that while this gas is produced, transported and sold within one State, it is sold from an interstate pipeline to a distributor for resale and because of this characteristic is subject to our limited jurisdiction (pp. 566, 567). This flies directly in the face of the decision in *Peoples Natural Gas Co.* v. *Public Serv. Comm.*, 270 U.S. 550 (1926). There West Virginia gas was fed into an interstate pipeline system which carried it across the border into Pennsylvania, where Pennsylvania-produced gas was added to the stream. The commingled West Virginia and Pennsylvania gas was then sold for resale to a distributor further down the line in Pennsylvania.[8] A unanimous Court, which included Justices Holmes, Brandeis and Stone, stated that the West Virginia-produced gas was of interstate character and could not be regulated by the Pennsylvania Commission. However, it held that the Pennsylvania-produced gas, which was fed into part of the interstate pipeline system and commingled with the interstate West Virginia gas, could be identified in quantity and could be regulated by Pennsylvania.

Thus, the very circumstance cited by the majority to distinguish the instant sales—that they are made from an interstate pipeline system for resale—was focused upon by the Supreme Court which held that this fact does not make an interstate transaction. This dissolves the theory relied upon by the majority that the transmission in part of an interstate pipeline system of intrastate gas converts it to interstate gas or somehow changes its nature.

Second, and equally important, this decision establishes in a clear and unambiguous holding that a State commission can regulate wholesale sales of gas produced, transported and delivered solely within that State notwithstanding its transmission in part of an interstate pipeline system. Therefore, wholesale sales of this nature do not fall within the regulatory gap which defines and delimits our jurisdiction. Rather, these wholesale sales are subject to State regulation and are precisely the type of sales which Congress explicitly excluded from this Commission's realm.

---

[7] See *e.g.*, *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954), erroneously relied on by the majority; *Panhandle Eastern Pipe Line Co.* v. *P.S.C.*, 332 U.S. 507 (1947); *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, 610 (1944).

[8] The West Virginia portion of the system was owned by a different corporation, unaffiliated with the Pennsylvania portion. However, the Court treated the fact of divided ownership as immaterial, stating that "the passing of custody and title [of the gas] at the state boundary without arresting the movement to the destinations intended are minor details which do not affect the central nature of the business." 270 U.S. at 554.

But the majority contends that its regulatory powers would be more logical and complete if the Commission had jurisdiction over all wholesale sales (pp. 567–568). However, unlike the majority of this Commission, the Congress which enacted the Natural Gas Act was not striving to create a complete and comprehensive plan of federal regulation which readily pre-empted State regulatory authority in an urge for a consistent "statutory scheme." Instead, Congress made crystal clear its purpose was to set up a commission with limited jurisdiction created only to fill the regulatory gap and not to displace any constitutional State regulation. This was manifest in the statutory provisions,[9] explicitly stated in both Committee reports[10] and reaffirmed in the clearest of language in the debates before both houses of Congress. In his introductory remarks the House sponsor of the bill, Congressman Lea, stated "The primary purpose of the pending bill is to provide Federal regulation, in those cases where the State commissions lack authority, under the interstate commerce law. *This bill takes nothing from the State commissions; they retain all the State power they have at the present time.*" 81 Cong. Rec. 6721 (1937). The Senate sponsor, Senator Wheeler, was equally clear: "[A]nd let me say to the Senator that, as a matter of fact, *the bill does not interfere with the State regulation, in any way, shape, or form.*" 81 Cong. Rec. 9312 (1937). (Emphasis added.) It is difficult to understand the majority's willingness to cast aside these repeated and unanimous expressions of intent to preserve constitutional State regulation in favor of its own concept of logical regulatory power which is nowhere mentioned in the Act or reports or debates, which contradicts the statutory definition of interstate commerce and which usurps State regulatory authority.

In conclusion, it is an instructive observation, although not a surprising one, that the intent of Congress as revealed by the legislative history independently supports and exactly explains the jurisdictional limitation contained in the statutory definition of interstate commerce. As stated by the Committee reports and the sponsors of the bill, Congress intended to fill a regulatory gap but not to displace any constitutional State regulation. The gap was created because the States were held powerless to regulate gas which flowed in more than one State. Thus, the Act was deliberately worded to apply only to gas flowing "between any point in a State and any point outside thereof," a standard which Congress considered self-explanatory. At the same time the Act explicitly excluded authority to regulate "any other . . . sale of natural gas."

The sales disputed here do not involve gas which flows between two States. They involve only gas produced, transported and sold solely within Louisiana. Its transmission in part of an interstate pipeline system does not make it "interstate," nor is Louisiana powerless to regulate it. I submit, therefore, that consideration of the legislative history compels the conclusion that regulation of these sales is not within our jurisdiction.

IV. *Judicial Decisions defining Interstate Commerce*

The distinction between interstate and intrastate commerce based on actual movement between States has been recognized and maintained by the courts. The Supreme Court as long ago as 1914 noted that commerce in principle identical to that involved in this case is intrastate. In the familiar *Shreveport Rate Cases, Houston, E. & W. T. R. Co.* v. *U.S.*, 234 U.S. 342, the Court accepted as seemingly self-evident the principle that railroad traffic between two points in Texas was intrastate, although the trains and railroad lines which carried the intrastate

[9] See Part II, *supra*.
[10] See pp. 572–573, *supra*.

traffic went to and served markets outside the State. And as recently as 1945 the Court, in *North Carolina* v. *U.S.*, 325 U.S. 507, accepted the same principle that rates concerning passengers traveling within the State of North Carolina on trains going outside the State were intrastate. These authorities clearly establish that United's disputed sales are intrastate and non-jurisdictional, as the examiner held.

The majority attempts to avoid the otherwise controlling effect of these decisions by observing that intrastate train passengers are more easily identifiable than intrastate gas molecules. This is true but irrelevant, for it ignores two determinative facts: that the critical event with which we are concerned is the sale by United to the local communities; and that at the time and place of sale, *each and every* cubic foot of gas delivered by United is both identifiable and identified as gas produced, transported and sold solely within Louisiana. Like the passengers in *Shreveport*, all the gas involved in the disputed sales is unquestionably known to be exclusively intrastate.

Indeed the *Shreveport* principle has been applied specifically to natural gas in the *Peoples* case, *supra*. As noted in Part III, the unanimous Court there held that gas produced, transported and sold solely within Pennsylvania, yet carried in part of an interstate pipeline system and commingled with interstate gas, maintained its intrastate character. With clarity that can be ignored but not distinguished, the Court stated:

> As respects the Pennsylvania gas we think it must be held to be in intrastate commerce only. Feeding it into the same pipelines with the West Virginia gas works no change in this regard. Of course after the commingling the two are undistinguishable. But the proportions of both in the mixture are known and that of either readily may be withdrawn without affecting the transportation or sale of the rest. So for all practical purposes the two are separable, and neither affects the character of the business as to the other. [270 U.S. at 554–55.]

Similarly, in *State of North Dakota* v. *F.P.C.*, 247 F. 2d 173 (8th Cir. 1957), it was held that gas produced, transported and sold within one State was intrastate notwithstanding its transmission in part of an interstate pipeline system commingled with interstate gas. There the narrow question was whether the sale of gas by a North Dakota producer to an interstate pipeline for resale in North Dakota was jurisdictional. The court framed the issue: "Does natural gas produced, wholesaled, transported and sold for immediate consumption solely within the State of North Dakota become a proper subject for federal regulation as being in interstate commerce, because part of its transportation occurs in a commingled state with gas admittedly being transported in interstate commerce?" It concluded: "The transactions in question cover gas produced, transported, sold and consumed entirely in the State of North Dakota. That does not constitute interstate commerce in any sense of the word." 247 F. 2d at 176–178.

In decided contrast to the facts of the above cases and those of the sales disputed here, *each and every* decision cited by the majority involved a stream of gas which, at the time and place of regulation, included at least substantial amounts coming from or destined to go beyond the State, with no attempt to identify or separate the intrastate portion (if any). In *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, 675 (1954), the Court stated that, after processing, the gas was sold and delivered to an interstate pipeline company and "then continues its flow through the interstate pipeline system until *delivered in other states*." The court in *Deep South Oil Co.* v. *F.P.C.*, 247 F. 2d 882, 887 (5th Cir., 1957), concluded: "We think it plain that they [the sales in issue] are sales 'in interstate commerce' for the obvious reason that the sale of gas originating in

one State for its transmission and delivery to distributors *in any other State* constitutes interstate commerce." Similarly, the court found in *Kentucky Natural Gas Corp.* v. *Public Serv. Comm'n.*, 28 F. Supp. 509, 511–12 (D. Ky. 1939), that "in the first three months of 1939 from 47 to 53 percent of the gas sold in Kentucky was brought in from outside the State, principally from the Panhandle Eastern Pipe Line." [11] (Emphasis added.)

Thus, the cases have uniformly maintained the distinction between interstate and intrastate commerce which Congress adopted in explicit statutory language characterized in its committee reports as "self-explanatory." Where the gas stream was transported in part of an interstate pipeline system but consisted only of gas produced, transported and sold solely within one State, it has been held a matter for State regulation and beyond the statutory authority granted this Commission. Our jurisdiction has been affirmed by the courts *only* where the gas stream at the time and place of regulation included gas flowing "between any point in a State and any point outside thereof." The majority's quotation of general language from these cases affirming jurisdiction can hardly justify a decision not contemplated by those courts, specifically rejected by other courts and expressly prohibited by the legislative history and the statutory language.

V. *Regulation of this Gas When Produced*

The majority assumes that the sales to United by the producers of this gas have been regulated by the Commission,[12] and from that argues that the gas was and continues to be in interstate commerce (p. 563). An understanding of a fundamental factual distinction compels rejection of this argument.

It is true that in the *Deep South* case, *supra*, the court *treated* the sales of gas by the producers as in interstate commerce even though the stream included an unspecified and unidentified amount to be consumed within the State.[13] However, this result was compelled by one reason, and one reason only—the gas stream was composed of substantial portions of gas destined beyond the State, and since there was no attempt and no means to identify the intrastate portion, the court had to *treat* the entire stream as interstate.

That situation is to be directly contrasted with the case in which the intrastate gas is specified and identified. The *State of North Dakota* case, *supra*, involved precisely the same facts as *Deep South* with the one exception that the intrastate portion of gas feeding into the interstate pipeline was identified by the producers. Under such circumstances the court held that the sales of the intrastate portion were not in interstate commerce and were non-jurisdictional. See p. 573, *supra*.[14]

---

[11] This case is in principle identical to the *Deep South* case (see Part V, *infra*)—since the gas stream included substantial interstate volumes and there was no attempt or means to identify the fluctuating intrastate portion, the court was forced to treat the entire volume as interstate. Thus, the case is in direct contrast to the instant case (where *all* the gas involved in the disputed sales is positively identified as intrastate), rather than "almost directly in point" as stated by the majority (p. 565).

[12] The facts pertaining to the sales by the producers were not developed in the record but can be assumed arguendo as herein stated.

[13] The Supreme Court in *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954), assumed that *all* of the gas involved was resold outside the producing State. See 347 U.S. at 675. Thus, it did not deal with the situation presented here, and the majority's statement that "the Court was apparently untroubled by the fact that some of the purchasing pipelines resold the gas bought from Phillips within the state in which it was purchased" is based on an erroneous "fact."

[14] The Commission's attempt in *Lo Vaca Gathering Co.*, 26 FPC 606 (1961), to overrule the 8th Circuit's decision in *State of North Dakota* is interestingly cited by the majority as authoritative (p. 564).

In the instant case the initial sales of gas *by the producers* include large volumes destined beyond the State, as well as the intrastate gas. Since there is no attempt or means to identify the intrastate portion, the Commission justifiably has *treated* the entire volume of gas sold by the producers as interstate. However, in the sales *by United* now in dispute, all of the gas involved is unquestionably identifiable and identified as exclusively intrastate. Each cubic foot is known to be gas produced, transported and sold solely within Louisiana. Therefore, the necessity no longer exists for treating this portion as interstate gas. For the majority to continue to do so violates without justification the explicit statutory language, the manifest intent of Congress and the uniform holding of the courts.

VI. *"Impact" on United's System*

The majority finally attempts to bolster its jurisdictional expansion by pointing to an alleged adverse impact of State regulation of these sales and to the "fully integrated" nature of United's system. Each can be disposed of in short order.

There is simply no basis in the facts for the majority's finding that the disputed sales have an adverse, substantial impact upon the national interest in commerce, or upon the effectiveness of Commission regulation, or upon any other matter of proper concern to this Commission. Certainly, the record of the one-day hearing in this case is barren of evidence showing any such impact on any such matters. In fact, no effort was made to explore the possibility of any impact, the question evidently not being considered important. See, e.g., Tr. 35, 36, 39, 138–139.

As to an impact on the national interest in commerce, presumably the important effect would be the rate impact. The majority points to differences between certain of United's intrastate rates prescribed by the Louisiana Commission and interstate rates prescribed by the Federal Power Commission. But the Federal Power Commission in prescribing interstate rates follows definite allocation-of-costs principles[15] which insure that the interstate rates bear their fair share of system costs and no more. These principles the Commission applies on the basis of its own judgement, without necessarily regarding any allegations of United or the Louisiana Commission respecting what they may consider to be the proper allocation of costs to intrastate sales.

Thus, the short, clear answer to the majority's unsupported speculation is that the Natural Gas Act now unquestionably permits jurisdictional companies to engage in non-jurisdictional operations and provides the mechanics for isolating them. These non-jurisdictional operations include not only intrastate sales for resale—such as the ones here in issue—but also direct industrial sales, sales of extracted liquids, sales of oil produced in association with gas by integrated pipelines, etc. If and when this Commission finds such non-jurisdictional operations adversely affect the prime beneficiary of the Natural Gas Act—the gas consumers—its duty will be to inform Congress and request a statutory amendment prohibiting them. However, such a finding has not been and could not be made here because of the total absence of record support and because proper application of cost allocation principles assures that jurisdictional customers pay only their fair share of system costs. The suggestion by the majority that costs from non-jurisdictional activities might be "reflected in higher interstate

[15] Applied in *Atlantic Seaboard Corporation*, 11 FPC 43 (1952), and frequently applied since. See the Commission's 1954 *United* opinion cited by the majority in footnote 2; and see Op. No. 387 in *American Louisiana Pipe Line Co., et al.*, issued May 16, 1963, 29 FPC 932, in Docket No. G–18419, *et al.*, and cases there cited.

rates" (p. 565) is totally without historical or legal foundation and will be disavowed and denied by the majority tomorrow if a regulated company seeks to justify a rate based on non-jurisdictional costs.

The majority further argues that United's sales in Louisiana may reduce the reserve and otherwise affect the quantities of gas available for out-of-state markets. Again, this basis for decision finds no support in the record. There is no evidence whatsoever that the onshore Louisiana reserves supplying these sales have been dedicated by United to the interstate market or have been relied upon by the Commission in approving United's expansions in the interstate market. But even if these reserves had been dedicated, the appropriate and conventional action would be for the Commission to issue an order requiring United to obtain an abandonment certificate before using the reserves for non-jurisdictional sales. This procedure, which is regularly used by the Commission, reserves control in the Commission over dedicated reserves and completely protects the interstate market.[10] The theory of the majority—that "we might be powerless to prevent United from selling gas in the producing state even though, as here [sic], that gas has been dedicated to the interstate market by a certificate of public convenience and necessity and even though we relied upon the availability of that gas in authorizing sales for resale to customers in other states" (p. 565)—is utter fiction contradicted by our regular practice. I can predict with confidence that it will be immediately dropped as soon as its genesis—this decision—is completed.

The majority's finding that United's disputed sales are "interdependent" with United's "fully integrated" system likewise is without substantial support in the facts or reasonable basis in the law. In practical effect, United's interstate and intrastate sales constitute separate businesses of one company. The Commission today effectively regulates United's interstate transportation and sales, as it has in the past, without concerning itself with the intrastate aspects of the company's business which are regulated by the State authorities. Indeed, Louisiana has been regulating substantially identical sales of United in its New Orleans Zone immediately adjacent to United's Jackson District without interfering with the effectiveness of Commission jurisdiction in the slightest. Similarly, the Commission regulates the interstate aspects of dozens of other natural gas companies while leaving the intrastate and other non-jurisdictional aspects to the States.

Although these sales are a part of United's overall business, as a practical matter they are only incidental to and are readily separable from it. On analysis it appears that the majority's "interdependence" or "fully integrated" factor, is in reality largely an aspect of its "substantial impact" factor, which the preceding discussion shows to be factually and legally without foundation. Thus, there is no basis either in fact or law for a holding that because one part of United's business is interstate the intrastate portion thereof also becomes interstate, as the numerous authorities cited by the examiner also clearly show.

---

[10] Section 7(b) of the Act provides:

> No natural-gas company shall abandon all or any portion of its facilities subject to the jurisdiction of the Commission, or any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity permit such abandonment.

It has been consistently construed to provide sufficient power in the Commission to protect jurisdictional customers. See *Panhandle Eastern Pipe Line Co.* v. *Michigan Consol. Gas Co.*, 177 F. 2d 942 (6th Cir. 1949); *J. M. Huber Corp.* v. *F.P.C.*, 236 F. 2d 550 (3d Cir., 1956).

CONCLUSION

Manifestly, United's Lirette-Mobile sales are, under the law and on the facts, intrastate and not subject to Commission jurisdiction. How, then, shall we finally appraise the majority's contrary decision in this case?

It would seem that the majority's decision stems from a conviction that Commission regulation of United's sales, and all sales of their character, is desirable and necessary in that it would enable the most complete and thorough regulation of the natural gas industry possible by a federal agency whose power and resources far exceed those of any State agency, and would thus insure to the consumers of natural gas the ultimate degree of protection in all respects now and for the future.

This objective, seemingly so laudable, is upon analysis subject to some very fundamental objections. First, it is not an objective permitted by the statute, which gives the Commission jurisdiction only over interstate and not intrastate commerce. Nor was it intended by Congress when it enacted the Natural Gas Act, for Congress specifically stated that Commission regulation under the Act was to supplement and not supplant State regulation. Further, it is not permitted by judicial decisions, which establish that these sales are intrastate.

Basically, this objective assumes that the scope of Commission jurisdiction under the Act is co-extensive with this Commission's assessment of the need for consumer protection. This is not correct. Of course, as the Supreme Court has said, the primary aim of the Act is to protect the consumer. But jurisdiction does not depend on or follow consumer need; it is established by law, and remains as thus established until changed by the legal process available through Congress. Although the overall aim of the Act is to protect the consumer, the statute itself represents a recognition and accommodation of conflicting interests—the preservation of local regulation over local transactions, as opposed to pervasive federal regulation reaching constitutional limits; the opposing interests of the several segments of the industry; opposing economic and sectional interests. Fairness to all those affected by Commission regulation and faithfulness to law require that we adhere meticulously to the statute by which Congress through the elected representatives has been fit to resolve these conflicting interests.

As stated recently by Commissioner Woodward in the *Montana-Dakota* case, Opinion No. 395 issued July 15, 1963, 30 FPC 200, 210:

> We must ever keep in mind that the basic concept of our society is the rule of law—law exercised in conformity with constitutional principles and by democratic processes. Thus the Constitution provides for the division of power between the state and federal governments, and between the three branches—legislative, judicial, and executive—of the federal government. And Congress, acting under the Commerce Clause and by the democratic process through the people's elected representatives, provides laws, of which the Natural Gas Act is an example, designed to reconcile diverse and conflicting interests in our nation and society in the interest of the whole people. It is essential to the attainment of the objectives of such legislation that the commands of Congress, and the courts' interpretations thereof, be vigorously obeyed. It is equally essential to the preservation of our basic concepts, our constitutional system, and our democratic processes, and to the preservation of the public respect for law which is their indispensable foundation, that we do not permit either our desire for what we may deem high achievement, or our misgivings concerning the quality of others' achievements, to lead us to assert authority or exercise functions which a preponderance of the guiding considerations shows are not ours.

INITIAL DECISION
OF THE PRESIDING EXAMINER ON A PETITION FOR DECLARATORY ORDER TO DETERMINE JURISDICTION

(Issued February 25, 1963)

ZWERDLING, *Presiding Examiner:* On January 8, 1962, United Gas Pipe Line Company (United) filed a Petition for Declaratory Order under Section 16 of the Natural Gas Act and Section 1.7(c) of the Regulations thereunder, requesting that the Commission determine a question of jurisdiction regarding certain gas sales made by United in the Jackson District of Eastern Louisiana. The sales in question are made in that part of the State of Louisiana lying north of Lake Pontchartrain and east of the Mississippi River, an area known as the Florida Parishes of Louisiana. Such sales are made to the communities of Kentwood, Roseland, Greensburg, Montpelier, Amite, Independence, Natalbany, Hammond, Ponchatoula, Madisonville, Mandeville, Franklinton, Bogalusa, Covington, Abita Springs, Pearl River, Doyle, Livingston, Walker, Port Vincent and Slidell. By order issued April 13, 1962, the Commission granted United's Petition for Declaratory Order and set the jurisdictional question for hearing.

The jurisdictional controversy presented here arose as follows. All of United's sales for resale made in its Jackson District, including those in the Florida Parishes area, are regulated by the Federal Power Commission and have never been regulated by any other agency. All of United's sales for resale made in its New Orleans District are regulated by the Louisiana Public Service Commission. On November 2, 1954 the Commission issued Op. No. 277 (13 FPC 398) approving a settlement in a *United* rate proceeding (Docket No. G–1142, *et al.*). The Commission found therein that the sales and services rendered in United's so-called Northern Area, including the Jackson District, were subject to the jurisdiction of this Commission, while the sales and services rendered in United's so-called Southern area, including the New Orleans District, were not subject to Commission jurisdiction.

On June 8, 1961 the Louisiana Public Service Commission issued an order directed to United to show cause why United should not be required to charge its intrastate New Orleans Zone rates for all gas sold in the Florida Parishes area of Louisiana. By such order the Louisiana Commission indicated its intention to exercise regulatory jurisdiction over all those sales of United made within the Florida Parishes area and which were then being regulated by the Federal Power Commission, unless United could show adequate cause to the contrary. On February 5, 1962, after hearing, the Louisiana Commission issued its final order directing United to apply within the Florida Parishes area gas rates no higher than those presently authorized within its New Orleans Zone. The rate charged by United to its resale customers in its Jackson District, as regulated and prescribed by the Federal Power Commission, amounts to 33.7 cents per Mcf. The rate authorized by the Louisiana Public Service Commission for gas sold by United in its New Orleans Zone is 24.85 cents per Mcf. Application of the New Orleans Zone rates to United's sales for resale made in the Florida Parishes area in 1961 would have resulted in revenues $304,000 lower than those actually collected by United under its higher FPC-approved Jackson Zone rates. (Exh. 8, p. 14)

United takes the position here that it does not know whether the sales in question are properly subject to the jurisdiction of the Federal Power Commission or the Louisiana Public Service Commission. It emphasizes that it is not interested in advancing the jurisdiction of either regulatory commission

over that of the other. However, United notes that it is faced with conflicting orders of two regulatory commissions, which forecast the possible imposition of severe penalties because of its obvious inability to comply with both orders. In order to resolve this conflict it filed the instant petition for a declaratory order to determine the jurisdictional question.

United is engaged in the transportation and sale for resale of natural gas in interstate commerce. It transports by means of its integrated pipe-line system natural gas produced from fields in Texas, Louisiana and Mississippi and delivers and sells it to industrials, other pipelines, and distribution companies in the foregoing States and also in Alabama and Florida.[1]

Prior to the year 1951 United's Florida Parish customers located within its Jackson operating district were served gas, some or all of which was produced in the State of Mississippi, which gas was moved through pipelines from that State into the State of Louisiana for resale to such Florida Parish customers. However, during the year 1951 the delivery to these customers of gas produced in the State of Mississippi ceased, and no gas produced in Mississippi has been delivered to them since that time.

Since 1951 all gas sold by United to its customers in the Florida Parishes area has been produced in South Louisiana and in offshore fields located in the Gulf of Mexico. (1:87) The facilities utilized by United to transport gas to its Florida Parishes customers are its Napoleonville, Louisiana to Kosciusko, Mississippi 30-inch line and its Lirette, Louisiana to Mobile, Louisiana 14–16 inch line. Out of the total supply of gas introduced into these pipeline facilities (from the fields in South Louisiana and offshore from South Louisiana) United makes deliveries to customers located both within the State of Louisiana and outside the State of Louisiana. Gas is introduced into United's Kosciusko line from production leases located in the Gulf of Mexico on the Continental Shelf, between 15 and 38 miles from the Louisiana shoreline. The gas is transported from its production points offshore to the mainland, being brought on shore in Louisiana at a point northwest of Four League Bay. Thence, it is conveyed northeasterly through United's 30-inch Kosciusko pipeline to the Napoleonville Compressor Station and commingled with gas produced onshore in Louisiana. The gas continues moving northeasterly through United's Montpelier Compressor Station to the Mississippi state line for ultimate sale for resale to customers outside the geographical limits of Louisiana. However, before the gas crosses the Louisiana-Mississippi boundary line, the portions here involved are sold for resale in the Florida Parishes area of Louisiana.

The Florida Parishes area also receives gas from United's Lirette-Mobile pipeline which originates in an onshore producing area of Louisiana and, following a course eastward of the Kosciusko line, crosses the Louisiana boundary into Mississippi at a point east of Lake Pontchartrain. Shortly after passing under Lake Pontchartrain, but before entering Mississippi, the Lirette-Mobile line supplies certain Florida Parishes communities through a 10-inch lateral which in turn continues northward and eventually joins United's system in the general area southwest of Jackson, Mississippi. It is undisputed that all of the gas transmitted by United in its Lirette-Mobile line enroute to the Florida Parishes area is onshore Louisiana gas.

Testimony introduced by United indicates that on five different occasions, twice during the month of January 1958, once in November 1958, once in May 1959, and once in July 1960, for periods varying from two hours up to 9 or 10 hours, some very small quantities of gas produced in Louisiana and offshore fields

[1] Op. No. 277, 13 FPC at 404.

flowed back across the Mississippi state line, through the 10-inch line extending north from Bogalusa, Louisiana, after that gas had already been transported across the state line. This backflow extended as far south as Bogalusa and possibly a little further. The United witness had not checked this situation since October 13, 1961, but he testified that he had no occasion to believe there had been any more backflows since that time. (1:127) Although this situation is referred to briefly in the Staff's Statement of the Case at the beginning of its instant brief, the Staff makes no contention that such brief, sporadic and accidental backflows occurring prior to 1961 could have any bearing upon the merits of the jurisdictional issue presented in this case.

Although, as earlier noted, the Commission in Op. No. 277, 13 FPC 398 (1954), held that United's sales in its Jackson District (which would include the Florida Parishes area) were subject to the jurisdiction of this Commission, it is important to recognize that this bare conclusion was there expressed in summary fashion, without discussion or analysis of any kind, as part of a decision approving a general rate settlement for United—and that the final result arrived at reflected the settlement process, rather than any firm determination based upon principles. One of the problems involved in that *United* rate proceeding resulted from Notices of Cancellation which had been filed by the company with respect to certain sales, based upon United's theory that these sales were intrastate in character and not subject to the jurisdiction of this Commission. On the last day of the G–1142 hearing, when the terms of the proposed settlement were spread upon the record, Staff Counsel summarized the situation with respect to these Notices of Cancellation, noting that United had agreed to move to withdraw certain of the cancellation notices, while certain other cancellation notices were to be made effective by an agreed date. (Docket No. G–1142, Vol. 35, Tr. 3048–9) In expressing agreement to the terms of the settlement, United's counsel stated: "The statements with respect to the cancellations were agreeable to United, *and were an integral part of this matter.*" [G–1142, 35:3081; Emphasis supplied.] Pursuant to this agreement, Op. No. 277 provided that United would move to withdraw its Notices of Cancellation with respect to certain listed sales, including those in the Florida Parishes area of the Jackson District. In a brief summary paragraph in that opinion the Commission disposed of the jurisdictional question in the following language:

> The New Orleans District is divided into New Orleans #5, which United conceives to be intrastate in nature; and New Orleans #6, which is interconnected with its interstate facilities. The Jackson District includes Northwest Mississippi which is not physically interconnected by existing gas transmission pipe lines. The sales and services rendered in United's so-called Northern Area, which includes the Dallas, Shreveport, Monroe, and Jackson districts, are subject to the jurisdiction of this Commission. The sales and services rendered in United's so-called Southern area, which includes the San Antonio, Houston, Beaumont, Southeast Louisiana, and New Orleans districts, are not subject to the jurisdiction of this Commission. [13 FPC 398, 405]

It is of interest to note that although the Commission recognized in the above statement that New Orleans #6 was interconnected with United's interstate facilities, as distinguished from New Orleans #5 "which United conceives to be intrastate in nature", the Commission nevertheless expressed the conclusion that all sales rendered in the *entire* New Orleans District were "not subject to the jurisdiction of this Commission". It seems clear that the relevant facts with respect to New Orleans #6 were identical with those involved in the instant proceeding in the case of the sales off United's Lirette-Mobile line to the Florida

Parishes area in the Jackson District—in that in both situations all of the gas entering United's Lirette-Mobile line is produced in onshore Louisiana and is sold off United's interstate system for consumption inside the State of Louisiana.

On the other hand it is also of interest to note, with respect to the Commission's Op. No. 277 labeling of the Jackson District sales as jurisdictional, that the instant Florida Parishes area constitutes only a very minor part of the entire Jackson District; that most of the Jackson District lies north of the Louisiana boundary line, comprising the entire State of Mississippi; and that the gas sold by United throughout the State of Mississippi, in the Jackson District, clearly was transmitted from other states and thus admittedly constituted interstate gas.

Under all the circumstances set forth above, it seems clear that the jurisdictional question in Op. No. 277 was treated, to some extent, as the subject of bargaining, as a part of the overall settlement—and that the Commission's summary jurisdictional statement in Op. No. 277 accordingly should not be given any weight in resolving the jurisdictional issue in our instant proceeding.

The instant hearing was held on May 7, 1962. Interveners included Louisiana Gas Service Company, a group of industrial consumers, and the Louisiana Public Service Commission and the State of Louisiana—hereafter referred to as the Louisiana interveners. Other interveners were Willmut Gas and Oil Company and Texas Gas Transmission Corporation.

The positions of the various parties may be summarized as follows. As already noted, United states that it does not know whether the sales in question are properly subject to the jurisdiction of the Federal Power Commission or of the Louisiana Public Service Commission. However, United's brief concludes that this Commission has jurisdiction over the transportation of gas from the offshore fields to the Florida Parishes area, if such offshore fields are ultimately found to be beyond the seaward boundary of the State of Louisiana. On the other hand, United concludes that gas sold in the Florida Parishes area which is produced in onshore Louisiana, or in offshore fields inside the Louisiana boundaries, is not jurisdictional. The Louisiana interveners contend that all of the gas sold by United in the Florida Parishes area is non-jurisdictional. The Staff of the Commission and Willmut Gas and Oil Company content that all of such sales are jurisdictional.

It is concluded here, for reasons set forth at length below, that all of United's sales for resale made in the Florida Parishes area off its Lirette-Mobile line are non-jurisdictional; and that all of United's sales for resale made in the Florida Parishes area off its Kosciusko line are jurisdictional.

I. *Sales in Florida Parish Area Off United's Lirette-Mobile Line*

As earlier noted, all of the gas transmitted by United in its Lirette-Mobile line enroute to the Florida Parishes area, and all of the gas sold by United off that line in the Florida Parishes area, is onshore Louisiana gas.

In examining the jurisdictional issue with respect to these particular sales, attention will first be directed to the possible applicability of the Commission's *Lo-Vaca* decision, Op. No. 348 (October 1961).[2] In a letter of December 13, 1961, addressed by the Chairman of this Commission to the Louisiana Public Service Commission, indicating that the instant jurisdictional question might appropriately be determined in a declaratory order proceeding, it was suggested that United's sales of Louisiana onshore gas in the Florida Parishes area, off its Lirette-Mobile line, "may well be governed by the rationale and decision

[2] 26 FPC 606 (1961).

of this Commission in Opinion No. 348 in *Lo-Vaca Gathering Company*, Docket No. CI60-693 and *Houston Pipe Line Company*, Docket CP61-177".

In the *Lo-Vaca* case the gas in question was produced in the State of Texas, and was sold by Lo-Vaca and Houston to El Paso Natural Gas Company in that state. Under the terms of the sales contracts with El Paso, the Lo-Vaca gas was to be used by El Paso solely for fuel in its facilities located outside the state;[3] and the Houston gas was to be consumed by El Paso solely as fuel in the operation of certain facilities in the State of Texas. The Commission held in Opinion No. 348 that, regardless of the terms of the contracts, the gas received by El Paso in Texas from Lo-Vaca and Houston would move physically in a commingled stream; that part of such commingled stream (which was bound to include a portion of the Lo-Vaca and Houston gas, regardless of the contract provisions) would move in El Paso's system to other states; that under these circumstances the specific gas sold by Lo-Vaca and Houston would actually in part be resold to customers outside of Texas, and that it would be physically impossible to restrict the consumption of this gas to El Paso's own facilities either inside or outside the state; that accordingly the sale of gas by Lo-Vaca and Houston to the El Paso interstate system must be regarded as subject to FPC jurisdiction.

It is of critical importance to note here that in the *Lo-Vaca* case the jurisdictional issue was directed to the sale made by the producers *to El Paso*, and the jurisdictional finding was based upon the Commission's conclusion that *some part* of the gas sold to El Paso under these contracts was bound to move physically as part of the commingled stream in El Paso's interstate line *to other states*, regardless of the terms of the contracts. By contrast, in our instant *United* proceeding the jurisdictional issue is directed to the sale made by United itself, of Louisiana gas, off its Lirette-Mobile line to local distribution companies in the Florida Parishes area, for consumption in that area. The issue is whether *that particular sale* by United is a "sale in interstate commerce". No contention is made, and there is admittedly no possibility that the gas which is the subject *of that sale* by United, or *any part thereof*, will thereafter be transported in interstate commerce outside the State of Louisiana.

It therefore seems clear that we do not have a *Lo-Vaca* situation in the instant proceeding.

On the face of it, the particular sales here involved—of gas produced in the State of Louisiana, transported by United entirely within that state, and sold to local distribution companies off the Lirette-Mobile line in the Florida Parishes area of Louisiana for resale and ultimate consumption there—would seem to fall clearly within the standard, established concept of *sales in intrastate commerce*. Certainly no one would contend here that this particular sale is of gas which as of that time had already "commenced its journey in interstate commerce", as part of "a continuous movement of such gas to an interstate destination". [*Deep South Oil Co.* v. *F.P.C.*, 247 F. 2d 882, 888 (CA 5, 1957).]

The only basis for the contention that these sales should be regarded as sales *in interstate commerce* is the fact that the gas in question, while enroute to the Florida Parishes area, is transported on United's interstate pipeline; and the fact that this gas, while so transported to the Florida Parishes area, is commingled with other Louisiana-produced gas which ultimately flows on into other states on the United System.

At the outset, it should be noted that this "commingling" aspect, while seeming at a superficial, uncritical glance to provide a surface similarity with the *Lo-Vaca* case, is nevertheless totally irrelevant to the jurisdictional issue here

[3] In other words, under the terms of the contract it was not a sale for resale.

involved. As already pointed out, the effect of the commingling in the *Lo-Vaca* case was that *some part* of the gas delivered to El Paso under the contracts there involved was physically bound to move as part of the commingled stream in El Paso's interstate line *to other states*, regardless of the terms of the contracts. However, the effect of the "commingling" in our instant *United* case is merely that the gas here in question, sold and delivered off United's Lirette-Mobile line to local distribution companies for consumption in the Florida Parishes area, "kept company" up to that point with gas which continued on into other states. It is difficult to see how it can seriously be thought that the gas in question, under such circumstances, by virtue of merely rubbing shoulders with other Louisiana gas having an ultimate out-of-state destination, could have acquired an "in interstate commerce" character through some process of "guilt by association".

There remains then, as the only possible basis for the contention that the instant sales should be regarded as "sales in interstate commerce", the theory that this gas is transported on and sold off United's interstate system, which is engaged in commerce between different states; that if Louisiana were allowed to fix the rates for United's sale of the instant gas off its interstate system to local distribution companies in the Florida Parishes area, the state's exercise of such jurisdiction *might* have an effect or impact upon United's interstate service. The Staff brief states this position as follows:

> . . . The sales are in interstate commerce because they are an integral part of a much larger interstate operation, all aspects of which are interdependent, with what happens at any one place in the system necessarily affecting the operations at all others. . . . the price at which United's gas is sold in Louisiana will affect the just and reasonable prices at which it can sell that part of its overall gas purchases in Mississippi and where Louisiana attempts to force a different rate or service pattern upon the Louisiana portion of the interstate system it is thus not merely adversely affecting interstate commerce in the transportation and sale of gas traveling between Louisiana and the other states on United's pipeline. Instead, in a very real sense, it is regulating sales of gas in interstate commerce assigned by the Natural Gas Act to the exclusive regulatory control of this Commission. [p. 14.]

Although it is recognized here that Louisiana regulation of United's rates for the instant local sales in the Florida Parishes area might conceivably have an effect or impact upon United's interstate operations, that in itself cannot be regarded as a basis for stretching the definition of "sales in interstate commerce" to cover transactions which traditionally have been regarded as intrastate in character.

It could not seriously be contended that any and every operation by a "natural-gas company" *within a state* must necessarily be regarded as an interstate operation, merely because state regulation might conceivably result in a multi-state concern, or an intrastate conflict of interest.

> . . . gas pipeline companies can be engaged in both intrastate as well as interstate business and have the intrastate portion not subject to FPC jurisdiction. . . . [*State of North Dakota* v. *Federal Power Commission*, (CA8, 1957) 247 F. 2d 173, at 177.]

The manner in which situations of this type have been handled by this Commission in the past is strikingly illustrated by Op. No. 343, *Kansas-Nebraska Natural Gas Co., Inc.*, 25 FPC 448 (1961). Kansas-Nebraska is a combined production, interstate transmission and retail gas distribution company, transmitting natural gas and distributing it both at wholesale and retail in the States of Kansas, Nebraska, and Colorado. All of its gas sold in Kansas is produced in that state. It is carried north and northeasterly through Kansas on the company's

interstate system, with 60 percent of the gas being sold for consumption in Kansas and 40 percent being carried through to Nebraska, where the latter volume is commingled with gas produced in the Julesburg Basin (located in western Nebraska and Colorado) and sold throughout the State of Nebraska. All of the company's sales in Kansas, including its sales for resale, were treated as non-jurisdictional sales, whose rates were regulated by the Kansas Commission. This created certain potential interstate conflicts of interest, which were discussed by the Commission in Op. No. 343 (25 FPC 454). In connection with the allocation of production costs Kansas-Nebraska opposed the "rolled-in" method, under which production costs are allocated to the entire system on a pooled basis, irrespective of the sources of the gas—on the ground that none of the more expensive Julesburg Basin gas was delivered to Kansas customers. The Kansas Commission, as an intervener supported the company approach on the ground that in regulating the company's intrastate rates in Kansas that Commission could not, under Kansas law, charge Kansas customers with the costs for a gas supply located outside the state. The Kansas Commission accordingly contended that if the "rolled-in" method were adopted by the Federal Power Commission in connection with its regulation of the company's interstate rates in Nebraska, there would be a resultant conflict between the dual schemes of Federal and state regulation.

The Commission rejected this argument, holding that under the Natural Gas Act it had sole authority and responsibility to determine the interstate wholesale rates of natural gas companies; that the "rolled-in" method was in its view the most reasonable one; and that the Federal Power Commission could not adopt an allocation method with which it did not agree, simply to permit the State of Kansas to carry out policies of its own. The effect of this decision was that interstate users in Kansas, under state regulation, would be charged with a lower portion of production costs than they would have been required to bear had their rates been determined by the Federal Power Commission under the "rolled-in" method. It is thus clear that the *Kansas-Nebraska* case involved the same interstate conflict of interest situation which is advanced in our instant *United* proceeding as a basis for the contention that United's sales of onshore gas in the Florida Parishes should be treated as interstate sales, subject to the jurisdiction of this Commission.

The same argument made here to support a finding of jurisdiction could have been made with equal force with respect to the Kansas-Nebraska pipeline system—*i.e.*, that gas produced in the State of Kansas, transported along Kansas-Nebraska's interstate line, and sold off the company's interstate system for resale and ultimate consumption in the same state, should be treated as involving sales of gas "in interstate commerce" in order to avoid a potential interstate conflict of interest. No such contention was made, however, and by common consent of all parties concerned and the Commission itself these particular sales of Kansas-produced gas within the State of Kansas were treated as non-jurisdictional sales, subject to regulation by the Kansas Commission.

If there were any doubt that the instant sales of onshore Louisiana gas by United for resale and consumption in the Florida Parishes area constitute intrastate sales and involve intrastate rates, those doubts must be removed upon a reading of the Supreme Court decisions in two landmark ICC railway cases arising under the Interstate Commerce Act—*Houston and Texas Railway* v. *United States*, 234 U.S. 342 (1914), hereafter referred to as the *Shreveport Rate Cases*, and *North Carolina* v. *United States*, 325 U.S. 507 (1945). The *Shreveport Rate Cases* involved the validity of an Interstate Commerce Commission order, issued under the Act to Regulate Commerce, which prohibited carriers from charging higher rates for hauling articles from Shreveport,

Louisiana into Texas than those charged for intrastate eastward traffic from Dallas and Houston, Texas, *on the same line*, for equal distances. Commodity rates fixed by the Railroad Commission of Texas for such intrastate hauls were substantially less than the rates prescribed by the ICC. Accordingly, the commodity rates charged by the carriers from Dallas and Houston eastward to Texas points were less than the rates charged for transportation of the same articles for like distances from Shreveport, Louisiana to Texas. The ICC order was attacked on the ground that Congress had no power to control the intrastate charges of an interstate carrier, and on the further ground that even if Congress did have such power it had not been exercised under the Act. The important point to be noted here is that the Supreme Court in that case treated the intrastate traffic, *hauled on the carrier's interstate line*, as involving intrastate operations and intrastate rates (234 U.S., at 350–357). In a later decision, *Wickard* v. *Filburn*, 317 U.S. 111, 123 (1942), the Supreme Court referred to the *Shreveport Rate Cases* as involving "railroad rates of an *admittedly intrastate character*." [4]

The case of *North Carolina* v. *United States*, *supra*, arose under the Interstate Commerce Act, which constituted a 1920 revision of the Act to Regulate Commerce. It involved a clash between the North Carolina State Utilities Commission and the ICC, with each claiming the paramount power to fix railroad rates in North Carolina. The State Commission had ordered railroads doing business in North Carolina to charge no more than 1.65 cents per mile for carrying intrastate coach passengers from one point in the state to another. Despite this order, the ICC authorized the same railroads to charge 2.2 cents per mile for the same type of carriage. It was conceded that intrastate coach passengers in general "traveled in the same trains and in the same cars, and on the same tracks which carried passengers traveling between two or more states. (325 U.S. 512) The situation thus would seem to be identical with that involved in our instant *United* proceeding, where Louisiana-produced gas which is ultimately delivered to the Florida Parishes area travels in the same interstate line as the balance of the Louisiana-produced gas which is headed for points outside the state. In *North Carolina* v. *United States*, *supra*, the Supreme Court, however, did not treat the travel of intrastate coach passengers as involving interstate transportation and interstate rates merely because such passengers were carried on the railway's interstate line. The Court noted that as to interstate regulation the ICC under the Act was granted "the broadest powers to prescribe rates", but that "No such breadth of authority is granted to the Commission over purely intrastate rates." (325 U.S. at 510–511) The Court then concluded that the transportation of intrastate coach passengers on the railway's interstate line involved "purely intrastate rates", as to which the ICC had been granted only limited authority to act under an express provision of the Interstate Commerce Act authorizing it to prescribe intrastate railroad rates after full hearing and upon findings that state-prescribed rates caused undue discrimination against interstate commerce. The Court then held that the ICC findings in that case were not sufficient to satisfy this requirement, and accordingly the ICC order was set aside.

In a similar reference to this limited grant of authority to the ICC under the Interstate Commerce Act the Supreme Court held in *Florida* v. *United States*, 282 U.S. 194, 212 (1931):

> The Commission has no *general* authority to regulate intrastate rates and the mere existence of a disparity between particular rates on intrastate and interstate traffic does not warrant the Commission in prescribing intrastate rates. [Emphasis supplied.]

[4] Emphasis supplied.

The Staff's position in the instant case that "where Louisiana attempts to force a different rate pattern upon the Louisiana portion of the interstate system . . . it is regulating sales of gas in interstate commerce assigned by the Natural Gas Act to the exclusive regulatory control of this Commission" (Staff brief, p. 14), amounts to a contention that the mere existence of a disparity between particular rates on intrastate and interstate sales of natural gas warrants this Commission in prescribing what clearly would constitute intrastate rates. But any such position would be totally inconsistent with the conclusion expressed by the Supreme Court in *Florida* v. *United States*, *supra*.

Once it is concluded here that United's sales of onshore Louisiana gas for resale in the Florida Parishes area are, in fact, *intrastate* sales, a conclusion which seems inescapable in view of the Supreme Court's treatment of like situations in the *ICC railway cases*, *supra*, then these particular United sales must plainly be found non-jurisdictional in view of the Supreme Court's express holding under the Natural Gas Act in *F.P.C.* v. *Transcontinental Gas Corp.*, 365 U.S. 1, 17 (1961), that: ". . . the Commission has no authority over *intrastate sales under any section of the Act* . . . ." [Emphasis supplied.]

It is true that Congress has the *power* under the Commerce Clause of the Constitution to regulate not only interstate operations, but also to regulate intrastate operations which have a substantial impact or effect upon interstate commerce. As the Supreme Court stated in *United States* v. *Wrightwood Dairy Co.*, 315 U.S. 110, 119 (1942):

> . . . The commerce power is not confined in its exercise to the regulation of commerce among the states. It extends to those activities intrastate which so affect interstate commerce, or the exertion of the power of Congress over it, as to make regulation of them appropriate means to the attainment of a legitimate end, the effective execution of the granted power to regulate interstate commerce. . . . The power of Congress over interstate commerce is plenary and complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution. . . . It follows that no form of state activity can constitutionally thwart the regulatory power granted by the commerce clause to Congress. Hence the reach of that power extends to those intrastate activities which in a substantial way interfere with or obstruct the exercise of the granted power.

Similarly, in the *Shreveport Rate Cases*, *supra*, the Supreme Court stated:

> . . . It is unnecessary to repeat what has frequently been said by this court with respect to the complete and paramount character of the power confided to Congress to regulate commerce among the several States. It is of the essence of this power that, where it exists, it dominates. . . . By virtue of the comprehensive terms of the grant, the authority of Congress is at all times adequate to meet the varying exigencies that arise and to protect the national interest by securing the freedom of interstate commercial intercourse from local control . . .
>
> . . . Its authority, extending to these interstate carriers as instruments of interstate commerce, necessarily embraces the right to control their operations in all matters having such a close and substantial relation to interstate traffic that the control is essential or appropriate to the security of that traffic, to the efficiency of the interstate service, and to the maintenance of conditions under which interstate commerce may be conducted upon fair terms and without molestation or hindrance. . . . *The fact that carriers are instruments of intrastate commerce, as well as of interstate commerce, does not derogate from the complete and paramount authority of*

Congress over the latter or preclude the Federal power from being exerted to prevent the intrastate operations of such carriers from being made a means of injury to that which has been confided to Federal care. Wherever the interstate and intrastate transactions of carriers are so related that the government of the one involves the control of the other, it is Congress, and not the State, that is entitled to prescribe the final and dominant rule, for otherwise Congress would be denied the exercise of its constitutional authority and the State, and not the Nation, would be supreme within the national field. . . . [234 U.S. 342, at 350–352; emphasis supplied.]

However, Congress does not always choose to exercise its power to the full sweep of its authority under the Commerce Clause. The crucial question presented here is whether Congress has in fact exercised any such power under the Natural Gas Act.

In the *Shreveport Rate Cases, supra*, the Supreme Court directed its attention to the *scope* of the power which Congress had granted to the ICC under the Act to Regulate Commerce. The Court noted that the Act contained an unqualified clause of sweeping scope barring undue preferences, as follows:

> SEC. 3. That it shall be unlawful for any common carrier subject to the provisions of this act to make or give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic, in any respect whatsoever, or to subject any particular person, company, firm, corporation, or locality, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever.

The Court then held:

> This language is certainly sweeping enough to embrace all the discriminations of the sort described which it was within the power of Congress to condemn. *There is no exception or qualification with respect to an unreasonable discrimination against interstate traffic produced by the relation of intrastate to interstate rates as maintained by the carrier.* It is apparent from the legislative history of the act that the evil of discrimination was the principal thing aimed at, *and there is no basis for the contention that Congress intended to exempt any discriminatory action or practice of interstate carriers affecting interstate commerce which it had authority to reach.* . . . [234 U.S. at 355–357.]

No such contention, of course, could be made with respect to the provision barring undue preferences in Sec. 4(b) of the Natural Gas Act. The Natural Gas Act, by its express terms, applies only to transportation and sales "in interstate commerce" (Sec. 1(b)), and *not* to "sales *affecting* interstate commerce". Unlike the sweeping and unlimited prohibition of the Act to Regulate Commerce against undue preferences by common carriers, the prohibition contained in Sec. 4(b) of the Natural Gas Act is expressly made applicable only "with respect to any transportation or sale of natural gas *subject to the jurisdiction of the Commission*"—and is thus limited to the making or granting of undue preferences with respect to *interstate sales*. As the Supreme Court stated in *F.P.C. v. Transcontinental Gas Corp., supra*, ". . . the Commission has no authority over intrastate sales *under any section* of the Act. . . ." [365 U.S. at 17; emphasis supplied.]

The Supreme Court has held that where Congress desires to impose Federal control over intrastate operations, because of their effect upon interstate commerce, Congress does not leave its intent to guesswork or speculation, but uses explicit language to that effect.

This doctrine was the basis for the Court's decision in *Federal Trade Commission* v. *Bunte Bros., Inc.*, 312 U.S. 349 (1941). That case arose under Sec. 5 of the Federal Trade Commission Act, which prohibited "unfair methods of competition in commerce, and unfair or deceptive acts or practices in commerce . . ." Bunte Brothers, a candy manufacturer in Illinois, sold products in that state in what the trade calls "break and take" packages, which make the amount received by the purchaser depend upon chance. The Federal Trade Commission found that this enabled the company to compete unfairly in the Illinois market with manufacturers outside the state, who could not indulge in this device because the Commission had barred "break and take" packages as an "unfair method of competition." The Commission prohibited Bunte Brothers from further using this device on the ground that it constituted unfair methods of competition under the Act. The lower court held that the Commission had exceeded its power, on the ground that the Act authorized the Commission to proceed only against business practices employed in interstate commerce, and that the transactions in question occurred in intrastate commerce. The Commission contended that its powers were not thus restricted, but that it might also prohibit "unfair methods used in intrastate sales when these result in a handicap to interstate competitors." The Supreme Court affirmed the lower court's holding that the Commission had acted in violation of the statute, stating:

> . . . "Unfair methods of competition in commerce" are the concern of § 5, and the Commission is "directed to prevent persons . . . from using unfair methods of competition in commerce . . ." The "commerce" in which these methods are barred is interstate commerce. Neither ordinary English speech nor the considered language of legislation would aptly describe the sales by Bunte Brothers of its "break and take" assortments in Illinois as "using unfair methods of competition in [interstate] commerce." *When in order to protect interstate commerce Congress has regulated activities which in isolation are merely local, it has normally conveyed its purpose explicitly.* See for example, National Labor Relations Act, §§ 2(7), 9(c), 10(a), 49 Stat. 450, 453, 29 U.S.C. §§ 152 (7), 159(c), 160(a); Bituminous Coal Act, § 4-A, 50 Stat. 83, 15 U.S.C. § 834; Federal Employers' Liability Act, § 1, 35 Stat. 65, amended, 53 Stat. 1404, 45 U.S.C. § 51 . . . . [at 350–351; emphasis supplied.]
>
> * * * * * * *
>
> *. . . This case presents the narrow question of what Congress did, not what it could do. And we merely hold that to read "unfair methods of competition in [interstate] commerce" as though it meant "unfair methods of competition in any way affecting interstate commerce," requires, in view of all the relevant considerations, much clearer manifestation of intention than Congress has furnished.* [At 355, emphasis supplied.]

Of particular interest in connection with our instant problem is the dissent of Justice Douglas in the *Bunte Bros.* case, *supra*, where he stated:

> . . . An unfair method of competition is 'in' interstate commerce not only when it has an interstate origin but also when it has a direct interstate impact. Respondent is 'using' unfair methods of competition 'in' interstate commerce when the direct effect of its conduct is to burden, stifle, or impair that commerce. [312 U.S. at 356]

As already noted here, in our instant *United* proceeding the contention is made that a transaction which would normally be regarded as intrastate in character should be treated as a sale "in interstate commerce", for the sole reason that the gas in question is carried on United's interstate pipeline and the sale is

made off United's interstate system; that if the State of Louisiana is allowed to regulate the rates for these particular sales by United in the Florida Parishes area, this might affect the prices at which United could sell the remainder of the gas in the State of Mississippi; that regulation of these Florida Parish rates by Louisiana would therefore have "a direct interstate impact".

The important thing to note here, however, is that the majority decision of the Supreme Court in the *Bunte Bros.* case, *supra*, rejected the contention in the Douglas dissent that the presence of such a "direct interstate impact" was sufficient to convert a purely intrastate operation into a transaction "in interstate commerce".

The same general conclusion was strongly expressed by the Supreme Court in *Kirschbaum Co.* v. *Walling*, 316 U.S. 517, 521–523 (1942), as follows:

> Congress may choose, as it has chosen frequently in the past, to regulate only part of what it constitutionally can regulate, leaving to the States activities which, if isolated, are only local. . . . *The history of Congressional legislation regulating not only interstate commerce as such but also activities intertwined with it, justifies the generalization that, when the Federal Government takes over such local radiations in the vast network of our national economic enterprise and thereby radically readjusts the balance of state and national authority, those charged with the duty of legislating are reasonably explicit and do not entrust its attainment to that retrospective expansion of meaning which properly deserves the stigma of judicial legislation.*

Similarly, in *Florida* v. *United States*, *supra*, the Court held:

> . . . whenever the Federal power is exerted within what would otherwise be the domain of state power, the justification of the exercise of the federal power must clearly appear. . . .

The National Labor Relations Act provides an enlightening example of the type of statute where Congress has clearly manifested its purpose to exercise the full sweep of its constitutional authority under the Commerce Clause, and to impose federal control over local operations having a substantial impact or effect upon interstate commerce. Sec. 10(a) of the Act empowers the National Labor Relations Board "to prevent any person from engaging in any unfair labor practice . . . *affecting commerce*". Sec. 2(7) declares:

> The term "affecting commerce" means in commerce, or burdening or obstructing commerce or the free flow of commerce, or having led or tending to lead to a labor dispute burdening or obstructing commerce or the free flow of commerce.

In *Polish Nat. Alliance* v. *National Labor Relations Board*, 322 U.S. 643 (1943), the Supreme Court had to determine whether certain practices of a fraternal organization carrying on the business of insurance, whose activities crossed state lines, could be deemed "to affect interstate commerce" and therefore to be within the operation of the National Labor Relations Act. The Court answered this question in the affirmative, stating:

> With negligible exceptions, Congress did not exercise its power to regulate commerce prior to its enactment in . . . 1887 of the Interstate Commerce Act.
>
> * * * * * * *
>
> Since that time it has frequently chosen, as the Statutes at Large abundantly prove, to regulate only part of what it constitutionally can regulate. Again, half a dozen enactments, other than the National Labor Relations Act, are sufficient to illustrate that *when it wants to bring aspects of com-*

merce within the full sweep of its constitutional authority, it manifests its purpose by regulating not only "commerce" but also matters which "affect," "interrupt," or "promote" interstate commerce.

* * * * * * *

In so describing the range of its control, Congress is not indulging stylistic preferences; it is mediating between federal and state authorities and deciding what matters are to be taken over by the central Government and what to be left to the States.

* * * * * * *

And so in this Act, unlike some federal regulatory measures, see *Federal Trade Commission* v. *Bunte Bros.*, 312 U.S. 349, 351, 85 L ed 881, 883, 61 S. Ct. 580; *A. B. Kirschbaum Co.* v. *Walling, supra* (316 U.S. at 522, 523, 86 L ed 1646, 1647, 62 S. Ct. 1116), *Congress has explicitly regulated not merely transactions or goods in interstate commerce but activities which in isolation might be deemed to be merely local but in the interlacings of business across state lines adversely affect such commerce.*

* * * * * * *

Congress therefore left it to the Board to ascertain whether proscribed practices would in particular situations adversely affect commerce when judged by the full reach of the constitutional power of Congress. Whether or not practices may be deemed by Congress to affect interstate commerce is not to be determined by confining judgment to the quantitive effect of the activities immediately before the Board. *Appropriate for judgment is the fact that the immediate situation is representative of many others throughout the country, the total incidence of which if left unchecked may well become far-reaching in its harm to commerce.* [322 U.S. at 647–8; emphasis supplied.]

To the same effect, see *Guss* v. *Utah Labor Relations Board*, 353 U.S. 1, 3 (1957):

> By this language and by the definition of "affecting commerce" elsewhere in the Act, Congress meant to reach to the full extent of its power under the Commerce Clause.

Also *N.L.R.B.* v. *Reliance Fuel Oil Corporation*, decided January 7, 1963 (No. 88, October Term, 1962), where the Supreme Court stated:

> This Court has consistently declared that in passing the National Labor Relations Act, Congress intended to and did vest in the Board *the fullest jurisdictional breadth* constitutionally permissible under the Commerce clause . . . [371 U.S. 224 at 226.]

By contrast, it is clear that in enacting the Natural Gas Act Congress had no intent or desire "to reach to the full extent of its power under the Commerce Clause", or to vest in the Federal Power Commission "the fullest jurisdictional breadth constitutionally permissible under the Commerce Clause". Instead, the Supreme Court has held in numerous decisions that the Natural Gas Act did *not* envisage federal regulation of the entire natural-gas field to the limit of constitutional power; that the overriding congressional purpose was merely to plug the gap in regulation of natural-gas companies resulting from prior judicial decisions which had prohibited state regulation of many of the interstate commerce aspects of the natural-gas business; that although Congress meant to create a comprehensive and effective regulatory scheme, it did *not* desire "comprehensive *federal* regulation"; that the Act was designed to take no authority from State commissions, and was so drawn as to complement and in no manner to usurp State authority.

The Supreme Court set forth its views on this subject at length, and with complete clarity, in *Panhandle Eastern Pipe Line Co.* v. *Public Service Commission*, 332 U.S. 507 (1947). In there holding that state regulation of rates for natural gas transported interstate and sold directly to consumers within the state was not precluded by enactment of the Natural Gas Act, the Court stated:

> The two questions may best be considered in the background of the legislative history of the Natural Gas Act and of the judicial history leading to its enactment in 1938.
>
> Prior to that time this Court in a series of decisions had dealt with various situations arising from state efforts to regulate the sale of imported natural gas. . . . by 1938 the Court had delineated broadly between the area of permissible state control and that in which the states could not intrude. The former included interstate direct sales to local consumers, as exemplified in *Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U.S. 23 . . . the latter, service interstate to local distributing companies for resale, as held in *Missouri ex rel. Barrett* v. *Kansas Natural Gas Co.* 265 U.S. 298; . . . reinforced by *Public Utilities Commission* v. *Attleboro Steam & Electric Co.*, 273 U.S. 83 . . . .
>
> * * * * * * *
>
> This impotence of the states to act in relation to sales for resale by interstate carriers brought about the demand for federal regulation and Congress' response in the Natural Gas Act. To reach those sales and prevent the hiatus in regulation their immunity caused, the Act declared in § 1(b):
>
> "The provisions of this chapter shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas."
>
> This section determines the Act's coverage and does so in the light of the situation existing at the time. Three things and three only Congress drew within its own regulatory power, delegated by the Act to its agent, the Federal Power Commission. These were: (1) the transportation of natural gas in interstate commerce; (2) its sale in interstate commerce for resale; and (3) natural gas companies engaged in such transportation or sale.
>
> * * * * * * *
>
> The line of the statute was thus clear and complete.
>
> * * * * * * *
>
> And the line drawn was that one at which the decisions had arrived in distributing regulatory power before the Act was passed.
>
> Moreover, this unusual legislative precision was not employed with any view to relieving or exempting any segment of the industry from regulation. *The Act, though extending federal regulation, had no purpose or effect to cut down state power.* On the contrary, perhaps its primary purpose was to aid in making state regulation effective, by adding the weight of federal regulation to supplement and reinforce it in the gap created by the prior decisions. *The Act was drawn with meticulous regard for the continued exercise of state power, not to handicap or dilute it in any way.*

This appears not merely from the situation which led to its adoption and the legislative history, including the committee reports in Congress cited above, but most plainly from the history of § 1(b) in respect to the changes which took place in reaching its final form.

* * * * * * *

Congress, it is true, occupied a field. But it was meticulous *to take in only territory which this Court had held the states could not reach.*

* * * * * * *

The Natural Gas Act created an articulate legislative program based on a clear recognition of the respective responsibilities of the federal and state regulatory agencies. It does not contemplate ineffective regulation at either level. *We have emphasized repeatedly that Congress meant to create a comprehensive and effective regulatory scheme, complementary in its operation to those of the states and in no manner usurping their authority.* [332 U.S. at 514–520; emphasis supplied.]

To the same effect, see:

Phillips Petroleum Co. v. *Wisconsin*, 347 U.S. 672 (1954):

There can be no dispute that the overriding congressional purpose was to plug the "gap" in regulation of natural-gas companies resulting from judicial decisions prohibiting, on federal consitutional grounds, state regulation of many of the interstate commerce aspects of the natural-gas business. A significant part of this gap was created by cases holding that "the regulation of wholesale rates of gas and electrical energy moving in interstate commerce is beyond the constitutional power of the States." *Interstate Natural Gas Co.* v. *Federal Power Commission*, *supra* [331 U.S. at 689.] The committee reports on the bill that became the Natural Gas Act specifically referred to two of these cases and to the necessity of federal regulation to occupy the hiatus created by them.[13]

[13] "The States have, of course, for many years regulated sales of natural gas to consumers in intrastate transactions. The States have also been able to regulate sales to consumers even though such sales are in interstate commerce, such sales being considered local in character and in the absence of congressional prohibition subject to State regulation. . . . There is no intention in enacting the present legislation to disturb the States in their exercise of such jurisdiction. However, in the case of sales for resale, or so-called wholesale sales, in interstate commerce (for example, sales by producing companies to distributing companies) the legal situation is different. Such transactions have been considered to be not local in character and, even in the absence of Congressional action, not subject to State regulation. (See *Missouri* v. *Kansas Gas Co.* (1924), 265 U.S. 298, and *Public Utilities Commission* v. *Attleboro Steam & Electric Co.* (1927) 273 U.S. 83.) The basic purpose of the present legislation is to occupy this field in which the Supreme Court has held that the States may not act." HR Rep No. 709, 75th Cong, 1st Sess 1–2; S Rep No. 1162, 75th Cong, 1st Sess 1–2. [347 U.S. at 682–4.]

Also see: *Federal Power Commission* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498, 502–503 (1949):

. . . the Natural Gas Act did not envisage federal regulation of the entire natural-gas field to the limit of constitutional power. Rather it contemplated the exercise of federal power as specified in the Act, particularly in that interstate segment which the states were powerless to regulate because of the Commerce Clause of the Federal Constitution. The jurisdiction of the Federal Power Commission was to complement that of the state regulatory bodies. . . .

Federal Power Commission v. *Transcontinental Gas Corp.*, 365 U.S. 1 (1961):

. . . Congress, in enacting the Natural Gas Act, did not give the Commission comprehensive powers over every incident of gas production, trans-

portation and sale. Rather, Congress was "meticulous" only to invest the Commission with authority over certain aspects of this field, leaving the residue for state regulation.

* * * * * * *

. . . Congress "meant to create a comprehensive and effective regulatory scheme." . . .

It is true, of course, that Congress did not desire comprehensive *federal* regulation; much authority was reserved for the States. But it is equally clear that Congress did not desire that an important aspect of this field be left unregulated. . . .

Federal Power Commission v. *Hope Natural Gas Co.*, 320 U.S. 591, 610 (1944):

. . . the bill was designed to take "no authority from State commissions" and was "so drawn as to complement and in no manner usurp State regulatory authority."

In view of the Congressional intent not to usurp or reduce existing state authority or power in this field, but merely to fill the regulatory gap left by prior court decisions, Congress in enacting the Natural Gas Act carefully abstained from making the Act applicable to transportation or sales *"affecting* interstate commerce," and instead limited the jurisdiction of this Commission to transportation and sales "in interstate commerce".

An argument might reasonably be made, along the lines suggested in the instant Staff brief (p. 14), that the comprehensive regulatory scheme would be rendered more effective if the regulatory powers of this Commission were extended to cover United's intrastate sales off its interstate system, rather than leaving its intrastate rates to be fixed by the Louisiana Commission. This problem was recognized by the Supreme Court with reference to railway carriers under the Act to Regulate Commerce, when it stated in the *Shreveport Rate Cases:*

. . . *the power to deal with the relation between the two kinds of rates,*[5] *as a relation, lies exclusively with Congress.* . . . It is for Congress to supply the needed correction where the relation between intrastate and interstate rates presents the evil to be corrected, and this it may do completely by reason of its control over the interstate carrier in all matters having such a close and substantial relation to interstate commerce that it is necessary or appropriate to exercise the control for the effective government of that commerce. [234 U.S. at 354–5.]

However, unlike the situation under the Act to Regulate Commerce, Congress has neither indicated nor expressed any intent to deal with any such problem under the Natural Gas Act. If Congress *had* regarded the relation between interstate and intrastate rates for sales of natural gas as presenting a serious problem, it could have vested control over such relationships in this Commission by making the Act applicable not only to transportation and sales of natural gas "*in* interstate commerce", but also to transportation and sales *"affecting* interstate commerce". This, however, Congress did not do—and as earlier noted, the Supreme Court has recognized that

. . . the Commission has no authority over *intrastate* sales under *any section* of the Act . . . . [*F.P.C.* v. *Transcontinental Gas Corp.*, 365 U.S. 1, at 17; emphasis supplied.]

Before concluding this discussion, some reference should be made to the particular argument presented by intervener Willmut Gas and Oil Company. Willmut recognizes as established law that Congress under the Natural Gas Act withheld from this Commission the power to regulate those activities of inter-

[5] *i.e.*, interstate and intrastate rates.

state pipelines which had *not* been held beyond the power of the states to regulate under the Commerce Clause in earlier Supreme Court decisions. However, it is suggested that the problem arises "when an attempt is made to determine exactly what activities were subject to state regulation prior to the enactment of the Act". Willmut contends that prior to the enactment of the Natural Gas Act the states had no jurisdiction, in view of the Commerce Clause, over *wholesales* of gas to local distributors when made by an interstate pipeline, regardless of the fact that the gas involved was produced, transported and consumed in one and the same state; that accordingly the Act must be interpreted as subjecting the instant United sales of this character to federal regulation, in order to avoid the regulatory gap which Congress meant to fill in enacting the Natural Gas Act. The Willmut argument is that the question whether sales made by an interstate pipeline company do or do not have an interstate character, precluding interference by the state, is totally unaffected by whether the gas is transported across state lines, but is governed completely *by the nature of the sales*—*i.e.*, by whether the sales in question are made *at wholesale* to local distributing companies, or *at retail* directly to the consumers.

In presenting this theory, Willmut relies wholly upon a discussion of the general subject in *Missouri* v. *Kansas Natural Gas Co.*, 265 U.S. 298 (1924), including particularly the manner in which the Supreme Court in that case reconciled its decision with earlier decisions in *Pennsylvania Gas Co.* v. *Public Service Comm.*, 252 U.S. 23 (1920), and *Public Utilities Comm.* v. *Landon*, 249 U.S. 236 (1919).

It is concluded here that Willmut has misconceived the significance to be drawn from these cases. The salient points to be noted here are as follows:

1) No question had ever been raised, nor was any presented in the cited decisions, as to the authority of the states under the Commerce Clause to regulate sales by an interstate pipeline company of gas which was produced, transported and consumed wholly in one and the same state—*i.e.*, gas which admittedly had not yet been subjected to interstate transportation at the time when it was sold for consumption within the same state.

2) The court in the above cases was dealing with the only question which was regarded as presenting a problem—*i.e.*, that of gas which had already been transported in interstate commerce by an interstate pipeline company and brought into a given state for sale therein. Under such circumstances, the court held in *Missouri* v. *Kansas*, *supra*, that:

a) Where the sale in question was one made by the interstate pipeline company to local distributing companies, the interstate movement had not yet come to an end. Accordingly, such sale was still a part of interstate commerce, and beyond the power of the state to regulate. This was the case in *Missouri* v. *Kansas*, *supra*, where the court stated:

> The question is controlled by familiar principles. Transportation of gas from one state to another is interstate commerce; and the sale and delivery of it to the local distributing companies is a part of such commerce, [265 U.S. at 307.]

b) However, where the local distributing companies, after purchasing the gas from the interstate pipeline company, in turn resold it to the consumers, the interstate movement was regarded as having come to an end with the delivery of the gas to the local distributing companies. Accordingly, the resale by the local companies to the consumers was not regarded as part of interstate commerce, and *was* subject to state regulation. (This was the case in *Public Utilities Comm.* v. *Landon*, *supra*.)

c) Finally, where an interstate pipeline company transported the gas across state lines and itself sold the gas directly to the consumers in another state, such a sale *was* held to be interstate commerce, *regardless of its retail nature*, in *Pennsylvania Gas Co.* v. *Public Service Comm., supra:*

> We think that the transmission and sale of natural gas produced in one state, transported by means of pipe lines, and directly furnished to consumers in another state, is interstate commerce within the principles of the cases already determined by this court. [252 U.S. at 26–28.] [6]

However, the court stated that in some instances, even where interstate commerce was admittedly involved, the states had authority to pass laws indirectly affecting such commerce, when needed to protect or regulate matters of local interest, and that such laws were operative until Congress acted under its superior authority by regulating the subject-matter for itself; that under the circumstances involved in that case the sale made directly to consumers by the interstate pipeline company, while part of an interstate transmission, was nevertheless local in nature and its regulation by the state was required in the public interest; that accordingly, since the regulation of such sales had not yet been attempted under the superior authority of Congress, the state had jurisdiction.

It is difficult to see how the cases cited above could seriously be regarded as standing for the proposition that sales by an interstate pipeline company of gas produced, transported and consumed wholly in one and the same state, which admittedly had not been the subject of an interstate movement prior to such sale, nevertheless are to be considered as sales in interstate commerce which the states had no power to regulate.

II. *Sales in Florida Parishes Area off United's Kosciusko Line*

Although it is here concluded, for the reasons set forth at length above, that United's sales of onshore Louisiana gas to the Florida Parishes area off its Lirette-Mobile line do not constitute "sales in interstate commerce" and therefore are non-jurisdictional, United's sales to the Florida Parishes area off its 30-inch Kosciusko line present a different problem.

Gas is introduced into United's Kosciusko line from three offshore fields on the Continental Shelf, lying between 15 and 38 miles from the Louisiana shoreline—*i.e.*, Blocks 32, 45, and 110 of the Eugene Islands area seaward of the Louisiana coastline in the Gulf of Mexico. This gas is transported from the production points offshore to the mainland, being brought on shore in Louisiana at a point northwest of Four League Bay. Thence, it is conveyed northeasterly through United's 30-inch Kosciusko pipeline to the Napoleonville Compressor Station and commingled with gas produced onshore in Louisiana. The gas continues moving northeasterly through United's Montpelier Compressor Station to the Mississippi state line for ultimate sale for resale to customers outside the geographical limits of Louisiana. However, before the gas crosses the Louisiana-Mississippi boundary line, portions are sold for resale in the Florida Parishes area.

The Staff contends that either all, or an appreciable portion, of the above-mentioned offshore fields lie beyond the boundaries of the State of Louisiana in the Outer Continental Shelf area, which is subject to the jurisdiction and control of the United States and is administered by the Secretary of Interior in

---

[6] Thus Willmut is clearly in error in reading this case as standing for the proposition that "it was the nature of the sales and not the transportation across state lines per se which gave the sales their interstate character . . ." [p. 8 of brief].

accordance with the terms and provisions of the Outer Continental Shelf Lands Act.[7] Staff further contends that gas produced in the Outer Continental Shelf area, beyond the Louisiana boundaries, and transported to the State of Louisiana and sold off United's Kosciusko line in the Florida Parishes area, constitutes gas which is transported and sold "in interstate commerce" within the meaning of that term as defined in Section 2(7) of the Natural Gas Act. Finally, Staff argues that since such out-of-state offshore gas constitutes an appreciable portion of the gas entering the Kosciusko line, where it is commingled with gas produced inside the Louisiana boundaries, the entire commingled stream in the Kosciusko line must be regarded as an *interstate stream*—*i.e.*, "in interstate commerce"; that accordingly, all gas sold in the Florida Parishes area off United's Kosciusko line should be regarded as jurisdictional.

The first question presented is whether the mentioned offshore fields are in fact *beyond* the boundaries of the State of Louisiana—a matter which is controlled by the Submerged Lands Act enacted by Congress in May 1953 (67 Stat. 29, 43 U.S.C. §§ 1301–1315). By that Act the United States relinquished to the coastal States all of its rights in the submerged lands within certain geographical limits, and confirmed its own rights therein beyond those limits. To effectuate these purposes, the Act

a) relinquished to the States the entire interest of the United States in all lands beneath navigable waters *within state boundaries;*

b) defined that area in terms of state boundaries "as they existed at the time a State became a member of the Union, or as heretofore approved by the Congress", not extending, however, seaward from the coast of any State more than three marine leagues in the Gulf of Mexico;

c) confirmed to each State a seaward boundary of three geographical miles, in any event;

d) retained in the United States all rights in submerged lands lying beyond those areas to the seaward limits of the Continental Shelf.

Subsequently, a litigated question arose between the coastal states and the United States as to the proper definition of the state boundaries as provided in the Submerged Lands Act. In *United States* v. *Louisiana*, 363 U.S. 1, 79 (1960), the Supreme Court found that Louisiana was entitled to submerged-land rights "to a distance no greater than three geographical miles from its coastlines, wherever those lines may ultimately be shown to be". The subsidiary controversy as to the proper location of the Louisiana coastline was left by the court to be resolved in some later proceeding. In its Final Decree entered on December 12, 1960, pursuant to this decision, the court decreed that

> As against the respective defendant States, the United States is entitled to all the lands, minerals and other natural resources underlying the Gulf of Mexico more than three geographic miles seaward from the coastlines of Louisiana, Mississippi, and Alabama . . . and extending seaward to the edge of the Continental Shelf. None of the States of Louisiana, Texas, Mississippi, Alabama or Florida is entitled to any interest in such lands, minerals or resources, and each of said States . . . are hereby enjoined from interfering with the rights of the United States in such lands, minerals and resources. [364 U.S. 502–503.]

The disputed question as to the proper location of the Louisiana coastline is presently being negotiated by a Joint Committee from the State of Louisiana and the United States Department of the Interior. (1:158) Under these circumstances, the Louisiana interveners contend that the factual question as to the

---

[7] 67 Stat. 462, 43 U.S.C. §§ 1331–1343.

proper location of the Louisiana coastline, and accordingly the controversy as to whether these particular offshore fields are within the boundaries of the State of Louisiana, may be resolved only by the Supreme Court and not by this Commission.

However, the matter need not be left in such an inconclusive posture for the purpose of the resolution of the jurisdictional issue in the instant proceeding. Offshore Blocks 32, 45 and 110 are shown on Exhibit 11, an enlarged map showing United's facilities. They are also located on the map attached as Exhibit A to Exhibit No. 12 in this proceeding. The mileage figures on Exhibit No. 11 indicates that there are 14.9 miles of pipeline from Block 32 to the Louisiana shoreline,[8] 10.4 miles of pipeline between Blocks 32 and 45, and 12.8 miles of pipeline between Block 45 and Block 110. It therefore appears that the United pipeline extends approximately 38 miles from the Louisiana shoreline before it reaches Block 110. (1:90)

As already noted, the Supreme Court in *United States* v. *Louisiana*, *supra*, stated that it did not intend in that particular decision "to settle the location of the coastline of Louisiana or that of any other State". (363 U.S. at 67, footnote 108) In its Final Decree (364 U.S. 502) the Supreme Court decreed that the United States was entitled to all the lands, minerals and other natural resources underlying the Gulf of Mexico "more than three geographic miles seaward from the coast lines of Louisiana, Mississippi and Alabama . . .", and further stated:

> As used in this decree, the term" coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters. [At 503.]

The Staff notes that although the exact perimeters of the Louisiana coastline under the above-mentioned Supreme Court definition are still in dispute, it is clear that if the coastline were determined *on that basis* all of Block 110, all of Block 45 and all or most of Block 32 would fall outside the Louisiana boundaries. However, the situation is somewhat further confused as a result of the fact that the State of Louisiana in the above Supreme Court litigation contended, *inter alia*, that its coastline should be measured as defined in certain regulations promulgated by the Commandant of the Coast Guard, pursuant to the Federal Act of February 19, 1895, 33 U.S.C. § 151. The Supreme Court deferred resolution of this question, stating:

> We think the consideration of this contention should be postponed to a later stage of this case. We decide now only that Louisiana is entitled to submerged-land rights to a distance no greater than three geographical miles from its coastlines, wherever those lines may ultimately be shown to be. [363 U.S. at 79.]

The Staff notes that even under the conditions most favorable to Louisiana—*i.e.*, use of the coastline as defined in the above-mentioned Coast Guard regulations—a line three geographical miles from the Louisiana coastline as thus determined would fall on the shoreward side of Block 110; that accordingly the producing area in Block 110 inevitably would be found *outside* the boundaries of Louisiana *under any theory which could be applied*. (Staff brief, pp. 17–18) It is of interest to note that the State of Louisiana, which is of course directly involved in the pending negotiations to determine the location of its coastline, did not in its instant reply brief comment upon or raise any question whatsoever with respect to this particular Staff conclusion—nor was this Staff conclusion questioned in any way in the reply briefs filed by any of the other Louisiana interveners.

---

[8] As there used, the term "shoreline" refers to "the line along which the marsh lands end and beyond which there is open water". (1:90)

It is therefore concluded that it can properly be assumed, for the purpose of the instant decision, that an appreciable portion of the gas entering United's Kosciusko line is out-of-state gas, produced *outside* the boundaries of the State of Louisiana. Under these circumstances, it is concluded that the entire commingled stream in the Kosciusko line must be regarded as an interstate stream, involving the transportation and sale of natural gas "in interstate commerce". The controlling physical fact is that there is no way of segregating the interstate and the intrastate molecules in that commingled stream in such a way that the gas delivered off the Kosciusko line to the Florida Parishes area will consist only of the gas which was produced inside the boundaries of Louisiana.

Under similar circumstances, the Commission held in the *Lo-Vaca* case, Op. No. 348, *supra*, that:

> Sales of gas by interstate pipeline systems are sales in interstate commerce where the gas sold has been produced in another state *even when mixed with gas produced in the same state.*
>
> * * * * * * *
>
> The same conclusion applies to sales of electric energy generated in another state *although mixed with energy generated in the state of sale.* [p. 611; emphasis supplied.]

In *Wisconsin-Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472 (CA7, 1952),[9] the court stated:

> Petitioners suggest that out-of-state energy sheds its interstate commerce garb when, after arrival in Wisconsin, it is continued in transmission, reduced from 132,000 volts to 33,000 volts and commingled with relatively larger quantities of Wisconsin generated energy. [at p. 477.]
>
> * * * * * * *
>
> As we understand petitioners' contentions, they insist that commingling, in Wisconsin, of Michigan generated energy with that generated in Wisconsin destroys the interstate character of the resulting mixture, so that all energy, after commingling takes place, is intrastate in character, having become part of the mass of goods within the state. But the reasoning of the courts quite generally is convincing that, even though the interstate component amounts to only a small percentage of the entire volume, the essential interstate character remains and sole jurisdiction is vested in the Commission.
>
> * * * * * * *
>
> The fact that the amount of out-of-state energy is small in proportion to the total amount of energy sold is unimportant.
>
> * * * * * * *
>
> Nor does the fact that Wisconsin generated energy is commingled with energy transmitted from Michigan convert the transaction to local or intrastate activity. [at p. 478.][10]

The Louisiana interveners, however, contend that, entirely apart from the considerations referred to above, gas produced in and transported from the Outer Continental Shelf area beyond the Louisiana boundaries to the State of Louisiana does not constitute gas transported or sold "in interstate commerce" within the meaning of that term as defined in Section 2(7) of the Natural Gas Act.

---

[9] Certiorari denied April 13, 1953, 345 U.S. 934.

[10] This decision was cited with approval by the Court of Appeals for the District of Columbia in *State of Wisconsin* v. *F.P.C.*, 201 F. 2d 183 (1952). Also see *Pennsylvania Water and Power Co.* v. *F.P.C.*, 343 U.S. 414, 419–20 (1952).

The status of the Outer Continental Shelf area is as follows: In 1953, subsequent to enactment of the Submerged Lands Act, Congress adopted the Outer Continental Shelf Lands Act, 43 U.S.C. §§ 1331–1343, providing in detail for Federal exploitation of the submerged lands of the Continental Shelf beyond those granted to the States by the Submerged Lands Act. The Outer Continental Shelf Lands Act contains the following provisions which are deemed pertinent to this discussion:

43 U.S.C. Section 1332(a)

(a) It is declared to be the policy of the United States that the subsoil and seabed of the outer Continental Shelf appertain to the United States and are subject to its jurisdiction, control, and power of disposition as provided in this subchapter.

43 U.S.C. Section 1333(a)(1)

(a)(1) The Constitution and laws and civil and political jurisdiction of the United States are extended to the subsoil and seabed of the outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon for the purpose of exploring for, developing, removing, and transporting resources therefrom, to the same extent as if the outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State: . . .

In addition, Sec. 9 of the Submerged Lands Act, *supra*, provides:

Nothing in this Act shall be deemed to affect in anywise the rights of the United States to the natural resources of that portion of the subsoil and seabed of the Continental Shelf lying seaward and outside of the area of lands beneath navigable waters, as defined in section 2 hereof, all of which natural resources appertain to the United States, and the jurisdiction and control of which by the United States is hereby confirmed. [43 U.S.C. §§ 1302.]

In *United States* v. *Louisiana*, 363 U.S. 1, 10, *supra*, the Supreme Court cited the above provision as authority for its conclusion that the Act "retains in the United States all rights in submerged lands lying beyond those areas to the seaward limits of the Continental Shelf . . ." And in its Final Decree issued in that case (364 U.S. 502) the Court decreed that:

As against the respective defendant States, the United States is entitled to all the lands, minerals and other natural resources underlying the Gulf of Mexico more than three geographic miles seaward from the coast lines of Louisiana . . . and extending seaward to the edge of the Continental Shelf.

It is thus clear that the Outer Continental Shelf area is an area subject to the exclusive jurisdiction and control of the United States.

The term "interstate commerce" is defined as follows in Sec. 2(7) of the Natural Gas Act:

(7) "Interstate commerce" means commerce between any point in a State and any point outside thereof, or between points within the same State but through any place outside thereof, but only insofar as such commerce takes place within the United States.

There can be no doubt that the phrase "commerce between any point in a State, and any point outside thereof", when read according to its normal and natural meaning, is broad enough to include commerce between points inside the state of Louisiana and offshore fields beyond the boundaries of Louisiana in the Outer Continental Shelf area. When read according to its natural meaning the phrase "any point outside thereof" is broad enough to include not merely *another state*, but also would include the District of Columbia, various possessions of the United States constituting organized Territories thereof, or lands merely subject to the

jurisdiction and control of the United States, such as areas under United States lease (*i.e.*, the Canal Zone), or a Federal domain area over which the United States has exclusive jurisdiction and control. It would seem obvious that before this natural meaning of the phrase may be abandoned or disregarded for an artificially narrow or more limited construction, some strong and compelling reason therefor should be shown.

The Louisiana interveners contend that such an artificially narrow construction of the phrase "and any point outside thereof" is required in view of the later clause limiting jurisdiction "only insofar as such commerce takes place within the United States". It is their position that the latter phrase "within the United States" must be read as meaning "within the *mainland* United States"; that under the terms of the Outer Continental Shelf Act the submerged lands merely "appertain" to the United States, but are not part of the United States; that accordingly by adding the clause at the end of this section Congress intended to make it clear that the phrase "any point outside thereof" was not to be given its normal or natural meaning, but instead must be read in a much more limited sense. The difficulty with the approach of the Louisiana interveners is that if the phrase "and any point outside thereof" is construed in such a way as *not* to include areas under exclusive United States jurisdiction and control, the result is to leave that phrase with only two possible alternative meanings, neither one of which would make any sense.

One such alternative would be to interpret the phrase as meaning "and any point *in another state*". However, if Congress had intended this result it could have accomplished its purpose quite directly, simply and unambiguously by merely defining interstate commerce as "commerce between any point in a State and any point in another state as herein defined." There does not appear to be any possible explanation as to what could have impelled Congress under such circumstances to use instead the much broader phrase "and any point outside thereof", if such a limited purpose were intended. The second alternative possibility presented by the position of the Louisiana interveners would be that the phrase "and any point outside thereof" might be interpreted as meaning "and any point in another state, or any point *in a foreign country*". However, in order to accept such a construction we would have to believe that Congress used a broader-than-necessary first phrase for the sole purpose of adding in *foreign commerce*, merely so that foreign commerce could then be expressly excluded from coverage by the last phrase "but only insofar as such commerce takes place within the United States". Obviously this would not make sense, and there is no justification for assuming that Congress was interested in engaging in any such meaningless exercise.

It is of interest to note that this latter alternative is ruled out in any event by the decision of the Court of Appeals for the District of Columbia in *Border Pipe Line Co.* v. *F.P.C.*, 171 F. 2d 149 (1948), holding that the Section 2(7) definition of "interstate commerce" in the Natural Gas Act does *not* include *foreign commerce*. It thus follows that if the phrase "and any point outside thereof" were to be construed in such a way as not to include areas under exclusive United States jurisdiction and control, that phrase could have only *one* possible alternative meaning—*i.e.*, *another state*. As already pointed out above, if Congress had any such limited intention its use of the broad phrase "and any point outside thereof" would have been entirely meaningless and unnecessary.

It is well to heed here the guiding principles laid down for statutory construction under such circumstances by the Court of Appeals in the *Border Pipe Line Company* case, *supra*, as follows:

> Congress uses expressions of established meaning.
>
> * * * * * * *

> . . . where relatively plain language and congressional conduct of accepted implication point one way and the contrary appears only through strained and complex assumptions and deductions, questions which the administrators may have as to the full intent and desirable scope of the congressional action ought to be addressed to the Congress.
>
> * * * * * * *
>
> It is bad from the viewpoint of sound government for the courts to twist strange results out of otherwise understood expressions of the legislature.
>
> * * * * * * *
>
> The wise and sound course for the courts is to give to the terms of a statute their plain meaning, so long as the resultant effect is sensible and not in conflict with a discernible purpose. [171 F. 2d at 152–3.]

If the Section 2(7) definition of "interstate commerce" is therefore simply read according to its natural and sensible meaning, the first phrase "and any point outside thereof" is broad enough to include the District of Columbia, any organized Territory of the United States, or lands merely subject to the jurisdiction and control of the United States, such as areas under United States lease or Federal domain areas over which the United States has exclusive jurisdiction and control. Similarly, it seems clear that the last phrase "but only insofar as such commerce takes place within the United States" was intended merely to insure that no regulatory authority would be exercised by this Commission over that particular portion of any interstate commerce which takes place in any *foreign country* and which is thus subject to the laws of such country—for example, the case of a pipeline connecting Alaska and the State of Washington, but passing through Canada. On the other hand, no reasonable explanation can be advanced as to why Congress should have desired to exclude from coverage interstate commerce *not* involving the laws of a *foreign country*, but involving areas subject to the exclusive jurisdiction and control of the United States. Accordingly, no justification can be found for adopting the narrow interpretation of the Louisiana interveners that the later phrase "but only insofar as such commerce takes place within the United States" is to be read as meaning "within the *mainland* United States." As already noted above, Congress has specifically provided in Section 4(a)(1) of the Outer Continental Shelf Act that

> The Constitution and laws and civil and political jurisdiction of the United States are extended to the subsoil and seabed of the outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon for the purpose of exploring for, developing, removing and transporting resources therefrom, *to the same extent as if the outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State.* . . . [Emphasis supplied.]

It is concluded that under these circumstances commerce between the State of Louisiana and areas subject to the exclusive jurisdiction and control of the United States in the Outer Continental Shelf area must be regarded as taking place "within the United States", within the meaning of Section 2(7) of the Natural Gas Act.

Finally, it is concluded that there is no common sense reason why Congress should have intended or desired the narrow construction contended for by the Louisiana interveners, since the result would have been to leave a gap in the regulatory scheme. It should be noted here that although the Commerce Clause of the Constitution (Art. I, Sec. 8, Clause 3) vests in Congress the power "To regulate commerce with foreign Nations, and *among the several States*, and with the Indian Tribes . . .", Congress has always regarded the Commerce

Clause as empowering it to regulate not only commerce between different states, but also commerce between a state and any organized Territory of the United States, or between a state and the District of Columbia.[11]

In the few cases where the question has been explicitly raised it has been held by the courts that "commerce between the States and a Territory which has become a part of the United States is interstate commerce". *Anderson* v. *Mullaney*, 191 F. 2d 123, 127 (CA9, 1951); *Inter-Island Steam Nav. Co.* v. *Territory of Hawaii*, 96 F. 2d 412, 416–7 (CA9). The Supreme Court acted on this assumption in *McLean & Co.* v. *Denver & Rio Grande R.R. Co.*, 203 U.S. 38, 49; *Hanley* v. *Kansas City Southern Ry. Co.*, 187 U.S. 617, 620; *Inter-Island Steam Nav. Co.* v. *Territory of Hawaii*, 305 U.S. 306, 313.

If the term "commerce . . . among the several States" in the Commerce Clause is broad enough to include commerce between a state and a Territory, or between a state and the District of Columbia, it would seem to be equally applicable to commerce between a state and an area subject to the exclusive jurisdiction and control of the United States, although not within a well-defined political unit. It follows, therefore, that prior to the enactment of the Natural Gas Act the states were without power to regulate commerce in natural gas between a state and a Territory, or the District of Columbia, or any area subject to the exclusive jurisdiction and control of the United States. See, in this connection, the holding of the Supreme Court in *Standard Oil Company* v. *California*, 291 U.S. 242, 245 (1934) that a state "cannot legislate effectively concerning matters beyond her jurisdiction and within territories subject only to control by the United States". Also see *Yellowstone Park Transportation Co.* v. *Gallatin County*, 31 F. 2d 644, 645 (1929) where the court held that a state had no jurisdiction over a Federal reservation, as follows:

> In other words, after the date of cession, the territory was as much without the jurisdiction of the state making the cession as was any other foreign territory, except in so far as jurisdiction was expressly reserved.

There does not appear to be any possible reason why Congress should have desired or intended not to fill such a regulatory gap when it adopted the Natural Gas Act. The filling of such a gap by the imposition of Federal jurisdiction and control would not have involved any problem relating to operations which might be subject to the laws of a foreign country, and accordingly it was not subject to the considerations which led Congress to exclude *foreign commerce* from the coverage of the term "interstate commerce" in the Natural Gas Act.

Since it thus appears that the clear and unambiguous language of Section 2(7) of the Natural Gas Act, as naturally read, is broad enough to cover commerce between any point in a state and the Outer Continental Shelf areas subject exclusively to United States jurisdiction and control, and since there is nothing in the legislative history of the Natural Gas Act indicating any intent or purpose not to cover such situations, the conclusion is inescapable that the transportation and sale of gas from the Outer Continental Shelf area beyond the boundaries of Louisiana to the Florida Parishes area of Louisiana involves the transportation and sale of natural gas "in interstate commerce".

Before concluding, brief reference may be made to the argument advanced by intervener Louisiana Gas Service Company that Congress in enacting the Outer Continental Shelf Act evinced a clear intent not to extend the power of this Commission into that area. The contention seems to be that even if it were

---

[11] See Bituminous Coal Act, 50 Stat. 90, 26 U.S.C.A. § 3526(d); Securities Act of 1933, 48 Stat. 74, 15 U.S.C.A. § 77(b)(7); Interstate Commerce Act, 41 Stat. 474, 49 U.S.C.A. § 1(1)(c).

concluded that the definition of "interstate commerce" in the Natural Gas Act is broad enough to include commerce between a point in a state and an area subject to the exclusive jurisdiction and control of the United States, nevertheless when Congress enacted the Outer Continental Shelf Act in 1953 it expressed a clear and effective congressional intent that commerce between a state and the Outer Continental Shelf area should be excluded from the coverage of the Natural Gas Act and from the jurisdiction of the Federal Power Commission. It is concluded, however, that there is nothing in the Outer Continental Shelf Act itself, or even in the quoted interchanges with Senator Daniel of Texas which occurred during the congressional hearings on that Act, indicating any congressional intent whatsoever to deal *in that Act* with the question whether gas produced in the Outer Continental Shelf area should be regarded as subject to Federal Power Commission jurisdiction under the Natural Gas Act as gas "in interstate commerce".

For the reasons set forth at length above, it is concluded that the sales for resale made by United in the Florida Parishes area off its Kosciusko line must be regarded as jurisdictional.

DECLARATORY ORDER

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner concludes, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) The transportation and sale for resale of natural gas by United Gas Pipe Line Company *off its Lirette-Mobile line* within that part of its Jackson District located within the so-called Florida Parishes of the State of Louisiana is not subject to the jurisdiction of the Federal Power Commission under the Natural Gas Act.

(B) The transportation and sale for resale of natural gas by United Gas Pipe Line Company *off its Kosciusko line* within that part of its Jackson District located within the so-called Florida Parishes of the State of Louisiana is subject to the jurisdiction of the Federal Power Commission under the Natural Gas Act.

JOSEPH ZWERDLING,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP63-324

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1963)

On May 27, 1963, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP63-324 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in Beaver County, Oklahoma, necessary to effectuate the direct sale of natural gas to Mid-America Pipe-Line Company, all as more fully set forth in the application.

Applicant proposes to sell on an interruptible basis a maximum quantity of 700 Mcf per day through the period ending May 31, 1973. Mid-America proposes

to use the gas as turbine fuel in its hydrocarbon products pump station to be located near Applicant's Mocane compressor station site in Beaver County, Oklahoma. Applicant will make the proposed sale by means of existing facilities, together with a new meter station on its Mocane compressor station site, estimated to cost $4,400.

Pursuant to due notice, a public hearing was held in Washington, D.C. on August 13, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware Corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the natural gas facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 90 days from the date on which this order issues.

(D) The volume of gas hereby authorized to be sold to Mid-America shall not exceed 700 Mcf per day.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP63-313

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1963)

On May 20, 1963, East Tennessee Natural Gas Company (Applicant) filed in Docket No. CP63-313 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation and operation of a 1,000 horsepower compressor station on its 16-inch South Line near Lobelville, Tennessee, all as more fully set forth in the application.

The installation of the proposed facilities will increase Applicant's ability to utilize its pipeline system for "pack-and-flow" operations by providing an additional 13,429 Mcf of "line pack" in its South Line. Applicant will thereby be able to maintain its demand as low as possible upon its sole supplier, Tennessee Gas Transmission Company. No compressor horsepower is presently installed in Applicant's system.

The proposed installation will eliminate the need for manual pressure control between Chattanooga and Knoxville, Tennessee. The operating costs of the compressor station are estimated to approximately equal the yearly expenditure of $13,080 for valve manipulation. By enabling Applicant to move an additional 15,000 Mcf of gas per day through its South Line, the proposed station would minimize the adverse effects created by wash-outs on either of two single line river crossings on the North Line. The North and South Lines connect near Knoxville.

The estimated cost of the proposed facilities is $274,800, to be financed from general funds provided from the operations of Applicant and/or short-term bank loans.

Pursuant to due notice a public hearing was held in Washington, D.C., on August 13, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee Corporation having its principal place of business in Knoxville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and the conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, East Tennessee Natural Gas Company, to install and operate the natural gas facilities as hereinbefore described, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-266

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1963)

On December 19, 1962, as supplemented on March 27, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP62-266 an application to amend the Commission's order issued November 19, 1962, 28 FPC 817, in said docket to delete from said order authorization for the construction and operation of certain facilities, to authorize the construction and operation of certain additional facilities and to permit and approve the abandonment of five mainline taps, all as more fully set forth in the application to amend, as supplemented.

The subject order authorized Applicant to acquire and operate certain facilities of Southwest Gas Corporation (Southwest); to abandon in place 7.52 miles of 10-inch pipe so acquired from Southwest; and to construct and operate, among other facilities, 9.08 miles of 16-inch pipeline looping a portion of the 16-inch line acquired from Southwest in Mohave County, Arizona.

Applicant requests herein that the subject order be amended to delete authorization for the 9.08 miles of 16-inch pipeline loop and in lieu thereof to construct and operate 10.73 miles of 20-inch pipeline replacing, over a slightly different route, 10.45 miles of the 16-inch line acquired from Southwest. Applicant also seeks authorization to abandon five mainline taps located on the portion of the 16-inch line to be replaced and abandoned and to construct and operate four mainline taps on the proposed new 20-inch replacement line. The new taps will be used to serve customers previously served by five taps to be abandoned.

The application indicates that the subject proposals would forestall future and more expensive capacity additions in a populated area, avoid crossing subdivided and soon to be subdivided lots, eliminate need for the section of loop line heretofore authorized and prevent danger involved in testing an old line at higher pressure in a populated area.

The application indicates an estimated increase of approximately $72,000 in the total estimated cost of the original project.

By letters, dated February 25 and April 25, 1963, Applicant was granted temporary certificates authorizing the subject proposals.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 25, 1963 (28 F.R. 7574). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued November 19, 1962, in Docket No. CP62-266 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued November 19, 1962, in Docket No. CP62-266 be and the same is hereby amended to delete authorization for the construction and operation of certain facilities, to authorize the construction and operation of additional facilities and to permit and approve the abandonment of five mainline taps, all as hereinbefore described and as set forth in the application to amend, as supplemented.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN UTILITIES, INC., DOCKET NO. CP63-301

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1963)

On May 10, 1963, Northern Utilities, Inc. (Applicant) filed in Docket No. CP63-301 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the transportation and delivery of additional volumes of natural gas for the account of Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska), all as more fully set forth in the subject application.

Specifically, Applicant proposes to construct and operate the following facilities:

(a) approximately 25 miles of 16-inch main pipeline loop on Applicant's interstate transmission pipeline between Sand Draw Field, Fremont County, Wyoming, and the city of Casper, Natrona County, Wyoming;

(b) a 12-inch meter run at the delivery point to Kansas-Nebraska at the latter's Casper compressor station, replacing the existing 8-inch meter run, and,

(c) meter stations to receive additional volumes of gas from Kansas-Nebraska.

The proposed facilities will enable Applicant to deliver a maximum daily volume of 26,000 Mcf* of natural gas which volume Kansas-Nebraska has requested Applicant to transport and deliver pursuant to the transportation agreement, dated August 25, 1962, between the two companies. The application indicates that the subject volumes will be tendered by Kansas-Nebraska to Applicant from producing areas in Fremont and Natrona Counties, Wyoming, and that said volumes will be transported by Applicant and delivered to Kansas-Nebraska for utilization by the latter in its market areas in eastern Wyoming and western Nebraska.

The application shows the estimated cost of the proposed facilities to be $914,388, which cost will be financed from cash on hand and cash obtained from the sale of assets.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 6, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Utilities, Inc., a Wyoming corporation having its principal place of business in Casper, Wyoming, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order, issued December 20, 1962, in Docket No. CP63-74, 28 FPC 1082.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

*At 15.025 psia.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Utilities, Inc., to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER MODIFYING LICENSE ARTICLE AND EXTENDING TIME FOR COMPLETION OF CONSTRUCTION

(Issued August 27, 1963)

Sacramento Municipal Utility District (District), licensee for Project No. 2101, filed: (1) a request on June 3, 1963 for a further extension of time from July 1, 1963, as now specified in Article 25 of the license, to January 1, 1964 for completion of the construction of Stage II of the project; and (2) a request on June 14, 1963 for modification of Article 28 of the license for the project to reflect the provisions of a Memorandum of Understanding, dated June 3, 1963, between District and the U.S. Forest Service relative to the removal and flush-cutting of tree stumps within the Ice House and Gerle Creek reservoirs of the project.

By its order issued October 24, 1962, the Commission extended the time for completion of Stage II from February 28, 1963 to July 1, 1963 because of delays caused by foundation difficulties in locating the Camino penstock and by a labor strike. Our records show that the construction of Camino penstock and powerhouse, the last uncompleted features of Stage II, has been prosecuted diligently, and that the District has kept us informed at all times as to the progress of construction. The recent high flows in the South Fork of American River prevented the maintenance of the coffer dam around the tailrace so that the gate installation could be completed. We are hereinafter granting the extension.

By its order issued September 19, 1962, 28 FPC 493, the Commission, among other things, amended Article 28 of the license to require the removal and flush-cutting of tree stumps in certain areas within the Union Valley Reservoir. The afore-mentioned Memorandum of Understanding between the District and Forest

Service seeks Commission modification of Article 28 so as to provide that the Commission, with the advice of the Forest Service, shall designate; (a) within Ice House Reservoir 23 acres where stumps shall be removed and disposed of and the area cleared of rocks readily movable by bulldozer, and 5 acres where stumps shall be flush-cut within six inches of the ground; and (b) within Gerle Reservoir 6 acres where stumps shall be removed and disposed of, and 6 acres where stumps shall be flush-cut to six inches above ground. Also, in both reservoirs, certain hazard stumps and areas of unsightly stumps, as designated by the Forest Service, are to be cut to six inches above ground.

The Commission finds:

(1) The District has carried on in good faith and with reasonable diligence the construction of Stage II of the project and it will not be incompatible with the public interest to grant a further extension as hereinafter provided.

(2) Modification of Article 28 of the license for Project No. 2101 as hereinafter provided is appropriate and consistent with the public interest.

The Commission orders:

(A) The time specified in Article 25 of the license for Project No. 2101 for completion of construction of Stage II of the project is hereby further extended from July 1, 1963 to January 1, 1964.

(B) Article 28 of the license for Project No. 2101 is hereby further modified, effective as of July 1, 1963, to read as follows:

Article 28. The Licensee shall, prior to flooding, clear bottoms and margins of each reservoir between a plane five feet below maximum drawdown elevation of such reservoir and the plane at the normal pool elevation of such reservoir. Exclusive of the Union Valley, Ice House, and Gerle reservoir areas, stumps in the reservoirs shall be cut within six inches of the ground, except that they shall be cut flush with the ground in boat-dock areas, bathing beach areas and other areas as may be designated by the Commission upon advice of the Forest Service.

Union Valley Reservoir—The Commission with the advice of the Forest Service shall designate 200 acres within the Union Valley Reservoir area where all stumps shall be removed and disposed of and 370 acres where the stumps shall be cut flush with the ground. In the remaining Union Valley Reservoir area between the minimum and normal pool elevations all existing stumps over 24 inches in height above ground shall be cut to 6 inches above ground.

Ice House Reservoir—The Commission with the advice of the Forest Service shall designate 23 acres within the Ice House Reservoir area between elevation 5450 (maximum pool) and elevation 5395 where stumps shall be removed and disposed of and the area cleared of rocks that can be readily moved with bulldozer equipment and shall designate 5 acres where the stumps shall be flush cut within six inches of the ground. In the remaining reservoir area between elevations 5450 and 5395 certain hazard stumps and areas of unsightly stumps, to be designated by the Forest Service, will be cut to six inches above ground.

Gerle Reservoir—The Commission with the advice of the Forest Service shall designate six acres within the Gerle Reservoir area between elevation 5231 (normal maximum pool) and elevation 5215 where stumps shall be removed and disposed of and six acres where stumps shall be cut to six inches above ground. In the remaining reservoir area between elevations 5231 and 5215 certain hazard stumps and areas of unsightly stumps, to be designated by the Forest Service, will be cut to six inches above ground.

The Licensee shall clear and keep clear to an adequate width lands of the United States along open conduits, and shall dispose of all temporary structures,

unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of reservoirs which may die during operation of the project shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission. The Licensee shall remove and dispose of floating debris and excessive accumulations on the shoreline of all new reservoirs, prior to June 1 of each year, to the satisfaction of the authorized representative of the Commission.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

CITY OF TACOMA, PROJECT NO. 2166

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR LICENSE

(Issued August 27, 1963)

Application was filed on July 8, 1963 by City of Tacoma, Washington (Applicant) for Commission permission to withdraw its application for license filed on September 7, 1954, for proposed Project No. 2166 to be located on the South Fork of the Skokomish River in Mason County, Washington.

Applicant, who is the licensee for Project No. 2016 comprising the Mayfield and Mossyrock developments on the Cowlitz River, states that in view of the delays encountered in the completion of construction of Project No. 2016 not previously expected, Project No. 2166 would not be warranted at this time.

The Commission finds:

In the circumstances recited herein, it is appropriate to permit the withdrawal of the application for license for Project No. 2166.

The Commission orders:

Permission to withdraw the aforesaid application for license is hereby granted, without prejudice to the filing by Applicant of a new application for license, and this proceeding is hereby closed.

OPINION NO. 383-A

TEXACO SEABOARD, INC., DOCKET NO. CI61–118; TEXACO INC., CI61–119; HUMBLE OIL & REFINING COMPANY, CI61–157

MEMORANDUM OPINION AND ORDER ON REHEARING REJECTING SETTLEMENT PROPOSALS

(Issued August 27, 1963)

Syllabus

1. Determination of "in-line" price is governed by date of contract execution, not date deliveries commenced. P. 615.

2. Area ceilings set forth in Policy Statement are "guideline to future action" but "cannot effect an automatic approval of proposed rates."—or have any retroactive effect. PP. 615, 616.
3. Whatever is eventually determined in R–199, Texaco or Humble will be able to receive payment for 80 percent of their gas whether delivered or not. P. 615.
4. By fixing 17-cent area price [for new sales in 1963 and thereafter] Commission did not foreclose possibility that in a contested proceeding it might certificate a particular new sale at either a higher or lower price—such determination will be based on record in accordance with principles enunciated herein and in *CATCO* and *Skelly*. P. 616.
5. Policy is to grant producers temporary authority only upon condition that guideline price will not be increased without Commission permission, with maximum limit of three years, or until permanent certificate is granted. P. 617.
6. Proper "in-line" price for contracts executed in period following Policy Statement will depend on evidence in proceedings in which initial price for such contracts are in issue. P. 617.
7. In determining "in-line" prices here account is taken of contract provisions, other than prices, which affect total compensation producers receive. P. 618.
8. Neither Texaco's or Humble's settlement proposals are in the public interest since increases proposed substantially exceed in-line price and are not governed by price at date of contract execution. P. 619.
9. Upon rehearing Commission *rejects* settlement proposals and *confirms* prior order as herein modified. P. 619.

Commissioner Ross *concurring in part; dissenting in part.*

Commissioner Morgan *joined* in Commissioner Ross' statement.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

On April 26, 1963, applications for rehearing were filed by Texaco Inc.,[1] Humble Oil & Refining Company and the Public Service Commission of New York with respect to the Commission's Opinion No. 383 and Order issued March 27, 1963, 29 FPC 593. That Opinion concerns applications for certificates of public convenience and necessity for sales of natural gas produced by Texaco in Texas Railroad District No. 4 and by Humble in District No. 3 under contracts executed on July 1, 1960 with Natural Gas Pipeline Company of America. We found that the certificates issued to Texaco in District No. 4 should be conditioned at 15 cents per Mcf while that issued to Humble in District No. 3 should be conditioned at 16 cents per Mcf. Texaco and Humble have filed offers of settlement, and responses have been filed by the Public Service Commission of New York and The United Gas Improvement Company. Because of Texaco's offer and to allow further time for consideration we granted rehearing on May 23, 1963 [not reported].

The problem here was to determine an initial rate for these sales that would be required by the public convenience and necessity under Section 7(e) of the Natural Gas Act. This means that the proposed price must not be "out of line" in accordance with the decision of the Court in the *CATCO* case.[2] Upon remand of the *CATCO* case[3] and in the *Skelly* case[4] we determined that the

[1] Texaco Seaboard has been merged into Texaco.

[2] *Atlantic Refining Co.* v. *F.P.C.*, 360 U.S. 378, 391.

[3] *Continental Oil Co., et al.*, 27 FPC 96, 100.

[4] *Skelly Oil Co., et al.*, 28 FPC 401, 408. See also Opinion on Rehearing, 28 FPC 1065, Opinion No. 362–A, issued December 18, 1962.

price line should be determined as of the time the contracts for the sales in question were executed, and we have determined the line here as of July 1, 1960. In doing so for District No. 4 we followed our findings in the *Skelly* case where the evidence is substantially identical to the present record. For the Humble sale in District No. 3 we examined the prices for other sales in this District No. 3 for the years 1958–1960. The Policy Statement setting forth an 18-cent ceiling or guideline price for initial rates was not issued until September 28, 1960, 24 FPC 818, 820, after all the contracts herein had been executed.

In their applications for rehearing, Texaco and Humble have made various arguments with respect to our determination of the initial price in each case, particularly with respect to the evidence considered. Most of these arguments have been expressly answered by the discussion in our Opinion No. 383 or in *CATCO* and *Skelly* Opinions, *supra*. Texaco's argument, repeated here, that we are using "in lineness" as the sole criterion of public convenience and necessity is answered by the court in *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (CADC, March 21, 1963). In that case the court held that the Commission could properly hold issues of price controlling, "it being conceded that the other requirements of public convenience and necessity had been fully met by the proposed sale." Both the *Atlantic* case and *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652, (10th Cir., March 28, 1963) uphold the use of sales prices in the area as the basis for fixing the initial prices in certificate cases and indicate that the Commission was not required to consider other evidence as to financial position and costs of production.

Humble now contends further that since it has not commenced deliveries and is free to accept or reject the proffered certificate, its contract should be treated like any other new contract under which deliveries have not commenced and should be entitled, at least, to the reduced initial price of 17 cents for District No. 3 specified by Order No. 267, 29 FPC 590, issued March 27, 1963. Our determination of the "in-line" price in this case and in our prior decisions is governed by the date the contract was executed, not the date deliveries began, and in the *Atlantic* case, *supra*, the court approved our use of the date the contract was executed to determine the "in-line" price. A new label would not transform this sale into a new transaction. If Humble should file an entirely new contract, the 17-cent ceiling would not automatically apply, but the price would be subject to consideration in an appropriate proceeding in which the history of the transaction would be highly relevant. As we said in the *Skelly* opinion, the area ceilings set forth in the Policy Statement are "guidelines to future action" but "cannot effect an automatic approval of proposed rates."

Both Texaco and Humble contend that we improperly included a condition in our order granting certificates (paragraph (C)) providing that the take-or-pay requirement in each contract is subject to the provisions of the Commission's final order in Docket No. R–199, modified by adding that the producers should not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. They argue that the condition is without support in the record, is indefinite and would require some higher revenue standard as compared with other contracts.

We have limited the effect of paragraph (C) so that whatever is eventually determined in Docket No. R–199, Texaco or Humble will always be able to receive payment for 80 percent of their gas whether or not any gas is delivered. While all doubt as to the future is not eliminated, in our opinion, it has been confined within reasonable bounds. In *Sohio Petroleum Co.* v. *F.P.C.*, 298 F. 2d 465, 468 (CA10) the court held that in issuing a temporary certificate the question of permitting a Btu adjustment could be left for future determination

where the applicable Policy Statement price was used as a floor. We followed this with respect to permanent certificates in Opinions Nos. 350 and 353.[5]

Finally, Texaco and Humble have not shown that imposition of the take-or-pay limitation requires a higher rate. It is true that we have used contracts in determining the lines that do have take-or-pay clauses,[6] but the effect of a possible limitation of such provisions in the future is highly speculative. When we determined the line we took into account such contingent factors. The line of 16 cents reached in District No. 3 and 15 cents in District No. 4 is higher than most prices which had not been involved in litigation. We think, therefore, that compensation has been made for such factors. We may observe again in this connection, as we did in Opinion No. 383, that the initial price established under this decision will not prevent Texaco or Humble from filing rate increases up to the contract level (subject to suspension and refund).[7]

A question has been raised as to the relationship of the Commission's Policy Statement guideline ceilings and the "in-line" price fixed in this case. The prices in the Commission's Policy Statement are guidelines for future Commission action. They have no retroactive effect. The fact that the Commission has determined upon a record in this proceeding that the "in-line" price for certain contracts executed in 1960 is 16 cents is in no way inconsistent with the Commission's announcement of a guideline ceiling price of 17 cents for new sales in 1963 and thereafter. The 16-cent "in-line" price was determined on the basis of the record in a contested proceeding relating to a certain time and place, namely July 1, 1960 in District No. 3. The Commission's decision to reduce its guideline ceiling from 18 cents to 17 cents was determined as of March 27, 1963, almost three years later, on the basis of data then available to the Commission to serve as a guideline price for future action. Such guideline prices are at levels at which the Commission will grant permanent certificates in non-contested cases and authorize temporary service in emergencies. By fixing these rates we do not foreclose the possibility that the parties in a contested proceeding may persuade us that the level at which we should certificate a particular new sale should be at either a higher or lower price. Our determination will be based upon the record in each proceeding in accordance with the principles enunciated in *CATCO* and *Skelly* and herein.

The need for guideline ceilings in the interim period until just and reasonable rates can be established in all producing areas is clear to all parties concerned. The Commission in the exercise of its consumer protection function must hold the line against further increases in the price of gas and producers must know the price at which, in the absence of protest, the Commission will grant them a certificate. We believe our action in reducing the existing ceiling Texas District No. 3 from 18 cents to 17 cents (and similar reductions in several other producing areas) is ample demonstration that our Policy Level prices are more than holding the line for consumers while enabling "producers to obtain authorizations which provide them a reasonable basis, for proceeding with their operations and furnishing needed supplies of gas."

Our guideline ceilings also serve the very important function during this interim period of providing the level at which the Commission grants tem-

[5] *Panhandle Eastern Pipe Line Co.*, 27 FPC 35; *Michigan Wisconsin Pipe Line Co.*, 27 FPC 449.

[6] However, in District No. 3 the Sinclair Oil and Gas Co. contract dated September 29, 1959, for an estimated monthly production of 60,000 Mcf at 15.144 cents per Mcf and the Slick Oil Corp. contract dated August 25, 1958, for 45,000 Mcf a month at 15.0 cents per Mcf do not have take-or-pay clauses.

[7] See also *Atlantic Refining Co.* v. *F.P.C.*, *supra*, cited on this point by the New York Commission.

porary authority to producers to make needed sales of gas in emergencies until permanent certificates are granted. The Commission policy is to grant such temporary authority only upon the condition that the guideline price will not be increased without permission of the Commission with a maximum limit of three years or until the permanent certificate is granted. The Commission's policy to so limit the filing of rate increases is a key element in our program to hold the line on producer prices until just and reasonable area rates are established.[8] The Commission in establishing the guideline ceiling price recognizes that while holding the line for consumers the prices must also be fair to producers who must agree to forego even filing for rate increases during the period of the temporary.

We may add that the issuance of the Policy Statement on September 28, 1960, did not automatically elevate the price line. In view of our decision in this case fixing the in-line price level at 16 cents as of July 1, 1960, and our reduction of the guideline level to 17 cents as of March 27, 1963, we are obviously not of the opinion that the proper initial price level is 18 cents on September 28, 1960. What would be the proper in-line price for contracts executed in the period immediately following the issuance of the Policy Statement will depend on the evidence in proceedings in which the initial price for such contracts are in issue.

The New York Commission calls our attention to the fact that for Texas District No. 3 we listed at 16.2 cents per Mcf a sale of Valley Gas Transmission Inc. to Tennessee Gas Transmission Company under a contract dated September 30, 1959. Since, as the New York Commission points out, the Valley company is really a gathering company, it should not have been included among the producer sales. The New York Commission also notes our inclusion of a sale by Pel Tex Petroleum Company under contract dated November 2, 1960, although we are determining the price as of July 1, 1960. Since this price itself could not have influenced Humble's determination to sell to Natural Gas Pipeline Company of America, and is dated later than the Commission's Statement of General Policy No. 61–1 issued September 28, 1960, we think that it would be appropriate as a matter of discretion to exclude prices for comparison purposes after this date. However, this does not mean that in other instances not involving the date of the Policy Statement we will not consider contracts executed contemporaneously with the contract in question as showing pricing conditions in the area merely, because the contract in issue was dated a few days before the one with which it is being compared.

The elimination of one or two of the four permanent sales at the 16.2-cent level would not change our judgment of the proper "in-line" price level as of July 1, 1960. In arriving at our result we took into account not only the 16.2-cent prices but the prices for other permanently certificated sales in District No. 3 ranging up to 15.2 cents and also the prices for sales under temporary certificates. As the table in our Opinion No. 383 shows, the latter range from 14 cents up to 20 cents, but those above 16.2 cents are at levels equal to those that have been subject to litigation and are suspect. Our table indicates seven sales under temporary certificates at the 16.2-cent level, one of which has

[8] The Commission's authority to impose such conditions is the subject of judicial review in *H. L. Hunt* v. *F.P.C.*, 306 F. 2d 334 (CA5), petition for rehearing denied April 16, 1963; petition for certiorari [granted 375 U.S. 810 (S.Ct. No. 273); CA5 reversed March 30, 1964, 376 U.S. 515].

become permanently certificated.[9] Sales under temporary certificates are, of course, not as persuasive as prices under permanent certificates but do assist in determining the price level.

As indicated in our opinion in determinating the "in-line" prices herein we have taken into account contract provisions other than prices which affect the total compensation producers received for their gas. For instance, most of the prices with which we made comparisons do not include reimbursement for dehydration although this item is included in Humble's price.[10] As noted above, we also took into account the limitation of Humble's take-or-pay clause. Another important factor is the size of Humble's proposed sale estimated to amount to 248,000 Mcf per month. There are no sales of a comparable volume for District No. 3 below the 16.2-cent level. Thus in view of the spread of permanently and temporarily certificated sales, particularly those at 16.2 cents, and without giving any weight to higher prices subject to litigation, 16 cents is in line for District No. 3 as of July 1, 1960.

The "in-line" price we have fixed herein, considering all of the above-mentioned factors relevant to the contracts involved, provides compensation to the producers that by no means is equivalent to the highest group of untainted prices heretofore paid. Our judgment is thus clearly in accord with our statement in the remanded *CATCO* case (*Continental Oil Co., et al.*, 27 FPC 96, 102) that a price is "not in line as of a given time if it is the highest price or in the highest group of prices theretofore paid," and the statement in *Texaco Seaboard Inc., et al.*, 27 FPC 482, 485, that in *CATCO* "we held the proper price line to fall between the highest group of prices and the median price."

On May 16, 1963, Texaco filed an offer of settlement proposing an initial price of 16 cents per Mcf and a moratorium on rate increase filings until May 1, 1967. By response dated June 10, 1963, the New York Commission objected to Texaco's proposal as involving too high a price and too short a moratorium. The United Gas Improvement Company indicated that it favors a price higher than the "in-line" price coupled with a moratorium on rate increase filings.

On June 14, 1963, Texaco filed an amendment to its certificate application extending the moratorium until May 1, 1968. On July 6, 1963, the New York Commission responded to the amendment saying that the moratorium was still not long enough and that it permitted an increase above the ceiling without agreement of the parties. Now by motion filed August 9, 1963, Texaco proposes an effective rate inclusive of tax reimbursement and dehydration allowance of 15.5 cents per Mcf combined with the same five-year moratorium on rate increases to May 1, 1968, and it withdrew its amendment. This proposal compares with our determination in this proceeding that the "in-line" price in Texas District No. 4 on July 1, 1960, at the time of Texaco's contract, was 15 cents, although the guideline price established as of August 30, 1962, was 16 cents (Fifth Amendment of Statement of General Policy No. 61–1, 28 FPC 441).

---

[9] This is a sale under contract dated April 11, 1960, listed in Exhibit 48 as by Olin Gas Transmission Corp., now Humble Gas Transmission Co., to Tennessee Gas Transmission Co. The price of 16.16947 cents per Mcf applies to an estimated first months production of 77,500 Mcf. The permanent certificate was issued in Docket No. CP60–109 on October 31, 1960 under *Paul F. Barnhart, et al.*, Docket No. G–13831, *et al.*

One of the other sales listed under temporary certificate at 16.2 cents (15,500 Mcf per month) and two of these listed at 14.0 cents should be eliminated for the purposes of this proceeding since the contracts were executed between September 28, 1960, when the Policy Statement was issued, and the end of year.

[10] Almost as large a provision for dehydration is included in the two remaining permanently certificated 16.2-cent sales listed in Exhibit 48 and in the Olin sale at 16.2 cents referred to above, which is also made under permanent certificate.

Humble on June 11, 1963, for its sale in District No. 3 proposed an initial price of 17 cents to remain in effect five years after the commencement of the delivery term.[11] This may be compared with the 16-cent "in-line" price determined in this proceeding as of July 1, 1960, and the 17 cents established by our Order No. 264 amending the Policy Statement as of March 27, 1963. The New York Commission and The United Gas Improvement Company made similar responses to Humble's proposal.

We are of the opinion that neither Texaco's nor Humble's proposals are in the public interest. The increases proposed over the prices determined to be "in-line" are substantial. Furthermore, the proposals are in conflict with the principle that the "in-line" price should be determined as of the contract date. To permit Texaco and Humble to put into effect initial prices at the guideline level established much later would nullify this principle without sufficient justification and would be detrimental to consumers. Furthermore, we are dealing here with in-line prices that have been determined after the presentation of evidence in a full hearing. We have no reason to believe that our determination was not correct. We shall therefore not accept the modified settlement proposal made by Texaco in its filing of August 9, 1963, nor the proposal filed by Humble on June 11, 1963.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 383, or which, having now been considered, warrant any change or modification of such opinion, except as noted above.

(2) The settlement proposals filed by Texaco and Humble should be denied.

The Commission orders:

(A) Our Opinion No. 383 and Order is hereby confirmed as the order of the Commission except as modified herein.

(B) Paragraph (D) of our Opinion No. 383 and Order is amended to require that acceptance of the certificates by the respective producer applicants may be made within 20 days of this present order on rehearing.

(C) The settlement proposals filed by Texaco and Humble are hereby rejected including those contained in Texaco's amendment to its certificate application.

Commissioner Ross *concurring in part* and *dissenting in part.*

Commissioner Morgan, *concurring in part* and *dissenting in part, joined* in Commissioner Ross' statement.

Ross, Commissioner, *concurring in part and dissenting in part:*

I concur with that aspect of the instant order which lessens the impact of guideline pricing but I dissent to the majority's in-line determination with respect to Texas District No. 3.

The majority's policy had been to automatically grant certificates—both temporary and permanent—whenever the proposed price was at or below the guideline level in the Statement of General Policy No. 61–1. The only exception concerned a permanent in cases when a party outside the Commission presented an objection in which even guideline prices were not used as a matter of course.

Here however, the majority states that the guideline price would not automatically apply to any new contract filed by Humble. And on page 616 of

[11] Delivery or six months after acceptance of certificate, whichever is sooner.

its opinion, the majority recognizes that guideline ceilings may be set improperly and that permanent certificates may be issued at a lower level in an appropriate proceeding. The significance of this statement is that guideline ceilings are not a floor. They should not be a floor because experience has repeatedly demonstrated that guideline levels have been overstated, with the result that producers have collected excessive prices under temporaries at such levels. If the Commission suspects, when it grants a temporary at a guideline ceiling, that the price permanently certificated may be lower, it should provide against the producers receiving a windfall at the expense of the consumers, as has occurred in the past. Thus, conditions providing for refunds to a level 2¢ or 3¢ per Mcf below the guideline should be imposed in all future temporaries issued at guideline levels. This is the only way guideline pricing can be employed without avoiding our obligation "to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges".[1]

The majority characterizes the guideline ceilings as an exercise of its "consumer protection function". The manner in which this particular function is performed hardly deserves this appellation. After a contested proceeding, an in-line price of 16¢ per Mcf was established for District 3. At the same time, a guideline price of 17¢ was promulgated for the same area. Of course the guideline level relates to a period after the date the Policy Statement was issued. However, the Supreme Court enjoined the Commission to hold the price line on producer certificates until just and reasonable rates were established—not merely until the Commission issued a Policy Statement. Moreover, a much more reliable basis for determining in-lineness is found in the results of a contested proceeding than in a Policy Statement promulgated without the benefit of the views of interested parties.

A second important matter raised by the instant opinion concerns the basis of in-line price determinations. In this connection, the majority has correctly concluded that two of the four permanent contracts at 16.2¢ per Mcf should not have been used in determining the price line issue. It then proceeds to the remarkable conclusion that elimination of these contracts does not change its judgment of the price line which took into account all prices below the levels subject to litigation. All what prices? All the other prices below the levels subject to litigation under permanent certification, save two, are in the neighborhood of 15¢ per Mcf and lower.[2]

One-half of the highest priced contracts is eliminated from consideration and the majority is telling us that this doesn't affect the result. The clear implication of this holding is that in-line prices will be determined solely by reference to the highest contracts in the area upon which it legally can rely, regardless of their minimal number and regardless of the number of other contracts at substantially lower prices. This plainly means that contract prices below the highest legal level are irrelevant to a price line determination, irrespective of their magnitude.

Such a position constitutes a regulatory standard for considering in-lines, with which I cannot agree. Such a position, in fact, is flatly inconsistent with this Commission's order of March 7, 1962, which was unanimously adopted.[3] There the Commission held the proper price line fell *between the highest group of prices and the median price level*, specifically indicating that this was the

[1] *Atlantic Refining Company* v. *P.S.C.* 360 U.S. 378

[2] Even the two exceptions at 16.2¢ per Mcf are notably unlikely candidates for supporting a price line determination for the reasons contained in my separate statement to the original order herein.

[3] *Texaco Seaboard Inc., et al.*, Docket No. G–13169, *et al.*, 27 FPC 482.

manner in which the price line issue was determined in *CATCO, supra*. The majority is, therefore, plainly in error in asserting that it followed the *CATCO* case, *supra*, in determining the in-line price in District 3.

Surprisingly, the majority states the in-line price it determined "by no means is equivalent to the highest group of untainted prices heretofore paid". It cites with approval previous holdings that the in-line price is somewhat lower. While the majority's attempts at consistency are admirable, the "in-line" price of 16¢ *is* equivalent to the highest group of untainted prices. There are two contracts permanently certificated at 16.2¢—actually 16.16947¢—and these contracts include over 0.2¢ per Mcf reimbursement for dehydration. This is a feature not present in the other contracts in the area with which comparisons were made.

Another serious difficulty is the majority's reliance on sales made under temporary certificates in reaching its in-line determination. This places in serious jeopardy the legal sufficiency of the Commission's finding. The reason is clear. Temporaries are granted at guideline levels. Grants of such temporaries are impervious to all attacks from consumer interests. (*Cf. J. Ray McDermott & Co., Inc.*, Docket No. CI63–301, order dated December 31, 1962, 28 FPC 1300.) To provide some aura of legal respectability, interested parties are told their rights are not adversely affected because a hearing may be held on the permanent. Now, however, the majority purports to rely on prices granted in temporaries thereby making a mockery of the hearing process.

Accordingly, I dissent to the majority's in-line determination of 16¢ per Mcf in Texas District 3. Adherence to prior holdings, cited but not followed by the majority, requires a price no higher than 15¢ per Mcf.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–303

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1963)

On May 13, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63–303 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a new delivery point with the necessary metering and regulating facilities, and the sale and delivery of natural gas for resale, all as more fully represented in the application in this proceeding.

Applicant proposes to construct and operate a sales meter station and appurtenant equipment in Cherokee County, South Carolina, at milepost 1237.62 on its main transmission line to be used as an additional delivery point for natural gas service to Carolina Pipeline Company (Carolina Pipeline) for resale to a new textile finishing mill of the Deering Milliken Service Corporation (Deering), on an interruptible basis for direct-fired process application in quantities up to 3,300 Mcf per day. The volume of gas to be supplied by Transco at this point will be out of allocations previously authorized by the Commission with no increase in contract demand.

The proposed facilities to be constructed are estimated to cost $24,500 to be initially financed from Applicant's general funds. Carolina Pipeline has agreed to reimburse Applicant for the entire cost.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 13, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the related delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The total deliveries of natural gas to Carolina Pipeline Company under this authorization should be limited to a maximum volume of 3,300 Mcf per day.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities to provide an additional delivery point for natural gas service to Carolina Pipeline Company as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The total deliveries of natural gas under this authorization are hereby limited to a maximum volume of 3,300 Mcf per day.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph

(b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. G–18799

ORDER GRANTING STAY

(Issued August 29, 1963)

Cities Service Gas Company and Cities Service Company have jointly moved for a stay of the Commission's order accompanying Opinion No. 396, issued July 15, 1963, 30 FPC 158, in this case pending final action on their application for rehearing, and if rehearing is denied, pending conclusion of judicial review. The order requires Gas Company to file substitute tariff sheets and to make refunds of the amount of federal income tax in excess of that considered proper for rate making purposes.

This proceeding involves only rates for a locked-in period. Currently, effective rates are not involved herein. Moreover all amounts disallowed are subject to refund with interest. In these circumstances, we will grant the requested stay.

The Commission orders:

Ordering paragraphs (B), (C), (D), (E) and (F) of the order accompanying Opinion No. 396 are hereby stayed pending final action on rehearing, and if rehearing is denied, pending final conclusion of judicial review, if such review is taken.

C. N. JOHNSTON, ET AL., DOCKET NOS. G–9136 AND G–9569

ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued August 29, 1963)*

Syllabus

1. Commission *disallows* proposed increased rates and *terminates* proceedings initiated under Section 4(e) of the Natural Gas Act. PP. 624; 626.

Norman A. Flaningam, C. W. Cooper, and *George C. Williams* for The East Ohio Gas Company, Hope Natural Gas Company, New York State Natural Gas Corporation and the Peoples Natural Gas Company

William R. Duff, J. Harry Mulhern, Edward S. Kirby, and *James R. Lacey* for Public Service Electric and Gas Company

J. David Mann, Jr., John Holtzinger, and *John P. Bracken* for The United Gas Improvement Company

Barbara M. Suchow, Kent H. Brown, and *Lawrence M. De Vore* for Public Service Commission of New York

Leo E. Forquer for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

By initial decision issued July 29, 1963, the presiding examiner in the above-entitled proceedings issued an initial decision disallowing the proposed increased rates of C. N. Johnston, *et al.* (Johnston) involved herein and terminating the proceedings because of Johnston's failure to sustain the burden of proof under

*Initial Decision appears on P. 624.

Section 4(e) of the Act of showing that the proposed rates are just and reasonable.

The time for filing exceptions to said decision has passed and no exceptions having been filed, the matter is now properly before us.

The Commission orders:

The initial decision of the presiding examiner issued on July 29, 1963 is adopted as the decision of the Commission in this proceeding effective as of the date of this order.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON PROCEEDINGS PURSUANT TO SECTION 4(e) OF THE NATURAL GAS ACT INVOLVING PROPOSED INCREASES IN THE RATE OF A PRODUCER

(Issued July 29, 1963)

SIMPSON, *Presiding Examiner:* The proceeding involves two increases in rates proposed by C. N. Johnston, *et al.*,[1] (Johnston, Applicant), representing periodic step increases, which were suspended by the Commission under Section 4(e) of the Natural Gas Act (Act), and never made effective. The sales concern those to United Gas Pipe Line Company (United) representing Applicant's 0.0001952 non-operating working interest in the Duck Lake Gas Unit, Duck Lake Field, St. Mary and St. Martin Parishes, Louisiana.[2]

These matters were initially consolidated with the proceedings in 12 other dockets involving suspended proposed changes in rates related to sales of natural gas in interstate commerce to the same purchaser (United) from the same field, including among others, proceedings concerning Arkansas Fuel Oil Corporation (G–8921, G–9571), R. H. Goodrich (G–8977, G–9575), and W. H. Cocke (G–8978, G–9570).[3] Subsequent severances and consolidations[4] resulted in a hearing on suspensions concerning Arkansas in 15 dockets, Goodrich in 4 dockets, Cocke in 3 dockets, Johnston in 2 dockets (G–9136, G–9569), and John W. Mecom, d.b.a. Mecom Petroleums, in one docket.[5] The hearing was duly held, and evidence was received directly on behalf of Arkansas and Mecom, Goodrich and Cocke adopting that of others.[6]

---

[1] C. N. Johnston, FPC Gas Rate Schedule No. 1, Supps. No. 1, filed June 17, 1955 (G–9136) and No. 2, filed September 30, 1955, (G–9569); the increases proposed being from 12.50¢ to 13.50¢ per Mcf, and from the latter to 20.20¢ per Mfc, respectively, before the 1¢ per Mfc gathering tax (15.025 psia).

[2] The contract relates to the sale of natural gas to United Gas Pipeline Company by C. N. Johnston, Eleanor J. Jones, Felton M. Johnston, Edgar Newton Johnston, Mary J. Moore, and Evelyn Elizabeth Patterson, individually and collectively, as sellers. It became effective May 1, 1955, and deliveries commenced July 1, 1955.

[3] Order Consolidating Proceedings, Fixing Date of Hearing and Specifying Procedure, issued March 2, 1956.

[4] See, Notice Severing, Consolidating Proceeding for Purpose of Hearing, and Fixing Date of Hearing, of February 26, 1957; Notice of Consolidation of Proceedings and Date of Hearing, of October 9, 1957; and, Notice of Consolidation of Proceedings and Date of Hearing, of April 8, 1958.

[5] Interventions were effected in the various dockets, including those of Johnston's on behalf of Philadelphia Electric Company, Public Service Electric and Gas Company, The United Gas Improvement Company, The East Ohio Gas Company, Hope Natural Gas Company, New York State Natural Gas Corporation, The Peoples Natural Gas Company, the State of Louisiana, Department of Conservation of Louisiana, Louisiana Public Service Commission, State Mineral Board of Louisiana, and Hunt Oil Company. By Commission order issued March 13, 1961, Cities Service Company, ultimate successor to Arkansas, was substituted as the real party in interest effective December 3, 1960, the proceedings being appropriately redesignated.

[6] *I.e.*, principally that of Arkansas pertaining to the current market price standard and conditions obtaining in the Duck Lake Field and South Louisiana area.

As Johnston offered no evidence, was not present, and was not represented at the hearing, the direct record for decision in these dockets consists essentially of the unverified statements contained in Applicant's two letters to the Secretary which propose the increases and which the Commission found to be insufficient to avert the suspension.

Subsequent to the hearing in the above-mentioned consolidated matters the proceedings in the Mecom docket (G–10357) were severed and, after the filing of an intermediate decision, were concluded on the basis of a settlement offer accepted by the Commission.[7] Thereafter, on October 12, 1962, Cities Service Company, successor in interest to Arkansas, also filed a settlement proposal in its dockets (No. G–8921, *et al.*), as did Goodrich (December 5, 1962) and Cocke (November 28, 1962) in their respective dockets. Thereafter by its several orders conditionally approving these several proposals the Commission severed and terminated the related proceedings, leaving only those of Applicant for disposition here.[8]

The evidence of record in the consolidated proceeding fails to disclose that Johnston is engaged in exploration and production, and so data as to industry costs and revenue or return requirements would have no application to him. Further, that part of the evidence which has to do with the unitization of the Duck Lake Field, negotiations by owners for the sale of gas to United, and the history of development of gas production and markets in Louisiana, has no apparent factual applicability to Johnston. Also, the evidence which relates to field prices has previously and specifically been held to be insufficient to sustain increases such as those represented by Johnston's proposed price.[9] It is noted in passing, however, that any conclusions from the evidence concerning a current market price would be related to relatively large volumes and have no direct bearing with respect to Johnston's reserves and deliveries, which are indicated to be exceptionally small.

In each of the foregoing instances of offer of settlement, by Cities, Goodrich, Cocke, the offeror waived the right to file for contractually increased rates for a specified substantial period of time, and offered, among other matters, various concessions as to the elimination of favored nation, price redetermination and periodic increase provisions, the offer, as modified by the order, being held to meet the required criteria stated in regard to other prior settlements, and its acceptance being based primarily, upon a finding as to benefits in the public interest.[10]

---

[7] See, Order Accepting Offer of Settlement and Providing for Refunds, issued May 25, 1961, 25 FPC 1022, finding the price of 17.5¢ per Mcf plus tax reimbursement to constitute a just, reasonable and lawful price for Mecom's sale from the Crescent Farms and Hollywood Fields, Terrebonne Parish, Louisiana (15.025 psia).

[8] *Cities Service Company*, Docket No. G–8921, *et al.*, issued December 26, 1962; *R. H. Goodrich, et al.* (including *W. H. Cocke*), Docket No. G–8977, *et al.*, issued February 25, 1963.

[9] *John W. Mecom (d.b.a. Mecom Petroleums)*, 25 FPC 1022, at 1023 (1961).

[10] Such as that pertaining to the Duck Lake Field, where Cities Service settlement offer consisted of a reduction in the then existing 22.95¢ per Mcf to an 18.0¢ per Mfc rate. Here the Commission analogized to the circumstances stated in the order in the case of *The Ohio Oil Company, et al.*, 27 FPC 1373 (1962), where the price increase preceding actual deliveries, was considered as equivalent to an initial price and so compared with the Commission's guide line rate for the area. *Tidewater Oil Company, et al.*, 27 FPC 1267 (June 15, 1962); *The Ohio Oil Company, et al.*, 27 FPC 1373 (June 28, 1962); *Shell Oil Company et al.*, 28 FPC 257 (August 1, 1962). With respect to the few instances where the proposed rate exceeded the applicable area ceiling (South Louisiana) the Commission took cognizance of unusual circumstances surrounding the initial contract. The criteria stated in the precedent cases substantially sum up to concessions which are conducive to long term price stability.

While it is possible that certain unusual circumstances noticed by the Commission in settlement cases concerning the Duck Lake Field[11] may apply to the Johnston contract the record offers no definite basis for so concluding.[12] The controlling matter is that the general record here contains no basis whatever for finding that essential criteria applied by the Commission in connection with past acceptances of settlement offers can be given effect as to Johnston, and, so finding, Staff Counsel's motion to dismiss should be granted.[13]

ORDER

Upon consideration of the record herein and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this order is a part,

IT IS BY THESE PRESENTS ORDERED, subject to review by the Commission on appeal, or upon its own motion, as provided by its Rules of Practice and Procedure, that:

(A) The increases in rate proposed in these proceedings be and the same are hereby denied, the application with respect thereto dismissed and the proceedings terminated.

EWING G. SIMPSON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60-36; GULF OIL CORPORATION, DOCKET NO. CI60-43; TIDEWATER OIL COMPANY, DOCKET NO. CI60-142

ORDER STAYING EFFECTIVENESS OF OPINION AND ORDER TO PROVIDE OPPORTUNITY FOR CONSIDERATION OF SETTLEMENT PROPOSALS AND COMMENTS THEREON

(Issued August 29, 1963)

On July 17, 1963, 30 FPC 329, the Commission issued its Opinion No. 399 and Order in the above-entitled proceeding. Applications for rehearing and motions for stay were filed on August 13, 1963, by both Gulf Oil Corporation and Tidewater Oil Company. Concurrently therewith, the producers have resubmitted petitions for issuance of orders granting permanent certificates of public convenience and necessity in accordance with their applications as modified by offers of settlement, as further modified in such petitions. The applications for rehearing and motions for stay and the renewed settlement offers have been served on all parties to the proceeding.

The original offers of settlement as submitted to the Commission on January 4, 1963, were rejected because of a joint opposition filed by Memphis Light, Gas and Water Division of the City of Memphis, Tennessee, and Mississippi Valley Gas Company and by Philadelphia Electric Company. In view of our subsequent

[11] Such as construing an amendment of the basic contract prior to first deliveries as providing, in effect, a new initial rate rather than a rate increase. See, *The Ohio Oil Company*, 27 FPC 1373, 1375.

[12] Deliveries by Johnston apparently commenced on July 1, 1955, or after the date for a contract increase to 13.50¢ per Mcf (June 1, 1955). However, an unresolved ambiguity exists in that the contract provides a rate (12.50¢) "from the date deliveries of gas are commenced hereunder" to June 1, 1955.

[13] Staff brief p. 57.

Opinion and Order, wherein we have treated a number of contentions raised by said interveners in opposing the settlement offers, and the modifications in the offers reflected in the current filings, it is our opinion that the public interest will best be served by staying the effectiveness of the Order accompanying Opinion No. 399 for a brief duration as it relates to the filing of rate schedule supplements and the refunding of excess charges to provide opportunity for consideration and comment by interested parties on the modified offers of settlement.

The Commission orders:

(A) On or before September 20, 1963, all interested parties to this proceeding shall, to the extent desired, submit statements of their position regarding the offers of settlement filed by Gulf and Tidewater on January 4, 1963, and August 13, 1963.

(B) The 30-day period specified in Paragraph (B) and the 60-day period specified in Paragraph (C) of the Order accompanying Opinion No. 399 are extended to and including October 15, 1963.

(C) Consideration of the applications for rehearing is stayed pending further action in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

AREA RATE PROCEEDING,[1] DOCKET NO. AR61-2; AMERADA PETROLEUM CORPORATION, ET AL.,[2] DOCKET NO. RI62-505, ET AL.

ORDER REDESIGNATING PROCEEDINGS, SEVERING CERTAIN RATE SUSPENSION AND CERTIFICATE PROCEEDINGS, ADDING AND DELETING RESPONDENTS, AND CONSOLIDATING PROCEEDINGS

(Issued August 30, 1963)

By order issued herein on May 10, 1961, (25 FPC 942) the Commission, among other things, initiated a proceeding to establish a just and reasonable rate or rates for sales of natural gas produced in the Southern Louisiana area. In that order, the Commission named as respondents in the proceeding all persons set forth in Appendix "A" thereto and all parties on whose behalf such persons had filed FPC Gas Rate Schedules for sales in the area, and consolidated therein a number of rate suspension proceedings listed in Appendix "C" thereto, as well as a number of certificate proceedings listed in Appendix "B" thereto.

By subsequent orders, various changes have been made relative to the respondents to these proceedings and the certificate and rate suspension proceedings consolidated herewith. The instant order makes further changes which appear to be appropriate. The appendices, "Revised Appendix A" and "Revised Appendix C" reflect these changes for the convenience of all concerned and are current as of the date of issuance of this order. As is explained below, all certificate proceedings have been severed and Appendix B has been deleted.

Most of the certificate proceedings previously consolidated herewith have been severed and consolidated with the proceedings in *Union Texas Petroleum, A Division of Allied Chemical Corporation, et al.*, Docket No. G-13221, *et al.*, by order issued December 31, 1962. The certificate proceeding still consolidated herewith,

---

[1] For a listing of all persons who are now respondents in such proceeding see Revised Appendix "A" hereto.

[2] For a listing of rate suspension proceedings which have been consolidated herewith see Revised Appendix "C" hereto.

should be severed at this time.[3] Generally, they are those in which the application has been withdrawn, cancelled, or granted, or which disposition will be made in other proceedings.

A motion has been made to change the name of Grey-Wolf Drilling Company to Wolfe Oil & Gas Company. The motion should be granted, and the change will be shown in Revised Appendix A.

It appears from the Commission's records that Argo Oil Corporation, Slick Oil Corporation, Aluminum Company of America (ALCOA), and Grande Corporation should be deleted as respondents because their sales in South Louisiana are now being made by The Atlantic Refining Company (Atlantic), Midhurst Oil Corporation, (Midhurst), Southeastern Public Service Company (Southeastern) and Magna Oil Corporation (Magna) respectively. Midhurst, Southeastern, and Magna should now be made respondents. Atlantic is already a respondent. ALCOA in its motion requesting that it be dismissed as a respondent in these proceedings, states that there is no refund obligation involved. Southeastern has filed a motion to be substituted for ALCOA as respondent. As above indicated, these motions should be granted.

Louis Ross (Ross) and Thomas Jordan, Inc. (Jordan) were made respondents in these proceedings by order issued May 10, 1961. It now appears from our records that Ross and Jordan were not making jurisdictional sales of natural gas in South Louisiana in 1960, and should therefore be deleted as respondents. By order issued May 16, 1963, Louisiana Natural Gas Corporation (Louisiana Natural) was made respondent to these proceedings. It now appears that Louisiana Natural makes no jurisdictional sales of natural gas. For this reason, Louisiana Natural should also be deleted as a respondent herein.

Three other producers, Owens Production Company, Inc., Southdown, Inc., and Whitehall Oil Company have rate schedules on file for sales in South Louisiana in 1960, but are not respondents. They will be made respondents to these proceedings by this order and added to Revised Appendix A.

By order issued April 25, 1963, in *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837, provision was made for the termination of certain rate suspension proceedings consolidated with the proceedings in Docket No. AR61–2. These rate suspension proceedings, in Docket Nos. G–18669, G–19865, G–19911, RI60–392, RI61–40, RI61–170, RI62–85, RI62–120, RI62–202, and RI62–203, will now be severed from the proceedings in Docket No. AR61–2, *et al.*

On July 15, 1963, Haroldson L. Hunt, Jr., Trust Estate (Hunt) filed a motion to be dismissed as a respondent in these proceedings. In support of its motion, Hunt states that it made only one sale in South Louisiana which has been discontinued by reason of depletion, and that it has no refund obligations. Under these circumstances, it appears that Hunt's motion should be granted.

Certain rate suspension proceedings which have been instituted recently, involving respondents in these proceedings, should now be consolidated herewith. These proceedings are incorporated into Revised Appendix C as indicated therein.

By order issued herein on November 9, 1961, 26 FPC 723, Section 1.17(b) of the Commission's Rules of Practice and Procedure with respect to service of copies of documents was waived, and provision was made for each party who

---

[3] These certificate proceedings are: *Hassie Hunt Trust*, Docket No. G–8647; *Oil Participations, Inc.*, Docket No. G–17448; *Socony Mobil Oil Company*, Docket No. G–18344; *Continental Oil Company*, Docket No. G–18755; *Texas Gas Exploration Corp.*, Docket No. CI60–76; *Union Producing Company*, Docket No. CI60–622; *North Central Oil Corporation*, Docket No. CI61–553; *Tennessee Louisiana Oil Co.*, Docket No. CI62–682; *The Preston Oil Company*, Docket No. CI62–1209; and *The Pure Oil Company*, Docket No. CI62–1224.

desired to be served with copies of filings made by other parties to these proceedings to so notify the Secretary on or before November 28, 1961. Because of the lapse of time since that date, and the addition of new parties, it appears that it would be equitable to offer this opportunity again, as hereinafter ordered. Those who have already filed will not be required to do so again.

The Commission finds:

(1) These proceedings should be redesignated as hereinafter ordered.

(2) The certificate proceedings in Docket Nos. G–8647, G–17448, G–18344, G–18755, CI60–76, CI60–622, CI61–553, CI62–682, CI62–1209, and CI62–1224, and the rate suspension proceedings in Docket Nos. G–18669, G–19865, G–19911, RI60–392, RI61–40, RI61–170, RI62–85, RI62–120, RI62–202, and RI62–203, should be severed from the proceedings in Docket No. AR61–2, *et al.*

(3) The motions filed by Wolfe, ALCOA, Southeastern, and Hunt should be granted, as hereinafter ordered.

(4) The rate suspension proceedings identified in Revised Appendix C by a double asterisk (**) should be consolidated with the proceedings in Docket No. AR61–2, *et al.*

(5) Certain parties should be made respondents in the proceedings in Docket No. AR61–2, *et al.*, and deleted as respondents, as hereinafter ordered.

(6) Provision should be made for the filing, by those desiring to do so, of notices to the Secretary, requesting that they be served with copies of filings made by other parties to these proceedings.

The Commission orders:

(A) These proceedings are hereby redesignated as shown in the caption to this order.

(B) The motions filed by Wolfe, ALCOA, Southeastern, and Hunt, are hereby granted.

(C) The certificate proceedings in Docket Nos. G–8647, G–17448, G–18344, G–18755, CI60–76, CI60–622, CI61–553, CI62–682, CI62–1209, and CI62–1224, are hereby severed from the proceedings in Docket No. AR61–2, *et al.*

(D) The rate suspension proceedings in *Gulf Oil Corporation, et al.*, Docket Nos. G–18669, G–19865, G–19911, RI60–392, RI61–40, RI61–170, RI62–85, RI62–120, RI62–202 and RI62–203, are hereby severed from the proceedings in Docket No. AR61–2, *et al.*

(E) The rate suspension proceedings in Revised Appendix C hereto, which are identified therein by a double asterisk (**), are hereby consolidated with the proceedings in Docket No. AR61–2, *et al.*

(F) Owens Production Company, Inc., Southdown, Inc., Whitehall Oil Company, Wolfe Oil & Gas Company, Southeastern Public Service Company, Midhurst Oil Corporation and Magna Oil Corporation, are hereby made respondents to the proceedings in Docket No. AR61–2, *et al.*

(G) Grey-Wolf Drilling Company, Aluminum Company of America, Argo Oil Corporation, Slick Oil Corporation, Louis Ross, Thomas Jordan, Inc., Louisiana Natural Gas Corporation, Haroldson L. Hunt, Jr., Trust Estate, and The Grande Corporation are hereby deleted as respondents in the proceedings in Docket No. AR61–2, *et al.*

(H) All parties to these proceedings, desiring to receive copies of filings made herein by other parties shall, within 10 days of the issuance of this order, so notify the Secretary of the Commission by filing an original and three copies of a notice naming one specific representative to be served on their behalf, with a certificate of service showing that a copy thereof has been properly served on all parties to these proceedings. In addition, parties to the proceedings who have

associated together in common interest groups for participation in such proceedings may designate one representative to be served on behalf of such common interest groups. On and after a date 10 days following the issuance of this order, the service required by Section 1.17(b) of the Commission's Rules of Practice and Procedure need be made only on the person named in the required notices and on staff counsel; *Provided, however,* that any party who has previously filed such notice with the Secretary shall not be required to do so again by this order.

ORDER DENYING MOTIONS FOR RECONSIDERATION AND STAY OF OPINION AND ORDER

(Issued August 30, 1963)

Motions for reconsideration of the Commission's Opinion No. 390 and Order issued June 19, 1963, 29 FPC 1175, were filed on August 7, 1963, by The Superior Oil Company, on August 9, 1963, by Shell Oil Company, and on August 13, 1963, by The Atlantic Refining Company. Superior also has requested a stay of the ordering paragraphs of the Opinion. Earlier applications for rehearing submitted by these parties were rejected by the Secretary on the ground that their tender was not in conformity with the requirements of Section 19(a) of the Natural Gas Act and Sections 1.34 (a) and (b) of our Rules of Practice and Procedure, in that they were filed after the statutory period for such pleadings.

On August 14, 1963, we issued our Opinion No. 390–A clarifying and modifying the original Opinion and Order and denying certain timely applications for rehearing and motions for stay. The various allegations and arguments contained in the present motions were among those considered by us in denying the applications for rehearing which were timely filed. No new material has been brought to our attention which warrants additional consideration of the subject proceeding.

The Commission finds:

No reasons have been adduced for giving further reconsideration to this matter or otherwise reopening the proceeding.

The Commission orders:

The motions for reconsideration and stay of Opinion No. 390 and Order as filed by The Superior Oil Company, Shell Oil Company and the Atlantic Refining Company are denied.

Commissioner O'Connor *dissenting* for the reasons set forth in his statement accompanying Opinion No. 390 issued June 19, 1963, p. 1188.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

POTOMAC EDISON COMPANY, DOCKET NO. E–7104

ORDER AMENDING ORDER INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued August 30, 1963)

On June 7, 1963, 29 FPC 1145, an order was issued in this docket instituting formal investigation concerning the lawfulness of Electric Rate Schedule Tariff "WS" filed with the Commission by Potomac Edison Company (Potomac Edison), and providing for hearing. That order, in Paragraph (B), directed Potomac Edison to file, on or before September 9, 1963, cost and revenue data showing its

costs of rendering service to each wholesale for resale customer served under the Rate Schedule Tariff "WS" utilizing as the test period the calendar year 1962.

On August 19, 1963, Potomac Edison filed with the Commission a request for an extension of time to December 9, 1963, in which to file the required cost and revenue data. Potomac Edison stated that additional time is necessary to properly prepare the data in the detail and scope required.

The extension of time to December 9, 1963, will result in data for the calendar year 1962 being out of date by the time the hearing is held on this matter. Consequently, a test year beginning July 1, 1962, and ending June 30, 1963, would be more appropriate.

The Commission finds:

It is appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 304, 307, 308 and 309 thereof, that Paragraph (B) of the Commission's order issued June 7, 1963, in this docket be amended: (1) to change the date by which cost and revenue data must be submitted from September 9, 1963, to December 9, 1963, and (2) to change the test period which shall be utilized from the calendar year 1962 to a period beginning July 1, 1962, and ending June 30, 1963.

The Commission orders:

Paragraph (B) of Commission Order issued June 7, 1963, in this docket is hereby amended to read as follows:

Potomac Edison shall file, on or before December 9, 1963, cost and revenue data showing Potomac Edison's cost of rendering service to each wholesale for resale customer served under the Rate Schedule Tariff "WS" referred to in paragraph (A) above, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period a period beginning July 1, 1962 and ending June 30, 1963, showing both historical revenues and *pro forma* adjustments thereto, a prudent net investment rate base, and a fair rate of return thereon.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

GULF OIL CORPORATION, DOCKET NO. RI64-120; F. WILLIAM CARR (OPERATOR), ET AL., DOCKET NO. RI64-121

ORDER PROVIDING FOR HEARINGS ON AND SUSPENSIONS OF PROPOSED CHANGES IN RATES [1]

(Issued September 3, 1963)

The above-named Respondents have tendered for filing proposed changes in presently effective rate schedules for sales of natural gas subject to the jurisdiction of the Commission. All of the sales are made at a pressure base of 14.65 psia. The proposed changes, which constitute increased rates and charges, are designated on the following page.

F. William Carr (Operator), *et al.*, (Carr) request an effective date of September 6, 1963, for their proposed rate increases. Good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit an earlier effective date for Carr's proposed rate filings and such request is denied.

The producers' present effective rates of 13.8733¢ per Mcf are the results of offers of settlement submitted by Gulf Oil Corporation and F. William Carr (Operator), *et al.*, and accepted by the Commission's orders issued June 5, 1961, in Docket No. G-11444, *et al.*, and August 19, 1960, in Docket No. G-14557, respectively. The proposed increased rates of 14.3733¢ per Mcf, which were contractually due February 5, 1963, are equivalent to 14.8733¢ per Mcf when the 0.5¢ per Mcf cost to the buyer for dehydration and central point delivery is taken into consideration and exceed the increase ceiling of 14.6¢ per Mcf for Texas Railroad District No. 2 as set forth in the Commission's Statement of General Policy No. 61-1, as amended [18 CFR, Chapter I, Part 2, Section 2.56].

The proposed changed rates and charges may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon hearings concerning the lawfulness of the proposed changes, and that the above-designated supplements be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], public hearings shall be held upon dates to be fixed by notices from the Secretary concerning the lawfulness of the proposed increased rates and charges contained in the above-designated supplements.

---

ORDER MODIFYING OPINION NO. 372 AND ORDER ISSUED DECEMBER 17, 1962

(Issued September 3, 1963)

On July 26, 1963, Valley Gas Company (Valley) filed an application for rehearing and reconsideration of Opinion No. 372 and order issued December 17, 1962, 28 FPC 1035, insofar as that order denied the request for an allocation of gas to service the Martinsburg-Roaring Spring, Pennsylvania area. Our denial of this requested allocation was based on the fact that the Applicant had not obtained the appropriate authority from the Pennsylvania Public Service Commission to conduct the gas service contemplated by the requested allocation. This defect has been cured as evidenced by the order of the Pennsylvania Public Service Commission issued July 22, 1963, a certified copy of which was attached to the instant application.

The record demonstrates the economic and engineering feasibility of the proposed service to the Martinsburg-Roaring Spring area and we conclude that our order of December 17, 1962 should be amended to direct Texas Eastern Transmission Corporation to sell a maximum of 388 Mcf of gas per day at 14.73 psia to Valley for service to this area.

The Commission orders:

Opinion No. 372 and order issued December 17, 1962 is hereby modified in the following respect:

(A) Texas Eastern Transmission Corporation is directed to sell to Valley Gas Company a maximum of 388 Mcf of gas per day at 14.73 psia.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

THE CINCINNATI GAS & ELECTRIC COMPANY, DOCKET NO. E-7125

ORDER TO SHOW CAUSE, INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued September 4, 1963)

The Cincinnati Gas & Electric Company, Cincinnati, Ohio (Cincinnati Company), a corporation organized under the laws of the State of Ohio and operating within the States of Ohio, Indiana and Kentucky, has been determined to be a public utility within the meaning of the Federal Power Act, order issued June 21, 1961, *The Cincinnati Gas & Electric Company*, Docket No. E-6997 (25 FPC 1195).

Cincinnati Company reports that it serves five municipalities, one cooperatively-owned electric utility and one investor-owned electric utility for which it has not submitted rate schedules for filing with the Commission. Those purchasers are: City of Hamilton, Ohio; Village of Blanchester, Ohio; Village of Georgetown, Ohio; Village of Hamersville, Ohio; Village of Ripley, Ohio; Inter-County Rural Electric Cooperative, Inc., and The Dayton Power and Light Company.

By letter dated May 23, 1963, the staff requested that Cincinnati Company file rate schedules for service to these customers, pursuant to the requirements of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder. Cincinnati Company, by letter dated July 25, 1963, replied that it would not file these rate schedules, on the ground that this Commission has no jurisdiction over these sales.

Cincinnati Company currently has on file with this Commission the following rate schedules:

Customer:	*F.P.C. Rate Schedule No.*
Louisville Gas and Electric Company	1
The Union Light, Heat and Power Company	2
Public Service Company of Indiana, Inc.	10
Louisville Gas and Electric Company Tennessee Valley Authority	12
Indiana and Michigan Electric Company, The Ohio Power Company	13
West Harrison Gas and Electric Company	15
Ohio Valley Electric Corporation	16
Tennessee Valley Authority	17
Butler Rural Electric Cooperative, Inc. (filing incomplete)	

Review and analysis of data currently available to this Commission indicate that some or all of these rates may result in excessive rates or charges or may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act. Additional factual data necessary for a resolution of those questions must be obtained.

The Commission finds:

(1) In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 308 and 309 thereof, that Cincinnati Company be directed to show cause in writing and at a formal hearing why the Commission should not find and determine that the sales at wholesale for resale to the seven purchasers referred to in the recital above for which there are no rate schedules on file with this Commission are

sales at wholesale in interstate commerce subject to the jurisdiction of this Commission under the provisions of the Federal Power Act for which Cincinnati Company must file appropriate rate schedules in the manner provided in Part 35 of the Commission's Regulations under that Act.

(2) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 304, 307, 308 and 309 thereof, that the Commission enter upon a hearing and investigation concerning the lawfulness of Cincinnati Company's rate schedules filed and required to be on file with this Commission; and that Cincinnati Company be directed to submit cost and revenue data all in the manner as hereinafter provided.

The Commission orders:

(A) A public hearing shall be held at a time and place to be specified by further order of this Commission concerning the lawfulness of all of Cincinnati Company's rate schedules for service to the customers referred to in the recital above; and at which Cincinnati Company shall also show cause why the Commission should not:

(1) find and determine that in each instance Cincinnati Company's sales at wholesale for resale to the seven purchasers referred to in the recital above for which there are no rate schedules on file with this Commission are sales at wholesale in interstate commerce, subject to the provisions of Sections 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(2) find and determine that Cincinnati Company has been violating and threatens to continue violating the provisions of Section 205 of the Act and Part 35 of the Commission's Regulations thereunder;

(3) order Cincinnati Company to file rate schedules for service to the seven purchasers referred to in subparagraph (1) above in accordance with the provisions and requirements of Section 205 of the Act and Part 35 of the Commission's Regulations thereunder; and

(4) issue such other orders and take such other actions as may be necessary or appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

(B) On or before December 9, 1963, Cincinnati Company shall respond to this order to show cause through Answer as provided in Section 1.9(c) of the Commission's Rules of Practice and Procedure, 18 CFR 1.9(c).

(C) Cincinnati Company shall file, on or before December 9, 1963, cost and revenue data showing Cincinnati Company's costs of rendering service to each wholesale for resale customer referred to in paragraph (A) above, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the period beginning July 1, 1962 and ending June 30, 1963, showing both historical revenues and *pro forma* adjustments thereto, a prudent net investment rate base, and a fair rate of return thereon.

(D) The showing referred to in paragraph (C) above shall be submitted in writing with sufficient copies to provide this Commission with six copies, to provide each State Commission affected with a like number of copies and to provide one copy each to all other parties as may be granted intervention in this proceeding.

(E) The showing referred to in paragraph (C) above shall not preclude or limit any additional showing by Cincinnati Company or others and shall be without prejudice to any future action taken by the Commission or its staff.

or to any future position Cincinnati Company or others may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(F) Notices of intervention or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C., on or before October 18, 1963, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16235; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G–16237; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–16904

ORDER DENYING REHEARING

(Issued September 4, 1963)

El Paso Natural Gas Company on August 6, 1963, the Washington Utilities and Transportation Commission on August 8, 1963, and the Public Utility Commissioner of Oregon on August 12, 1963, have filed applications for rehearing of our Opinion No. 393 and Order issued July 12, 1963, 30 FPC 77, in which we denied certificates of public convenience and necessity to El Paso and Colorado Interstate Gas Company (CIG) for a proposed pipeline extending from near Rock Springs, Wyoming, to California.

We have considered the applications of the parties and find that they do not raise points which require further comment except as follows. El Paso compares at length the present proceeding with that in which we granted a certificate to Transwestern Pipeline Company (22 FPC 391) for gas service to Southern California. The Transwestern application was unopposed, and did not provide the same opportunity as this proceeding to consider all relevant factors. The Opinion in that case, issued in 1959, was based upon a different factual situation, and did not purport to establish any principles which should serve to govern the disposition of future certificate cases. The Opinion therefore has little bearing on the disposition of this case.

Petitioners claim that the Commission did not give adequate weight to the benefits to the Pacific Northwest area from the proposed Rock Springs project. They say the total public interest must be weighed, and if Rock Springs resulted in a disadvantage to California, as compared with alternative projects, it should nevertheless have been authorized if such disadvantage had been outweighed by advantages to the Pacific Northwest area and elsewhere. We agree that the total public interest must be the criterion, and our decision is based upon precisely that standard. It must be kept in mind that the Rock Springs project was a proposal to bring additional gas to California, not the Pacific Northwest, and the cost of the project would have been borne by California consumers. The record in this case shows that the Rock Springs project, if certificated, would have cost California consumers some $20,000,000 more a year than a possible alternative project, while possible benefits to the Pacific Northwest area were not spelled out in the record and to the extent they might exist the record indicates that they are not of this order of magni-

tude. Our decision gave equal weight to the interests of all regions and clearly meets the test of the over-all public interest.

Both El Paso and the Washington Commission have commented on our statement that the estimates made with respect to the alternative routes are subject to an "indefinable margin of error."[1] By this we meant that it was difficult to define the error by a specific percentage, but the evidence on alternative routes was sufficiently definitive for the purpose of showing the existence of more economical ways of supplying gas to California and the general magnitude of the savings as compared with the proposed project.

We also note the apparent failure of CIG and the Southern California distributing companies to continue to support the project as neither has filed a petition for rehearing of our opinion.

It was brought to our attention in the applications for rehearing that the States of California and Utah should be included in the list of interveners supporting the project.[2]

The Commission further finds:

The applicants for rehearing present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 393 on July 12, 1963, or which having now been considered warrant any change or modification of said order except as mentioned above.

The Commission orders:

The applications for rehearing filed with respect to our Opinion No. 393 and Order issued July 12, 1963 are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7118

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 4, 1963)

Northern States Power Company (Applicant), incorporated under the laws of the State of Minnesota and doing business in the States of Minnesota, North Dakota and South Dakota, with its principal place of business in Minneapolis, Minnesota, filed an application, on July 26, 1963, for authority, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $15,000,000 principal amount of First Mortgage Bonds, due 1993.

Applicant proposes to issue the Bonds under a Trust Indenture, dated February 1, 1937 from Applicant to Harris Trust and Savings Bank of Chicago, Trustee, as heretofore supplemented by thirteen supplemental indentures and to be further supplemented by a new Supplemental Indenture to be dated as of September 1, 1963. The new Bonds will be a first mortgage lien on all fixed

[1] P. 88.

[2] The California Commission did not participate in the present phase of the proceedings but the record does include a letter from that Commission stating its support of the applications (Tr. 8164–8165). The Public Service Commission of Utah participated in oral argument in support of the project.

properties of the Applicant and will be on a parity with the Applicant's outstanding mortgage issues. The new Bonds will be dated as of September 1, 1963 and will mature on September 1, 1993. The interest rate of the Bonds will be determined by competitive bidding.

On or about September 11, 1963 Applicant proposes to invite sealed, written bids for the purchase of Bonds by newspaper publication and by distribution of a Form of Proposal, together with a Statement of Terms and Conditions relating thereto and a Form of Purchase Contract. All bids, whether from a single bidder or a group of bidders, must be for the purchase of all of the Bonds and must be on the Form of Proposal provided by Applicant, signed by the bidder, or by the representative in the case of a group of bidders. Each bid must specify the interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛th of 1 percent; the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be not less than 99% and not more than 102¾% of the principal amount thereof; and, that Applicant shall be paid the amount of the accrued interest on the Bonds from September 1, 1963 to the date of payment therefor and delivery thereof.

Unless postponed, all bids for the purchase of the proposed issuance of Bonds must be presented to Applicant at the 8th Floor Assembly Room, Harris Trust and Savings Bank, 111 West Monroe Street, Chicago 90, Illinois, at or before 10:00 a.m., CDST on September 18, 1962. Applicant, unless it rejects all bids, which it reserves the right to do, or excludes a bid or bids for reasons specified in the Statement of Terms and Conditions, will accept the bid which provides the lowest cost of money to Applicant. Each bid must be accompanied by a certified or bank cashier's check or checks, payable in Chicago or New York Clearing House funds, in the aggregate amount of $450,000.

Applicant states that the proceeds from the sale of the Bonds will be used to pay, in part, the cost of Applicant's 1963 construction program, estimated at $58,700,000 of which $17,200,000 has been expended within the first five months of 1963, and to pay outstanding bank loans estimated not to exceed $9,000,000 as of the date of issuance and delivery of the new Bonds. The principal items of expenditure for 1963 are: $1,030,000 for continued construction of a 66,000 kw atomic power plant near Sioux Falls, South Dakota; $18,554,000 for continuing construction of the 216,000 kw Unit #8 at Applicant's Riverside steam electric generating plant in Minneapolis; $671,000 for continuing construction of a 230 kv interconnection with Minnesota Power & Light Company; $620,000 toward the construction of 100 MVA 230/115 kv Red Rock Substation at Newport, Minnesota; $719,000 for the construction of 115 kv transmission line from Riverside Substation to the Fifth Street Substation to Aldrich Substation in Minneapolis; $20,076,000 for additions and improvements generally to electric distribution facilities; $6,000,326 for additions and improvements to gas plant; and $5,000,866 for additions and improvements to steam, telephone, water and common utility plant.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on August 13, 1963 (28 F.R. 8301), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition

or protest on or before August 23, 1963 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued September 1, 1955, *In the Matter of Northern States Power Company*, Docket No. E–6637 (14 FPC 946).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply and guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Commissioner Black present but *not participating.*

ORDER GRANTING REHEARING FOR PURPOSES OF RECONSIDERATION

(Issued September 5, 1963)

Long Island Lighting Company and The United Gas Improvement Company (UGI) on August 12, 1963, filed an application for rehearing of the Commission's order issued July 24, 1963, 30 FPC 402, in the above-entitled proceedings. On August 20, 1963, Philadelphia Electric Company filed a similar petition. By that order the motions of UGI to reject, cancel and dismiss the rate filings involved here were denied. We held in the July 24 order that the producers had the right under the favored-nation provisions in their contracts to file for increased rates of 23.55¢ per Mcf based on the 23.55¢ per Mcf initial rate of Pan American Petroleum Corporation (Pan American) for the sale of gas to Transcontinental Gas Pipe Line Corp. (Transco) at least during the period that Pan American's temporary authorization is in effect. We also indicated that the producers' triggering rights under their contracts do not appear to be dependent solely upon the sales by Pan American and Oil Participations Inc. (Oil Participations)[1] mentioned in Transco's letter, since there were other sales being made at 23.55¢ to Transco under Hassie Hunt Trust Estate FPC Gas Rate Schedule No. 3[2] and Wm. Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 5 and under renegotiated rates involved in Docket Nos. G-17726, G-17727, G-17740 and G-17936, among others.

Petitioners in their applications for rehearing reiterate their contention that the Pan American sale does not provide a basis for contractual support for the Section 4(e) filings here. They state, among other things, that Pan American on July 30, 1963, filed a motion for approval of a settlement proposal seeking permanent authorization in Docket No. G-16946 for the subject sale at

[1] Now Austral Oil Company, Inc.

[2] As petitioners correctly point out in their application, the order of July 24 erroneously refers to the seller as "Herbert Hunt Trust Estate" instead of "Hassie Hunt Trust Estate".

a rate of 20.625¢ per Mcf. They aver that if precedent is followed the settlement proposal will be approved, and that such sale will consequently not support a rate filing in excess of 20.625¢ per Mcf.[3] They also contend that the Hunt rates and the renegotiated rates do not provide the requisite contractual support, and that they have had no opportunity to show why the Hunt rates and the renegotiated rates are irrelevant or not comparable to the alleged triggered rates involved here.[4]

No action to date has been taken with respect to Pan American's settlement proposal, but any action taken with respect thereto may have a bearing on this case. In view thereof, and to allow further time for reconsideration of these matters in the light of any comments which might be filed by the other parties, it is appropriate that we grant rehearing in these proceedings.

The Commission orders:

Rehearing is hereby granted in these proceedings to permit reconsideration of the issues raised by the petitions for rehearing filed herein.

Commissioner Black *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

IOWA PUBLIC SERVICE COMPANY, DOCKET NO. E-7115

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 5, 1963)

By order issued August 22, 1963, 30 FPC 536, in the above-entitled matter, the Commission authorized Iowa Public Service Company (Applicant) to issue and sell at competitive bidding $12,000,000, maximum principal amount of First Mortgage Bonds, Series due 1993, subject to the provisions, among others set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised

---

[3] Because of the "fringe benefits" in the settlement proposal, petitioners argue that the comparable price is something below 20.625¢ per Mcf.

[4] With respect to the Hunt sales, they contend that such sales cannot be used to support triggering because the Hunt rates were the result of the Pan American and Oil Participations sales, which petitions claim to be no longer valid. In support of this position they cite the *Shell* case, Opinion No. 382 issued March 15, 1963, 29 FPC 498. They also claim that under certain of the contracts triggering could not occur as a result of the Hunt rates or the renegotiated rates because the favored-nation provisions in such contracts are applicable only if Transco "purchases from producers new gas from sources of supply in the state of Louisiana." In this connection they aver that the triggering price must be in a "new" contract for "new" gas.

the Commission by telephone and telegram as contemplated by Section 34.9 of the Regulations;

(ii) The Commission shall have approved the price to be received by Applicant for the Bonds and the coupon rate thereof, by a further order.

Applicant, on September 5, 1963, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, in which it states, among other things, that it proposes to accept, as representing the lowest cost of money to it, the bid of Halsey Stuart & Co. Inc. to purchase all of the proposed issuance of $12,000,000 of Bonds, at a price of 98.03% of principal amount, with an interest rate of 4⅝% per annum.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in paragraph (B) of the Commission's order issued August 22, 1963, in the above-entitled docket; and under the bid it proposes to accept for the issuance of Bonds, the price to be received by Applicant for the Bonds and the interest rate thereof are reasonable.

(2) The proposed issuance of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of paragraphs (C), (D) and (E) of the Commission's order issued August 22, 1963, in the above docket.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-332

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 5, 1963)

On June 4, 1963, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP63-332 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation and sale to certain of Applicant's present customers additional volumes of natural gas for firm service, all as more fully set forth in the application.

Commencing during the 1963-64 winter heating season, Applicant proposes to sell, under long term service agreements and its Annual Firm Gas Rate Sched-

ules, the following additional volumes of natural gas to the following existing customers:

ADDITIONAL ANNUAL FIRM SERVICE

Customer	Date of commencement	Maximum daily quantity (14.73 psia)
Central Illinois Public Service Co	11-1-63	1,020
New Jersey Natural Gas Co	11-1-63	4,080

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 22, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G-880 (6 FPC 148).

(2) The proposed transportation and sales of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce, subject to the jurisdiction of the Commission, and such proposed transportation and sales are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to transport and sell natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sales of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-349

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 6, 1963)

On June 19, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP63-349 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to The Gas Service Company (Gas Service) for resale in the communities of Golden City, Greenfield, El Dorado Springs, Lockwood, Stockton, Jerico Springs, Missouri and to domestic consumers and other customers of Gas Service residing adjacent to the 12-inch Lamar line.

All deliveries of natural gas above mentioned will be made through Applicant's existing facilities previously installed in connection with sales in and around the cities of Lamar and Jasper, Missouri.

The sales of gas to Gas Service are to be made under Applicant's Gas Rate Schedules F-2, C-2 and I-2.

The estimated volumes of gas requirement of the communities named on the third year after the beginning of service are as follows:

Customer	Peak day	Annual volume
Golden City	637	57,255
Greenfield	895	83,205
El Dorado Springs	2,387	295,910
Lockwood	696	64,750
Stockton	696	68,770
Jerico Springs	99	6,980
Lamar Mainline (Domestic Customers)	159	11,110

The total peak day requirements as shown are 5,569 mcf. per day at 14.73 psia and 587,980 Mcf., on an annual basis.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 29, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, A Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) Public convenience and necessity require that a certificate of public convenience and necessity issue authorizing the proposed sale and the rights granted hereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such regulations.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to sell and deliver natural gas to The Gas Service Company for resale, as hereinbefore stated, as more fully described in the application.

(B) The certificate issued herein and the rights granted hereunder are conditioned upon Applicant's compliance with all applicable rules and regulations under the Natural Gas Act and particularly the terms and conditions set forth in Section 157.20 of such Regulations.

(C) Applicant shall advise the Commission of the commencement of the service within 10 days thereof.

Commissioner Black *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO CP63-341

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 6, 1963)

On June 11, 1963, Eastern Shore Natural Gas Company (Applicant) filed an application in Docket No. CP63-341 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction of metering and connecting facilities to deliver gas to General Foods Corporation, as more fully set forth in the application.

Applicant proposes to tap its existing transmission line at Dover, Delaware, making a 5,200-foot extension, including necessary metering facilities, to supply General Foods with a maximum of 300 Mcf per day of firm gas for food processing. Applicant proposes to reduce its existing contract demand to Tidewater Oil Company by an amount sufficient to permit the service to General Foods on a firm basis.

It appears that the proposed service can be made with existing facilities and from Applicant's existing gas supplies for the indefinite future. The estimated total cost of the facilities is $28,645.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 20, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transmission of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Eastern Shore Natural Gas Company, to construct and operate the facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-333

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 6, 1963)

On June 5, 1963, as supplemented on June 14, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63-333 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the modification of Applicant's existing Turner, Oregon, measuring and regulating station to increase the capacity of said station and the sale and delivery of natural gas to Northwest Natural Gas Company (Northwest) for resale and distribution in the communities of Aumsville, Stayton, Mehama, Lyons, Mill City, Junction City and Columbia City, and said communities' respective environs, all in Oregon, all as more fully set forth in the application, as supplemented.

Deliveries of natural gas by Applicant to Northwest for Aumsville, Stayton, Mehama, Lyons and Mill City will be made at the Turner Station; deliveries of natural gas for Junction City and Columbia City will be made, respectively, at Applicant's existing stations providing service for Eugene and Portland, Oregon. The application shows that Northwest will transport the gas so delivered through partial use of its existing facilities and through facilities proposed by it to points of resale and distribution.

The proposed modification of the Turner Station is to provide capacity sufficient to deliver the requirements of those communities proposed to be served through use of such Station. No additional facilities will be required at the Eugene and Portland Stations. The estimated cost of the proposed modification is $19,600 which cost will be financed out of current working funds.

The estimated third year requirements of the seven communities to be served by Northwest are:

Communities	Annual (Mcf)	Peak day (Mcf)
Aumsville	156,477	639
Stayton	171,428	877
Lyons	255,143	991
Mehama	(1)	
Mill City	63,619	306
Junction City	242,286	1,010
Columbia City	146,381	505
Total	1,035,334	4,328

[1] Included with Lyons.

The application shows that the total estimated cost of transmission and distribution facilities to be constructed by Northwest during the first three years of the proposed service is $1,388,200.

It appears that Northwest has received the appropriate state and local authorizations necessary for the proposed service to the seven communities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 22, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and

particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-335

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 6, 1963)

On June 6, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63-335 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the modification of Applicant's existing Albertson's Inc., measuring and regulating station in Ada County, Idaho, and the sale and delivery of natural gas to Intermountain Gas Company (Intermountain) for resale and distribution in Kuna, Ada County, Idaho, and environs, and surrounding irrigation areas, all as more fully set forth in the application.

Applicant proposes to deliver natural gas to Intermountain at the outlet side of the subject meter station. In order to accommodate Intermountain's requirements for Kuna, Applicant proposes to modify the meter station at an estimated cost of $800, so as to provide sufficent capacity therefor.

Intermountain proposes to install a natural gas distribution system in Kuna and to interconnect this system with the Albertson's, Inc., meter station. The total estimated cost of the transmission and distribution facilities to be constructed by Intermountain during the first three years of the proposed service is $116,266.

The application states that Intermountain estimates that during the third year of operation, the annual and peak day natural gas requirements will be 43,-

360 Mcf and 236 Mcf, respectively. The gas will be sold pursuant to Rate Schedules DS–1 and S–1 of El Paso FPC Gas Tariff, Original Volume No. 3.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 20, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, as more fully described in the application in this proceeding, and to sell natural gas to Intermountain Gas Company for resale and distribution in Kuna, Idaho, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction of facilities authorized by paragraph (A) above shall be completed and the facilities placed in actual operation, as required by Section 157.20(b) of the Commission's Regulations under the Natural Gas Act, within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EQUITABLE GAS COMPANY, DOCKET NO. CP63-334

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 6, 1963)

On June 5, 1963, Equitable Gas Company (Applicant) filed in Docket No. CP63-334 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 3 miles of 20-inch transmission pipeline at a point in Union Township, Washington County, Pennsylvania, all as more fully set forth in the application.

The proposed facilities will increase the deliverability into Applicant's distribution system from the transmission system by 8,800 Mcf of gas. Inasmuch as most of Applicant's production, underground storage, and points of gas purchase are located south of Applicant's principal service area, the additional deliverability will enable Applicant to utilize its gas supply in such a way that the deliverability of storage pools, located more advantageously in relation to Applicant's distribution system, can be conserved until later in the heating season and for days of exceptionally high requirements.

The proposed facilities will increase the volume of line pack now available from the facilities constructed pursuant to authorization received in Docket Nos. G-17871 and CP60-4 from approximately 30,000 Mcf of gas per day to approximately 31,800 Mcf of gas per day and will make possible the more efficient use of line pack since it will then be available at both the Tepe Measuring Station and the distribution line commencing at the Hartson Compressor Station. This additional utilization of line pack will reduce the use of Applicant's peak load storage facilities during peak hours.

The proposed facilities will permit Applicant to reduce pressures on its older pipelines and will also provide capacity in addition to that now available in the event of any emergency affecting the operations of the presently existing pipelines into the Tepe Measuring Station.

With the proposed facilities in operation larger volumes of gas can be handled at the connection with Texas Eastern Transmission Corporation near Applicant's Pratt Compressor Station without reducing flows from Applicant's storage pools located to the south of such connection. This in turn will permit Applicant at periods of other than those of peak demands to reduce the volume of gas deliveries directly into Applicant's distribution system at the connection with Texas Eastern near Delmont, Pennsylvania. This will provide more efficient distribution of gas entering the distribution system and will permit more flexibility in storage input operations at Applicant's peak load pools during periods of less severe weather during the winter heating season.

The estimated cost of the proposed facilities is $365,866, to be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 20, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Equitable Gas Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of May 9, 1944, in Docket No. G–275 (4 FPC 588).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Equitable Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the facilities placed in actual operation, as required by Section 157.20(b) of the Commission's Regulations under the Natural Gas Act, within 4 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–16841 AND RP61–19; PEOPLES GAS LIGHT AND COKE COMPANY v. MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP63–11

ORDER DENYING REHEARING

(Issued September 6, 1963)

On August 9, 1963, Midwestern Gas Transmission Company filed an application for rehearing of Opinion No. 394, 30 FPC 150. Ordering Paragraph (C) of

that opinion determined that Midwestern is and will be obligated to pass on to its Southern System customers all refunds received and to be received from Tennessee Gas Transmission Company with respect to the period from April 5, 1960 to October 1, 1962, which constitute a reduction in Midwestern's gas purchase costs for that period below what they would have been at the level of rates for which Tennessee filed in Docket No. G–17166. Midwestern raises two principal points in its Application for Rehearing: first that Opinion No. 320 did not impose upon Midwestern a binding obligation to pass on *any* of the refunds which might be received from Tennessee; and second that even if such a binding obligation were imposed with respect to refunds for the G–17166 period (ending April 4, 1960) no such obligation was or could have been imposed with respect to the refunds for the G–19983 period (from April 5, 1960, to October 1, 1962). All of the arguments which Midwestern now advances in support of the second point were fully considered in Opinion No. 394, and no purpose would be served by further discussion here. The first point, however, has not been fully argued by Midwestern heretofore, and we will briefly indicate our reasons for concluding that the argument is without merit and cannot alter the result we have reached.

In Opinion No. 394 we contrasted Midwestern's apparent acquiescence in its obligation to pass on the refunds received with respect to the period prior to April 5, 1960, with its complete denial of any refund obligation for the period thereafter. We indicated that nothing in either the language of Opinion No. 320 or its underlying purpose justifies a termination of the refund liability because of Tennessee's placing in effect of further increased rates on April 5, 1960. Midwestern now informs us that "its proposal to pass on the G–17166 refunds was not motivated by any understanding that it was bound to make these refunds under Opinion No. 320." In its present view Midwestern relies primarily on the fact that the statement in the body of Opinion No. 320 to the effect that Midwestern "should" make the refunds was not repeated in any of the Ordering Clauses of the Opinion.

The most striking fact about Midwestern's new contention is its inconsistency with everything that Midwestern has previously told the Commission. Thus in its letter of January 25, 1963, wherein it proposed to make $923,440 of refunds to its Southern System customers (the G–17166 refund) Midwestern stated:

> Opinion No. 320 issued by the Federal Power Commission on May 12, 1959 granting a Certificate of Public Convenience and Necessity for the construction of the Southern System of Midwestern Gas Transmission Company, provided that if Midwestern should receive refunds from Tennessee Gas Transmission Company under Docket Nos. G–11980 and G–17166, Midwestern should make corresponding refunds to its customers, subject to the approval of the Commission. [1]

Again, in its 1962 Annual Report to the Commission Midwestern stated its position as follows:

> In December, 1962, Tennessee Gas Transmission Company, sole supplier for the Company's Southern System, refunded $5,927,896 (including interest of $568,495) to the Company covering settlement of a rate increase in effect at the time the Company received its original certificate from the Federal Power Commission and another later rate increase for which the Company did not file a corresponding rate increase. Pursuant to a condition in the original certificate, the Company proposes to refund to its customers $923,440 (including interest of $142,117) applicable to the increase in effect

[1] The Commission's Secretary notified Midwestern of such approval by letter of August 5, 1963.

when the certificate was issued. Such proposed refund has been approved by the customers and is now filed with the Federal Power Commission for approval. The Company in concurrence with the opinion of legal counsel intends to retain the remainder of the refund received from Tennessee since the Company's rates were not increased to offset the increase in gas purchase costs.

We have no doubt that Midwestern's original understanding of the nature of the obligation imposed by Opinion No. 320 is the more accurate one. In the light of what has subsequently occurred, it perhaps would have been a desirable precaution to repeat the statement of the refund obligation in an ordering paragraph in Opinion No. 320. But considering what Opinion No. 320 does say, and considering further the manner in which Midwestern's initial rate of return was fixed (which we discussed in Opinion No. 394), we are satisfied that in Opinion No. 320 the Commission intended to impose a binding obligation. The only remaining question is whether, as a matter of law, this purpose could only be achieved by the inclusion of direct language of command in an ordering clause. We are not aware of any principle of law requiring such a formalism nor does Midwestern cite any. It is quite clear that in this case no such mechanical rule was needed to enable Midwestern fairly to understand the obligations imposed upon it.

The Commission orders:

Midwestern's application for rehearing is denied.

Commissioner O'Connor *dissenting.*

CITY OF PARIS, MISSOURI, DOCKET NO. CP63-306; CITY OF MADISON, MISSOURI, DOCKET NO. CP63-307

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 6, 1963)

On May 15, 1963, the Cities of Paris and Madison, Missouri, (Applicants) filed in Docket Nos. CP63-306 and CP63-307, respectively, applications pursuant to Section 7(a) of the Natural Gas Act for orders of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its facilities with those which Applicants propose to construct and operate, and to sell and deliver natural gas to Applicants for resale and distribution in the Cities of Paris and Madison, Missouri, all as more fully set forth in the applications.

Applicants propose to construct and operate jointly a 20.8-mile lateral line from Respondent's transmission line in Audrain County, Missouri, to the city gate of Paris. Madison will bear 25% of the cost and Paris will bear the remaining 75%. The City of Madison will construct and operate an 11-mile transmission line from the Paris city gate to the proposed distribution system in Madison. Both cities propose to construct and operate individual municipally-owned natural gas distribution systems.

The estimated cost of the facilities proposed to be constructed by the City of Paris is $375,000, and the estimated cost of the facilities proposed to be con-

structed by the City of Madison is $247,000. The proposed project will be financed with 30-year gas revenue bonds.

The estimated annual and peak day natural gas requirements in Mcf at 14.73 psia for the first three years of operation of the proposed distribution systems are as follows:

	First year	Second year	Third year
City of Paris:			
Annual	77,564	88,034	100,506
Peak day	969.8	1,106.2	1,270.3
City of Madison:			
Annual	29,784	36,947	43,435
Peak day	365.5	460.0	524.8

On June 21, 1963, Respondent filed an answer to the applications and stated that it does not object to rendering the requested service upon the execution of appropriate gas sales contracts specifying maximum delivery pressures at Respondent's main line not to exceed 250 psig.

Notice of the applications was issued on July 25, 1963, and published in the Federal Register on August 1, 1963 (28 F.R. 7874). No protests, requests for hearing, or petitions to intervene have been received.

The Commission finds:

(1) Applicants, the Cities of Paris and Madison, Missouri, are municipal corporations organized and existing under the laws of the State of Missouri, and are legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the Cities of Paris and Madison.

(2) Respondent, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicants, as hereinbefore described and as more fully described in the applications herein, and to sell and deliver to Applicants natural gas for resale and distribution in their respective communities as hereinafter ordered.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicants, as hereinbefore described and as more fully described in the applications in this proceeding, together with such metering, regulating, and appurtenant facilities as may be required therefor, and to sell and deliver up to 1,270 Mcf of gas per day to the City of Paris, Missouri, and up to 525 Mcf of natural gas per day to the City of Madison, Missouri, for resale and distribution in said communities pursuant to Respondent's appropriate rate schedules on file with the Commission.

(B) Applicants shall commence the purchase of gas as proposed herein within one year from the date on which this order issues.

(C) This order is conditioned upon the execution of appropriate gas sales contracts between Applicants and Respondent specifying maximum delivery pressures at Respondent's main line not to exceed 250 psig.

(D) Respondent shall report to the Commission the date of commencement of service within ten days thereof.

THE TOWN OF POSEYVILLE, INDIANA, DOCKET NO. CP63-224

ORDER MODIFYING EXAMINER'S DECISION

(Issued September 6, 1963)*

Syllabus

1. Commission *directs* Texas Eastern Transmission Corporation, under Section 7(a) of the Natural Gas Act, to establish physical connection of its facilities with facilities proposed to be constructed by Applicant, and sell natural gas to Applicant. P. 665.

Commissioner Black *not participating.*

John W. Kern for The Town of Poseyville, Indiana.

Keith M. Pyburn and *Jack D. Head* for Texas Eastern Transmission Corporation.

Albert J. Feigen for Community Natural Gas Company.

John J. Mullally for Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

On July 31, 1963, the presiding examiner issued a decision in this proceeding requiring Texas Eastern Transmission Corporation (Respondent) to establish connection with the municipal facilities of The Town of Poseyville, Indiana (Applicant). Applicant, filing under Section 7(a) of the Natural Gas Act, seeks this connection with facilities it proposes to construct and operate so as to purchase and receive natural gas for resale and distribution in the Town of Poseyville and environs.

Applicant proposes to construct and operate approximately 4 miles of 3-inch transmission line from the town gate to an interconnection with the main line of Respondent. Applicant will also construct and operate a distribution system to serve consumers in Poseyville and make sales directly from the lateral line in outlying areas.

Applicant estimates its natural gas requirements in Mcf for the first three years of operation to be as follows:

Year	Peak day	Annual
1	271	31,000
2	374	41,700
3	495	54,300

Applicant's facilities are estimated to cost $230,000, which will be financed by a $230,000 bond issue.

Respondent filed on May 7, 1963, an answer to the aforementioned application wherein it stated the volume of natural gas requested by applicant could be delivered by Respondent without impairing the ability of Respondent to provide adequate service to its existing customers. Respondent did not object to the granting of the aforementioned application in the event the Commission found

*Initial decision appears on p. 665.

that Applicant's proposed project was economically feasible and that the delivery of natural gas to Applicant by Respondent was found to be in the public interest.

Pursuant to our order of July 1, 1963, a hearing was held on July 24, 1963. Intervention in opposition to the project was granted to the Community Natural Gas Company (Community). Community, subsequently, on the record, withdrew its opposition to Applicant's project and thereafter took no position either in support of or in opposition to the project. Community also withdrew from any participation in the proceeding. Staff, on the record, requested certification of Applicant's project since it satisfied Commission requirements as set forth in *Panhandle Eastern Pipe Line Co.* 15 FPC 1421. Staff and Applicant waived the right to file briefs and the aforementioned examiner's decision was issued.

The examiner found it necessary and desirable in the public interest to direct respondent to render gas service to Applicant and ordered that Respondent establish connection of its facilities with those of Applicant and that Applicant install its facilities to be ready for operation by December 31, 1964.

Since this project meets the requirements for Section 7 (a) applications which we have previously established, we concur generally with his conclusion. See *Panhandle Eastern Pipe Line Co.*, 15 FPC 1421.[1] This determination, however should not be taken as necessarily expressing approval of the type of analysis of the matter set forth on page 669 of the Examiner's initial decision, moreover, we believe the project should become operative prior to the commencement of the 1964–65 heating season. Accordingly, we shall condition the order upon Applicant being prepared to receive natural gas from Respondent within one year from the date of this order and upon the execution of a proper service agreement.

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant, The Town of Poseyville, Indiana, is a municipal corporation incorporated under the laws of the State of Indiana and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the Town of Poseyville and environs.

(3) It is necessary and desirable in the public interest that Texas Eastern Transmission Corporation be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver to Applicant up to 495 Mcf of natural gas per day, its estimated third year peak day requirement, as set forth in the application, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Texas Eastern Transmission Corporation within one year from the date of issuance of this order and, in addition should execute a service agreement with Texas Eastern in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Texas Eastern serve Applicant, as proposed, will not place any undue burden upon Texas Eastern Transmission nor impair its ability to render adequate service to its existing customers.

---

[1] These requirements include:

(a) Minimum debt service coverage of at least 1.5 based upon a 20-year bond issue or 2.0 based upon a 30-year bond issue.

(b) No undue burden on Respondent.

(c) The project will not impair the ability of Respondent to render service to its customers.

(d) Respondent's pipeline is the most feasible source of supply.

(e) There is a public need for and the public will benefit from natural gas service.

The Commission orders:

(A) Texas Eastern Transmission Corporation be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 495 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order and, in addition shall execute a service agreement with Texas Eastern in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Texas Eastern shall report to the Commission in writing the date of commencement of service to Applicant, within ten days after initiation of service.

Commissioner Black *not participating.*

INITIAL DECISION

OF THE PRESIDING EXAMINER ON THE SEC. 7(a) APPLICATION OF THE TOWN OF POSEYVILLE, INDIANA

(Issued July 31, 1963)

ELLIS, *Presiding Examiner:*

I—PROJECT SUMMARY

The Town of Poseyville, Indiana, a community of 1,000 persons near Evansville in southwest Indiana, has besought the Federal Power Commission for an order under Section 7(a) of the Natural Gas Act calling upon a nearby natural gas pipeline, that of the Texas Eastern Transmission Corporation, to connect their line with a lateral proposed to be established by the town and to supply it with natural gas to meet the needs of its residents, the distribution to be made by the municipality. A similar project of a private distributor for service to Poseyville was approved by an order of the Commission of last year, but its lateral has not been built for failure of the distributor to acquire a franchise from the town.

II—PROCEDURAL HISTORY

December 17, 1962: The Commission's order in Opinion No. 372, CP60–122, directs Texas Eastern to supply gas to Mr. S. C. Chapman (now the Community Natural Gas Company) for Poseyville and two other nearby towns. Only the latter two had enfranchised Mr. Chapman.

January 16, 1963: By a popular vote of 231 for and 16 against, the residents of the town of Poseyville approve a program for distribution of gas in Poseyville by the municipality, the piping system to be built and financed out of revenue bonds.

February 14, 1963: Application filed by the town of Poseyville for an FPC order upon Texas Eastern, under Section 7(a) of the Natural Gas Act.

July 1, 1963: Following its notice of May 10, the Commission orders hearing on the application, and grants intervention to the Community Natural Gas Company.

July 24, 1963: Hearing held on the application and the parties agree to dispense with the filing of written briefs.

III—FORMER COMPETING APPLICATION

In one sense, the suitability of gas service to Poseyville has already been determined by the Commission. In a recent proceeding for the expansion of Texas Eastern Transmission Corporation's sales capacity, which was decided by Opinion No. 372 of December 17, 1962, there intervened Mr. S. C. Chapman, who petitioned for an order requiring Texas Eastern to sell to him 1,140 Mcf of natural gas per day for service to Poseyville and two other nearby towns in Indiana. The two other towns had already granted him a franchise, but Poseyville had not. Accordingly, the initial decision in that case, issued October 3, 1962, directed Texas Eastern to connect its facilities with those proposed by Mr. Chapman and make the sale of 1,140 Mcf, with the indication that if the Poseyville franchise should be denied him, Mr. Chapman will make gas available to Poseyville off his proposed system. The evidence and the estimates upon which this order issued were in lump sum form and did not break down the figures to show the need for Poseyville alone, the sales expected to be made there, or the investment required for that portion of the program. Hence there is no indication in the order as to how much of the 1,140 Mcf was destined for Poseyville. The Commission's opinion adopted the initial decision in this respect, without revision (Docket Nos. CP60–122, CP61–203). It is apparent that there had been local negotiations for some time with respect to a franchise for service to Poseyville, but it now is denied that Chapman ever was given a firm assurance that he would be called upon to distribute gas in the town.

A month after the Commission's December order, the town of Poseyville held a popular election and voted overwhelmingly, that is 231 to 16, to establish its own gas distribution system, under a plan to pay for it by the issue of revenue bonds. The question voted upon by the townspeople gives no hint, one way or the other, as to whether the plan includes the necessary four-mile lateral line out to the Texas Eastern main line or whether it is the plan to buy at wholesale from Mr. Chapman's new line expected to be built to the town border. But it is quite possible that a particular voter who inquired into the program in great detail could discern that the expected financing included $46,200 (one-fifth of the total) for four miles of three-inch lateral line to reach out to Texas Eastern's line.

Thereafter Community Natural (Mr. Chapman's new company) filed for intervention in Poseyville's petition before FPC, averring that service to Poseyville's residents under the municipal program will be 27 to 32 percent more expensive to them than the cost of such service if rendered by Mr. Chapman's company.

However, when the matter came on for hearing, Mr. Chapman and the Community Natural withdrew any and all expression of opposition to the municipal project, announcing on the record that Community Natural specifically takes no position either way on the town's application and does not purpose actively to participate in the proceeding. Also, it was said that if an order should now issue to Poseyville as requested, then Community Natural will not extend its line toward Poseyville; from this it is concluded that no problem of duplication of facilities now remains. There remains an obvious question whether there will be an unused portion of the allocation made last year to Mr. Chapman, now

Community Natural, but it was agreed at the hearing that the present proceeding, being limited to Poseyville's independent application, is not and cannot be the vehicle for a revision of the Texas Eastern allotment to Community Natural, or an abandonment of a portion of it, which will require a separate treatment at the initiative of Texas Eastern, Community Natural, or the Staff. Thus there does remain this *possibly* excess allocation, but this is not regarded as a bar to present consideration of Poseyville's own application on its own merits, since the condition upon which the former allocation was made is now seen to fail of consummation, that is, either Mr. Chapman's enfranchisement for service in Poseyville or an arrangement for sale at wholesale to Poseyville. Instead, the town now wants to install its own distribution system and buy direct from Texas Eastern. While, for this reason, there has not been conducted a comparative hearing on the merits of the two projects and there is no finding here, nor even the slightest implication, as to which program is more in the public interest, it is significant that the lateral line to be built in either case is of about the same length, four to four and a half miles.

IV—TEXAS EASTERN RESPONSE

Under FPC's new regulation, Section 156.2(d), the Texas Eastern Transmission Company "is a party respondent to the proceeding." Their answer filed to the town's application reads as follows:

> The volume of gas required by Applicant for the third year of service in the amount of 485 MCF (at 15.025 psia; 495 MCF at 14.73 psia) per day represents approximately 0.019% of Texas Eastern's presently authorized long term firm service. In view of this small volume, Texas Eastern is obviously able to make it available to Applicant without impairing Texas Eastern's ability to render adequate service to its customers. It is Texas Eastern's position that the sale and delivery of this small volume of gas by Texas Eastern is not economically feasible. However, Texas Eastern will abide by whatever decision the Commission may make on the merits of the Application.

At the hearing, Texas Eastern's counsel explained this to mean, not that the project is regarded as infeasible so far as the town is concerned, but that the service by Texas Eastern is regarded as not economically feasible to it. Though twice requested so to do, the counsel declined to furnish any evidence, explanation, figures or detail to suggest why or how much infeasibility might result. At page 19 of the Transcript, the Presiding Examiner advised the attorney for Texas Eastern that the statement referred to could not be accepted unless backed up or explained by something in the way of evidence or analysis; that unless so supported, their statement could not be accepted as one of objection to the grant of the application. This reaction appears to be appropriate in any event, under the circumstances, but also is required as a result of the regulation, Section 156.7, which reads:

> If the natural gas company objects to the grant of the relief sought by the application, it shall fully state the grounds and reasons for its objections.

The only response from Texas Eastern is this statement appearing in the transcript: "We will leave it that way." All this becomes important because the governing statute specifies that the order upon a pipeline may issue "if the Commission finds that no undue burden will be placed upon such natural-gas company thereby." Here, upon the record made, it is evident that the requested order will result in a revenue sale by the pipeline somewhat in excess of $2,000 per month; there is no acceptable evidence that such a sale would be a burden upon the pipeline, undue or otherwise, and it is the conclusion that

the cryptic, unsupported, unexplained statement that this sale "is not economically feasible" furnishes no basis to counteract the otherwise sufficient evidence that this sale will not place an "undue burden" on Texas Eastern. Especially so when the sale is under Texas Eastern's own filed tariff rate, a change in which it is free to file at any time.

V—ECONOMIC FEASIBILITY

Under the statutory requirement of a finding that the proposed order on the pipeline is "necessary or desirable in the public interest", in this, as in other cases, the real question calling for the Commission's examination and determination—whether raised by any intervener or not—is the economic feasibility of the project itself.[1] Among other tests, the most significant one applied to municipal projects is the bond coverage, that is, whether the net earnings (or surplus of revenue over expenses without a deduction for depreciation) is amply budgeted to provide in each year at least 1.5 times the amount required for debt service on the bonds to be sold to build the project. 15 FPC 1421, 16 FPC 897, 17 FPC 118; *Virginia Petroleum Jobbers Association* v. *F.P.C.* (CADC, 1961) 293 F. 2d 527.

To establish the feasibility of its project, Poseyville presented an exhibit detailing the capital and operating costs, the number of customers and amount of sales and revenues expected, and the result of all of those figures on the coverage ratio referred to. If 30-year bonds are sold, the coverage ratio averages 2.1 and in no year falls below 1.7, while if 20-year bonds are sold the average is 1.7 and the minimum 1.5, all of which are within the standards set by the Commission in the cases referred to. It is true the figures depend for their significance upon the validity of the engineering exhibit from which they are derived. No particular industrial market is relied upon, and it is obvious the net revenues and the quantities sold depend upon the number of customers which may be expected to develop, especially for domestic heating, since the plans show that sales to residences to be heated by gas are relied upon for 70 percent of the town's market; without this market there would be a serious question of feasibility. The bases for reliance upon the study submitted as to customer acceptance, and the various figures derived from it, are three:

(a) The engineering firm which prepared it has acquired a considerable experience in this field, has installed a number of similar projects in quite similar towns in this very area, and their estimates and predictions have proved to be of considerable reliability.

(b) While in some other cases there have been reported detailed house-to-house surveys, questionnaires or "straw votes" upon which the sales predictions were made (17 FPC 118, 120), it is becoming evident that a more reliable index of the activity to be expected is the realized experience of similar towns in the area. For this purpose it is noteworthy how very closely the project of Poseyville compares to one approved by the Commission in 1960 for Stonington, Illinois, which appears to be 100 or 200 miles from Poseyville. In that decision, 24 FPC 482, the question of economic feasibility was very directly raised, and the project was examined at considerable length and finally approved. Note these correlations:

(1) Stonington's population is about 10 percent over Poseyville's.

---

[1] See 28 FPC 1035, 1038, Opinion No. 372, Texas Eastern Transmission Co., CP60-122, Dec. 17, 1962. This is because, it being a municipal project, there is no state commission certificate to rely upon for the determination of feasibility (27 FPC 967, 975, 980).

(2) Both towns are four miles from their supply line and must build the lateral. Stonington's was to cost $47,630, Poseyville's is supposed to cost $46,200.

(3) The local vote was roughly the same, over 10 to 1 in favor of municipal operation, in both cases.

(4) The total investment is about the same, $240,000 for Stonington and $230,000 for Poseyville.

(5) The peak day gas requirement also is slightly larger for Stonington, 572 compared to 495.

(6) The number of customers is about the same: 336 Stonington residents had "signed up"; 334 Poseyville customers are predicted.

(7) Stonington has the advantage of service from a pipeline whose rate is about one-fourth below Texas Eastern's and also has a subsidiary sale to a municipal light plant. On the other hand, Poseyville's bonds are expected to be sold for a considerably lower rate of interest than was predicted in the other case.

(c) Estimates as to peak day needs, total customers predicted, heating saturation hoped for, and the like, are significant and helpful only after their correlation with numerous similar projects, which requires some restating of the data in terms of a common denominator. For that purpose, and following the procedure approved in 28 FPC 41, 42, 49, there follows, a summary table comparing the data predicted for Poseyville with like figures for thirteen comparable projects which were approved in 1962 (27 FPC 967) nearly all of which are in the same territory.

COMPARATIVE TABLE—*New project for Poseyville compared with 13 other local midwestern projects*

Poseyville, Indiana, project		Comparative range (13 other projects)		
		High	Median	Low
Population	1,009	1,687	750	230
Miles to the pipeline	4.0	17.4	1.8	0.25
Number of customers (3d yr.):				
Residential:				
Non-heating	54	119	12	18
Heating	233	279	215	56
Commercial and industrial:				
Non-heating	24	31	8	2
Heating	23	20	30	5
Total customers	334	449	265	81
Gas requirements:				
Peak day—Mcf	495	680	496	102
Annual—MMcf	54.3	65.2	51.2	10.7
Capital investment:				
Total as proposed	$230,000			
Per customer	690	$728	$577	$412
Operating revenue:				
Income	66,976			
Expense	35,915			
Net operating revenue	31,061	35,440	8,110	2,358
Percent of investment [2]	13.5	14.2	5.78	2.49
Comparative data:				
Heating saturation (percent)	81	100	75	64
Home heating use (cu. ft./DDD)	29	28.2	25.6	21
Peak day Mcf per population unit	0.463	1.18	.483	.286
Residential peak day use per population unit	.333	1.07	.316	.22
Peak day Mcf per customer	1.48	2.62	1.57	1.26
Population units per residential customer	3.72	6.83	3.95	1.39

[2] This of course does not allow for depreciation.

The close correlation with the median figures for other localities corroborates the conclusions here relied upon. Upon all of these facts the critical bond service coverage ratio seems supported by the evidence and the economic feasibility seems adequately established.

VI—STATUTORY REQUIREMENTS

The specific findings or requisites set out in Section 7(a) of the Natural Gas Act, to sanction an order for pipeline service to a local distributor, are here listed and their coverage recited, as follows:

1. FPC's action is "necessary or desirable in the public interest." The basic question on this score is economic feasibility, as covered above, which is regarded as comprehending also whether the project can be financed, as here testified. In addition, some previous cases have examined, for this finding of public interest, the question whether there is a "public need" for the service and "public benefit" from it (15 FPC 1421, 1425), and there is evidence on it here. However, by this time, after the issuance of evidently hundreds of these orders wherever there is a gas supply available and the project appears feasible, it should be taken and concluded that any town without natural gas service has a public need for it and will benefit from it. Until, at least, some party disproves it, any discussion, evidence, or finding of public need and public benefit would seem to be pure supererogation; it should be taken for granted.

2. The sale is to a municipality "legally authorized to engage in the local distribution of natural gas to the public." In the initial decision of January 22, 1963 in G–2306 *et al.*, *infra* at page 750, it was the holding that this means *prima facie* authority, which is satisfied by noting that (a) there is a state law permitting towns of this class upon popular vote to go into the gas business, (b) the vote has been had, and (c) its outcome is favorable. The statute to that effect here is found in Burns Indiana Statutes, Sections 54–602 to –612. The vote has been had, and it was favorable, 231 to 16.

3. ". . . that no undue burden will be placed upon such natural gas company" (meaning Texas Eastern). That question is covered in Part IV above.

4. ". . . no authority to compel . . . such natural-gas company to establish physical connection or sell natural gas when to do so would impair its ability to render adequate service to its customers." Texas Eastern's answer, as quoted above, gives satisfactory assurance on this score.

VII—FINDINGS AND ORDER

In conclusion, it is found:

(1) Texas Eastern is subject to the Natural Gas Act (Opinion No. 372, December 17, 1962).

(2) It is necessary and desirable in the public interest to direct Texas Eastern to render gas service for distribution by the Town of Poseyville, Indiana, which is a municipality authorized to engage in such distribution.

(3) This action will place no undue burden on Texas Eastern, nor impair its ability to render adequate service to its customers.

Accordingly, *it is ordered*, Subject to review by the Commission, that Texas Eastern Transmission Corporation establish a physical connection of its transportation facilities with the facilities to be installed by the Town of Poseyville, Indiana, and sell natural gas to the Town up to the amount of 495 Mcf per day, subject to the condition (which is hereby found to be required by the public convenience and necessity) that the Towns facilities to receive,

transport and distribute the gas are installed and ready for operation by December 31, 1964.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G–2280

ORDER TERMINATING PROCEEDING

(Issued September 6, 1963)

On October 16, 1953, in the above-designated proceeding, the Commission ordered Tennessee Gas Transmission (TGT) to show cause why it should not be required to make certain adjustments in its surplus and plant accounts to make them conform to the requirements of the Uniform System of Accounts prescribed for natural gas companies.[1] As stated therein, the entries questioned stem from two incidents of profit on pipe exchanges with other pipe-line companies, and from the capitalization of interest during construction.

One of the aforementioned pipe exchange incidents took place in 1949, and involved the entry of $1,764,821.50 to the gas plant in-service account. This matter has previously been satisfactorily adjusted by proper journal entries made by the company. The two matters remaining to be adjusted under the aforementioned order have been the subject of further staff study and conferences between the company and staff. As a result thereof, agreement was reached on May 7, 1963, (1) that interest during construction was properly capitalized at 6% per annum; and (2) that for recording the adjustments on a 1950 pipe exchange transaction, the following journal entries should be made:

FPC account	Particulars	Amount
435	Miscellaneous debits to surplus	$473,862
101	Gas plant in-service	(473,862)
	To record reduction of plant in-service account.	
108	Accumulated provision for depreciation gas plant in-service	177,419
434	Miscellaneous credits to surplus	(177,419)
	To adjust depreciation for period July, 1950 through December, 1962.	
108	Accumulated provision for depreciation of gas plant in-service	4,928
403	Depreciation expense	(4,928)
	To adjust depreciation for period January through April, 1963. (Depreciation calculated at 3% per annum through Sept. 30, 1962; and at 3.12% per annum from and after Oct. 1, 1962.)	

The Commission finds:

The calculation of depreciation and the accounting adjustments hereinbefore stated appear to be appropriate and are hereinafter accepted as being in compliance with the requirements of the Uniform System of Accounts.

The Commission orders:

(A) The journal entries herein noted are hereby accepted as being in compliance with the aforementioned order issued herein and the Uniform System of Accounts.

(B) Within 30 days of the date of issuance of this order, TGT shall file certified statements that the aforementioned accounting adjustments have been recorded on its books and records.

---

[1] 12 FPC 1300.

(C) Acceptance of the journal entries herein noted is limited to the issues and amounts expressly set forth in the Commission's order of October 16, 1953.

(D) Subject to TGT's filing of the statements required by Paragraph (B) of this order, the above entitled proceeding, Docket No. G–2280, is terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

FOSTER PETROLEUM CORPORATION, DOCKET NOS. RI64–17 AND RI64–24

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued September 9, 1963)

On August 12, 1963, Foster Petroleum Corporation (Foster) filed motions for reconsideration [1] of the Commission's suspension orders issued July 12, 1963, in Docket Nos. RI64–17 and RI64–24, requesting that the Commission vacate its suspension orders.

The suspension order issued in Docket No. RI64–17 involves proposed increases in rates from 7.2 to 11.0 cents per Mcf for sales of sour gas by Foster to Phillips Petroleum Company (Phillips) from Panhandle Field, Moore County, Texas (Railroad District No. 10). The proposed increased rates [2] were suspended until December 15, 1963, and thereafter until such further time as they are made effective in the manner prescribed in the Natural Gas Act.

The suspension order in Docket No. RI64–24 involves proposed increases in rates from 7.2 cents per Mcf to 10.5 cents per Mcf for sales of sour gas by Foster to Phillips from Panhandle Field, Moore County, Texas (Railroad District No. 10). The proposed increased rates [3] were suspended until July 16, 1963, and thereafter until such further time as they are made effective in the manner prescribed in the Natural Gas Act.

In support of its motions, Foster states that (1) the subject increased rates are just and reasonable in and of themselves, and (2) the Commission has accepted without suspension rates identical to Foster's proposed rates for sales of gas by producers not only from the Panhandle Field in Moore County, but also from the same wells as Foster.[4]

The area price levels set forth in the Statement of General Policy No. 61–1, as amended (18 CFR, Chapter I, Part 2, Section 2.56), are applicable to pipeline quality gas as that term is generally understood in each area. In the instant case, Phillips gathers the subject gas, among others, into its Panhandle gather-

---

[1] Foster termed the motions as applications for rehearing and reconsideration. Applications for rehearing of interlocutory orders such as here involved may not properly be filed. [Section 1.30(e) of the Rules of Practice and Procedure (18 CFR 1.30(e))]. The instant tenders have been considered as motions for reconsideration pursuant to Section 1.12 of the Commission's Rules of Practice and Procedure.

[2] The increased rate filings were designated as Supplement Nos. 1 to Foster's FPC Gas Rate Schedule Nos. 1, 5, 6, 8, 9, 10 and 12.

[3] The proposed increased rates were designated as Supplement Nos. 1 to Foster's FPC Gas Rate Schedule Nos. 14 and 15.

[4] In its motions, Foster suggests, as an alternative plea, that if the Commission will not permit Foster to charge and collect the subject increased rates without suspension, Foster would be willing to file increased rates of 10.0 cents per Mcf for sour gas and 10.5 cents per Mcf for sweet gas, if such rates would be accepted without suspension. No action on such alternative plea has been taken.

ing system which connects its Dumas, Sanford and Sneed gasoline plants. After processing, the residue gas is then sold by Phillips to several interstate pipeline companies. We consider the area rate ceiling for pipeline quality gas to be applicable to the sales of residue gas by Phillips at the outlet of its plants. Although Foster's increased rates are not in excess of the 11.0 cents per Mcf increased rate ceiling for pipeline quality gas for Texas Railroad District No. 10, the cost per Mcf to Phillips for the gathering and processing of Foster's nonpipeline quality gas must be taken into consideration in determining the proper rate level for Foster's sales to Phillips. Since such costs are not known, the subject increased rates of 10.5 cents and 11.0 cents per Mcf were properly suspended.

The previous acceptance of certain increased rates similar to the rates of Foster involved in these proceedings does not preclude suspension of Foster's rates where there is the sound justification for doing so as indicated above. *Cf. F.C.C.* v. *Pottsville Broadcasting Company*, 309 U.S. 134, 145; *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 236 F. 2d 289.

The Commission finds:

The motions for reconsideration filed by Foster on August 12, 1963, in the above-designated proceedings, set forth no new facts or legal considerations which were not fully considered prior to the issuance of our orders of July 12, 1963, or which now having been considered, warrant the modification of said orders.

The Commission orders:

Foster Petroleum Corporation's August 12, 1963 motions for reconsideration of the Commission's orders issued July 12, 1963, in the proceedings in Docket Nos. RI64–17 and RI64–24 are hereby denied.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63–350

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 9, 1963)

On June 21, 1963, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP63–350 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a new delivery point and the necessary metering and regulating facilities for the delivery of natural gas to the Dayton Power and Light Company (Dayton) for the account of The Ohio Fuel Gas Company (Ohio Fuel), an existing customer of Applicant's, all as more fully represented in the application in this proceeding.

Applicant as agent for Ohio Fuel, would construct the proposed facilities on its main transmission line in Clinton County, Ohio, at an estimated cost of approxmiately $27,400. Excluding the cost of main line taps and tap valves estimated at $2,235, the cost of the metering and regulating station will be paid for by Ohio Fuel. This additional point of delivery is to be established for the

purpose of delivering natural gas to Dayton for resale in Bowersville and Port Williams, Ohio, and surrounding area. Dayton is an existing wholesale customer of Ohio Fuel, which has received "budget" authorization in Docket No. CP63-185 to establish additional delivery points to existing wholesale customers for resale in new communities.

No additional mainline facilities will be required by Applicant and gas delivered at this new point will be part of Applicant's presently authorized volumes to Ohio Fuel. Applicant plans to finance its portion of the proposed construction from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 29, 1963, respecting the matters invloved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof as well as sale and delivery of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the related sale of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to construct and operate certain natural gas facilities, and to sell and deliver natural gas for resale, as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the

general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

UNION CARBIDE CORPORATION, PROJECT NO. 1856

FINDING THAT OFFER OF SETTLEMENT IS UNACCEPTABLE

(Issued September 9, 1963)

The Union Carbide Corporation (Carbide) on July 29, 1963, filed an offer of settlement concerning the issue of this Commission's jurisdiction under Part I of the Federal Power Act over Hawks Nest and Glen Ferris hydroelectric plants on the New-Kanawha River in West Virginia. This issue has been set for hearing on September 23, 1963. The offer of settlement proposes that Carbide will acknowledge the licensing authority of the Commission over the aforementioned projects if (1) the term of any license issued shall extend to 1993 and (2) the following method of calculating "gross earnings" for application to the provisions of Section 10(d) of the Federal Power Act is incorporated in the license:

> gross earnings * * * shall be assumed and calculated to be the actual cost of generating electric energy in the Hawks Nest Plant and the Glen Ferris Plant, from time to time, plus a specified reasonable return upon the net investment of Carbide in the Hawks Nest Plant and the Glen Ferris Plant * * *.

Carbide is an industrial corporation which utilizes all of the energy from its Hawks Nest and Glen Ferris projects in arc furnaces at a metallurgical plant. It does not sell any of such energy.

The problems involved in applying to industrials the provisions of Section 10(d) concerning an amortization reserve, of Section 10(e) concerning expropriation of excess profits and of Section 3(13) concerning the determination of "earnings in excess of a fair return on such [legitimate original cost] investment" have never been definitively settled by the Commission for the practical reason that it has never had to determine the net investment of an industrial concern in a hydroelectric project for the purposes of Section 14 of the Act. It has addressed itself merely to the first step, the establishment of an amortization reserve pursuant to Section 10(d) to provide a fund in the event that it is later determined that a licensee has received earnings in excess of a fair return which should be used to reduce its net investment in the project under Section 3(13). By Order No. 252, issued August 7, 1962 (28 FPC 298), and the amortization reserve schedule prescribed thereunder, an industrial licensee is required to report, pursuant to Section 10(d), the basis it employs in valuing project power output which it uses.

The fair import of the reporting requirement of Order No. 252 is that if the basis employed by the industrial concern is reasonable, it may be used by them

in establishing amortization reserves pursuant to the Section 10(d) license conditions (17 FPC 388, Article 14). The method suggested by Carbide in its offer of settlement, however, by its terms would automatically exclude the possibility of an amortization reserve and would therefore negate Section 10(d). For this reason we are unwilling to incorporate such a method in a license.

For the foregoing reasons we find Carbide's offer of settlement is unacceptable.

Commissioner Black *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. G–18799

ORDER ON REHEARING

(Issued September 10, 1963)

On August 14, 1963, Cities Service Gas Company (Gas Company) and Cities Service Company jointly filed an application for rehearing of Opinion No. 396 and accompanying order issued July 15, 1963.

The arguments advanced by Cities Service on rehearing are essentially a repetition of their previous contentions in this case which were adequately disposed of in Opinion No. 396. We shall, therefore, discuss only the relatively few considerations which warrant further consideration.

Cities Service declares that our decision constitutes an improper departure from the past "uniform practice" of routinely allowing a tax allowance on Gas Company's cost of service at the 52% rate. This contention overlooks a previous case involving Cities Service in which the Commission adopted the consolidation effective tax rate recommended by Staff herein.[1] The effective consolidated tax rate was also utilized in a number of subsequent decisions by this Commission.[2] Thus, Cities Service should not be surprised by a tax allowance of less than 52% of Gas Company's income. But even if this were a departure from past practice, we would be unwilling to permit Cities Service to collect excessive rates herein simply because it had been successful in collecting such rates in the past.

Cities Service contends that the Commission erred in holding that Gas Company's rates should be made subject to further reduction in light of the Commission's decision in *Alabama-Tennessee Natural Gas Co.*, Docket No. G–5471, *et al.*, regarding the treatment of deferred income taxes. This contention is correct. As Cities Service points out, we have provided that whatever decision is rendered in that case will be applied only prospectively. Since this proceeding relates to a past locked-in period we shall rescind this provision from our order.

We have reviewed the remaining arguments presented by Cities Service and find them to be adequately reviewed in our original Opinion herein.

ORDER DENYING APPLICATION FOR REHEARING

(Issued September 10, 1963)

On July 15, 1963, the Commission issued its Opinion No. 395, 30 FPC 200, together with accompanying order, determining jurisdiction in these proceedings over certain sales of natural gas by Amerada Petroleum Corporation (Amerada) and Signal Oil and Gas Company (Signal) to Montana-Dakota Utilities Company at Signal's processing plant near Tioga, North Dakota. On August 13, 1963, Amerada and Signal filed an application for rehearing of the Commission's opinion and order. In support of their application, Amerada and Signal urge the Commission to reconsider the points raised in their briefs to the examiner and their exceptions to the examiner's decision, and they attach as an appendix to their application the exceptions and supporting reasons for exceptions heretofore filed. No new legal or factual considerations are presented.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed by Amerada and Signal present no new facts or principles of law which were not fully considered by the Commission when it adopted its Opinion No. 395 and accompanying order issued July 15, 1963, or which having now been considered warrant any change or modification in said opinion and order.

The Commission orders:

The application for rehearing filed herein on August 13, 1963, by Amerada Petroleum Corporation and Signal Oil and Gas Company is hereby denied.

Commissioner O'Connor *dissenting* for the reasons set forth in Commissioner Woodward's dissenting opinion accompanying Opinion No. 395 and order issued July 15, 1963, 30 FPC at 207.

Commissioner Black *not participating.*

OAKDALE IRRIGATION DISTRICT AND SOUTH SAN JOAQUIN IRRIGATION DISTRICT, PROJECT NO. 2005

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued September 10, 1963)

On May 11, 1959, as supplemented on April 8, 1963, Oakdale Irrigation District and South San Joaquin Irrigation District, joint licensees for Project No. 2005, filed for Commission approval revised Exhibit K maps showing the present project area and boundary of the project and revised Exhibit L drawings showing the "as-built" plans of the project.

The project is located on Middle Fork of Stanislaus River and affects lands of the United States within the Stanislaus National Forest.

The effects of approval of the revised exhibits would be to show a reduction of the area of National Forest lands occupied by the project from 2,945.23 acres to 1,356.29 acres, and a resultant reduction in the annual charges for such occupancy from $5,890.46 to $2,712.58.

The substantial reduction in project area is due to the fact that the license initially described the project boundary by subdivisions of the public land survey, Revised Exhibit K fixes the boundary at an elevation five feet above full pool and includes only the areas in the vicinity of the powerhouses and spillways necessary for project operations.

The joint licensees have cooperated with the Forest Service in determining the new project boundary. By letter dated June 7, 1963, the Service has advised us that the new boundary would best serve the purpose of the Stanislaus National Forest, and has recommended Commission approval of the revised Exhibit K maps.

The Commission finds:

(1) Revised Exhibit K (FPC Nos. 2005–42 through-46) and revised Exhibit L (FPC Nos. 2005–47 through–65) conform to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) Exhibit K (FPC Nos. 2005–16, –17, –26, –40) and Exhibit L (FPC Nos. 2005–28 through–39), now part of the license and which have been superseded, should be eliminated from the license.

(3) The decreased amount of annual charges for recompensing the United States for the occupancy of its lands by the project are reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2005.

(B) The superseded exhibits described in finding (2) above are hereby eliminated from the license for Project No. 2005.

(C) Article 2 of the license for Project No. 2005 is hereby modified, effective as of August 1, 1963, to read as follows:

Article 2. The project covered by and subject to this license is located on the Middle Fork of the Stanislaus River in Tuolumne County, California, and consists of:

A. All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands

necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensees or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license, and the application for amendment, and which are designated and described as follows:

EXHIBIT J

Three typewritten sheets, except for the design head of the Donnells Development filed in the Commission February 10, 1953.

C. All other structures, fixtures, equipment, or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used and useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission, also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

D. The horsepower capacity herein authorized to be installed is 88,500 horsepower.

(E) Article 29 of the license is hereby modified, effective as of August 1, 1963, to read as follows:

Article 29. Licensees shall pay to the United States the following annual charges:

A. For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with

the provisions of Part 11 of the Commission's regulations. The authorized installed capacity is 88,500 horsepower.

B. For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $2,712.58, effective July 1, 1963.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensees and returned to the Commission within 60 days from the date of issuance of this order.

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62-1544, ET AL.

ORDER DENYING MOTION OF EASTERN SEABOARD INTERVENERS TO VACATE SECRETARY'S NOTICE OF EXTENSION OF TIME AND TO EXPEDITE PROCEEDINGS

(Issued September 11, 1963)

On August 14, 1963, The Eastern Seaboard Interveners[1] filed a motion requesting that the Commission either vacate the Secretary's notice of August 7, 1963 granting The Sun Oil Company's (Sun's) *ex parte* "request" for a thirty-day extension of time within which to file exceptions to the examiner's decision or take such other and further action as may be necessary to expedite ultimate decision in these proceedings.

The Eastern Seaboard Interveners strongly urge that because of the failure of Sun to serve its telegraphic request for an extension of time to file exceptions to The Initial Decision of the Presiding Examiner upon them that they were deprived of the opportunity to answer or object to Sun's motion as specifically envisaged by Section 1.12(e) of the Commission's Rules. We agree that the request for extension of time to file exceptions (which by the terms of Section 1.13(f) must be by written motion) should have been served on the other parties and that in the absence thereof[2] the Secretary should not have granted the

---

[1] The Brooklyn Union Gas Company, Long Island Lighting Company, Philadelphia Electric Company, and the United Gas Improvement Company, hereinafter referred to as The Eastern Seaboard Interveners.

[2] We recognize that there will be circumstances in which a request for extension of time will have to be filed within a period too short to allow responses within the 10-day period generally prescribed by Section 1.12(c) of our rules for answering or objecting to motions. In such cases we would normally expect the moving party to certify that the other parties have been contacted and have no objection to the grant of the motion, or, failing this, to ask that the time for responses be cut down after advising the Secretary that it made an effort to secure consent and as to which parties are unwilling to agree to the underlying request. The Secretary would have discretion to pass upon such a request to cut down the time for response pursuant to Section 3.5(10), and in appropriate circumstances could fix a shorter period providing such period gives non-consenting parties a reasonable opportunity to make their responses.

extension. But since he did grant the extension, we do not believe that it would be fair to rescind this action now.

Sun has undoubtedly placed reliance upon the extension issued to it by the Secretary's notice of August 7, 1963, and to require it to prepare its exceptions within the time normally contemplated by our Rules would, in effect, make it impossible for Sun to put its case before the Commission.

The Commission orders:

The motion of the Eastern Seaboard Interveners to vacate the Secretary's Notice of Extension of Time be and hereby is denied.

Commissioner Black *not participating*.

MEMORANDUM OPINION AND ORDER CLARIFYING OPINION AND ORDER; DENYING APPLICATIONS FOR REHEARING AND MOTION TO REOPEN FOR ADDITIONAL EVIDENCE; AND GRANTING STAY

(Issued September 11, 1963)

Syllabus

1. Settlement is an accommodation of conflicting positions agreed to as reasonable basis for terminating a proceeding in a manner consistent with public interest—fact that in-line price here is lower than price at which settlements have been effected affords no basis for objection. P. 683.
2. Until requisite filings have been made and succession approved, original producer applicant remains accountable for all refunds required. P. 684.
3. Commission *affirms Skelly* conclusion that date of contract execution is significant act in price determination—*rejects* contention that consideration be given all contracts up to date deliveries commenced. P. 684.
4. Commission *holds* that gas paid for but not yet taken by pipeline is gas sold in interstate commerce for resale and regulation thereof is within jurisdiction of the Act. P. 684.
5. It would be inequitable to require refunds for sales under a temporary authorization where authorization contained no refund condition and thus failed to alert producer of such possibility. P. 685.
6. Public interest would not be served by allowing price increase above existing triggering rate pending conclusion of applicable area rate proceeding, even if such rate were indicated on basis of individual company cost of service concepts. P. 686.
7. Commission *clarifies* prior Opinion and order; *denies* applications for rehearings and motion to reopen; and *grants* stay. Pp. 686–687.

Commissioners O'Connor and Ross *dissenting in part*.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., and Charles R. Ross.

Applications for rehearing have been filed to our Opinion and Order issued July 17, 1963, 30 FPC 283, in the above-entitled proceeding by various of the parties.[1] Motions for stay of the Order pending action on the applications and until the completion of judicial review also have been submitted. The application filed by Placid Oil Company, *et al.* in Docket Nos. G–13183, G–13184, G–14109, and G–17398 includes a motion to reopen the proceeding on the basis of facts which have become available since the initial decision. Transcontinental Gas Pipe Line Corporation has requested certain clarification of the decision as to its obligation to make refunds to its customers in respect to gas paid for but not yet taken into its system. Our examination of the rehearing applications indicates that a number of the issues argued therein are simply restatements, often in similar terms, of arguments previously advanced by the parties and adequately covered in the Opinion.

In particular these include the sales considered in fixing the price line, the kind of evidence to be used in determining whether the initial price is in the public convenience and necessity, the amount of tax reimbursement allowed, denial of the option to reject, the moratorium on the filing of price increases, and, in general, the matter of the refunds required of the producers. A rediscussion of these points would be largely repetitious and could serve no useful purpose. We direct our attention, therefore, to the remaining matters.

Several of the producers urge error in our failure to grant, as a bare minimum, the 20.625 cents per Mcf initial rate allowed in the orders approving settlements in other Southern Louisiana certificate proceedings. Without engaging in an extended discussion, we may note that a settlement, as its title connotes, is an accommodation of conflicting arguments and positions which is agreed to as a reasonable basis for terminating a proceeding in a manner consistent with the public interest. The settlement of the pending controversy with its elimination of further expense and delay, the savings attendant thereon, and the stability of prices which results, balanced against the possible allowance of a somewhat higher price to the producers or a waiver of a portion of the refunds which might otherwise be forthcoming are all elements which enter into consideration in the determination whether the offer accords with the public interest. In the instant dockets setlement could not be achieved and, as a consequence, it was necessary that an in-line price be determined for these sales. The fact that this price is lower than the price at which the settlements have been effected itself affords no basis for objection, nor does it support the assertions that our failure to fix a price equal to that allowed in the settlements is in any way capricious, arbitrary, unfairly discriminatory, violative of the Natural Gas Act, or constitutes an unconstitutional deprivation of property without due process of law.

The producers also argue that we erred in putting a condition in the certificates issued them to the effect that the take-or-pay requirement in each contract is subject to the provisions of our final order in the rule-making proceeding in Docket No. R–199, with the limitation that we would not require them to accept provisions for less than 80 percent of the annual contract quantities. The condition is identical with that provided in *Panhandle Eastern Pipe Line Company*,

[1] The Superior Oil Co., Ocean Drilling and Exploration Co., J. R. Frankel, Kilroy Properties, Inc., Placid Oil Co., Hassie Hunt Trust and Caroline Hunt Sands, J. Ray McDermott and Co., Inc., Callery Properties, Inc., New York Public Service Commission, Long Island Lighting Co. and The United Gas Improvement Co., and Transcontinental Gas Pipe Line Company.

et al., Opinion No. 350, and *Michigan Wisconsin Pipe Line Company, et al.*, Opinion No. 353, and in a number of other producer certificate proceedings. The charge of indefiniteness in the certificates occasioned by the condition is answered in our treatment of similar arguments in *Skelly Oil Company, et al.*, Opinion No. 362–A and *Texaco Seaboard, Inc., et al.*, Opinion No. 383, wherein the condition as initially imposed was modified to provide for a maximum reduction to 80 percent of the volumes provided in the contracts. As noted, this qualification is already provided in the condition applied in this proceeding. Moreover, applicants' uncertainty as to the terms under which they are required to sell their gas production is alleviated further by the proviso that any changes or modifications to be made as a result of the rule-making proceeding is to have only prospective application.

The application for rehearing filed by Kilroy Properties, Inc., *et al.*, states that Kilroy transferred substantially all of its interest in the properties involved in Docket No. G–17338 by an assignment dated September 1, 1962, the actual transfer to have been effective January 1, 1962. Notice of the assignment was not submitted to the Commission until July 29, 1963, a date subsequent to our Opinion in this proceeding. By letters dated August 20, 1963, addressed to the alleged assignee and attorney of record for Kilroy the Secretary of the Commission advised that, until the requisite filings have been made and the succession approved, Kilroy remains accountable for all refunds required by Opinion No. 398 in Docket No. G–17338. The import of those letters is hereby confirmed.

Kilroy also contends that in determining whether its proposed price was "in-line" we erred in not considering all contracts up to the date it commenced deliveries, rather than the date of its contract, "because until such deliveries commenced the gas had not been dedicated to the interstate market and the Commission did not have jurisdiction over Kilroy's sale to Hope." This contention is effectively answered in our order on the rehearing applications filed in *Skelly*, Opinion No. 362–A, wherein we stated that we used the date of the contract because we are of the opinion that the execution of the contract is the significant act on the part of buyer and seller in determining the price. Our conclusion is affirmed for the reasons expressed in that opinion and in the cases therein cited. We may note that our use of the date of execution of the contract to determine the "in-line" price was approved in *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (CADC, March 21, 1963).

The Superior Oil Company asserts a rather novel contention in regard to our action in requiring refunds on the basis of gas paid for but not yet taken by its pipeline purchasers. Referring to the Act's limitation in Section 1(b) to the transportation of natural gas in interstate commerce and to the sale in interstate commerce of natural gas for resale, it avers that the gas there involved has been neither sold nor delivered, and that any provision for failure to take this gas for transportation or sale in interstate commerce is beyond our regulatory powers. We cannot agree with such a hypertechnical approach. Assuredly, the gas has been sold—it has been paid for by Transco and United. While, as observed in the Opinion, some possibility of forfeiture of the prepaid volumes continues to exist, the possible occurrence thereof cannot be made a controlling consideration. Otherwise our jurisdiction could easily be evaded by sales for future deliveries subject to remote conditions subsequent. In our opinion, the gas has been sold in interstate commerce for resale and our regulation thereof is within the jurisdiction of the Act.

However, a further problem remains with respect to the refund obligation on the prepaid gas, one which we believe requires rectification. We speak here of the requirement in the Opinion and Order for immediate flow-through of refunds

on the prepaid gas which may be taken in kind. As clarified by Transco in its application for rehearing, and confirmed on re-examination of the order issued February 2, 1962, approving settlement in Docket No. RP61–13, the settlement agreement (Article IV, as implemented by Article V(C)), includes adequate provisions for proper disposition of all contingent supplier refunds made to Transco, including payment of such refunds to its utility customers where warranted. A review of United's settlement agreement in Docket No. G–9547, *et al.*, approved by order issued March 12, 1962, likewise establishes that ample provision has been made (Article V, Appendix E) for flow-through of refunds resulting from the permanent certificate granted in Docket No. G–16388. Accordingly, we shall amend ordering paragraph (E) of the Order accompanying Opinion No. 398 to the extent of deleting the last sentence thereof.

The New York Public Service Commission objects to the lack of an interest charge on the computation of refunds to be made in kind for prepaid gas. In our opinion, the absence of an interest charge is offset by the almost complete preclusion of any possibility of forfeiture on the volumes of refund gas (the time limitation being the life of the contracts) and by the fact that the volume of such gas is to be calculated at the conditioned initial price, regardless of whatever future price escalations may occur. Thus, Transco and United are accorded an assured volume of gas which they may take at their option at a minimum price.

The New York Commission, together with Long Island Lighting Company and The United Gas Improvement Company, protest the failure to order refunds of excess charges on the gas sold by Superior from offshore Vermilion Block 76 field prior to the issuance of the August 10, 1959 certificate. Our refusal to order the refund was based upon the fact that the temporary authorization which had been granted Superior on October 22, 1958, did not contain a refund condition. Thus, although Superior was informed that once service was commenced under the temporary authorization it could not be discontinued without permission of the Commission, there was nothing to alert it to the possibility that a refund might be required thereunder. For this reason we believe it would be inequitable to now require Superior to make the refund. The clarification of our position expressed in the opinion on rehearing in *Skelly*, which follows, is directly in point and suffices for disposition of the present claims:

> A refund has been required when the permanently certificated rate is less than the temporary one, but in such a case specific language advising the parties of the risk they took if they accepted the temporary certificate has uniformly been used. Since in the present proceeding there is no such provision in the temporary certificates, to proceed now and order the producers to make refunds would not be equitable regardless of any ultimate right we may have to order such refunds.

Placid Oil Company, Hassie Hunt Trust and Caroline Hunt Sands jointly urge error in the temporary moratorium placed by us on the price escalations. Their application points out that the gas involved in some of their dockets has been the subject of a Section 4(e) rate proceeding to determine the justness and reasonableness of increases from the initial price of 23.55 cents per Mcf to 25.55 cents per Mcf. These increases were disallowed by us in Opinion No. 369[2] on the ground that the Hunt interests had failed to meet their burden of proof, specifically that the cost of service presentations were improper. Applicants

[2] *H. L. Hunt, et al.*, Docket No. RI62–467, *et al.*, issued November 30, 1962, 28 FPC 897, rehearing denied by order issued January 15, 1963, 29 FPC 84; petition for review filed, CA5, Nos. 20375 and 20386.

now contend that "The purport of the Commission's Opinion No. 369 was that if the so-called deficiencies had been corrected, Applicants' 25.55-cent price would have been 'just and reasonable' ". Assuming, without deciding, this to be true, it does not meet the problem here. For we have held, for reasons which we here reaffirm, that it would not serve the public convenience and necessity to allow a price increase above the existing triggering rate pending conclusion of the area rate proceeding in AR61–2, even if such rate were indicated on the basis of individual company cost of service concept. See *Superior Oil Co.* v. *F.P.C.*, 322 F. 2d 601, 617–618, CA9, No. 18252, decided August 26, 1963. Since the temporary certificates issued these petitioners contained no such condition and the permanent certificate applications were still in hearing, we were not in a position to so hold at the time of Opinion No. 369.

As previously noted, applicants have included a motion to reopen the proceeding for the introduction of new evidence. This evidence, as outlined in their application, involves the recent increases in production of gas from the South Louisiana area, the amount of such gas which has moved in interstate commerce, growth of the Louisiana intrastate market, depths of reservoirs in South Louisiana, both industry-wide and those respecting Placid's production in this proceeding, and changes in well drilling costs. The evidence also attempts to differentiate Placid's position from the general statistics relating to production in the South Louisiana area. Opinion No. 398 rejected consideration of this type of evidence as irrelevant to the determination of the initial price question in independent producer certificate cases. Moreover, a large part of the information sought to be introduced at this late date either was or should have been available to petitioners earlier, or relates to periods considerably after the date of execution of the contracts, from which the in-line price must be judged. The motion will therefore be denied.

A number of the producer-applicants have requested stay of ordering paragraphs (B), (C), (D) and (F) pending the outcome of judicial review of the Opinion and Order. Paragraphs (B) and (C) relate to the filing of supplements to the presently effective rate schedules to reflect the conditioned price as the initial price and to the imposition of the moratorium. Paragraphs (D) and (F) provide for the making of the refunds within 60 days of July 17, 1963, the date on which Opinion No. 398 was issued. Except for the indicated modification in paragraph (E), our review of the applications for rehearing does not convince us that we were in error in our determinations or that continued collection of the initial contract prices, determined by us to be excessive, can be sanctioned. We do not believe the public interest will be adversely affected, however, by deferring payment of the refunds, with interest, for a period of 30 days after conclusion of judicial review of Opinion No. 398. Accordingly, we shall grant the motions for stay of ordering paragraphs (D) and (F). In all other respects the applications for rehearing and motions for stay will be denied.

The Commission finds:

(1) The assignments of error and grounds for rehearing and reopening set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 398, or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order, except as specified below.

(2) The motion to reopen for the submission of additional evidence should be denied.

(3) Good cause exists for granting, in part, the motions for an amendment to the Order issued herein on July 17, 1963, so as to stay the actions required by

ordering paragraphs (D) and (F) for a period of 30 days after conclusion of judicial review of Opinion No. 398.

The Commission orders:

(A) The applications for rehearing filed in the above-entitled proceeding are hereby denied.

(B) The last sentence of paragraph (E) of the Order is hereby deleted.

(C) The motion to reopen the proceeding is denied.

(D) The completion of the acts and compliance with the requirements set forth in ordering paragraphs (D) and (F) of the Order accompanying Opinion No. 398 are hereby stayed for a period of 30 days after conclusion of judicial review of said Opinion.

(E) In all other respects said Opinion and Order is confirmed.

Commissioners O'Connor and Ross *dissenting in part.*

Commissioner O'Connor, *dissenting in part:*

I believe the Commission should stay paragraphs (B) and (C) which require the producers to immediately reduce their rates, conditioned upon the producers' agreement to refund the difference between present and ordered rates if the order is upheld on review. This procedure would protect both consumers and producers pending judicial review, and would prevent the possibility of irreparable loss which the order now imposes upon the producers. Otherwise, I join the order.

Commissioner Ross, *dissenting in part*, for the reasons contained in his statement accompanying Opinion No. 398, issued July 17, 1963, *Placid Oil Co., et al.*, Docket No. G–13183, *et al.*, 30 FPC 283, 302, to the extent applicable.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, Harold C. Woodward, and David S. Black.

IOWA POWER AND LIGHT COMPANY, DOCKET NO. E–7119

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued September 12, 1963)

Iowa Power and Light Company (Applicant), incorporated under the laws of the State of Iowa and doing business in that State. with its principal place of business in Des Moines, Iowa, filed an application on August 8, 1963 and supplement thereto on August 19, 1963 for authorization pursuant to Section 204 of the Federal Power Act, to issue from time to time, short-term Promissory Notes in an aggregate principal amount not to exceed $12,500,000 outstanding at any one time.

The proposed notes, payable to such commercial bank or banks from which the Applicant may borrow funds, will have maturities of not more than 90 days from the date of issuance and in no event shall the maturity of any of the notes extend beyond December 31, 1964. Applicant will pay no commitment, finder's or other fees in connection with the issuance of any of the aforesaid notes or with the borrowings evidenced by said notes.

The interest rate for each borrowing will be at the prime rates in force at the time and place of making the loan. As of the date of the application the current prime interest rate was 4½% per annum.

Applicant states that proceeds from the bank borrowings will be used to obtain temporary financing of Applicant's construction program, pending receipt of proceeds from permanent financing.

Applicant's construction program for the last six months of 1963 is estimated to cost $11,975,000 and for the full year of 1964 $12,500,000. Of these amounts $4,800,000 for 1963 and $2,500,000 for 1964 are allocated to the construction of a new 125,000 kw generating unit being installed at Applicant's Des Moines Power Station No. 2; $1,200,000 for 1963 and $400,000 for 1964 is allocated to the construction of a high pressure boiler and modernization of the Des Moines Power Station No. 2; and other items in the construction program include $500,000 for Des Moines Urban Renewal Modifications and Rebuilds, of transmission and distribution facilities and $500,000 for conversion from 34.5 kv to 69 kv of 21 miles of transmission line between Clarinda and Shenandoah plus a new substation at Shenandoah.

Written notice of the application has been given to the Iowa Commerce Commission and to the Governor of that State. Notice of the application also was published in the Federal Register on August 21, 1963 (28 F.R. 9223), stating that any person desiring to be heard or to make protest with reference to the application should file a petition or protest on or before September 5, 1963, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued May 31, 1961, *Iowa Power and Light Company*, Docket No. E-6974 (25 FPC 1063).

(2) The proposed issuance of Promissory Notes, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of not to exceed $12,500,000, as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt from the requirements of Section 204(a) of the Act by the virtue of Section 204(e) thereof.

(4) The proposed issuance of Promissory Notes, described above, will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(5) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance is, therefore, not exempt by virtue of that Subsection from the requirements of Section 204 of the Act.

(6) The proposed issuance of securities, as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of not to exceed $12,500,000 outstanding at any one time, upon the terms

and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon final maturity of all notes, issued pursuant hereto, being on or before December 31, 1964.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP63-327

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 12, 1963)

On May 28, 1963, as supplemented on June 14, 1963, and July 12, 1963, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP63-327 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities; the transportation and delivery on a firm daily basis of up to 3,000 Mcf of natural gas per day for Texaco, Inc. (Texaco); and in addition to said firm service, the transportation and delivery, annually, on an interruptible basis of up to 1,825,000 Mcf of natural gas at daily volumes not to exceed 5,000 Mcf. Under this proposal, Applicant is obligated to make available annual transportation service of 1,368,750 Mcf; however, said annual service may be curtailed or interrupted on any particular day.

The gas to be transported will be produced by Texaco from its properties in the Dog Lake Field, Terrebonne Parish, Louisiana. The gas will be taken by Applicant and transported through its system for delivery to Texaco at the latter's Lawrenceville, Illinois, refinery. The subject gas will be used by Texaco at its Lawrenceville refinery as fuel. The application indicates that the use of natural gas will reduce the frequent shutdowns for tube cleaning caused by the presently used fuel which is oil and will increase the overall operating time of refinery units such as heaters, compressors and boilers.

The proposed transportation service will be rendered pursuant to an agreement dated May 20, 1963, between Applicant and Texaco.

In order to render the proposed service Applicant proposes to construct and operate the following facilities:

(1) 5.37 miles of 30-inch loop pipeline in Mississippi, Tennessee and Kentucky;
(2) 3.53 miles of 26-inch loop pipeline in Louisiana;
(3) 5.70 miles of 8-inch pipeline in Louisiana;
(4) 5.65 miles of 8-inch loop pipeline in Illinois;
(5) 1.70 miles of 8-inch pipeline in Illinois, and,
(6) One meter station in Louisiana and one meter station in Illinois.

The total estimated cost of the proposed facilities is $1,809,700, which cost will be financed, pending permanent financing, by funds on hand and short-term bank loans.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 5, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued is granted on the express condition that the firm and interruptible transportation services hereinafter authorized shall be subject to curtailment and interruption if required to meet the existing and future Contract Demands of Applicant's customers for firm resale service.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the firm and interruptible transportation services authorized herein shall be subject to curtailment and interruption if required to meet the existing and future Contract Demands of Applicant's customers for firm resale service.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60-36; GULF OIL CORPORATION, DOCKET NO. CI60-43; TIDEWATER OIL COMPANY, DOCKET NO. CI60-142.

ORDER DENYING APPEAL FROM REJECTION BY THE SECRETARY OF JOINT APPLICATION FOR REHEARING

(Issued September 12, 1963)

On August 28, 1963, Memphis Light, Gas and Water Division and Mississippi Valley Gas Company (Appellants) filed pursuant to Section 1.7(d) of the Commission's Rules of Practice and Procedure an appeal from the action of the Secretary of the Commission in rejecting by letter of August 21, 1963, the Joint Application for Rehearing of the Commission's Opinion No. 399 tendered for filing by the Appellants on August 19, 1963.

On July 17, 1963, 30 FPC 329, the Commission issued its order in the above-entitled proceedings. Under the provisions of Section 19(a) of the Natural Gas Act and Section 1.34(a) of the Commission Rules a party seeking rehearing of a Commission order must file its application for rehearing within 30 days of the issuance of the Commission order. Appellants allege that their lateness in the filing of their Application for Rehearing was not due to their fault but was caused by an unusual and unforseeable delay in the mails and that such delay constitutes good cause for late filing as comteplated in Section 3.5(a)(8) of the Commission's Rules.

As noted above, the 30 day requirement for the filing of applications for rehearing of a final order of the Commission is a statutory requirement which is not subject to waiver for any cause. Moreover, since Appellants present no new contentions in their late-filed Application for Rehearing not previously raised by them and considered by us in our Opinion No. 399, there is no issue presented therein which would lead us to reopen the proceeding on our motion for reconsideration of their claims.

The Commission orders:

The Appeal From Rejection by the Secretary of Joint Application for Rehearing tendered by Appellants is denied.

THE CALIFORNIA COMPANY, A DIVISION OF CALIFORNIA OIL COMPANY, DOCKET NO. G-16167, ET AL.

ORDER AMENDING ORDER CONDITIONALLY APPROVING PROPOSED SETTLEMENT AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING CERTIFICATE

(Issued September 13, 1963)

On August 15, 1963, Texas Gas Transmission Corporation (Texas Gas) filed a request for modification of our order of August 7, 1963, 30 FPC 448, in the above-captioned proceedings.

Texas Gas requests that ordering paragraph (I) of the August 7, order be amended to relieve Texas Gas of the refund holding and reporting requirements thereby imposed. Ordering paragraph (I) requires United Gas Pipeline Company (United), Southern Natural Gas Company (Southern) and Texas Gas within fifteen days from the date of receipt of the refunds from The California Company to submit reports to the Commission setting forth the proposed disposition of the refunds. Ordering paragraph (I) also requires these refund recipients to hold the refunds pending further Commission action. Texas Gas, in its request for modification, correctly points out that it is presently required by the terms of its rate settlement agreement in Docket No. RP61-15 to make refund to its jurisdictional customers of the entire portion of the refund applicable to jurisdictional sales to be received from The California Company in Docket Nos. CI61-628, CI61-629 and CI61-630, the only dockets in which Texas Gas is the purchaser.[1] Further, Texas Gas is required within 20 days of making the refunds to its jurisdictional customers to report to the Commission in writing and under oath the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined and to serve a copy of such report on each customer receiving a refund.

It therefore appears that ordering paragraph (I), insofar as it applies to Texas Gas, duplicates and is in conflict with Texas Gas' obligations under its rate settlement. Accordingly, Texas Gas' request for modification will be granted.

The Commission finds:

It is appropriate in carrying out the provisions of the Natural Gas Act that the Order Conditionally Approving Proposed Settlement and Conditionally Issuing Certificates of Public Convenience and Necessity and Amending Certificate issued August 7, 1963, in the above-captioned matters be amended as ordered below.

The Commission orders:

(A) Finding paragraph (6) of the Order Conditionally Approving Proposed Settlement and Conditionally Issuing Certificates of Public Convenience and Necessity and Amending Certificate, issued August 7, 1963, in the above-captioned matters is hereby amended to read as follows:

---

[1] See "Order Approving Settlement, Prescribing Refund and Terminating Proceeding," *Texas Gas Transmission Corporation*, Docket No. RP61-15, issued December 26, 1961, 26 FPC 924.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that United and Southern be required to submit the report and retain the refunds and interest as ordered below.

(B) Ordering paragraph (I) of said order is hereby amended to read as follows:

(I) Within 15 days from the date of receipt of refunds and interest required by this order, United and Southern each shall submit a report to the Commission and serve a copy on each jurisdictional customer and the various utility comissions in the states wherein it does business, setting forth the amount of refund and interest and the proposed disposition of such amounts. Pending Commission action and further orders respecting such disposition, United and Southern shall hold such refund and interest amounts in a special fund (without further interest obligation).

(C) In all other respects said order shall remain in full force and effect.

CI62–479; J. M. FLAITZ, ET AL., DOCKET NO. CI63–225

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 13, 1963)

Motions for severance, for approval of settlement proposals and issuance of certificates of public convenience and necessity in their respective dockets were filed in the above-captioned proceedings on August 1, 1963, by Austral Oil Company, Incorporated (Austral); Angust 5, 1953, by R. E. Kellerman (Kellerman), Texas Crude Oil Company (Operator), *et al.* (Texas Crude), and Ted Weiner (Operator), *et al.* (Weiner); August 8, 1963, by J. M. Flaitz, *et al.* (Flaitz); August 9, 1963, by Crown Central Petroleum Corporation (Crown) and August 12, 1963 by Robert W. O'Meara (Operator), *et al.* (O'Meara).

The settlement proposals are similar to those previously approved by the Commission [1] and provide for the following:

(1) Effective April 1, 1963, the rates for gas delivered (or paid for but not taken)[2] under Crown's Rate Schedule No. 7, Austral's Rate Schedules Nos. 3

---

[1] See orders in *Union Texas Petroleum et al.*, Docket No. G–13221, *et al.*, issued June 24, 1963, 29 FPC 1279, concerning Union Oil Company of California and Tenneco Corporation and order issued August 7, 1963, 30 FPC 456, concerning Humble Oil and Refining Company.

[2] The term "delivered" is used in the proposals as in other proposals approved by us. In the context of the proposals we interpreted the term to include gas required to be taken during the moratorium periods but paid for and not taken. Our approval of these settlements is also conditioned upon such interpretation.

and 15, Texas Crude's Rate Schedule No. 3, Weiner's Rate Schedule No. 5, O'Meara's Rate Schedule No. 2 and Flaitz' Rate Schedule No. 3 will be 20.625¢ per Mcf.[3] The presently effective rate under Kellerman's Rate Schedule No. 1 will remain at 20.25¢ per Mcf.[4]

(2) A moratorium on rate increase filings from April 1, 1963, through March 31, 1968, inclusive, in all dockets.

(3) Extension of make-up periods for gas paid for but not taken to 4 years in all cases except Docket No. G–18136 in which case there is no take or-pay-for provision.

The settlement rates are subject to prospective changes during the moratorium periods according to any applicable area rate determined in the South Louisiana Area Rate Proceeding, AR61–2.

Rate increase filings may be made (1) prior to the end of moratorium periods to the extent that the maximum suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State and Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which the applicant is entitled by contract.

Each of these applicants is presently selling under a temporary authorization without refund condition and none of these applicants proposes to make refunds for amounts above the settlement rates collected for deliveries made prior to April 1, 1963.

Since payments for gas delivered by each of the applicants except Kellerman subsequent to March 31, 1963, have been made at rates above the settlement rates the differences will be refunded by each of said applicants to the various pipeline purchasers within 30 days from the date of this order.

No party has filed an answer to any of these motions and we find these settlement proposals, as herein modified, in the public interest.

In keeping with our present policy we shall require that the applicants pay interest on the amounts to be refunded at 7 per cent per annum, such interest to accrue through the last day of the month in which the settlement proposals were filed, August 31, 1963.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[5] and issue cer-

---

[3] All prices expressed inclusive of tax reimbursement and all volumes expressed at 15.025 psia.

[4] See Appendix for further details.

[5] The hearings in the Union Texas Petroleum, *et al.* consolidated proceeding concluded July 25, 1963.

tificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in the Docket Nos. G–16907, G–17563, G–18136, G–20124, G–20126, CI62–395, CI62–479 and CI63–225 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express conditions that the applicants comply fully with the terms of the settlement proposals which settlements are expressly approved, as modified by this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity to the settlements and the conditions of this order.

(F) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and the proceed-

ings in Docket Nos. G–16907, G–17563, G–18136, G–20124, G–20126, CI62–395, CI62–479, and CI63–225 shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(I) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(J) Interest on amounts to be refunded to the pipeline purchasers shall accrue through the last day of the month in which the settlement proposals were filed, August 31, 1963.

Commissioner Black *not participating.*

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP63–322

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 16, 1963)

On May 23, 1963, Algonquin Gas Transmission Company (Applicant), filed in Docket No. CP63–322 an application and supplement thereto on June 12, 1963, pursuant to Section 7(b) of the Natural Gas Act, for authority to abandon and sell certain natural gas facilities to The Hartford Gas Company (Hartford Gas)

and to relocate its delivery point from Wethersfield to Cromwell, in Connecticut, all as more fully described in the application.

Hartford Gas is now a customer of the Applicant and the facilities abovementioned are now being used to serve part of its service area and will continue to serve such public purpose after acquisition. Ownership and operation of the 33,150 feet of 10-inch pipeline and 4,033 feet of 12-inch pipeline will allow Hartford Gas to redesign its distribution system so as to conform to changes in the area being served due to developments in the City of Hartford, Connecticut.

Applicant will receive the sum of $266,545.19 which is the amount of original costs of the property to it, less depreciation as of June 30, 1963, and for account purposes such amount will be carried as a debit in account 102—Gas Plant Purchased or Sold.

The measuring and regulating equipment belonging to Applicant and now installed in the station at South-Wethersfield-Rocky Hill which is owned by Hartford Gas and leased to Applicant will be removed and relocated at a station site near Applicant's main line in Cromwell, Connecticut and the former location will no longer be listed or shown as a delivery point in the Service Agreements with Hartford Gas.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 27, 1963, respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel, moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities hereinbefore described are parts of the Applicant's pipeline system and subject to the jurisdiction of the Commission.

(2) The change of the kind of use of the pipeline facilities to be transferred by Applicant to Hartford Gas will inure to the public benefit enabling the distributor to use the line acquired as a distribution facility to be tapped as may be required thus obviating the necessity to construct duplicate facilities in the area of Hartford, Connecticut to serve the customers in the area. The public convenience and necessity will be better served by the proposed arrangement than without it.

(3) The sale of the facilities and the relocation of the measuring equipment now located on the facilities being sold and transferred, as hereinbefore stated, by the Applicant to Hartford Gas has been agreed to and contracted for by the said parties.

(4) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission in writing of the date of settlement of the sale and relocation of the measuring facilities within 10 days thereof.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61–19 AND RP62–7; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP63–6

ORDER REJECTING APPEAL FROM PRESIDING EXAMINER'S RULING EXCLUDING EVIDENCE

(Issued September 16, 1963)*

On August 8, 1963, the Presiding Examiner ruled certain prepared testimony and exhibits submitted by the Coal Intervenors were inadmissable in evidence in the above-designated consolidated proceedings. On August 19, 1963, the Coal Intervenors filed a joint appeal to the Commission from that ruling. Midwestern Gas Transmission Company on August 27, 1963, filed an answer in opposition to the appeal. A joint answer also in opposition was tendered by Natural Gas Pipeline Company of America, Northern Illinois Gas Company, Northern Indiana Public Service Company and The Peoples Gas Light and Coke Company on August 28, 1963.

The Commission has considered all of the foregoing tenders and concludes that it is not necessary to pass upon the Coal Intervenors' appeal at this time. The appeal, therefore, should be rejected without prejudice to its being raised, if necessary, in any exceptions to the Presiding Examiner's Initial Decision which Coal Intervenors may file.

The Commission orders:

The appeal from the Presiding Examiner's ruling of August 8, 1963, excluding certain Coal Intervenors' tendered evidence from the record in these proceedings is hereby rejected without prejudice.

Commissioner Black *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SWIDLER, *Chairman:*

On January 22, 1963, the presiding examiner issued his initial decision on the seven remaining issues in these consolidated proceedings.[1] These issues are as follows:

(1) Panhandle's application in Docket No. CP61-36 relating to a proposed direct sale to B. F. Goodrich Co. near Fort Wayne, Indiana.

(2) Panhandle's application in Docket No. CP60-40 relating to a proposed direct sale to General Portland Cement Co. in northwestern Ohio.

(3) The remaining allocation questions with respect to American Louisiana and Michigan Wisconsin in Docket Nos. G-2306, G-2327, and G-10396.

(4) The request of the City of Bushnell, Illinois, an intervener, for service from Panhandle.

(5) The request of the Village of Milford, Illinois, an intervener, for service from Trunkline.

(6) Panhandle's request for a certificate in Docket No. CP60-60 covering a 3-mile lateral at Defiance, Ohio.

(7) Staff's recommendation that an order be issued limiting the quantities of gas which are the subject of a direct sale by Panhandle to National Distillers & Chemical Corp. at Tuscola, Illinois.

The examiner would approve the two direct industrial sales proposed by Panhandle and would issue certificates to Panhandle for the transportation of the gas required for these sales.

With respect to the allocation of gas on American Louisiana's system, he found that Michigan Consolidated has a need for the entire 127,000 Mcf which it has been taking from American Louisiana since the Panhandle abandonment decision, and that Michigan Wisconsin no longer needs any part of the 127,000 Mcf to meet the demands of its customer companies. He would therefore reaffirm the allocation of American Louisiana's gas supply to Michigan Consolidated as contained in the Commission's order of December 19, 1958, in Docket No. G-10396 (20 FPC 851, 858, par. (C)), and would direct that the delivery and sale of this gas by American Louisiana be continued.

On the questions involving the requests by the City of Bushnell and the Village of Milford for gas from Panhandle and Trunkline, he would condition the certificates to the pipelines to require Panhandle to connect its line near Knoxville, Illinois, with the proposed facilities of the City of Bushnell, and Trunkline to make connection with the facilities proposed to be operated by the Village

[1] The procedural background and the history of prior decisions in these proceedings is set out at length in the examiner's decision.

of Milford, and would require the pipelines to sell gas to these interveners in the amounts requested.

Because of some uncertainties in the record, he would dismiss Panhandle's application for a lateral at Defiance, Ohio without prejudice, with the expectation that it would be resubmitted separately with a fuller explanation of the need for the lateral and the effect of the investment on Panhandle's jurisdictional customers, and that it might then be disposed of in a shortened proceeding without need for further hearing.

Concerning staff's recommendation for a "cease and desist" order limiting Panhandle's sale of gas to National Distillers at Tuscola, Illinois, he found that such an order would be premature, and that if staff has a basis for making inquiry and requiring Panhandle to examine its operations, a simple letter from staff noting the apparent discrepancies and requesting explanation would be all that is called for at this time. If thereafter some question remains, it then would be time enough to issue a formal "show cause" order and set the matter for hearing under its own docket number in a separate proceeding.

Exceptions to the examiner's decision have been filed by a number of parties. These exceptions are directed to the examiner's grant of certificates to Panhandle authorizing the transportation of gas for direct sale to B. F. Goodrich Co. and General Portland Cement Co., and to his finding that Panhandle and Trunkline should make connections to serve and should sell gas to the City of Bushnell and the Village of Milford, respectively. No question has been raised with respect to the allocation of American Louisiana's gas as made by the examiner, his disposition of Panhandle's Defiance lateral application, or his treatment of staff's recommendation to limit Panhandle's sales at Tuscola to National Distillers.[2]

On February 28, 1963, Panhandle filed notice of and petition for withdrawal of its application in Docket No. CP60–40, wherein it proposed to transport gas for sale to General Portland Cement Co.[3] This withdrawal is based on a letter dated February 21, 1963, in which Panhandle and the cement company agreed to terminate their contract for sale. We have no objection to Panhandle's withdrawal and by our order attached hereto shall grant the petition to withdraw.

In view of the withdrawal of Panhandle's application in Docket No. CP60–40, there remain only three issues in contest on exceptions to the examiner's decision: The direct sale by Panhandle to B. F. Goodrich Co., and the requests for gas service interposed by the City of Bushnell and the Village of Milford. Having reviewed the record evidence in this case, together with the briefs of the parties, the examiner's decision, and the exceptions filed, we conclude that the examiner's decision should be adopted—modified, however, to provide, *inter alia*, that Panhandle shall make connection with and sell gas to Bushnell from its Canton lateral rather than from its Galesburg lateral.

The B. F. Goodrich Co.

Panhandle proposes an interruptible service of up to 5,000 Mcf daily to Goodrich's new tire plant near Fort Wayne, Indiana. Panhandle's Exhibit No. 281 projects an annual sale of 1,050,000 Mcf by the third year of operation under its

---

[2] On August 14, 1962, Panhandle filed an application to amend its certificate in Docket No. G–2047 to increase its service to National Distillers. This application was noticed February 27, 1963. No action has since been taken.

[3] Section 1.11(d)(1) of the Commission's Rules of Practice and Procedure requires express permission of the Commission to effect withdrawal of an application in a proceeding in which a hearing has been held or convened.

contract with Goodrich. A certificate for this service has already been issued on behalf of the State of Indiana.

The gas is to be used solely for burning under boilers to produce steam needed for the manufacture of tires. Either coal or oil would serve the purpose equally well insofar as the technology of tire-making is concerned. Goodrich selected interruptible gas with oil standby for the operation of its boilers as being the most economical method of operation.

The new Goodrich plant is located adjacent to the supply lateral of Northern Indiana Fuel and Light Co., the local distributing company. Panhandle has entered into a contract with Northern Indiana which calls for Northern Indiana to deliver Panhandle's gas to Goodrich for Panhandle's account, title to remain in Panhandle while the gas is enroute and Panhandle to pay Northern Indiana 2 cents per Mcf for its transportation and incidental services. Pending Commission action on Panhandle's application in these proceedings, Northern Indiana is selling surplus gas to Goodrich on a temporary basis. Northern Indiana, however, has expressed no interest in a permanent sales contract to meet the requirements of the Goodrich plant, but rather has expressed its preference for the proposed arrangement whereby it will deliver the gas to Goodrich for Panhandle's account. Panhandle's contract with Goodrich calls for a flat rate of 40 cents per Mcf. Staff joins with the parties to the transaction in recommending Commission approval of the sale.

The Fuels Research Council, National Coal Association, United Mine Workers, and other coal interests, herein referred to collectively as the Coal Interveners, put in evidence an extensive study designed to demonstrate that, at the 40-cent rate for gas, the overall cost of the plant, fuel and operations over a presumed 20-year life, including fixed charges, would be about $18,000 a year more than if the installation had been designed to burn coal under the boilers rather than gas and oil.[4] The examiner noted, however, that the pertinent question is not whether coal would be cheaper than gas, but whether, notwithstanding the evidence that it might have been cheaper for Goodrich to contract for coal, the use of Panhandle's line for the purpose of selling gas to Goodrich is in the public interest and required by the public convenience and necessity.

The examiner treated this question of the public interest at length in his decision; and although he referred to the use of gas for boiler fuel use as an "obviously inferior use," he concluded that the sale here proposed by Panhandle to Goodrich is required by the public convenience and necessity and that a certificate authorizing Panhandle to transport the gas for this use should be issued. This conclusion is based on a number of subsidiary findings which are discussed below.

First of all, the examiner found that the evidence tending to establish a saving in the cost of steam by the use of coal of about $18,000, or about 5 percent of the cost of steam using gas and oil, would of itself hardly warrant the reversal by the Commission of the policy determination made by Goodrich to use gas with oil standby in the operation of its new $25,000,000 plant. The Goodrich decision to use gas was made after careful study of all of the available forms of energy, and was based on the best judgment of its economic experts. Moreover, the examiner found that a minor variance in cost of this kind, although resulting in a saving to Goodrich, should not be considered determinative of the public

[4] Goodrich's witness testified that although the cost of purchasing coal would have been favorable, the additional plant investment, together with additional labor and operating costs make the purchase of gas from Panhandle a more economic operation.

interest question, since the public interest is obviously much broader than that of Goodrich or Panhandle or Northern Indiana or the Coal Interveners.

To determine a proper measure of the public interest to be applied in the disposition of this case, the examiner looked to cases previously decided by the Commission in which it considered the sale of gas for boiler fuel use. He concluded as follows:

> However, it appears it is the consensus of decisions on boiler fuel use of gas that, notwithstanding the claim of this patent spoliation of a scarce, unique, wasting and irreplaceable natural resource, a sale in a reasonable amount for industrial use is accepted as justified where the denial would mean an unfair and undue deprivation to the particular industry *or* where there are net revenues spread among such wide classes and groups of customers (rather than solely to the owners of the pipeline) that the sale has a substantial element of benefit to a wide segment of the public.

Applying this test in the present case, the examiner found that there will be a substantial element of benefit to a wide segment of the public in connection with Panhandle's sale to Goodrich. In the first place, he found that there will be a substantial benefit to the distributor. Northern Indiana, and perhaps eventually to its customers, because Northern Indiana will be charging 2 cents per Mcf for transporting Panhandle's gas and for other very minor services. Northern Indiana will be transporting the gas for a distance of only 10 miles through its existing lateral facilities, and there is no suggesting that this service will add $100 a day to its cost of service.

In the second place, the examiner found that even though the sale is nonjurisdictional and its rate is not subject to FPC regulation it will to some extent benefit all of the pipeline's distributors and, presumably, their customers. The record shows that about 7.5 percent of Panhandle's total sales under its expanded program are direct industrial sales. These sales, including the Goodrich sale, the examiner noted, are interruptible sales which will dispose of "valley gas" and will not require the capacity of Panhandle's line on the peak days of its need for firm domestic and commercial customers. Moreover, and most important, the examiner found that the revenues from these sales will absorb a part of the fixed costs of Panhandle's operations which would otherwise be collectible from firm jurisdictional users. Citing Panhandle's cost allocation exhibit for the first year of its expanded program, the examiner showed the average cost of Panhandle's direct sales to be 28.76 cents per Mcf. Since a part of this cost represents fixed costs, the examiner found that the difference between this cost and the bare incremental cost of making the Goodrich sale would represent some reduction in the cost of service to Panhandle's jurisdictional customers. To give another measure of the benefit, the examiner noted that the 28.76-cent average cost is based on a total direct sale cost allocation of $14,000,000, and that of this total cost $2,720,000 represents a contribution to fixed costs of gathering, transmission, and storage. On the basis of this showing, the examiner concluded that "the benefit of the direct industrial use of the gas is not limited to the narrow ambit of the particular parties to the sale but, to some very slight extent at least, is spread among the public from one end of Panhandle's system to the other." He would regard the proposed transportation of gas for sale to Goodrich as being in the public interest, and he would certificate it as being required by the public convenience and necessity.

The Coal Interveners have filed exceptions to the examiner's grant of a certificate to Panhandle for the Goodrich sale. They except generally to the findings of the examiner discussed above. The main thrust of their exceptions, however, is to an issue not previously argued by them, namely, whether Panhandle has

shown with specificity that its pipeline east of its Glenarm compressor station will have the necessary capacity in the summertime to meet the requirements of the Goodrich plant and at the same time its commitments to its distributor and storage customers. These interveners also urge the Commission, if it is disposed to grant the certificate, to limit the authorization to no more than 2,268 Mcf per day, which is the present boiler fuel requirement of the Goodrich plant, rather than 5,000 Mcf as proposed by Panhandle, since the 5,000 Mcf will not be required until further expansion of the plant at some indefinite future time.

The Glenarm station referred to by the Coal Interveners is located in central Illinois. The question of available summertime capacity downstream from Glenarm arises from the peculiar design of Panhandle's system whereby capacity on the eastern portion of the system has been constructed in great part for summer sales, and the load is heaviest in the summer due to Panhandle's commitments to Michigan Consolidated, Michigan Gas Storage, and others. It should be noted, however, that the lateral through which Panhandle serves Northern Indiana has a capacity of 12,500 Mcf per day which should be sufficient to carry the 5,000 Mcf per day for Goodrich as well as the gas required by Northern Indiana except when Northern Indiana requires its full contract quantity of 8,000 Mcf per day. It should also be noted that Northern Indiana's summer requirements are about 5,000 Mcf less than its winter requirements, so that there should be sufficient gas available for the Goodrich service in the summer. Moreover, the Goodrich sale is fully interruptible, and Goodrich can change to its alternate oil supply for fuel without delay.

As shown, Panhandle has sufficient capacity in its system to render the proposed service to Goodrich on an interruptible basis without the construction of additional facilities other than those heretofore authorized as part of Panhandle's expansion program. The gas will be sold to Goodrich off-peak, with the expectation that the service will be interrupted perhaps 25 days a year. By using its "valley gas" for this service, Panhandle will be able to improve its system load factor and utilize its existing facilities in the most economic way. Panhandle proposes to make this sale at a rate of 40 cents per Mcf, of which 2 cents per Mcf will be payable to Northern Indiana for its transportation service. Panhandle's rate schedule for firm resale service in this area consists of a demand charge of $2.38 per Mcf and a commodity charge of 24.9 cents per Mcf. This rate results in an average charge of 32.7 cents per Mcf at 100 percent load factor. Panhandle's resale interruptible service rate schedule in this area has a rate of 32.7 cents per Mcf. As found by the examiner, and as the above rate comparison indicates, the Goodrich sale will not burden Panhandle's jurisdictional business but it will be more than compensatory and will benefit a wide segment of the public as well as the immediate parties to the sale.[5] In our judgment it is sufficient in this case to show that such benefits will be realized. It is not necessary to prescribe a definite measure of benefits to be applied as a minimum standard to justify the proposed industrial service. It is important, however, that the service, if authorized, be in fact a true interruptible sale, and that it not be permitted to preempt capacity which is needed to meet the firm demands of the pipeline's jurisdictional customers. To this end, we shall condition the certificate to Panhandle to make the service subject to curtailment and interruption if required to meet the existing or future contract demands of Panhandle's customers for firm resale service, and to require Panhandle to report to the Commission as

[5] The costs properly allocable to Panhandle's nonjurisdictional business will of course be subject to determination in Panhandle's next rate case.

of June 1 of each year the number of days on which such service was curtailed or interrupted during the preceding 12 months, together with the date and the amount of each such curtailment or interruption.

Panhandle's contract with Goodrich provides for daily deliveries of up to 5,000 Mcf. Although present operations at the Goodrich plant require only 2,268 Mcf per day, Goodrich contemplates reaching a level of operations during the initial five-year term of the contract which will require the full 5,000 Mcf contract quantity. We can see no advantage in limiting the authorization to 2,268 Mcf per day as requested by the Coal Interveners. In our judgment, the sale of gas in accordance with the contract and the use of Panhandle's facilities for that purpose are in the public interest, as found by the examiner, and Panhandle has sufficient capacity in its system to render this service on an interruptible basis as contemplated by the parties. Accordingly, we shall authorize the service as recommended by the examiner.

A word should be added in response to the dissent with respect to the proposed sale to B. F. Goodrich Co. While it is true that the examiner in this proceeding questioned the testimony by an official of the distribution company in support of Panhandle's request for a certificate to serve B. F. Goodrich, the examiner found that the direct sale by Panhandle was in the public interest. As the examiner pointed out, this is not a contest between the distributor and the pipeline. The examiner, all of the parties, and the Commission's staff are in agreement that if the sale is certificated it should be made directly by the pipeline.[6] In addition, the examiner found that the state commission has "enfranchised the sale" (p. 725). The examiner also found that the area of the sale is rural and not actually served by any distributor. We are satisfied to affirm the examiner's conclusion on this point. In our judgment if the Commission, on its own motion, is to explore the issue whether distributors or pipelines should make industrial sales the proper vehicle is in a proceeding to formulate a policy of general application. We do not believe that the public interest would be served by remanding this proceeding to the examiner for further hearing on an issue which has been resolved to the satisfaction of all concerned. This proceeding began in 1953 and already had the distinction of setting an FPC record for the longest number of days in hearing.

The City of Bushnell

The City of Bushnell was granted intervention in January 1961. The purpose of its intervention, as made clear from its petition, was to seek a condition under Section 7(e) which would require Panhandle to furnish up to 2,000 Mcf per day to the municipality. Bushnell presented alternative proposals for taking this gas from Panhandle. Its primary proposal was to build a lateral northward 30.5 miles to a point of connection with Panhandle's Galesburg lateral near Knoxville, Illinois. Under this proposal, Bushnell would also serve three small communities located along its proposed lateral. Later, as an alternative, Bushnell proposed a lateral extending eastward 32 miles to Canton, Illinois, where it would connect with Panhandle's Canton lateral. Under the Canton alternative, Bushnell would serve two of the three communities which would be served by its Galesburg proposal. A map illustrating these proposals is found on page 741 of the examiner's decision, and a tabulation of pertinent facts relating thereto is set forth on pages 738–739.

---

[6] In all of the cases cited in the dissenting opinion either the distributor claimed the right to make the industrial sale itself or one of the parties or the Commission staff raised this issue on the record.

The requested service for Bushnell has been hotly contested from the outset by Panhandle, as well as by Illinois Power Co. and Central Illinois Public Service Co. (Cipsco). (Illinois Power is presently the sole customer on Panhandle's Galesburg lateral, and Cipsco is the local public utility distributor within whose service area Bushnell is located.) Staff also, in its brief to the examiner, recommended that Bushnell's request for service from Panhandle be denied.

The major objections to this service, as presented to the examiner at the hearings and in the parties' briefs, were: (1) The failure of Bushnell to file an application for service under Section 7(a). (2) The availability of gas service by Cipsco, whose transmission line passes within 4 miles of Bushnell. (3) The high cost of the proposed municipal system in relation to the size of the community. (4) The lack of demonstrated capacity on Panhandle's laterals to render the service requested. Despite these objections, the examiner found that the public interest requires Panhandle to provide the requested service, and directed Panhandle to make connection with Bushnell's system on the Galesburg lateral near Knoxville, in accordance with Bushnell's first alternative proposal.[7]

With respect to the procedural question of the proper method of requesting gas service from a pipeline, the examiner found that it is the law of this case as determined by an earlier ruling (16 FPC 897, 898) that requests of interveners of this type shall be judged under the requirements of Section 7(a). The petitions for intervention filed by the City of Bushnell and the Village of Milford, as well as those filed by a number of other municipalities whose requests for gas have already been acted upon, are based on the Commission's general power to condition pipeline certificates under Section 7(e). These petitions were filed prior to June 1, 1961, when the Commission adopted Part 156 of its Regulations Under The Natural Gas Act setting forth detailed procedures for requesting gas service from a pipeline under Section 7(a). Inasmuch as the petitions for intervention, and the earlier order of the Commission in this case with respect thereto, reflect the practice of allowing intervention in pipeline certificate cases for the purpose of requesting gas service followed by the Commission prior to June 1, 1961, and adhered to in this proceeding with respect to other interveners, the examiner found that there was no basis for rejecting the requests made by Bushnell and Milford on procedural grounds. He would judge the requests, however, under the requirements of Section 7(a) as prescribed by the Commission's earlier order. By these standards, it must be found as a condition precedent to granting the requested service that "no undue burden will be placed upon such natural-gas company thereby," and that the order will not "compel" a sale which "would impair its ability to render adequate service to its customers."

The examiner found no substance in the argument that Cipsco's transmission line is located only four miles from Bushnell and that Cipsco could render gas service in Bushnell at lower rates than the municipality. Bushnell is a community of 3,710 which for 30 years has served its residents with a municipally owned propane air gas system. Bushnell also operates a municipal electric system serving about 50 percent of the community's electric requirements. The other 50 percent of the electric requirements is presently served by Cipsco. In

[7] There is no question of gas supply. The Commission's order of July 27, 1962, authorizing Panhandle's and Trunkline's expansion, reserved such conditions on the certificates issued as might be found necessary with respect to service for Bushnell and for Milford, and the further order of September 25, 1962, specifically reserved for possible allotment to Bushnell an allocation of 2,000 Mcf per day of peak capacity.

1960, at Bushnell's invitation, Cipsco made an offer to purchase the municipal gas and electric systems and to serve Bushnell with natural gas. Although a majority of the city council voted to accept the Cipsco offer, the vote was one short of the number required to sanction the action under local law. In view of the city's determination to operate its own natural gas system, and the fact that neither the city nor Cipsco is subject to the Commission's jurisdiction, the examiner limited his consideration to the merits of Bushnell's request for gas from Panhandle to operate its own system.

The examiner also rejected the argument that because this project would involve the largest single financing undertaken by the city it would present too much of a financial burden. This argument, he found, gives too little weight to the fact that the plan calls for revenue bonds only. Although the city had previously experienced some financial difficulties with its propane system, these, he found, were the result of high propane rates which necessarily inhibited sales, thus demonstrating the need for lower priced natural gas. He also noted that the finance firm sees no difficulty in marketing the city's bonds.

The remaining objection, that Panhandle cannot deliver the gas to Bushnell from its Galesburg lateral without impairing its ability to render adequate service to its present customer on that lateral, Illinois Power, was advanced by every party opposing the Bushnell project. Panhandle's lateral extends some 40 miles from Peoria to Galesburg. At the commencement of this action two years ago, Illinois Power was utilizing the full 20,000 Mcf-capacity of this lateral. Since then, Panhandle has been authorized to loop the first half of the lateral from Peoria to Elmwood as part of its expansion program in these proceedings; and Panhandle now plans to deliver 30,000 Mcf per day to Illinois Power at Elmwood, part of which will go through Panhandle's existing lateral from Elmwood to Galesburg, and part of which will go through a new lateral from Elmwood to Galesburg which has since been constructed by Illinois Power.[5] Bushnell claims that Illinois Power's new lateral will relieve enough capacity on Panhandle's old line to permit delivery of the 2,000 Mcf per day requested from Panhandle. Illinois Power opposed Bushnell's request for service on the ground that it has a right to continue to benefit by the full capacity of the old Panhandle lateral, and did not build the new line for the purpose of benefiting Bushnell's municipal operations. Panhandle and staff opposed Bushnell's request because it was not thought clear that the new Illinois Power lateral would leave any room available in the old lateral for the service to Bushnell.

The examiner treated the question of available capacity raised by Panhandle and staff as controlling. He noted, however, that the evidence on this question of Panhandle's capacity "was not notable for candor, clarity, and completeness." The Illinois Commerce Commission certificate to Illinois Power for its new lateral was not put in evidence, and there were conflicting statements in the record as to whether the old lateral would be needed for Illinois Power. The examiner, however, would rely on a statement of Panhandle's engineer, in answer to a hypothetical question, that half of the increased deliveries to Illinois Power could go through the new line (assuming the capacity of the new lateral line to be the same as Panhandle's old 8-inch line), which would leave only 15,000 Mcf for the old line to carry and free sufficient capacity to carry the 2,000 Mcf for Bushnell. Despite Illinois Power's protests of discrimination, the examiner

[5] Panhandle, for the present, plans to continue to use the old 8-inch line to deliver a part of Illinois Power's requirements to the distribution company at Galesburg. However, Illinois Power and Panhandle have agreed to the sale of the line from Elmwood to Galesburg to Illinois Power, and Panhandle has filed for abandonment of that section of its lateral. See Docket No. CP61–265.

could find no reason why Illinois Power should continue to monopolize the capacity on the old line when it now had sufficient capacity on its new line to meet its needs without using all of the capacity on the old line. Accordingly, the examiner would order Panhandle to make the connection with Bushnell's system near Knoxville and render the requested service.[9]

Exceptions to the examiner's disposition of this issue were filed by Cipsco, Illinois Power, Panhandle, and the Illinois Commerce Commission.

All four of these parties take exception to the examiner's finding that there will be capacity available on Panhandle's old Galesburg lateral beyond Elmwood for serving 2,000 Mcf per day to Bushnell as a result of the construction of Illinois Power's new lateral from Elmwood to Galesburg. Illinois Power and Panhandle both contend that the maximum delivery which can be made to Illinois Power for service in the Galesburg area is 27,500 Mcf, not 30,000 Mcf as had originally been hoped; that Illinois Power has a need for all of this gas (Illinois Power cites a peak day load of 27,900 Mcf for 1962–63, and an estimated load of 28,600 Mcf for 1963–64);[10] and that the service to Bushnell could only be made at the expense of impairing existing service to Illinois Power. The Illinois Commerce Commission joins these parties in contending that there is not sufficient evidence of record to support the conclusion of the examiner with respect to the availability of capacity to serve Bushnell. Illinois Power takes the position that if the Commission does not reverse the examiner on this point for lack of supporting evidence, the proceedings should be reopened to permit it to produce evidence showing that its present requirements at Galesburg are in excess of the volumes Panhandle can make available to it. In this connection Illinois Power notes that two heating seasons have passed since the testimony and exhibits on this issue were placed in the record, and that actual experience (such as that cited above) now available to show that the Bushnell service ordered by the examiner would impair Panhandle's existing service to Illinois Power. As an alternative to its exceptions, Illinois Power has therefore attached a petition to reopen the proceedings.

Illinois Power also charges error in the examiner's failure to give consideration to the matter of pressure on the Galesburg lateral. It contends that Panhandle does not have sufficient pressure at Elmwood to meet the pressure requirement at Knoxville as set forth in Bushnell's engineering exhibit. It further contends that to the extent deliveries are made to Bushnell, the pressure available for deliveries to Illinois Power at Galesburg will be reduced and will impair service to Illinois Power.

Apart from the question of the availability of capacity on Panhandle's lateral to render service to Bushnell without impairing service to Illinois Power, Illinois Power and the Illinois Commerce Commission take exception to the examiner's order as being inequitable and discriminatory. The Illinois commmission especially emphasizes this point, arguing that if there is capacity available on Panhandle's old line for service to Bushnell, it is only because of Illinois Power's new lateral, and that the examiner's order is conditioned on new capacity thus being provided by Illinois Power and not by Panhandle. Illinois Power, however, constructed its lateral, not for the benefit of Panhandle or the City of Bushnell, but for itself and its customers, and it did so in accordance with a

---

[9] The examiner stated that he was not passing one way or another on Bushnell's second-choice lateral to Canton.

[10] Illinois Power also cites a peak day delivery from Panhandle for distribution in the Galesburg area of only 24,390 Mcf in 1962–63, leaving 3,510 Mcf which had to be served from Illinois Power's emergency propane supply. These cited figures, however, are not facts of record in this proceeding.

certificate of the Illinois commission. The state commission stresses the point that no part of the cost of Illinois Power's lateral would be borne by the people of Bushnell, and it contends that they should not be entitled to benefit from it. Any new capacity thus created should be reserved for Illinois Power.

Cipsco's exceptions are directed primarily to the economics of the Bushnell proposal. Cipsco contends that there has been no showing of the economic feasibility of Bushnell's project under reasonable rates. Referring to the table on page 742 of the examiner's decision, Cipsco notes that the capital investment per customer of $890 for the Bushnell project is out of line in comparison with 13 other local projects already approved by the Commission in these proceedings, for which the highest cost per customer was $728. Cipsco also notes that the capital investment is not higher than $890 only because of Bushnell's existing propane system; and that this system, which was intalled in 1933, will have to be replaced over the next 30 years at an increased cost per customer (which Cipsco fixes at $70). Cipsco contends that many capital costs and operating costs have been understated by Bushnell, although the debt margin projected would cover these omissions at the proposed rate levels, as the examiner found. Cipsco, however, argues that Bushnell's rates are unreasonably high, and that its project would not be feasible at rates comparable to those which Cipsco would charge for the same service. It points out that the primary source of revenue is residential use, as to which Bushnell's rates are 44.1 percent higher than Cipsco's present rates. The people of Bushnell, Cipsco argues, should not be asked to bear the burden of the additional costs of 30–40 miles of transmission when Cipsco's line passes within four miles of the city and Cipsco could render the gas service needed by the people of Bushnell at rates up to 44 percent lower than those proposed by the municipal project. Panhandle's exceptions support this position as stated by Cipsco.

Cipsco also objects to the examiner's failure to find that Bushnell's alternative proposal to build a lateral to Canton should be rejected for failure to make an adequate showing of technical feasibility. This exception has reference to the question of the pressure available at Canton for delivery to Bushnell. Panhandle, on the other hand, argues that despite the pressure problem at Canton service to Bushnell through Canton is to be preferred over a connection from the Galesburg lateral, whether the service is rendered by way of the municipal system or by way of Cipsco. As noted above, however, Panhandle supports Cipsco in contending that service by Cipsco would best serve the interests of all concerned.

Panhandle's exceptions further renew its argument on the jurisdictional question, charging that the examiner erred in allowing Bushnell to seek a supply of gas without filing an application under Section 7(a). Panhandle also excepts to the examiner's order as requiring it to supply gas to Bushnell for use as boiler fuel in Bushnell's electric generating plant. Such an order, Panhandle contends, is beyond the Commission's jurisdiction as outlined in Section 1(b) of the Act, since the sale of gas to Bushnell for this use would be a direct sale and not a sale for resale. (The tabulation on page 738 of the examiner's decision shows the power plant requirements.)

Illinois Power and the Illinois commission make much of the argument that any temporary slack in Panhandle's line resulting from the construction of Illinois Power's new lateral should be reserved to Illinois Power, and that an order requiring Panhandle to use a part of this capacity, which was created by Illinois Power for its own benefit, to serve Bushnell would be unfair and discriminatory. However, our review of the record in this case convinces us that

there is no necessity for us to decide what disposition should be made of any excess capacity, since it does not appear that any such excess capacity exists. The response of Panhandle's witness to a hypothetical question indicating that Panhandle's existing line from Elmwood to Galesburg could carry Bushnell's 2,000 Mcf per day under certain assumed conditions does not support the conclusion that there is in fact such capacity available. This same witness testified that as far as he knew the full capacity of the existing line would continue to be used to serve Illinois Power. As already noted, the certificate issued to Illinois Power by the Illinois commission for the distributing company's new lateral is not in evidence, and there is no record of the capacity of this new line or of the division of Panhandle's gas at Elmwood between the new line and the existing lateral to Galesburg. In the absence of substantial evidence to show available capacity on Panhandle's lateral, we cannot find that an order directing Panhandle to deliver up to 2,000 Mcf per day to Bushnell from the Galesburg lateral near Knoxville would not impair Panhandle's ability to render adequate service to its existing customer, Illinois Power. Thus, we cannot agree with the examiner that Panhandle should be directed to meet Bushnell's need for 2,000 Mcf per day by making a connection on the Galesburg lateral.

Panhandle has expressed its preference for Bushnell's Canton alternative. It states in its exceptions that "the Canton lateral is obviously the more desirable route for service to the residents of Bushnell. . . ." In view of the capacity questions just discussed with respect to the Galesburg proposal, we find ourselves in agreement with Panhandle on this point. The examiner devoted little time to considering the possibility of service through Canton, although he has set forth the basic facts with respect to Bushnell's proposal in his tabulation on pages 738–739. Despite some question with respect to the available pressure at Canton, the record supports the conclusion that Bushnell's Canton proposal is feasible—economically and financially, and is sound as to engineering.

The question with regard to the pressure at Canton arises from the fact that Bushnell's engineering study and the testimony of its witness with respect to the feasibility of its system design are based on the assumption of an available pressure of 300 lbs. at the point of connection with Panhandle's lateral at Canton, whereas the testimony of Panhandle's engineering witness indicates that the pressure at Canton is in fact something less than 300 lbs. How much less is not explicitly set forth in the record; but there are sufficient engineering data in the record to determine the available pressure and the ability of Bushnell's system to serve its stated third year requirements with the reduced inlet pressure at Canton. We feel that we can properly exercise our expertise in making these determinations on the basis of the facts of record.

As part of its expansion authorized in these proceedings, Panhandle has looped its 6-inch Peoria-Canton lateral from Peoria to Glassford, and has changed its delivery point to Cipsco from Canton to Glassford. Cipsco is presently constructing a new 10-inch line from Canton to Glassford to take delivery of its gas from Panhandle. The existing 6-inch Panhandle line from Glassford to Canton will no longer be used to serve Cipsco, and it is through this line that the gas for Bushnell would be delivered. The evidence shows that Panhandle has contracted to deliver its gas to Cipsco at Glassford at a minimum pressure of 300 lbs., and that it has available 438 lbs. of pressure on the inlet side of its Glassford regulating station. With a minimum of 300 lbs. at the outlet of the Glassford station and at the inlet of the 9-mile 6-inch line to Canton, Panhandle would be able to deliver in excess of 2,000 Mcf per day into Bushnell's system at Canton at a pressure of about 292 lbs. With an inlet pressure of 292 lbs. at Canton, Bush-

nell's system as designed has more than enough capacity to deliver its third year requirements, and to permit distribution at the various points of delivery at the pressures contemplated by the engineering study in evidence.[11]

With respect to the other aspects of Bushnell's proposal and its request for gas from Panhandle, which have been called into question by Cipsco's and Panhandle's exceptions, we find the examiner's conclusions to be sound. The economics of Bushnell's proposal might be more favorable at the rates which Cipsco claims it would charge; but, as already stated, it is not for this Commission to tell the people of Bushnell that they should look to Cipsco rather than to their own municipal system for gas service. On the record before us the City of Bushnell is proposing to construct and operate its own natural gas system, and at the rates set forth in its economic evidence that proposal is economically feasible. The record shows, moreover, that the cost estimates made by Bushnell's economic witness have been conservatively made on the high side by as much as 20 to 25 percent, and that its system, accordingly, could be operated with rates reduced by approximately 23 percent and still be able to meet its debt service coverage. Bushnell has had a long experience in the operation of municipal utility systems, having operated its water system for 80 years, its light plant for 21 years, and its propane air plant for 26 years. Its proposed natural gas system is economically feasible and its financing is assured. On the record before us, there is no economic reason which would justify a denial of Bushnell's request for gas from Panhandle.

Panhandle contends that the Commission has no jurisdiction to consider Bushnell's request for a supply of gas in the absence of a Section 7(a) filing by Bushnell. This argument has been fully answered by the examiner in his decision as outlined above. Panhandle further contends that the Commission has no jurisdiction to order the sale and delivery of gas to Bushnell if a part of the gas is to be used as boiler fuel in the city's electric generating plant, since the sale of gas for such use would be a direct sale rather than a sale for resale. Bushnell takes the position that the gas will be resold by the gas utility to the electric utility. But even though a portion of this gas were to be used directly by the city for the purpose of generating electricity, this use would not deprive the Commission of its jurisdiction to order Panhandle to sell and deliver to Bushnell the full requirements of the city's natural gas system. This question was settled in *City of Red Bud*, 25 FPC 987, where the same argument of no jurisdiction was made, and where the Commission adopted the following disposition of the issue as made by the examiner:

> Mississippi, apparently relying upon *City of Hastings* v. *F.P.C.*, 221 F. 2d 31, cert. den. 349 U.S. 920, claims that the Commission's jurisdiction does not extend to the sale of gas to Red Bud because a part of its estimated requirements are for use in the municipal power plant. That is to say, its position is that the sale of gas for power plant use "would be a sale to Red Bud not for resale but for consumption by the customer." Counsel, however, overlook the fact that the gas used in the power plant is an integral part of a "sale for resale" and does not involve a separate direct sale transaction for consumptive use only. The ruling in the *City of Hastings* case is therefore inapplicable here. Moreover, the supposed nonjurisdic-

[11] The Bushnell system would have the capacity to deliver up to 2,800 Mcf per day to the City of Bushnell at 50 lbs., 1,440 Mcf per day to Prairie City at 105 lbs., and 900 Mcf per day to Avon at 80 lbs. The third year peak day requirements for deliveries at these communities are, respectively, 1,217 Mcf, 784 Mcf, and 544 Mcf. (The requirements for Prairie City include the requirements for Avon which is served through Prairie City.)

tional part of the gas will become indistinguishable at the point of sale from the remainder of Red Bud's purchase . . . . [25 FPC 999.]

We would further note that even if the sales by the gas system to the electric plant were eliminated, along with the revenues to be realized therefrom, Bushnell's gas system would still be economically feasible, having a debt service coverage ratio of at least 1.8.

We shall order Panhandle to make connection with Bushnell's facilities at Canton, and shall require it to sell and deliver to the city at that point a maximum of 2,000 Mcf per day as requested.

The Village of Milford

The village of Milford was permitted to intervene in these proceedings for the purpose of seeking a supply of gas from Trunkline as part of Trunkline's expansion program. Milford proposes to construct and operate a gas distribution system as authorized by Illinois law, and requests up to 906 Mcf per day from Trunkline, which is the nearest available supplier. As noted above, the Commission's order certificating Trunkline's expansion contained a reservation for any condition found necessary with respect to service to Milford. Milford's request was opposed by Trunkline, Cipsco, and by staff.

During the course of the proceedings, Milford presented three different plans. The first plan—the only one voted upon by the citizens of Milford—provided for the village to construct a municipal distribution system, to be financed through the issuance of $320,000 of revenue securities. Under this plan, Milford would receive its gas at the town border from the Midwest Gas Pipe Line Co., an as yet inoperative company controlled by the firm financing Milford's project. This plan was approved by the voters in 1960.

The second plan was presented at the hearing in 1961, at which time Midwest had dropped out of the picture. It was then proposed that the village should issue securities totalling $530,000 in order to build the distributing system as well as a 13.8-mile transmission lateral connecting with Trunkline's supply line and a small distribution system to serve the Village of Wellington located halfway between Milford and the proposed connection with Trunkline.

A year later, as the hearing drew near its close, the village returned with a third plan. This plan, which is the proposal passed upon by the examiner, calls for a $300,000 municipal system to be financed by revenue certificates. Milford would receive its gas from Trunkline through a lateral to be constructed by a contractor, the Panama-Williams Corp., which would also build the distribution system in Wellington. A preliminary agreement between Milford and the contractor calls for the signing of a lease contract under which Milford would have the exclusive right to use and operate the facilities constructed by the contractor, and would pay for all operating and maintenance costs. The village would have the option of buying the facilities within one year for a purchase price of $200,000, which could be paid either in cash or in 5 percent gas revenue bonds, which the contractor would accept at par. Otherwise, the village would pay a monthly lease charge of $1,800 (roughly one percent of the construction cost) for a period of 25 years, at which time the facilities would become the property of the village with no further payments required.

The examiner had no difficulty in finding that Milford's project is financially and economically feasible, and that the local markets can support the distribution system proposed. There was no substantial opposition to the Milford project on these points. The examiner directed his discussion mainly to the objections raised by Cipsco, and strongly seconded by Trunkline, as to the *ultra vires* ille-

gality of Milford's program. The issues thus raised concern, *inter alia*, the necessity of further voter approval, the power of the contractor to condemn the property necessary for the transmission right-of-way, the effect of a franchise previously issued by Milford to Cipsco, and the legality of the lease-purchase agreement as a form of financing under Illinois law.[12] These questions, it is claimed, go to the matter of whether Milford "is legally authorized to engage in the local distribution of natural or artificial gas" as required by Section 7(a). It is the position of Cipsco and Trunkline, as urged upon the examiner, that the apparent authority claimed by Milford on the basis of the Municipal Ownership Act of Illinois and the implementing election is deficient for the reasons cited, and that the municipality is not "legally authorized" and does not qualify for a Section 7(a) order.

The examiner found that these questions of local law properly should be tried in the courts of the State of Illinois which have primary jurisdiction and which, apparently, are available to Cipsco, to the taxpayers of Milford, or to others in interest, whether or not a certificate is issued by the FPC directing the sale and delivery of gas by Trunkline to Milford. It is enough, he found, for the Commission under Section 7(a) to find *prima facie* or apparent legal authority without determining that the municipality has complied with all the requirements of applicable state law permitting it to engage in local distribution. In his judgment, to go beyond that and try the many and devious questions peculiar to the local law of Illinois would require the Commission "to step out of its normal regulatory function and supplant the regularly established state courts which have the responsibility, the power of authoritative decision, and the special background so obviously called for."

As a test of *prima facie* or apparent legal authority, the examiner would require a showing that (1) there is a municipal ownership act which calls for a local vote, (2) the local vote has been had, and (3) the outcome of the vote is favorable. Being satisfied that Milford here had met this test and demonstrated ostensible legal authority to engage in local distribution as required by Section 7(a), the examiner ordered the connection of facilities and the delivery and sale of gas by Trunkline to Milford as requested.[13]

Exceptions to this portion of the examiner's decision were filed by Cipsco and Trunkline. Both of these parties take issue with the examiner's finding with respect to the showing of legal authority required by Section 7(a). They contend that the examiner has relieved Milford of its statutory burden of proving compliance with the conditions of Section 7(a), while at the same time rejecting the proof of Cipsco and Trunkline, which he admits is "a persuasive showing of outright *ultra vires* illegality." They not only object to his refusal to consider the issue of unlawfulness thus presented, but also to his casting the burden on them of initiating state court action after Trunkline has been directed to serve Milford.

Cipsco presses the point that even under the restricted standard of ostensible authority followed by the examiner, there has been no *prima facie* showing. It is

---

[12] Cipsco's and Trunkline's objections and Milford's response to these objections are set forth in detail at pages 748–749 of the examiner's decision.

[13] The examiner rejected staff's objection that the contractor for the lateral line would be subject to the Natural Gas Act and that in the absence of a certificate application by the contractor Milford's project must be found deficient and its application be denied. The examiner found that the function of operating and maintaining the lateral would be the sole responsibility of Milford, and that Milford, not the contractor, would be the "person . . . transporting natural gas in interstate commerce" within the meaning of Section 1(c). Apart from the lease arrangement with the contractor, staff had no objection to Milford's program.

submitted that even under this limited test the Commission must determine whether the authorizing state statute has apparently been complied with, and that in this case Milford has made no such showing. Cipsco contends that under the express terms of the Illinois statute Milford does not have the requisite authority because: (a) its plan has not been submitted to the voters; (b) its plan includes a financing device not authorized by the statute; and (c) the lease-purchase agreement purports to obligate the revenues of the gas system far in excess of the cost thereof plus 10 percent, as limited by the statute.

In support of this position, Cipsco notes that the Milford voters did not approve or even know about the present plan for a distribution system in Wellington or the lease-purchase arrangement with respect to that system and the 13.8-mile transmission line when they voted on the original $320,000 municipal system. Under the present plan, these additional facilities will cost $200,000 if purchased within one year, or $540,000 if bought on the lease-purchase plan ($21,600 per year for 25 years). Cipsco contends that under the Illinois law the ordinance to be approved by the voters is required to set forth the action proposed and describe the plant, equipment and property proposed to be acquired or constructed. Despite his recognition that the Wellington system and the transmission line were to be constructed and acquired as part of the Milford system, and even though no vote with respect thereto had been had, the examiner found that Milford had ostensible authority under the Illinois law. This conclusion, Cipsco charges, is erroneous.

Cipsco further contends that the Illinois law provides for the financing of municipal utilities only by the issuance of bonds, mortgage certificates, or special assessment bonds, to be passed on by a referendum vote of the electors of the municipality, and that the lease-purchase arrangement whereby the contractor would initially advance the $200,000 needed to construct the Wellington system and the transmission line is not a form of financing authorized by the statute. Moreover, Cipsco argues the total obligation of the lease over 25 years is more than double the cost of the facilities, whereas the law limits revenue obligations to 110 percent of the cost of the property. Here again, Cipsco claims that the examiner erred in finding apparent authority on the part of Milford rather than an apparent lack of authority.

Both Trunkline and Cipsco contend that there was no evidence of the ability of the contractor, Panama-Williams, to finance construction of the Wellington system and the transmission line, and that the examiner erred in simply relying on the requirement that the contractor furnish a performance bond. This, they contend, is particularly significant in view of the fact (not of record) that Panama-Williams, on January 31, 1963, filed a petition in bankruptcy in the United States District Court for the Southern District of Texas, Houston Division. (A copy of the petition is attached to Trunkline's exceptions.)

Cipsco also argues in its exceptions that the public interest requires a denial of Milford's request for gas from Trunkline, since Cipsco already holds a franchise from Milford and can service the people of Milford at rates which, on an annual basis, are from 32 to 44 percent lower than the rates proposed by Milford. To this end, Trunkline's exceptions support Cipsco's position. Trunkline also argues that the law of this case, as established by the Commission's order of July 5, 1962, in these proceedings with respect to competing applications for service in Montrose, Iowa, requires the Commission to withhold any order directing Trunkline to establish service to Milford until the local issues are resolved.

Trunkline's exceptions, like Panhandle's, again urge the objections of these parties to the failure of Milford and Bushnell to file applications under Section

7(a), and to the examiner's failure to find that the Commission is without authority to issue a Section 7(a) order in the absence of the filing of such applications.

The exceptions filed by Cipsco and Trunkline do not persuade us that the examiner erred in finding in favor of Milford's request for service from Trunkline. These exceptions, as well as the briefs filed by Cipsco and Trunkline, present well-developed arguments to show that Milford cannot proceed with its present plan for initiating natural-gas service without violating the laws of the State of Illinois. Milford, on the other hand, has also argued at length in its briefs in support of the legality of its proposal, setting forth with much persuasion the established precedents under Illinois law which indicate that the procedures which it has followed and proposes to follow are proper. Whether Milford needs further voter approval to enter into the lease contract with the contractor who is to build the transmission line and Wellington distribution system or to exercise its option to purchase the leased facilities, whether the lease contract is a legitimate operational arangement whereby Milford can secure the gas it needs or is an improper means of financing the acquisition of additional facilities, and whether the franchise issued to Cipsco by Milford in 1931 for 50 years was revoked by the ordinance adopted in 1960 authorizing construction of the municipal system, or was terminated by the "non-user" of Cipsco, or imposes any impediment to the construction of the municipal system by Milford, are questions of Illinois law which can, and properly should, be determined by the courts of primary jurisdiction in that state. The people of Milford have voted to have a municipal gas distribution system rather than be served by Cipsco,[14] the vote was had in accordance with the procedural requirements of the Illinois law, and Milford is prepared to construct and finance the distribution system in Milford in accordance with the ordinance adopted and approved by its citizens. Milford's plan to lease and operate the facilities to transport the gas from Trunkline's pipeline to its town border rather than to receive the gas from the owner of these facilities at the town border does not alter the essential aspects of the distribution system and requires no additional financing,[15] and in our judgment it does not alter the fact that Milford has apparent authority under the laws of Illinois and the village ordinance "to engage in the local distribution of natural or artificial gas to the public" within the meaning of Section 7(a) of the Natural Gas Act.

We find it necessary and desirable in the public interest that Milford's request for gas be granted and that Trunkline be ordered to make connection with the facilities to be operated by Milford and to sell to Milford the quantities of gas herein requested. As in the case of Bushnell, we are not persuaded by the arguments of Cipsco and the pipeline company that Cipsco can distribute gas in Milford at rates lower than those proposed by the municipality and that Milford's

---

[14] Cipsco, which presently serves electricity in Milford, waged a vigorous publicity campaign prior to the election to persuade the people of Milford that it was prepared to serve them with natural gas at rates considerably lower than the proposed municipal system.

[15] Additional financing would be required only if Milford were to exercise the option in the lease contract to purchase the contractor's facilities within the first year for $200,000 in cash or bonds. Milford contends that no further voter approval would be required even if it were to exercise this option since the Illinois statute applies only to the financing of the initial acquisition or construction of a utility and not to subsequent additions or extensions. *Illinois Power Co.* v. *City of Jacksonville*, 18 Ill. 2d 618 ,165 N.E. 2d 300 (1960).

request should therefore be denied. The people of Milford have expressed their desire for a municipal system and the system proposed is feasible on engineering, economic, and financial bases. Similarly we cannot agree with Trunkline's argument that our order of July 5, 1962, with respect to service in Montrose, Iowa, establishes a precedent which requires us to withhold action on Milford's request for gas pending the resolution of the local issues.[18] Unlike the Montrose case, Milford has made its decision as to who should distribute gas in the village. There is also no substance in Trunkline's argument that we have no jurisdiction to order the sale of gas to Milford in the absence of an application by Milford under Section 7(a). As indicated in our discussion of Bushnell's request for gas, we adopt the examiner's disposition of this jurisdictional issue.

In view of the questions raised with respect to the ability of the contractor, Panama-Williams, to undertake construction of the transmission line to Milford and the Wellington distribution system, we shall condition our order directing Trunkline to make connection and sell gas to Milford upon the filing by Milford within 90 days of an executed lease contract with Panama-Williams, or some other contractor, in substantially the same form as that contained in Milford's proposal and incorporated in this record, together with a copy of a duly executed performance bond satisfactory to the Commission.

The Commission finds:

(1) The examiner's decision, together with his formal findings and recommended order, issued on January 22, 1963, should be modified consistent with the foregoing opinion and the provisions of paragraphs (2) through (4) below, and as so modified the examiner's decision should be adopted as the decision of the Commission.

(2) The examiner's decision should be modified to eliminate the issuance of a certificate of public convenience and necessity to Panhandle for the transportation of gas for sale to General Portland Cement Co.

(3) The examiner's decision should be modified to require Panhandle to make connection with the proposed facilities of Bushnell and to sell gas to Bushnell at Canton rather than near Knoxville, and to eliminate the condition making the order for gas to Bushnell contingent upon Illinois Power's new lateral being placed in service.

(4) The examiner's decision should be modified with respect to the order requiring Trunkline to make connection with the facilities proposed to be operated by Milford and to sell gas to Milford by including as a condition thereof the filing by Milford within 90 days of an executed lease contract with Panama-Williams, or some other contractor, in substantially the same form as that contained in Milford's proposal herein, together with a copy of a duly executed performance bond satisfactory to the Commission.

(5) The exceptions to the examiner's decision, except as herein granted, should be denied.

(6) The motion of Bushnell and Milford for oral argument, filed February 11, 1963, should be denied.

(7) The petition of Illinois Power to reopen the proceedings, filed February 11, 1963, should be denied.

---

[18] The Commission, in the case of Montrose, left it up to the town to decide which of two equally qualified distributors it wanted to serve it, and ordered the pipeline company to make connection with and sell gas to the distributor selected by the town (28 FPC 41).

(8) The petition of Panhandle for withdrawal of its application in Docket No. CP60–40 to transport gas for sale to General Portland Cement Co., filed February 28, 1963, should be granted.

(9) The motion of Panhandle and Trunkline to sever the Bushnell and Milford issues for separate and later determination, filed April 1, 1963, should be denied.

The Commission orders:

(A) The examiner's decision, issued in these proceedings on January 22, 1963, is hereby modified in accordance with finding paragraphs (1) through (4) above, and as so modified the examiner's decision is hereby adopted as the decision of the Commission.

(B) In accordance with paragraph (A) above:

(i) A certificate of public convenience and necessity is hereby issued to Panhandle Eastern Pipe Line Company for the transportation of gas to the B. F. Goodrich Co. plant as more fully described in the examiner's decision and in Panhandle's application in Docket No. CP61–36. The service hereby authorized shall be subject to curtailment and interruption if required to meet the existing or future contract demands of Panhandle's customers for firm resale service. Panhandle shall report to the Commission as of June 1 of each year the number of days on which such service was curtailed or interrupted during the preceding 12 months, together with the date and the amount of each such curtailment or interruption. This report shall be filed by June 30 of each year.

(ii) The allocation of the gas supply of American Louisiana Pipe Line Company to Michigan Consolidated Gas Company as contained in the Commission's order of December 19, 1958, in Docket No. G–10396, 20 FPC 851, 858, paragraph (C), is hereby reaffirmed, and the delivery and sale thereof is hereby directed to be continued.

(iii) The certificates of public convenience and necessity issued in these proceedings to Panhandle Eastern Pipe Line Company and Trunkline Gas Company on July 11 and 27, 1962, are hereby conditioned respectively to require Panhandle to connect its line at Canton, Illinois, with the proposed facilities of the City of Bushnell, Illinois, and to sell gas to Bushnell in the amount of up to 2,000 Mcf per day, and to require Trunkline to connect its line with the facilities proposed to be operated by the Village of Milford, Illinois, and to sell gas to Milford in the amount of up to 906 Mcf per day. The order for Milford, however, is conditioned upon the filing by Milford within 90 days of the issuance of this order of an executed lease contract with Panama-Williams, or some other contractor, in substantially the same form as that contained in Milford's proposal herein, together with a copy of a duly executed performance bond, satisfactory to the Commission, assuring the performance of the contractor with respect to the construction of the Milford transmission line and the Wellington distribution system.

(iv) Panhandle's application for a certificate covering its proposed 3.11-mile lateral at Defiance, Ohio, Docket No. CP60–60, is hereby dismissed without prejudice.

(C) The exception to the examiner's decision, except as herein granted, are hereby denied.

(D) The motion of Bushnell and Milford for oral argument is hereby denied.

(E) The petition of Illinois Power to reopen the proceedings is hereby denied.

(F) The petition of Panhandle to withdraw its application in Docket No. CP60–40 is hereby granted.

(G) The motion of Panhandle and Trunkline to sever the Bushnell and Milford issues is hereby denied.

Commissioner Ross *dissenting in part.*

Commissioner Black *not participating.*

Ross, *Commissioner, dissenting in part:*

I dissent to the majority's grant of a certificate to Panhandle relative to the proposed direct sale to B.F. Goodrich Company. In my opinion, this issue should be remanded to the Examiner for the following reasons.

The issue presented is whether we adequately discharge our responsibilities under the Natural Gas Act by permitting a pipeline rather than the local distributor to make the proposed industrial sale. In the past, we have denied a pipeline's application to initiate a direct industrial sale when the sale could have been made along the existing distributor's system.[1] We have also refused to certificate industrial sales by a pipeline when the prospective buyers were currently purchasing gas from the local distributors.[2] In a case quite similar to this one where the affected distributor did not oppose the pipeline sale, the Commission nevertheless provided for the distributor to make the sale.[3] These decisions do not erect a policy whereby we reject each and every direct industrial sale proposed by a pipeline. But they do indicate the concern of the Commission in this area, and its intention to ". . . continue to consider each case on the merits as it arises and make the determinations which are commensurate with the facts and law applicable thereto." (*Southern Natural, supra,* 25 FPC 927.)

The evidence adduced thus far is anything but convincing that the public interest favors certification of Panhandle. An officer for the distributor involved, Northern Indiana Fuel and Light (which is making the sale at the present time), testified it would be highly objectionable for his company to make the sale. While the sale would permit a reduction in rates to all of the distributor's customers—including Goodrich—of about two hundred dollars a day, the officer feared that some day these concededly desirable rate reductions might be repealed if the Goodrich sale—for some unknown reason—were discontinued.

The Examiner termed Northern Indiana's reasons as patently incredible. Indeed they are. There may be several good reasons why Panhandle, rather than Northern Indiana should make this sale. There may be reasons why we should permit Panhandle's stockholders rather than the ultimate consumers of Northern Indiana to reap the benefits of this lucrative sale. If such reason exists, they do not appear in this record and I would therefore remand this issue for the taking of further evidence.

---

[1] *Southern Natural Gas Company,* 25 FPC 925 (1961).

[2] *American Louisiana Pipe Line Co.,* 20 FPC 575 (1958).

[3] *Panhandle Eastern Pipe Line Co.,* 13 FPC 301 (1954). This was a case in which the Examiner found Panhandle had coerced the distributor into the arrangements it had made. The Commission adopted the Examiner's findings regarding this matter except for the jurisdictional nature of the distributor's sales.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON THE REMAINING ISSUES IN CERTIFICATE APPLICATIONS

(Issued January 22, 1963)

ELLIS, *Presiding Examiner:*

Nature of the case: This is a group of certificate proceedings under the Natural Gas Act which, being interrelated, were consolidated for hearing and which have hitherto been covered in part by initial decisions on particular issues. Under the principal dockets, there now has been authorized a major expansion of the Panhandle Eastern pipeline and of the line of its subsidiary, The Trunkline Gas Company. Orders for service to a number of communities along the Panhandle line have also gone into effect. All questions and applications remaining in these dockets are covered below. Mainly, they relate to certain direct industrial sales, service to new areas, and some pipeline allocation problems.

Procedural background: The Commission's order of December 1, 1960, consolidated with the above dockets the then highly controverted application of Panhandle Eastern (Docket No. G–11061) to abandon its substantial and long-continued sale at Detroit to the Michigan Consolidated Gas Company. This, in turn, brought into the case certain unsettled questions relating to the final allocation of the gas available to two major pipelines with which Michigan Consolidated is affiliated; that is, the American Louisiana Pipe Line Company and the Michigan Wisconsin Pipe Line Company. The question raised by the petition to abandon Panhandle's sale at Detroit, which has now been settled by agreement, had been a controversy in litigation for many years between Panhandle Eastern and the American Natural Gas System, of which Michigan Consolidated, American Louisiana, and Michigan Wisconsin are constituent parts.

When the present phase of the proceeding began by the order of December 1, 1960, the abandonment application was before the Federal Power Commission for a new and further hearing as a result of the remand by the Court of Appeals for the District of Columbia of the Commission's order of 1959 which had undertaken to authorize abandonment of the sale (20 FPC 851, *Michigan Consolidated Gas Company* v. *F.P.C.* (1960), 283 F. 2d 204). According to the Court's opinion, the abandonment matter was required to be reconsidered largely because of the Commission's failure, in the process of comparing the overall needs of Panhandle and Michigan Consolidated, to take into account the data relating

to the distributor companies affiliated with the Michigan Wisconsin line. This need, as it then existed, to examine, weigh and consider the market needs of the Panhandle line, as expressed through all of its customers, and the market needs of all of the customers of the various affiliates of Michigan Consolidated which comprise the American Natural system, resulted in a hearing which was perhaps the most extensive in the history of the Commission, continuing for about 200 days with a record of over 31,000 pages. The hearing was conducted with all possible dispatch with few and brief recesses and then only such as the parties concurred in. Nevertheless, the hearing was ending its first year before the process of cross examination gave promise of coming to a conclusion.

At that point, that is on January 8, 1962, Panhandle Eastern and Michigan Consolidated entered into a settlement of their controversy, and this settlement has now been approved by the Federal Power Commission. In general, the settlement provides for the continuation of the sale near Detroit of the same annual quantity as heretofore, but with the delivery made only during the seven off-peak months of the year instead of the prior delivery of 127,000 Mcf daily throughout the year.

The hearing continued for some weeks after the settlement was entered into because of the many changes in Panhandle's expansion program which became necessary. By agreement, some matters were severed while the hearing was still going on because their particular issues were separable and were ripe for the issue of a decision. After the final briefs were received early in June 1962, two other initial decisions were issued on the non-controversial portions of the Panhandle expansion program, permitting the decisions to become effective promptly, in order to facilitate construction of the new pipelines during the current 1962 season and to provide for distribution of the added supply to the many municipalities along the line in time for attachment of new heating customers before the beginning of the new heating season. There follows a list of the initial decisions heretofore rendered in the present phase of the proceeding:

(A) Initial decision of April 11, 1962, which, after exceptions filed, was affirmed by the Commission's order of May 17, 1962—Ordered new service to be undertaken by Panhandle, Trunkline and Michigan Wisconsin for the use of 13 communities along their respective lines. All had intervened, either directly or through the local utilities, or had filed under Section 7(a) of the Natural Gas Act for such orders. This concluded dockets numbered CP61–114, CP61–115, CP61–54, CP61–191, CP61–192, CP61–160, and CP61–68.

(B) Decision of May 21, 1962 on the application of two distributor companies for a connection from the Michigan Wisconsin line to bring new service to Montrose, Iowa, which, after exceptions, was reversed in part and adopted in part by the Commission's order of July 5, 1962, upon which rehearing was denied on September 4, 1962.

(C) Decision of July 11, 1962, approved (i) the expansion program of Panhandle in Docket No. CP60–60 (with certain exceptions noted below), (ii) Panhandle's sales authorization to Michigan Consolidated Gas Company during the off-peak months, as proposed in the settlement agreement (this in replacement of the previous year-around sale, upon the basis of which there was concluded the docket raising the abandonment question, G–11061, (iii) Panhandle's application with respect to Howell storage field and its utilization for peak day requirements of 65,000 Mcf (CP61–136), and (iv) the final certification of the expansion of the Trunkline Gas Company and the allocation of its supply, as contained in Docket No. CP60–22 (Phase 2). In order to expedite the remaining

construction program, the determinations contained in the July 11, 1962, decision included only the non-controverted features of Panhandle's program; accordingly, no exceptions were filed and the initial decision was adopted by the Commission and affirmed in its order of July 27, 1962.

(D) Initial decision of August 23, 1962, undertook to conclude the remaining issues upon which immediate action was necessary in order to permit current construction, including therefore, the certificate approval of Panhandle's program for distribution to its customers of the entire expanded capacity of its line, as set out in its Fourth Amended Application filed in February 1962, *et seq.* (CP60–60), but excluded the two direct industrial sales which are covered below. Also, the certificate authorized the operation of the Waverly storage field on a provisional basis. The Commission's order of September 25, 1962, affirmed the initial decision, except its coverage of Waverly storage field.

In the group of dockets listed in the caption of this paper there remain the following issues for determination, all of which are covered below:

(1) Panhandle's application in Docket No. CP61–36, which is related to the proposed sale to the B. F. Goodrich Company plant in Indiana.

(2) Panhandle's application in CP60–40, relating to a proposed sale to the General Portland Cement Company in Ohio.

(3) The remaining allocation questions with respect to the American Louisiana Pipe Line Company and the Michigan Wisconsin Pipe Line Company which are contained in Dockets Nos. G–2306, G–2327 and G–10396.

(4) The reservations or conditions sought by interveners for service to Bushnell, Illinois (from Panhandle).

(5) The reservations or conditions sought by interveners for service to Milford, Illinois (from Trunkline).

(6) Panhandle's request for a certificate covering a 3-mile lateral at Defiance, Ohio (CP60–60).

(7) The recommendation contained in the brief of the FPC staff, pages 64–69, with respect to the transportation of gas by Panhandle to the National Petro-Chemicals plant at Tuscola, Illinois.

(1) *The Goodrich Tire Plant Sale:* For direct service to a new industrial plant of the B. F. Goodrich Company located near Fort Wayne, Indiana, Panhandle has filed a separate application (CP61–36) for an authorization from the FPC to transport its gas for the purpose of making this sale. Since the gas would be consumed in the boilers of the Goodrich plant the sale would not be "for resale" and hence would not as such be subject to regulation under the Natural Gas Act. However, the transportation of the gas in interstate commerce for this purpose is subject to FPC regulation, and accordingly, a certificate of public convenience and necessity (that is, a permit) is the subject of Panhandle's application. A certificate has already issued on behalf of the State of Indiana, by its Public Service Commission (11T1732).

The plant is a new one; construction began in 1960, about the time the present proceeding was set for hearing, and during the course of the year the major construction was virtually completed, three large boiler units were installed, gas service on a temporary basis began through the nearest local distributor, and tires are being produced. It is said that the plant will occupy 800,000 square feet, cost something over $25,000,000 and will provide employment for as many as 1,000 persons. The vast significance and importance of the plant to the local as well as the national economy are obvious.

The quantity of natural gas originally proposed was 580,000 Mcf per year but the maximum quantity set forth in the contract with Goodrich speaks in terms

of up to 5,000 Mcf per day, subject to interruption when, in the judgment of Panhandle, its supply is needed to meet the requirements of its firm customers. It is now evident from the testimony and Panhandle's current exhibits that the anticipated annual quantity will roughly double the originally planned figure.[1]

The gas is to be used simply for boiler fuel, quite in contrast to the allegation contained in the sworn application of Panhandle which reads:

> The natural gas to be purchased from Panhandle will be used by Goodrich almost exclusively in processing operations, for which natural gas has been found to be the most suitable fuel on the basis of a careful study undertaken by Goodrich.

Since application was attested under oath by the vice president of Panhandle, who stated that the matters set forth are true to the best of his information, knowledge and belief, it can only be assumed that the actual program had not been revealed to Panhandle at the time of the application in August 1960. At the hearing during 1961 and 1962 the Goodrich company's witness produced by Panhandle made it abundantly clear, time and again, that the gas is solely for burning under boilers to produce steam, that either coal or oil would serve the purpose equally well, so far as any technological reason is concerned, and that Goodrich made its selection of interruptible gas, with oil standby, solely on the basis of its study and conclusion to the effect that this form of fuel would most economically serve the purposes (11T1738, 184T29,042, 184T29,100). It was developed that the steam produced in the boilers is essential in the processing of rubber for tire making, but there is no support for the claim that the gas itself is in any wise to be used for processing.

When the application for the certificate to cover this transportation was consolidated by the Commission's order of December 1, 1960, with Panhandle's expansion case (CP60–60), Panhandle's application to abandon its sale to Michigan Consolidated and the allocation of available supplies within the rival American Natural system, it apparently became evident that the Goodrich matter would not be passed upon in a short time, hence Panhandle in June 1961 requested a temporary authorization which was denied by the Commission on June 27. Thereupon arrangements were made for temporary service through the nearby distributor, the Northern Indiana Fuel and Light Company. Permanent service through that distributor's line was in contemplation anyway because the new plant is located adjacent to the Northern Indiana company's supply lateral, about 10 miles downstream from its origin at Panhandle's Edgerton compressor station. Panhandle has contracted with Northern Indiana to deliver the gas to Goodrich for Panhandle's account, title to remain in Panhandle while the gas is en route and Panhandle to pay Northern Indiana 2¢ per Mcf for its transportation and incidental services. This will come out of the revenue of the sale to Goodrich, which Panhandle has contracted to make at a flat rate of 40¢ per Mcf. The lateral line through which the gas will flow is the same pipe which feeds Northern Indiana's distribution systems in the towns some miles to the north and the west, although there is now evidence that its capacity may require to be supplemented (151T24,357). Thus, in the first 10 miles of Northern Indiana's supply lateral there will be contained and commingled up to 8,000 Mcf per day (the new contract demand between Northern Indiana and

[1] Exhibit 281 projects an annual sale of 1,050,000 Mcf by the third year of operation under the contract. The figure for the first year of operation is 750,000 Mcf, or nearly half again more than was proposed two years ago.

Panhandle, Exhibit 277) and up to 5,000 Mcf per day of Panhandle's gas being delivered to the Goodrich plant by Northern Indiana for Panhandle. If the two maxima were coincidental, the added construction adverted to at the hearing might be required since the supply lateral will carry only about 12,500 Mcf. But the Goodrich sale is interruptible and is expected to be cut off perhaps 25 days a year—which would be the days of Northern Indiana's maximum take. Also, it may be some time before the plant reaches the 5,000 maximum.

The temporary sale is being made from surplus gas already available to the distributor, and some small "over-runs" from Panhandle's supply, and the sale is under Northern Indiana's interruptible industrial rate (Exhibit 98–M), which is in several steps down to 50¢ per Mcf for larger quantities, with the result that Goodrich's present cost of gas from Northern Indiana is 51.2¢ per Mcf (184T29,082). This service has continued to date and is expected to be replaced from the direct sale by Panhandle as soon as it is authorized. The immediate and obvious question is why a direct sale from Panhandle is proposed at all since the facilities of the distributor are there and available and, in actual fact, will physically be used for the direct sale when it comes to be made. The answer is far from clear and satisfactory, but it is true that Northern Indiana's witness (its secretary and comptroller) flatly indicated a number of times that his company is not interested in assuming the burden of this large sale, perhaps would not take it under any circumstances, and much prefers a proposed arrangement under which it will carry the gas for Panhandle's account and collect 2¢ per Mcf for its service.[2] This abnegation by the distributor otherwise enfranchised for the area was extensively probed at the hearing, but, notwithstanding the patent incredibility of the reasons set forth in the footnote (*cf.* 152T24,585), the staff brief joins with those of the parties to the transaction in recommending that the direct sale by Panhandle to Goodrich be approved.

At the time of the hearing before the state commission Northern Indiana filed its answer consenting to the proposed service by Panhandle (11T1751) and the information was doubtless available to the state commission that the net result of the 40¢ sale would be to allow Goodrich a discount of 20% or so below the industrial rate charged by Northern Indiana to all others in the area (among the customers paying Northern Indiana's rate of something over 50¢ there is included another rubber company). However, the great difference in the quan-

[2] The first objection mentioned by the witness was that his company (or at least the managing officer—it seems not to have been taken up by its board of directors) felt unwilling to undertake the risk involved in such a large transaction as the sale of up to 5,000 Mcf a day to Goodrich. After it became apparent that their purchase from Panhandle would be on the interruptible rate schedule of the pipeline (Item I, p. 27) under which the distributor-purchaser would be free to cut off its take, and therefore its burden, at any time its resale would not be called for, thereafter the objection to this sale developed to the effect that the net revenues (amounting to about $200 a day) necessarily would have their reflection on their company's cost of service and would work a significant reduction in their retail rates throughout their area. It was not, of course, claimed that a rate reduction is objectionable, but it was attempted to be stated that the proposal to sell through the distributor would be highly objectionable because, after this benefit and betterment to their customers, there would be serious dislocations and public reactions should some misfortune transpire which might later on cause Goodrich to break off their purchase, the distributor thereafter not to receive the revenues in the amount stated, and their reduced rates therefore required to be restored to their present levels (151T24,392–24,595). These two reasons, or so-called reasons, were all that could be given by the witness as the basis for its declination of the sale through its books. However there was no objection to the use of the distributor's facilities, and it is noteworthy that the eventual plans calls for a physical delivery by exactly the same methods and facilities and program that would be in use if the sale were made through the local distributor (151T24,397).

tity projected would doubtless justify the difference between the 40-cent rate being charged to Goodrich and the 50-plus cent rate being paid by the other industries. Whatever the considerations, the state commission approved the program and enfranchised the sale. It is not the case of conflict between the distributor and the pipeline; in fact, when Goodrich's need came to Northern Indiana's attention, it was Northern Indiana which immediately decided in effect to refer the business to Panhandle. Most significantly, it is not an industrial sale in the midst of an urban area served by a distributor. Rather, the area is entirely rural and is not actually served at all as of now. Thus the rate benefit to Northern Indiana's customers which could be expected to follow such a sale if made by the distributor would not affect the area surrounding the factory, at least until that area has experienced a new growth and develops its own residential and commercial market for gas. Neither would it help the rates in the nearest city (Ft. Wayne), since that metropolitan center is served by another distributor. In these circumstances there does not seem applicable the principle recently applied in the case of Southern Natural Gas Company calling for the sale to be made by the distributor serving the area immediately surrounding the plant (25 FPC 925, 937).

A brief on behalf of the Fuels Research Council, National Coal Association, United Mine Workers and others, presents an unrelated but quite pointed objection to the certification of the sale under any circumstances. Their witness, an engineer with special experience in the field, presented a rather extensive cost study designed to demonstrate that, at the 40¢ rate for gas, the overall cost of the plant, fuel and operations over a presumed 20-year life, including fixed charges, would cost the Goodrich Company about $18,000 a year more than if the installation had been designed to burn coal under the boilers instead of the gas and oil type boilers which have now been installed. There was some disagreement about the assumed cost of the coal, their first computation showing a saving in favor of coal of $27,599 per year. The $18,000 figure resulted from using the same coal price which the Goodrich witness used in his demonstration as to why gas and oil were selected instead, and this margin or apparent saving amounts to about 5% of the annual cost of the entire steam-producing operation. The net difference resulted from a showing that the fuel itself would deliver to Goodrich for $61,000 less than the cost of the natural gas at 40¢ (and of the oil during the periods of interruption), from which figure there are subtracted $21,000 as the extra labor costs and $22,000 as the extra fixed charges for coal operation (Ex. 304; 198T31,371). The showing made is most convincing, indeed it was attacked on the ground of its applicability rather than validity, and for present purposes it may be concluded that a saving of $18,000 annually would have resulted had coal been selected as the fuel—presuming, of course, that no significant change in the figures would develop over the coming 20 years.

However, the showing is attacked on other grounds. In the first place, Panhandle points out that the major gas and oil installation has been completed (all after the application was filed here), therefore, if a comparison must be made it is claimed that the comparison would have to included the loss from the dismantlement of the present boiler plant or at least the considerable cost of conversion from gas to coal. But the answer to this is obvious: It was not for Goodrich or Panhandle to anticipate the Commission's approval and issue of a certificate which they knew had to be obtained, nor to prejudice the Commission's determination, on whether this transportation is in the public interest, by so arranging their program that a denial of a certificate would be costly.

Cf. 60 C.J.S. 286. The net question, therefore, is this—whether, notwithstanding the evidence that Goodrich could make or could have made a certain saving by the use of coal, is the use of the Panhandle gas line for the purpose of this transportation in the public interest and required by the public convenience and necessity, the test set out in section 7(e) of the Natural Gas Act.

The answer, so far as the evident saving is concerned, is rather clear. The B. F. Goodrich Company which is to buy the gas and pay for it has presented adequate testimony that it fully considered all forms of power and energy and has concluded, after a thorough study, that the gas-oil arrangement would be preferable because it is the most economical one, considering all factors (184T29,047). The case presented by the coal association should, it would seem, have been addressed to the Goodrich company. (Indeed, the coal association witness testified that he has made many cost studies of this type for diverse industries including the B. F. Goodrich Company.) If the difference in cost developed were a very considerable amount or were even much greater than the 5% here shown, it is possible that further examination would be called for upon this ground, but it is the conclusion that evidence *tending* to establish a saving of 5% in the cost of the steam is hardly of such magnitude as to warrant the reversal by the Federal Power Commission of the policy determination made by the management of Goodrich in the operation of their $25,000,000 plant.

Indeed, minor variances either way showing a saving to the industrial user by gas or by coal would hardly seem to be determinative of the public interest question which, according to the language of the statute, underlies the decision. The public interest is obviously much broader than that of Goodrich or Panhandle or Northern Indiana or of the Coal Association. As shown by a number of cases, the public interest is greatly involved in the use of gas in large quantities for this obviously inferior use. See for example, *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1 (1961); *El Paso Natural Gas Company*, 22 FPC 900 (1959); *South Georgia Natural Gas Company*, 22 FPC 211, 215. All appear to have been sales of large quantities to electric plants' steam boilers without evidence of compensating benefits. However, it appears it is the consensus of decisions on boiler fuel use of gas that, notwithstanding the claim of this patent spoliation of a scarce, unique, wasting and irreplaceable natural resource, a sale in a reasonable amount for industrial use is accepted as justified where the denial would mean an unfair and undue deprivation to the particular industry *or* where there are net revenues spread among such wide classes and groups of customers (rather than solely to the owners of the pipeline) that the sale has a substantial element of benefit to a wide segment of the public. 22 FPC 900; 25 *id.* 987, 998; 26 *id.* 319, 325. In the case of such sales by distributor companies (not by the pipeline as here proposed), this benefit accrues through the betterment of the load factor and the reduction in their overall net cost to be recouped from the consuming public. In fact, it was even testified that home heating sales would not be possible without it (131T21,368). Thus, in the case of the American Natural system, their distributors' industrial sales are something over one-fourth of their total volume (10T1639).

The question resulting is whether like benefit is to be found where the local distributor declines the sale and the pipeline itself proposes to make it. In the first place, it is true there will be substantial benefit to the distributor here, and perhaps eventually to its customers, because Northern Indiana will be charging 2¢ per Mcf for its carriage of the gas for about 10 miles and for certain very minor services. There was no suggestion that this work will add $100 a day to Northern Indiana's cost of service.

In the second place, even though the sale is "non-jurisdictional" and its rate is not regulated by F.P.C., it is evident that it will to some extent benefit all of the pipeline's distributors (and, presumably, *their* customers). Panhandle's current Exhibit 280, summarizing its annual sales under its expanded program, shows direct industrial sales of about 7½% of its total volume. The sales are interruptible, will dispose of "valley gas", and will not require the capacity of the line on the peak days of its need for the firm domestic and commercial customers. Most important, in some part its revenues will absorb a part of the fixed costs otherwise collectible from the domestic rate payers. Panhandle records the average cost of its direct sales as 28.76¢ per Mcf (189T30,080)[3] and allocates that amount to its cost of service. To the extent that this portion of the revenue from the 40¢ sale to Goodrich exceeds the bare incremental cost of providing the gas, it tends to reduce somewhat the cost of service to be collected from its jurisdictional customers (189T30,179). To ascertain that specific benefit, we turn to Panhandle's "Allocation of Cost of Service" for its first year under the expanded program authorized in Docket CP60-60 (Ex. 275), where there is shown the derivation of the 28.76¢ figure for the cost of each Mcf of non-jurisdictional or direct sales. That cost figure comes from allocating to direct sales nearly $14 million out of the total interstate cost of service of $181 million, or 7.6%. $14-million divided by the volume sold, in Mcf, equals 28.76¢. Most of that of course goes to pay for gas produced and sold, but a substantial amount, $2.72 million, goes to pay for the *fixed* costs of gathering, transmission and storage, including a charge for off-peak use of capacity. The total so charged ($2.72 million) amounts to about 3⅓% of the total fixed costs of gathering, transmission, and storage to be incurred in the first year of operation under Panhandle's expanded program, and the total fixed costs are nearly half of Panhandle's total cost of service. Thus the direct industrial sales contribute to that extent to the costs otherwise to be reimbursed through the rates charged to the distributors and eventually to the consuming public. Specifically, the jurisdictional cost of service of $167,322,706, upon which Panhandle bases its rates to its distributors, would be increased by $2,720,968, if the direct industrial sales were not available to share in paying the fixed costs (189T30,180). Upon that showing, it is evident that the benefit of the direct industrial use of the gas is not limited to the narrow ambit of the particular parties to the sale but, to some very slight extent at least, is spread among the public from one end of Panhandle's system to the other.[4] I conclude, accordingly, that the sale meets the tests of the decisions last cited, is to be regarded as in the public interest, and should be certificated accordingly as meeting the test of public convenience and necessity.

(2) *Sale to General Portland Cement Company:* For use in the manufacture of cement at their plant located in a rural area in northwestern Ohio, about half

---

[3] It is evident that the margin between that cost and the 40¢ sale price to Goodrich, or 11¼¢, will go, in part, to Northern Indiana for its services (2¢) and the rest (9¼¢) will be for the benefit of Panhandle and, of course, the income tax gatherer. (Figures herein are rounded off for clarity.)

[4] It is possible a claim could be made that too low a percentage of the fixed costs is collected from the direct sales, that it should be fairly related to the proportion of the volume so sold with an increase in the benefit to all distributor customers accordingly (*cf.* 127T20,762 for a comparable, or at least referable, policy of one of the distributors related to its own sales). But such a question belongs in a rate case, where all similar sales could be treated alike. It is enough, for the purpose of passing upon the initiation of a single sale, that the expected benefit be shown to be at least significant, if not substantial, in proportion.

way between Toledo and Fort Wayne, the General Portland Cement Company has undertaken to purchase a substantial quantity of gas on an interruptible basis to be served from the Panhandle line, which passes under a corner of their property. There is no retail distributor in the vicinity—the town of Paulding is five or six miles away—hence the plan calls for a direct sale by Panhandle. As in the case above, the sale is not directly subject to Federal Power Commission jurisdiction. But Panhandle's transportation of the gas in interstate commerce for the purpose of making the proposed sale is subject to Section 7 of the Natural Gas Act, and the use of Panhandle's facilities for the purpose of this transportation requires first a finding and order by the Federal Power Commission to the effect that such use is required by the public convenience and necessity. 23 FPC 795. Panhandle's application for a certificate to that effect (Docket CP60–40) was filed in 1960 and consolidated with the numerous other subjects of this proceeding by the Commission's order of December 1, 1960. No local certificate of authority was presented because, so the forum was advised, the Ohio Commission does not exercise jurisdiction in such cases as this.

Not only is the sale fully interruptible on either side (that is, Panhandle may interrupt whenever its available supply is needed for its firm customers or perhaps for any or no reason at all, and the cement plant may take the gas at any time, or not take it, as it chooses), but the "contract" calls for service only during the off-peak months; that is, from March 15 to November 15 of each year (Exhibit 128). The price is 32¢ per Mcf, subject to renegotiation annually during the five years of the contract. The maximum quantity is 10,000 Mcf per day, which would mean, therefore, a possible maximum of 2,450,000 Mcf during the year, but Panhandle's Exhibit 281, its projected annual sales by classes of service, shows the estimated sales for the cement plant at 2,232,000 Mcf per year. The revenues, at the flat rate of 32¢ would be somewhat under three-fourths of a million dollars a year.

In order to assay the various objections which the application has given rise to, it is necessary to note carefully the nature of the proposed use. Significantly, it is not a sale for boiler fuel use at all. At the hearing, the process of cement making was explained in detail and unchallenged; there was described the direct application of the burning fuel to the mixture of raw materials while they are moving gradually toward the lower end of the kiln, the result being to heat the materials to 2,700° and fuse them into Portland cement, with, in the case of coal, a part of the ash becoming an important constitutent of the final product. When gas is substituted for coal at some plants, this extra constituent is supplied through a special additive to the raw materials; at others, including the plant in this case, the change from coal can be adjusted to within 24 hours by a slight alteration in the proportions of the raw materials which enter the tube or kiln (185T29,245–63). The result is that, while the coal is thus directly used in the processing operation, it is not regarded as technically essential, in fact, it was testified that, in the cement plants in this country, the fuel supply (comprising about 20% of the total cost of the final product) may come from either coal, oil or gas as local conditions warrant. The motivation for Portland Cement's contract is therefore economic, not technological. Portland Cement's witness makes it plain that its purpose is to locate the cheapest fuel available. Both coal and gas equipment will be maintained so that either can be turned on as current prices indicate (185T29,265). Since the coal is bought within the state under relatively short-term arrangements and comes to the plant by truck delivery rather than by rail, the advantage to Portland Cement in having in

force the gas contract at 32¢, whether used or not, and its effect to stabilize the price of coal are rather obvious. Coal used in 1961 amounted to 75,000 tons (185T29,255).

The objections to the proposed sale come from two quarters—the mining and coal interests, which face the possible loss of most or nearly all of their sale at the plant, maintain stoutly and quite credibly that the cement company is mistaken in envisaging a saving of $18,000 a year by the use of gas during the eight months of the contract season. Coal claims instead that gas throughout the year would cost $47,000 more than coal.[5] The Federal Power Commission staff brief recommends against the issue of a certificate for the transportation of gas for the Portland Cement sale on a number of diverse grounds, which are discussed below. So far as cost is concerned, the staff concludes that coal is substantially equal to gas in cost and that the sole reason apparent for the change to natural gas is one of price (Brief, p. 58).

After extensive probing at the hearing, it became apparent that only one of two points of difference remained about the relative costs, once there had been arrived at a common denominator for the measurement and agreed premises as to the cost of the supply and the quantities to be compared. Converting the various elements to the final heat units produced, that is, a million British thermal units (Mmbtu) it is evident that (a) the gas cost alone, including the overhead for the gas service and gas-supply equipment, comes to 33.6¢ per Mmbtu, (b) that the bare cost of the coal at 1961 prices is 29.3¢, (c) that the wages and all overhead for coal handling and equipment based on the 1960 figures applied to 1961 quantities, came to about five and six-tenths cents (depending upon a number of variables), making the coal arrangement on its face appear at first to be more expensive.

However, Coal points out quite convincingly that the fixed overhead cost of the coal equipment (or about two-thirds of the wage-and-overhead charge referred to) must be allocated as much or even more to the gas program as to the coal, since the gas service from March to November *at* the low rate of 32¢ is available and utilizable because, and only because, the plant will keep its coal equipment ready for use and will, in fact, avoid plant shut-downs by actually using the coal whenever there is an interruption of the gas service on the interruptible gas service contract. The plant operates continuously seven days a week, 24 hours a day throughout the season and the season lasts throughout the year, winter as well as summer, if the business justifies it. It would be infeasible to shut down for a matter of hours or days during a period of possible gas interruption, hence the equipment to use coal in the case of such interruption is an essential part of the proposed gas program. The coal burners to use during the periods of gas interruption are quite as necessary to the gas program as are the gas burners used during the periods of actual gas service. To claim the benefit of the extraordinary low price of gas which the interruptible contract furnishes, without recording the cost of the standby fuel equipment essential to its availability, is rather like eating one's cake and having it too. In that view, the cost of the gas service must include not only the cost of the gas fuel and the gas equipment but also a share ($^{8}/_{12}$) of the fixed annual charges for maintenance and so forth on the coal burning equipment. With that addition it is evident that at the 1961 price and quantity of coal disclosed at the hearing,

[5] These figures are to be related to a total plant budget upwards of $3 million (185T29,294).

there is a small saving to the cement company by the use of coal.[6] There can be no simple finding of the amount of such saving because the fixed elements of the cost will, of course, reduce on a unit basis as the quantities used increase. The coal interest's claim is that this figure on an annual basis is $47,148.68 (or 2.505¢ per Mmbtu), equalling perhaps a 7% savings. However, as Panhandle pointed out, this was computed upon a 12-month operation by either fuel arrangement. Of course, the only plan is for the gas service during the eight off-peak months of the year and for coal to continue to be used during the four winter months, if the plant stays in operation, which on its face would reduce the claimed saving by one-third.

But the figures contain inevitable uncertainties and in any event assume the premise that the rates used will remain as they were set at the end of the year, including the price of coal and gas, wages and other costs. If the question be solely which fuel is cheaper, manifestly it is the cement company's management which has the responsibility to make the determination for the operation of its own plant and the responsibility should carry with it the prerogative to do so. Panhandle points out quite cogently that if coal is indeed cheaper, no gas will be bought; hence, again, it would seem that Coal's presentation should be addressed to General Portland Cement Company.

For the purpose of determining under Section 7 of the Natural Gas Act whether the proposal to transport this gas for this purpose is in the public interest, the cost comparison is useful only to show that the gas arrangement sought for cannot promise any real or evident or significant savings at present prices and that, accordingly, if some public interest considerations along other lines indicate a denial of the application, such denial would not amount to an undue or unfair detriment to the cement company. Beyond that, cost comparisons would seem to be irrelevant, since the cement company showing that, as they first viewed it at least, the gas purchase would be cheaper, would not, even if true, establish that the sale necessarily has the elements of *public* convenience and necessity which the law requires.[7] As in the case above, the public interest is very much broader than that of the Cement Company or of Panhandle. The obvious effect of the gas contract to promote a stabilization of the price of the coal and to provide at least a standby fuel in times of national or other emergency will help to insure the continuance of the company's operation and may, indeed, be of consequence in keeping the plant open and running rather than shut down during such periods, which is certainly and obviously in the public interest (185T29,268). In that view, the proposed contract has its purpose in the service of the public interest even if the cement company, after a recheck of current costs, should determine that, so long as present coal prices hold, coal operation is more economical and should continue.[8]

---

[6] Thus, taking the intervener's basic figures, the existing coal cost is 34.9¢/Mmbtu (29.3 plus 5.6 for labor and overhead). The gas sells for 32.6¢ per Mmbtu plus 1¢ for gas equipment overhead. Two-thirds of the 5.6¢ coal overhead are fixed items (Ex. 304, sched. 2) chargeable to gas for an expected two-thirds of the year, which comes to 2.5¢. Thus the comparable gas cost is 36.1¢/Mmbtu, or a difference favoring coal at 1.2¢. (Ex. 304, 10T1673, 197T31,011–31,109.)

[7] Conversely, it has not been supposed that a gas sale otherwise in the public interest must lose its badge of "public convenience and necessity" solely from a showing that a competing fuel offers itself with some demonstration of a saving. No decision is cited to that effect. Note, e.g., that only a few days ago the staff recommended approval (under the "shortened procedure") of a cement plant sale in Illinois to be made by Panhandle's subsidiary (Trunkline), where the price of the gas is to be 45¢ (CP63–40).

[8] See Stocking and Watkins, *Monopoly and Free Enterprise*, Twentieth Century Fund, 1951, p. 11.

Turning now to the other objections expressed, the staff brief suggests first that Panhandle's line in this area is fully occupied during the summer months, second, that if the gas is available it might better be added to Panhandle's storage reserves, third, that the use for this purpose for which coal is equally suitable amounts to a wastage of an irreplaceable natural resource, and that, accordingly, the certificate should be denied. The first objection stated is on the ground that in the design of Panhandle's system the facilities at the eastern, or destination end (that is, from Illinois to the Canadian border at Detroit), are rather fully used during the summer season during which period the line east of the Tuscola junction is fully loaded (198T30,598) particularly in view of the large summer sale to Michigan Consolidated ner Detroit. It is thought to be obvious that some capacity must be constructed to make the delivery to the cement plant and that the cost of these facilities might at some indeterminate time in the future bring about a request for a "tilt" in Panhandle's rates. shifting some cost to the demand charge component of its regular tariffs which would adversely affect the distributor customers along the line. The argument, if understood, answers itself. The only sale proposed is an interruptible one, to be made if, as and when Panhandle has the gas to sell during the months of March to November. The sale itself is not subject to the Federal Power Commission jurisdiction and all that is requested is authority to use its pipes to carry gas for this purpose, if, as and when there is gas available. If the objection is that there is no gas available because of the summer load at the eastern end of the line then there will be no gas sold and the objection becomes irrelevant (185T29,281). If the objection is to the construction of facilities for this purpose (none of which is pointed to, cited, or perceived) the answer is the expansion program has been authorized by the initial decision of July 11 in this case, approved by the Federal Power Commission on July 27, 1962, and now final. If, finally, the objection is to the possibility that at some future date a new rate filing by Panhandle would contain a shift to the distributor companies of the cost of building of this unnamed, undisclosed, unidentified, and undetermined facility for the cement plant sale, the answer, of course, is that any such eventually will be to be dealt with when it arises.

Next is the staff suggestion that if Panhandle is denied the permit to use its line for the purpose of this sale, the capacity would otherwise be available for the injection of additional quantities of gas in Panhandle's storage fields. This is in the face of the showing on Exhibit 297, Panhandle's summer flow diagram, that 35,000 Mcf per day is provided for to inject into the Howell (Michigan) Storage Field near the eastern end of the line and a like amount for the proposed Waverly Storage Field, in Illinois. Aside from the fact that injection at those rates would be ample to maintain the storage program, there now appears to be available all or nearly all of the 35,000 Mcf per day proposed for the Waverly Storage Field since, after the staff's brief was filed, the Commission's decision of September 25, 1962, has, as recommended by the staff, denied Panhandle's application to utilize Waverly Field.

Staff's remaining objection is that the Commission must weigh and here give effect to the consideration that the "conservation of gas, a wasting resource is paramount . . .", citing *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1. The argument is certainly a good one, at least in the abstract. Since, by definition, this use of gas in a substantial quantity for a purpose for which a far more abundant fuel is equally available, useful and economical, must be classified as an inferior use, then, in any program of conservation of natural resources for uses that are not inferior, the sale proposed for the cement

plant would seem to be among those which would qualify to be dropped. But that is a long way from proving that this one sale to this one plant (out of many competitors in the industry) by this one pipeline (out of many in the industry) should be singled out for proscription upon a general policy of conservation which manifestly should be applied equally, fairly and without discrimination.

Staff's concern for conservation of gas does not seem to have emerged at the time its recommendation for the Goodrich rubber plant sale (the case just discussed above) was in formulation. That one is patently inferior, a naked use for boiler fuel, and the benefit to Panhandle's rate payers is not one whit greater from the Goodrich sale than from this one, since in both cases the revenue credited to cost of service is 28.76¢ per Mcf (Exhibit 275). It would be most extraordinary to discriminate against the Portland Cement Company's efforts to purchase gas in favor of the less justifiable Goodrich Company purchase. It would be most extraordinary to apply the principals of conservation to Portland's attempted purchase while ignoring it for all the other industrial sales made and to be made by Panhandle as listed on Exhibit 280, pages 4, 5 and 6.

But even more pointedly, the cement business is, or is supposed to be, highly competitive.[9] In other cases, one of them very recent, and while this case has been going on, the Commission has considered and authorized the transportation of gas for sale to cement plants.[10] Moreover, when the present Section 7(c) of the Natural Gas Act was recommended to the Congress for enactment, the use of gas in cement kilns was commented upon favorably by the Commission in its presentation to the Congress.[11] Conservation is a perfectly valid inquiry,[12] and doubtless needs much more exploration than it has had, but no ground is perceived for singling out a single plant out of the entire cement industry for application of its philosophy.[13] Staff's presentation could well be made in proposing a rule-making type proceeding looking to the equal and just limitation of gas for the entire industry, or for boiler fuel use if that were the subject matter in question, or in proposing a legislative solution, if found required.[14] Applied here to a single industry in competition with many, and against a single pipeline out of many, the plea of the need for conservation (*if* any such need there be) is misplaced and does not by itself operate to remove the label of public convenience and necessity otherwise demonstrated. See Koplin, "Natural Gas Allocation Policy", 64 Y.L.J. 840 (1955); Pegrum, "The Natural Gas Industry: An Economic Appraisal of Public Policy", 29 J. of Land and P.U. Econ. 168 (1953).

As in the case of the Goodrich sale, the revenues from the Portland Cement sale up to 28.76¢ per Mcf are expected (in fact, on this record, required) to be used to pay all the incremental costs of the sale plus a small but evident part of the fixed costs of the operation of the Panhandle line which would otherwise be to be collected from the jurisdictional rate payers. In view of the benefit

to them (as discussed under the heading of the Goodrich sale)[15] and of the benefit to the Portland Cement Company (as discussed herein)—not to mention the obvious benefit to Panhandle—the proposed use of gas for sale to the cement company has the essential elements of public convenience and necessity and the transportation for that purpose must be authorized accordingly.

(3) *Allocation of the American Louisiana System Capacity:* The Commission's order of December 1, 1960, which established this proceeding, consolidated with it certain remaining issues of allocation of the supply of two subsidiaries of the American Natural system (that is, the American Louisiana Pipe Line Company and the Michigan Wisconsin Pipe Line Company) which had been outstanding for some time under Dockets G–2306, G–2327 and G–10396. The point is that, when the Commission in 1958 ordered the abandonment of Panhandle Eastern's sale to another American Natural subsidiary (Michigan Consolidated, the local distributor in the Detroit area), the loss of that supply to Michigan Consolidated was made up in large part by the allocation to Michigan Consolidated of three quantities of natural gas amounting to 127,000 Mcf per day of the American Louisiana capacity which had been previously reserved in G–2306 or made available from an American Louisiana expansion program in G–10396 and not yet finally allocated. 20 FPC 851. This was the order (permitting the abandonment of service at Detroit) which was set aside on review by the Court of Appeals for the District of Columbia circuit;[16] hence there now remains for final order of the Commission the proper allocation of those three quantities comprising a share of the daily capacity of the American Louisiana Pipe Line system.

FPC's order of December 1, 1960, severed those allocation issues from any and all other matters appearing in the three dockets and directed they be heard in connection with the abandonment case and Panhandle's expansion program.

The details, so far as now material, are as follows: In a series of decisions ending at 17 FPC 657 (and see 19 FPC 1113, 20 FPC 575, 604, 613), American Louisiana's then capacity of 300,000 Mcf per day was allocated one-third to Michigan Wisconsin Pipe Line Company and two-thirds to Michigan Consolidated Gas Company, but a part of that allocation was purely on a temporary basis, with 51,600 Mcf reserved and assigned *pro tempore* to Michigan Consolidated and 8,285 Mcf to Michigan Wisconsin. Later on, there developed a program for expansion of the American Louisiana system, which was authorized by an order of the Commission in 1958 (20 FPC 475). The increase was assigned on the basis of 31,000 Mcf to Michigan Wisconsin and 26,000 Mcf to Michigan Consolidated "until further order of the Commission", but none of the "expansion gas" was to be used for firm loads. These two actions made a total of 59,885 Mcf per day of "reserve gas" and 57,000 Mcf per day of "expansion gas" available for final assignment. When the Panhandle abandonment decision issued on December 19, 1958, 20 FPC 851, 856, these two amounts of 59,885 and 57,000 were allocated to Michigan Consolidated in order (along with an amount of 10,115 otherwise available) to replace the Panhandle delivery of 127,000 Mcf per day whose abandonment was to be permitted. Shortly thereafter, the corresponding capacity of the Panhandle line was allocated by Commission order to a number of communities along the Panhandle line. Both orders, that is the order for the abandonment of the Panhandle service at Detroit and the order distributing the abandonment gas to other Panhandle customers,

[15] *Cf.* Opinion No. 367 of October 25, 1962, 28 FPC 731 at p. 734.
[16] See page 720, above.

were promptly taken to court and eventually set aside by the Court's orders of April 29 and July 11, 1960.

In the meantime, however, the distribution of the Panhandle capacity of 127,000 Mcf per day to its other customers had, with the Court's sanction, been permitted to go into effect on a more or less provisional basis.[17] The Panhandle distributor witnesses explained at the present hearing how their several allotments were promptly taken advantage of mostly by the attachment of additional domestic heating customers. With a few exceptions, there was not noted much evidence of provision made by them for meeting the nascent emergency should it transpire that the abandonment order be upset and the allocation of the abandonment gas canceled. Instead, the distributor companies, supported by their several state commissions, discharged their felt duty in this regard by protesting repeatedly at the hearing to the effect that the loss to them of the allocation of the abandonment gas would be serious, indeed, catastrophic.

These apprehensions were allayed when, in January of 1962, Panhandle and Michigan Consolidated filed their settlement agreement (Item BZ by reference) which converted Panhandle's obligation to deliver 127,000 Mcf per day throughout the year to Michigan Consolidated at Detroit into a summer-only delivery program, that is, a program to deliver the same annual quantity, but all of it during the seven off-peak months from April 1 to October 31 of each year. This change, together with the increase of about one-third in Panhandle's total peak-day capacity which has now been authorized by the orders in this proceeding in Docket CP60–60, has permitted the retention by the Panhandle line's distributor companies of the abandonment gas which they received beginning in 1959, and the addition of substantial quantities from Panhandle's expansion, with the result that all of the Panhandle distributor companies have agreed to accept and settle for the new totals so made available. Letters from the several companies (indicating in some cases a certain amount of compromise which has been helpful in effecting final settlement) are in evidence as Exhibit 276. Hence, no question remains as to allocation of the abandonment gas on the Panhandle system, but there does remain the question of the proper final allocation of the American Louisiana capacity which was consigned to Michigan Consolidated at Detroit in substitution of the abandonment gas.

The amount mainly in question is the total of the 57,000 Mcf per day of American Louisiana "expansion gas" and 59,885 Mcf per day of American Louisiana "reserve gas." The greater part of these two amounts has been the subject of delivery to Michigan Consolidated for some time, first by the orders mentioned above which allocated the gas temporarily to Michigan Consolidated and later on by force of the Commission's decision in the abandonment case. Since the Court *pendente lite* permitted the abandonment order to go into effect in 1959,[18] and since the winter delivery which was permitted to be stopped has not been and is not to be resumed, there has continued to date the delivery of the entire two substitute quantities to Michigan Consolidated by force of the Commission's allocation contained in the order of 1958, 20 FPC 851, notwithstanding this order was set aside by the Court of Appeals in its decree of April 29, 1960.

The court pointed out on page 31 (p. 221 of 283 F. 2d) that the quantity of 59,885 Mcf per day of "reserve gas" in G–2306 originally had been reserved for distribution to new Wisconsin markets of the Michigan Wisconsin Pipe Line

[17] *Michigan Consolidated Gas Co.* v. *F.P.C.* (1960), 282 F. 2d 854.
[18] See footnote 3 at page 209 of 283 F. 2d.

Company. Similarly, 31,000 Mcf (out of the 57,000) of "expansion gas" was originally assigned to Michigan Wisconsin "until further order of the Commission." Accordingly, the Court's opinion directed that in these proceedings the Commission further consider the extent of the needs of the communities requesting gas service from Michigan Wisconsin. In that posture, the obvious question would be whether to return to Michigan Wisconsin at least that share of American Louisiana's capacity in which Michigan Wisconsin previously had an interest but which, in 1958, was ordered withdrawn from Michigan Wisconsin and transferred to Michigan Consolidated in replacement of the abandonment gas.

During the first year of the hearing, the needs of the distributors off the Michigan Wisconsin line were thoroughly explored, in order to assay their needs along with those of the Michigan customers and of the distributors along the Panhandle Eastern Pipe Line. At that time it was the proposal of American Louisiana to reallocate the reserve gas in the same manner the volumes had formerly been allocated by the Commission on a temporary basis prior to the abandonment order (that is, to return 39,285 Mcf to Michigan Wisconsin). See 13T2043–76 and Exhibit 136.

But a great deal has occurred in the four years since the abandonment order, and as one of the effects, this return of American Louisiana gas to Michigan Wisconsin is no longer the proposal of the American Natural System (of which both companies, along with Michigan Consolidated Gas Company, are constituent parts). The joint brief on behalf of all three companies recommends that "the allocations of the American Louisiana gas which are now in effect pursuant to the Commission's prior orders in those dockets [G–2306, G–2327 and G–10396] should be made permanent." (Page 3) The point is that, in the meantime, the capacity of Michigan Wisconsin has been considerably enlarged through several other proceedings and the 39,285 Mcf per day (8,285 plus 31,000) are no longer needed by Michigan Wisconsin to meet the demands of their many distributor customer companies. These increases in the Michigan Wisconsin capacity have taken place in the *Midwestern* case, 22 FPC 775, in the *Laverne* case, 24 FPC 177, in the *Northern Natural* case, 25 FPC 1234, and in a very recent expansion program considered and authorized by the Commission under Docket CP62–212, orders issued July 25 and November 1, 1962. Michigan Wisconsin's brief in the present case at page 18 certifies that as a result of these proceedings (including the 1962 application) all of Michigan Wisconsin's "customers will receive the volumes they have nominated."[19] This is said to be true also as to the new communities which sought service from Michigan

[19] A terse example of the working out of this proceeding and of the recent Michigan Wisconsin expansion case (CP62–212) is the supply now provided for the Michigan Gas Utilities Company, which has two divisions, one purchasing gas from Panhandle for service to various communities in southeastern Michigan and the other division purchasing gas from Michigan Wisconsin for service in southwestern Michigan. With respect to its Panhandle supply, the brief of Michigan Gas Utilities requests that its contract demand (formerly 23,700) be increased to 30,000 Mcf per day. The Commission's order of September 25, 1962, approved the sale by Panhandle of the several amounts proposed in their Fourth Amended Application at page 4, which specifies 30,000 for the Michigan Gas Utilities Company. With respect to its Michigan Wisconsin supply, the Michigan Gas Utilities brief points out that its request in this proceeding was to increase its maximum daily quantity from 42,714 Mcf to 47,300 Mcf, but that, as a result of Michigan Wisconsin's most recent expansion program (CP62–212), Michigan Gas Utilities has entered into a service agreement with Michigan Wisconsin whereby its maximum daily quantity would be increased to 49,202 Mcf per day. The net result is to give Michigan Gas Utilities exactly what is now requested in the case of its Panhandle supply and somewhat more than was originally testified to in the case of its Michigan Wisconsin supply.

Wisconsin and which were of concern to the Court of Appeals, as noted at footnote 51 to the opinion of April 29, 1960, in *Michigan Consolidated Gas Company* v. *Federal Power Commission*, 283 F. 2d 204, 222.

This conclusion—that the Wisconsin and Iowa distributor companies of the Michigan Wisconsin line have been otherwise fully supplied—was verified through the following procedure. At the hearing on March 23, 1962 (191T30,-279), counsel for the American Natural System stated very fully the background as set forth above and the new position of the two pipelines (as now contained in their brief), stating specifically that, with its increased capacity, Michigan Wisconsin will be able to meet the increased nominations of all of its customers and still have some 7,600 Mcf per day available for possible sale to new markets. Further, that, upon the basis of its new application, Michigan Wisconsin assumes "that the presently effective allocation of American Louisiana's gas would not be changed." (191T30,283) Their position was then stated that the Commission should now make permanent the allocation of the reserved American Louisiana gas which is now in effect—which is taken to mean specifically to recommend that there now be confirmed on an indefinite basis the allocation to Michigan Consolidated of the entire 57,000 Mcf per day and the entire 59,885 Mcf per day as outlined above (together with the remaining small balance, to make a total of 127,000 as discussed at pp. 856 and 858 of 20 FPC, as to which there has been no question raised). Through the cooperation of counsel, the transcript of their statement of March 23, 1962, was sent to their distributor companies appearing in the case, and no protest or objection or counter-suggestion has been received from any of them, or indeed from any other source.[20] In the service list of the March 23 transcript there appears also the Wisconsin Public Service Commission and the Michigan Public Service Commission, and the latter has responded both by letter and in its brief in support of the proposed allocation.

The need of Michigan Consolidated for the entire amount has been amply demonstrated in the crucible of actual experience through the two winters which followed the actual taking effect of the Panhandle abandonment order, and is further demonstrated by Exhibit 200, Exhibit 201, and through the testimony of its management. See principally the transcripts for September 8 and 14, 1961.

In fact, it is now evident that, if the 39,285 Mcf portion of the American Louisiana capacity were now restored to Michigan Wisconsin, the net result would be to expect or require Michigan Wisconsin to resell it right back to Michigan Consolidated, either through the latter's preemptive rights as a customer of Michigan Wisconsin or through its sale to Michigan Consolidated under the category of surplus gas on the Michigan Wisconsin system. The staff brief joins all the others which comment on this question, and recommends the confirmation to Michigan Consolidated of the 116,885 Mcf per day of American Louisiana capacity. Accordingly, and with no contrary suggestion appearing and that solution being definitely and obviously in the public interest, it is so ordered hereinafter, together with a re-confirmation of the remaining

---

[20] Despite what is said in Opinion No. 371 of December 11, 1962, 28 FPC 979 at p. 982, I do not understand that this failure of those affected to respond in any way is required to be ignored and given no weight or significance since, in this case, each and every one of the distributor companies is an active participant in the case, either as a formal intervener, or as an active witness presenting its needs through testimony and exhibits (with or without the aid of its own separate counsel), or as an affiant furnishing documentary testimony.

balance cited above so as, in effect, to reinstate the order of December 19, 1958, 20 FPC 851, 858, in this regard.

(4) *Municipal Gas Project for the City of Bushnell, Illinois:* Soon after the present phase of this proceeding began in December 1960, the City of Bushnell, Illinois, filed its petition for leave to intervene, which was granted by the FPC order of January 13, 1961. The petition made it plain that its purpose is an order under Section 7(e) of the Natural Gas Act (comprising in effect a condition upon Panhandle's certificate) calling upon Panhandle to furnish natural gas for distribution by the municipality in an amount of something more than 2,000 Mcf per day, the supply lateral line to be built by Bushnell for a distance of 28 miles or so. Their plan was to serve not only Bushnell itself, but three smaller towns enroute and to receive the gas at a connection at a point near Knoxville, Illinois, which is some miles west of Peoria and is located on a lateral line of the Panhandle system which runs west and north out of Peoria for a distance of about 40 miles out to Galesburg, Illinois, just beyond Knoxville. It is the law of this case, as announced in a previous ruling in this same "lead docket" (16 FPC 897, 898), that requests of interveners of this type shall be judged under the requirements of Section 7(a) of the Natural Gas Act, providing that, when it is in the public interest, the Commission may direct a natural gas company to make connection and sell gas to any person or municipality "engaged or legally authorized to engage in the local distribution of natural or artificial gas to the public."

The statute has certain prerequisites or essentials, most of all of which have become the subject of sharp controversy among several parties in the case of Bushnell. In the first place, the Commission must first find "that no undue burden will be placed upon such natural-gas company thereby." In the second place, the Commission may not "compel" the sale of natural gas "when to do so would impair its ability to render adequate service to its customers."

Two or three alternative plans were presented by Bushnell at a number of different sessions of the hearing and all of them are stoutly objected to by Panhandle itself, also by two important public utility distributors in the nearby area (Illinois Power Company and Central Illinois Public Service Company). Further, two particular phases of the program are thought by the staff of the Power Commission to be so questionable as to require its recommendation against the allowance of an order for gas from Panhandle. As in the other matters written up herewith, in view of this very sharp and spirited controversy, there were issued in July and September the certifications on the construction and operation phases of Panhandle's expansion with a reservation of later decision on the subject of Bushnell's intervention. Specifically, the initial decision of July 11, 1962, adopted by the Commission's order of July 27, issued the certificate covering Panhandle Eastern Pipe Line Company's expansion program with, however, a reservation or condition to the effect that the certificate is subject to such further conditions as may be found to be necessary with respect to service for Bushnell, Illinois. In the initial decision of August 23, 1962, confirmed in this respect by the Commission's order of September 25, there were authorized the various increased sales which constituted the end purpose of the expansion program, but in the allocation of Panhandle's available capacity for all of its authorized customers, there was specifically reserved for possible allotment for service to Bushnell, Illinois, the amount of 2,000 Mcf of peak day

capacity (see 28 FPC 529). Hence, no question remains as to the availability of the supply for Bushnell or the jurisdiction of the Commission by order to require service through the technique of a condition now to be attached to Panhandle's certificate.[21]

THE BUSHNELL MUNICIPAL PROJECT

Population in area to be served	Estimated number of customers in third operating year				Reference
	Total	Residential	Others	Percent of potential	
5,490 [a]	1,522	1,323	199	75	Ex. 41, p. 2.

[a] If Bushnell builds to Galesburg lateral.
[b] If Bushnell builds to Canton lateral.

[21] Panhandle has raised the technical, but perhaps very valid, question, that since Section 7(a) of the statute provides its methodology for those seeking gas to obtain it by Commission order, this specific coverage of the subject matter in Section 7(a) precludes the use of Section 7(e) to solicit the same end through the general power to condition a certificate of convenience and necessity. As a matter of statutory construction, the point has a great deal of merit (especially since June 1, 1961, when the Commission adopted part 156 of its regulations calling for very detailed procedures to be followed by those who would seek a Section 7(a) order for natural gas from a pipeline). But the petition here was filed before those regulations became effective and in any event it is not understood that the point is open since the Commission has determined otherwise in this very docket in the order cited from volume 16. Anyway, this petition (as well as that of Milford, which follows) is treated on the merits exactly as if it were under Section 7(a), and it is regarded that if it could not qualify for a Section 7(a) order, it should not be the subject of a certificate condition under Section 7(e).

ESTIMATED MAXIMUM COSTS

Miscellaneous plant	Administrative	Total project	Reference
$90,452 [a]	$294,000	$1,350,000	Ex. 41, p. 2; T. 30, 908.

[c] Assuming sales by Bushnell to its power plant.
[d] Assuming no sales by Bushnell to its power plant.

The table above shows enough of the details to indicate the scope and nature of the project with its alternative forms, but in view of the nature of the objections raised by the various commentators (to the effect that (1) the project is not wanted by the citizens of the town, (2) service is available on a much more practical basis from the Central Illinois Public Service Company's line only four miles away (instead of 30.5), (3) the application does not comply with Section 7(a), (4) the order would impair Panhandle's ability to serve its other customer on the Galesburg lateral, (5) Panhandle is not the closest source of supply, (6) the sale includes an unauthorized power plant use, and (7) it is technically infeasible and its finances are out of line), it will be necessary to review the background in order to assay the objections and to weigh the required statutory findings.

Bushnell is a thriving community of 3,710, located athwart the Burlington Road out of Chicago and 60 miles or so west of Peoria. For 30 years it has maintained a municipal gas system for its residents, which now operates on propane air. With other cities in the locality long since served by the advantages of natural gas, the city authorities of Bushnell have for several years sought an allocation of natural gas for its residents and for those of two or three nearby small towns also supplied by a propane system, but Bushnell has not succeeded in effecting an arrangement for natural gas which would still permit the continuation of their municipal distribution operation. The nearest available source is the line of the Central Illinois Public Service Company, a retail distributor for large areas of the central part of the state and a customer company of the Panhandle line. Central Illinois' pipeline crosses the Bushnell area only four miles to the south and is obviously the most feasible potential source of supply, if agreeable arrangements could be made. As Panhandle's chief engineer tersely testified (195T30,774) ". . . for the life of me I can't see why that [the Central Illinois line near Bushnell] wouldn't be the more practical and more economical way to serve the town of Bushnel." Central Illinois is quite ready and willing to serve "the residents" of the town of Bushnell and in fact, has made an offer to buy out both the electric and the gas distribution systems operated by the municipality. Only a year ago, soon after Central Illinois received an increased allocation from FPC which put it in a position to take on some additional customers, a majority of the city council voted to abandon their proposed

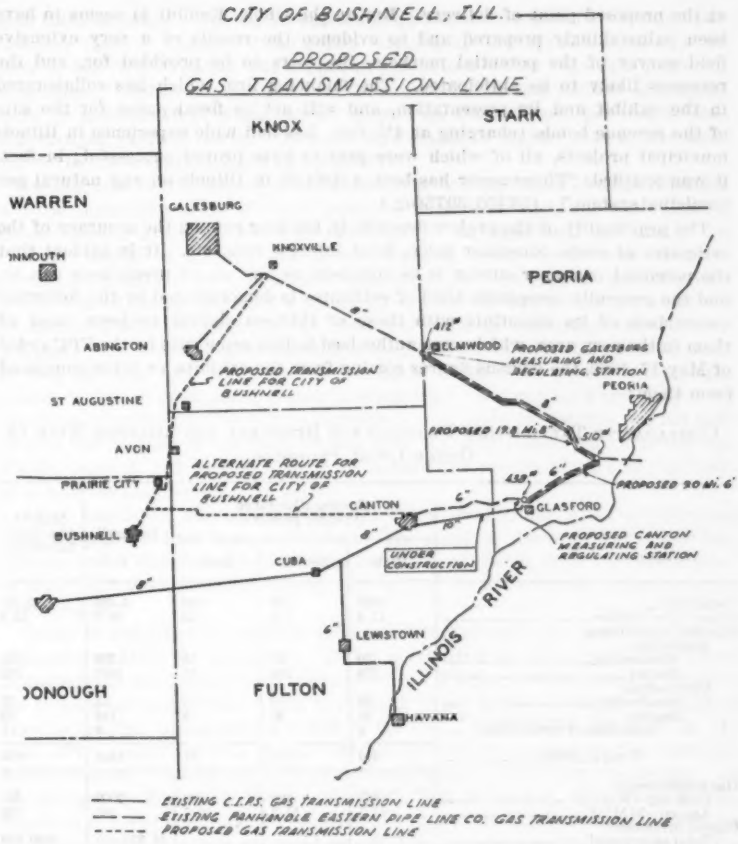
municipal natural gas project and sell out to Central Illinois, but the vote was one short of the plurality required under local law. On the other hand, both before and after that vote, the city council has gone on record unequivocally reasserting its determination to continue municipal operation and seek an allocation of natural gas for it. One such resolution was passed April 3, 1961, confirming the testimony of Mayor Varner at the hearing (Exhibit 41–B); another was passed February 19, 1962, under the aegis of Mayor Lyons, and is in evidence as Exhibit 41–C.

The city's efforts to get a supply of gas from the Illinois Power Company have likewise been unavailing; while the supplier, Panhandle, joins the others in opposing the petition here. It is evident that natural gas service for the people of Bushnell will be denied unless the present petition is successful, or unless the city authorities decide to abandon municipal distribution and sell out their plant to Central Illinois, or unless Central Illinois could be moved (by local law or otherwise) alternatively (a) to furnish the municipal system the supply it needs (which Panhandle is prepared to make available to Central Illinois), or (b) to furnish a transportation or "wheeling" service to carry the gas to a convenient Bushnell connection for an appropriate charge, the gas to come through Central Illinois' line off the Canton lateral of the Panhandle Eastern pipeline. If either arrangement could be effected, the order for the provision of the supply by Panhandle could apparently be accomplished without controversy. But, as the matter now stands, none of those sensible, obvious, practical and economical plans for service of gas to the people of Bushnell appears to be available since the governing authorities of the city prefer municipal operation and the available supplier, Central Illinois, declines to supply gas for the purpose except upon an arrangement for purchasing and operating the distribution system in Bushnell *and* apparently for purchasing Bushnell's electric distribution system also.

In view of that impasse, and mindful of the public demand to find natural gas for the town by some proper means, the city authorities have sought out the help of very capable consulting engineers and financiers and have produced the program or programs which are the subject of their present request for an order from the Federal Power Commission.

To understand the project as well as the objections to it, it is necessary to refer to the map herewith (Exhibit 303) and note the 30–50 mile triangle with Bushnell at the southwest corner, Peoria at the southeast corner and Knoxville near Galesburg at the apex.[22] Panhandle's Galesburg lateral extends northwesterly about 40 miles from Peoria, and it is near the terminus that Bushnell proposes to attach its own lateral (the left leg of the triangle), which will run 30.5 miles southwesterly and through several towns to be served by it on the way to Bushnell. The staff's principal objection seems to be that the length of the lateral makes the project unduly expensive and perhaps infeasible, while all the objectors join in the view that Panhandle's 8-inch line, comprising the downstream or northwesterly half of its Galesburg lateral, does not have available the capacity to serve 2,000 Mcf per day to Bushnell without impairing its service to the Illinois Power Company which serves Galesburg and other towns in the immediate area. On that question, Illinois Power is the only customer so affected because it is the only customer on the latter half of the lateral, that is, from Elmwood on, and Panhandle has recently received authority to "loop" and increase the capacity of the first half of the lateral leading from Peoria as far as Elmwood.

[22] See map on next page.



(From Exhibit No. 363)

It is those issues—the expense of the 30.5 miles supply lateral to be built by Bushnell and the effect of the proposed delivery on Illinois Power—which are the principal subject of the rather strenuous contentions outlined below. In addition, Central Illinois, feeling quite earnestly that its plan for ownership of the distribution system and service by its own staff is the better one for the interests of the people of Bushnell, has undertaken to point out a number of defects believed to cast doubt on the merits and feasibility of the Bushnell program.

Before considering the objections, attention should be paid to the able and helpful exhibit prepared by Bushnell's consultant, E. B. Murer, an engineer with experience in 37 municipal projects. Not surprisingly, some questions were left to be answered at the hearing—for example, it was asserted that no one had made contact with Panhandle at any time before the case began to inquire whether gas was available or whether suitable gas pressure could be provided

at the proposed point of delivery. But on the whole, Exhibit 41 seems to have been painstakingly prepared and to evidence the results of a very extensive field survey of the potential markets, the costs to be provided for, and the revenues likely to be anticipated. The financing firm which has collaborated in the exhibit and its presentation, and will act as fiscal agent for the sale of the revenue bonds (charging at 4% fee), has had wide experience in Illinois municipal projects, all of which were said to have proved successful; in fact, it was testified, "There never has been a default in Illinois on any natural gas municipal system." (3T466, 30T5042.)

The practicality of the project depends, in the long run, on the accuracy of the estimates of costs, consumer sales, bond interest rate, etc. It is evident that the potential customer survey is as complete as any set of predictions can be, and the generally acceptable level of estimates is demonstrated by the following comparison of its essentials with those of thirteen similar projects, most of them in the very area, which were authorized in this same case by the FPC order of May 17, 1962, the various figures coming from the exhibits, or being computed from them:

COMPARATIVE TABLE—NEW PROJECTS FOR BUSHNELL AND MILFORD WITH 13 OTHER LOCAL PROJECTS

	Comparative range (13 other projects)			Bushnell	Milford (see pages following)
	High	Median	Low		
Population	1687	750	230	5,490	2,223
Miles to the pipeline	17.4	1.8	.25	30.5	13.8
Number of customers:					
Residential:					
Non-heating	119	12	18	320	221
Heating	279	215	56	1003	382
Commercial:					
Non-heating	29	6	2	53	21
Heating	20	30	5	143	53
Industrial or institutional	2	2		3	1
Total customers	449	265	81	1522	678
Gas requirements:					
Peak day—Mcf	680	496	102	2000	906
Annual—MMCF	65.2	51.2	10.7	360	109
Capital investment:					
Total as proposed				$1,350,000	$300,000
Per customer	$728	$577	$412	$890	$443
Operating revenue:					
Income				$383,534	$134,060
Expense				154,188	86,680
Net operating revenue	35,440	8,110	2,358	229,346	47,380
Percent of investment	14.2	5.78	2.49	17	15.5
Comparative data:					
Heating saturation (percent)	100	75	64	75	64
Home heating use (cu. ft./DDD)	28.2	25.6	21	28.5	27.8
Peak day Mcf/population unit	1.18	.483	.286	.364	.407
Residential peak day use per population unit	1.07	.316	.22	.3	.285
Peak day Mcf per customer	2.62	1.57	1.26	1.41	1.34
Population units per residential customer	6.83	3.95	1.39	4.15	3.7

Thus the estimates are quite "in line" as to the number of customers expected and the peak day usage in relation to the population, the usage relied upon for the average customer, and the heating saturation to be expected (75%). The net revenues as a percentage of the investment are extraordinarily high, suggesting the costs be scanned with greater care, since the debt service ratio depends

upon their accuracy. The figure outstandingly out of line is the investment per customer ($890). Plainly, if the homes "signing up" for space heating fall far short of the 76% expected, the confident predictions would require a profound reappraisal.[23] Offsetting this a little is the substantial present number of propane users for heating, all of whom can be counted on since natural gas will be one-fifth cheaper, perhaps better. Oil users may expect to convert over a time since gas will be one-seventh cheaper (Exhibit 41).

Turning now to the battery of criticisms—the first and most obvious objection is to the duplication in the 30.5-mile lateral to be built and paid for while Central Illinois' line is available only four miles away. As explained, this line is not available except on unacceptable terms. Nothing would—or at least should—prevent Bushnell and Central Illinois from even now arranging an equitable sale or carriage of gas for Bushnell's municipal system (in which case a transfer of Panhandle's delivery point for the 2,000 Mcf could be authorized without controversy); nor does any other solution so clearly comport with the public interest, as long as those who speak for the residents of Bushnell prefer a municipal system, which, it would seem, is their prerogative.[24] But any such obviously more desirable solution must be left to suggestion only, since the parties are not subject to the controls of the Natural Gas Act. Central Illinois offers to buy out the city system, but only as a tie-in to include the electric plant also; anyway, as of now the plants are not for sale.

As to feasibility, the protestants point out several minor items of operating costs supposed to have been overlooked. The response shows all but one or two were included and that ample revenue margin is available, since the debt service of about $100,000 a year will take up only half of the net revenues projected after three years.

There is disagreement whether the capital cost should add something for the right of way along the state road. If that is required, the 25% contingency added to the installation estimate will take care of it. Further, we are asked to construe an Illinois statute of 1961 which is thought to put a road block in the right of way by denying condemnation rights to the city. Central Illinois' brief (p. 17) asks FPC to apply the rule of *expressio unius exclusio alterius* for this statutory interpretation. The proper rejoinder to that plea is *forum non conveniens*. As it was put by Examiner Weston (G–16842, Nov. 9, 1962, p. 25), "It is not the function of this Commission to consider and decide the highly technical questions of Illinois municipal law advanced by CIPS in opposition to the proposals of the three municipalities for new gas service." If this problem should operate to debar the right of way, the line will not get installed, the gas will not be sold, and no harm will ensue from the FPC certificate issued for it.

Panhandle objects that one-fifth of the annual sale will be used by the city in its electric power plant, which has all the appearance of a non-jurisdictional direct sale. But the law does not in so many words delimit the new sale to that quantity resold by the buyer in local distribution. Finally, if there is a problem of which tariff rate applies, that will come up when the service agreement is filed.

Staff's objection that the bond issue of over a million dollars is too great a burden on the city seems not to give adequate weight to the plan which calls for revenue bonds only. That the city had one default on one payment of bonds in the past is hardly surprising for a city running four utilities for many years; also it occurred on the propane system whose high rates have inhibited sales, an

---

[23] In the case of two other Illinois towns, the Illinois Power Company witness predicts an 80% saturation (32T5480).

[24] *Panhandle E. P. L. Co.*, FPC order dated February 2, 1956, G–1705, 12 PUR 3d 376.

obvious demonstration of the need for gas. Anyway, the finance firm sees no difficulty about marketing the bonds.

There remains the serious and not easily disposed of problem about whether the supply is available, at least without impairing Panhandle's "ability to render adequate service to its customers" (§ 7(a), N.G.A.). The point is this. Panhandle's lateral runs from Peoria out to Elmwood (20 mi.), thence about the same distance on to Galesburg, near which point (i.e., at Knoxville, near the far end of the line) Bushnell wants to tie in its supply lateral. When this case began two years ago, Panhandle's lateral was more than fully occupied by the needs of the Illinois Power Company for Galesburg, which took up its full capacity of 20,000 per day. But two developments have altered the picture. Panhandle's expansion program now authorized calls for a duplicate, parallel pipe for the first half (Peoria to Elmwood), and the plan now is to deliver 30,000 Mcf per day to Illinois Power at that point, or at least meter it there. Part of that "take" will go through the present line on to Galesburg; the rest through a new paralleling pipe built or to be built by Illinois Power. Bushnell sees the old pipe (Elmwood to Galesburg) thus relieved of quite a part of its burden and wants the 2,000 Mcf per day for them put through the Panhandle capacity so left over. Illinois Power protests strongly they have a right to continue to benefit by the full capacity of the old line; that they did not build the new one for the purpose of benefiting the municipal operation of Bushnell (even refusing to let Bushnell share in its use *and* its costs, 33T5499).

Both Panhandle and the staff object to the Bushnell plan because the present (or old) lateral to Galesburg is *now* fully taken up by service to Illinois Power and it was thought not clear that the new Illinois Power parallel lateral would leave any room available for reassignment in the old Panhandle lateral. That latter question plainly is controlling, and the evidence on the subject was not notable for candor, clarity, and completeness. By the time this program was developed at the hearing in relation to Panhandle's latest expansion, the Illinois Power witness had long since come and gone. The Panhandle witness knew of the new Illinois Power pipe but did not know whether it was or is yet completed (195T30,783). At one point it was said that even with the new one, the old lateral will still be needed for Illinois Power, but at another point it was made clear that the new sale to Illinois Power (30,000 per day, increased from 20,000) could equally well be split evenly between the two lines (195T30,716, *et seq.*). Just why it was thought this split should be for Illinois Power to decide was not made clear. Bushnell points to an Illinois Commerce Commission certificate to Illinois Power for an 8" line at this point, thus positing the same 20,000 capacity as the present Panhandle lateral. But this certificate was not in evidence and need not be relied upon since the Panhandle engineer was clear that half the new sale could go through the new line, which would leave only 15,000 for the old one to carry and a capacity remaining of 5,000 to carry the 2,000 for Bushnell. Illinois Power protests this is a discrimination against it, but just how this is so is not perceived. The order herewith is to be effective when the Illinois Power line goes into service; *this* order does not require it to be built. But when it is built and available, the previous need of Illinois Power for all of the old capacity, and its entire dependence upon it, will disappear, and with it whatever pre-emption the former use resulted in. It is hardly fitting for Illinois Power to continue to monopolize the old line *after* its new construction provides it another route in part to satisfy its needs. There is no evidence that Illinois Power can or will use both lines to capacity, nor any reason apparent why the delivery cannot be equal, or nearly so, through

the two lines, with ample margin of capacity left in the old one for Panhandle's sale to Bushnell.

The foregoing conclusion is without reference to Panhandle's plan to "abandon" its old lateral (Elmwood to Galesburg) and sell the facility to Illinois Power, of which this record is not unaware (195T30,729). But Panhandle's petition for FPC authority for this action is still pending and unheard (under CP61–257), and is not part of this otherwise omnibus proceeding. As the staff pointed out at the hearing, there would be no difficulty in providing for continued service for Bushnell in the event Panhandle's sale of its line is found to be in the public interest (195T30,840). If there is doubt on this score it would not be inappropriate to sever the Bushnell issue at this time and consolidate it with CP61–257 (assuming this would not require a repetition of the expense of the proofs already developed on all sides), but this proposal is not within the jurisdiction of the hearing examiner.

Neither does this decision pass one way or another on Bushnell's second-choice lateral to the east, to connect with Panhandle's Canton lateral, consideration of which will not be necessary unless the other solutions above discussed shall all fail of consummation.

One final word. The objectors point out a substantial retail rate differential favoring Central Illinois' tariff in effect should they buy out the Bushnell system. There can be no doubt this apparent betterment was not lost upon the citizens of Bushnell and their representatives who voted nevertheless to pursue their pleas here; anyway, Bushnell's brief points out their Exhibit 41 uses outside, maximum rates which may, if there is success and prosperity, be reduced.

Of the many choices of possible solutions, and out of the welter of conflicting recommendations, it is concluded the people of Bushnell are best served by an order for a Panhandle connection near Knoxville, effective when the new Illinois Power lateral goes into operation, and upon the bases stated, it is found that no undue burden will be placed upon Panhandle thereby, nor will it impair its ability to render adequate service to its customers.

(5) *Service from Trunkline for Milford, Illinois:* Like Bushnell the Village of Milford, Illinois, was permitted to intervene in the expansion case of Trunkline Gas Company (CP60–22, phase two), upon the averment that the Village is authorized under the law of Illinois to own and operate a gas distribution system, which it proposes to construct, for the service of which an allotment order upon the nearest supplier, Trunkline Gas Company, was sought in the amounts of 906 Mcf (peak day) and 109,800 (annually). It was agreed at the hearing that Trunkline now has the supply available, and when the expansion certificate issued to Trunkline in July 1962, the order adopted by the Commission on July 27 contained a reservation for any condition found necessary with respect to service to Milford.

Briefs in opposition have been filed by Trunkline, by a nearby distributor (Central Illinois Public Service Co.), and by the staff of the Federal Power Commission. The latter is here first treated.

The staff brief points to the lateral-line leasing arrangement which is part of Milford's plan and rests upon the legalistic objection that the lessor of the lateral pipe (13.8 miles) would somehow become subject to the Natural Gas Act, *ergo*, lacking a certificate application from the lessor, "the Milford project is deficient" and Milford's application must be denied. Except for the town's lease from the contractor-builder, the staff recites no objection to the program.

The objection is put simply in the staff brief at p. 77 to the effect that the lessor (Panama-Williams Corporation) "is a person who would be transporting

natural gas in interstate commerce, within the meaning of Section 1(c) of the Natural Gas Act." But at page 74 it is put contrariwise that the functions of operation and maintenance will be performed by Milford.

It is unimaginable that the arrangement has any such legal consequence for Panama-Williams, which is nothing more or less than a contractor with a title lien to secure its price.[35] The preliminary agreement is in evidence (Ex. 40–D) and contains nothing to suggest that the lessor-builder will or could operate the facility or control it; the responsibility as well as the activity are all Milford's. So is the burden of paying the expenses of operation. It would be novel doctrine that bare legal title makes the title lien holder subject to the Natural Gas Act for the acts of the lessee. *El Paso*, 19 FPC 371, 373.[36]

Turning now to the merits of Milford's program, it is thought significant that the present one is the third plan devised and submitted at the hearing. The first program—the only one which the voters have been called upon to consider—provided for the Village to construct and operate its municipal distribution system, financing it through the issue of revenue securities in the amount of $320,000 and the gas to be received at the town border from the Midwest Gas Pipe Line Company, an organization which had not at the time engaged in such business (or apparently any other) and which was controlled by the financing firm employed to market the securities referred to. This was the plan approved by a two-to-one vote of the electorate during 1960.

The second plan was that presented at the hearing in 1961, by which time participation of the Midwest company had dropped out of the picture. It was then proposed that the town should issue securities to a total of $530,000 in order to build the distribution system as well as the 13.8-mile transmission main leading south and east to a connection with the Trunkline Gas Company and also a small distribution system in the village of Wellington, which would be on the line half way between Milford and the Trunkline connection. By this time there was produced an ordinance of the village board of Wellington, enfranchising the Village of Milford to distribute gas in Wellington. The village authorities of Milford are advised it was not and is not necessary to return to the voters with the new plan. However, at the hearing in 1961, after certain questions had been raised and doubts expressed, it had been indicated the village board would be advised to the contrary.

A year later, as the hearing was drawing to a close, the village returned with its third and present plan. Under this one, the Milford distribution system is to be built as before through the issue of revenue certificates, but the capital cost to the distribution system has now been cut to $300,000 (Exhibit 40–G). To get the gas from Trunkline the village has entered into a preliminary agreement with a contractor, the Panama-Williams Corporation, to build a 13.8-mile transmission line and also to build the distribution system in Wellington, the small village to be served enroute.

It is this phase of the new program which has given rise to the major controversy. The preliminary agreement (Exhibit 40–D) calls for a "lease contract" to be entered into under which Panama-Williams will construct the transmission line and the Wellington distribution system, and grant to Milford

---

[35] For a like view as to a similar arrangement of Panama-Williams with other Illinois towns, see the initial decision of November 9, 1962, in *Tennessee Gas Transmission Co.*, G–16842, at p. 772, *infra*.

[36] Compare, for a ready example, the Howell storage field already certificated to Panhandle in this case, to operate as a facility in interstate commerce. No one suggested that Panhandle (the "Natural gas company") owns or should own the land comprising the storage area, instead of depending on gas storage *leaseholds*.

the exclusive and irrevocable right to use and to operate both facilities, the plan being for the Village to pay all expenses of operation and to keep the facilities in repair. The Village also has an option to buy both facilities within one year for a purchase price of $200,000, which may be paid either in cash or in 5% gas revenue bonds, which the contractor agrees to accept at par. Otherwise, the ownership remains in the contractor, subject to a "monthly lease charge" of $1,800 (or roughly 1% per month on the estimated construction cost) for a period of 25 years, at which time the facilities will become the property of the village and no further payments will be made. Whether this contract is called a lease or a contract of sale or something else, its provision is clear that the contractor is the builder only, and that it has no responsibility or powers in connection with the operations, while the village is the renter or purchaser, is the exclusive operator, pays all the maintenance expense, and is eventually the owner when it gets it paid for. It is also clear that the payment obligation of the village is limited to the revenues to be derived from the operation; it does not appear to be a general obligation of the town.

The new program sets up the monthly lease payment to the contractor not as a debt service or as a repayment of capital, but instead as an expense item similar to the cost of the gas itself. The result is to project annual revenues for the third and subsequent years at $134,060, from which three items of cost are to be subtracted, leaving a net anticipated revenue of $47,380. The three cost items are as follows:

Estimated gas cost	$53,802
Estimated operating expenses	11,278
Annual lease charge	21,600
Total	86,680

Subtracting the total expense from the anticipated revenue of $134,060, there is predicted the net revenue of $47,380. Turning to the new exhibit 40–G, the annual debt service for the $300,000 bond issue for the Milford distribution system is seen to range from $17,750 up to $23,000 (30-year basis), which means a ratio of 2.4X. This appears to leave a little over $5,000 a year for bond reserve, a like amount for depreciation, and an annual surplus upwards of $25,000. Figured on a 20-year basis, there still remains a debt coverage of 2.0 times the debt service cost. This is an average figure, with none of the annual figures falling below 1.7.[27]

The data offered to demonstrate the reality of this net revenue of $47,380 is listed for convenience on the table on page 742, above. Serving a population area of 2,223 (all but 500 of them being in Milford), there are expected to be attached 678 customers, 64% of them for heating, and there will be needed 906 Mcf on a peak day and about 109,000 Mcf annually. Note that the net revenue is 15.5% of the basic investment.[28] Note also that the comparative figures are quite in line as to the predicted usage per customer and per unit of population. Finally, the investment per customer is $443, which is much less than Bushnell's since the transmission line is not counted in.

The data referred to is from a program prepared by the same engineering firm that produced Bushnell's plan; the bonding house is also the same. Exhibit

[27] Note that even regarding the lease payment as an added burden of the debt service, to a total of about $43,600 per year, the planned net revenues of $68,980 exceed that figure by a ratio of 1.58X, well above the minimum standard (1.5).

[28] If the option plan should work out to pay for the transmission and Wellington lines through revenue bonds toward the end of the first year, the investment figure becomes $500,000 and the annual net becomes 13.7%.

40 indicates a careful weighing of the potential markets, costs and revenues. It results, in view of what has been said, that the feasibility of the project for Milford and its neighboring town must be regarded as acceptably established."

That the town's markets can support a gas distribution system is also shown by the case in opposition—Central Illinois has said a number of times it stands ready and willing to serve Milford when it has the gas available (30T5098; 167T26,629; Brief, pp. 11, 20). Central Illinois still stands on the validity of its gas franchise issued by Milford in 1931, while Trunkline's Reply Memorandum filed June 1, 1962, advises us that Central Illinois has now contracted for an adequate gas supply to exercise its franchise. There was some talk of Central Illinois planning to apply for a state commission certificate,[30] but no evidence of any such action came in by the time the record closed in April. If these assertions of readiness and supply are true, the obvious question is: Upon what does Central Illinois await action in proof of its protestations? Their brief filed here in May 1962—long after their supply problem had been the subject of agreed settlement[31]—calls flatly for the denial of Milford's petion but not one word appears asking for the help of FPC to get gas to Central Illinois for Milford. If Trunkline's brief is correct that they have arranged for the gas, no further order from FPC would be required. The inaction casts telling doubt on the basis for the opposition here.

With the feasibility of the project established—indeed admitted by the paucity of the contradiction—it remains to consider the objections which Central Illinois moves for consideration, strongly seconded by Trunkline. Central Illinois' brief is an extremely able and persuasive showing of outright *ultra vires* illegality of the program, so much so that in another forum it might well be prevailing. A mere listing of the legal defects charged is enough, without discussion—

(a) The voters' approval was on the first plan, for a distribution system costing not over $320,000, and there has not been taken the statutory vote on the present plan, which involves at least $200,000 more.

(b) The Milford voters did not approve, or even know about the present plan for the distribution system (and program) in Wellington or the lease-purchase program on that system and on the 13.8-mile transmission line. The two will cost $200,000 if bought within one year, or $540,000 if bought on the lease-purchase plan at $21,600 per year over 25 years. Under Illinois law, the ordinance to be approved by the voters "shall set forth the action proposed, shall describe the plant, equipment, and property proposed to be acquired or constructed . . ." (Chap. 24, Sec. 11–117–3).

(c) Although the contractor apparently is to provide the right of way for the line, there is no showing it has the power of eminent domain [as to which see p. 743, above].

(d) Central Illinois' franchise is still in effect, it has not expired for non-user, and their service to Milford would be at rates lower than those projected for Milford.

---

[30] Trunkline casts the doubt that Panama-Williams has not been here to show it can finance the $200,000 construction. But this seems to give too little weight to the lease-purchase agreement, under which the contractor must furnish a performance bond (Ex. 40–D).

[30] A private utility needs one in Illinois, a municipality does not (167T26,649).

[31] In February 1962, Central Illinois agreed to a new winter contract demand of 94,000 Mcf, up from 53,833 (Ex. 276), and this was agreed to by Panhandle in its application filed February 19 and by FPC in its rulings in July and September.

(e) The lease-purchase agreement is in law a purchase and sale, in a form not authorized by statute and without the required voters' approval. That is, the lease-purchase is a form of financing but not one of the particular forms the statute specifies. The total obligation of the lease over 25 years is far more than double the cost of the facility (excluding, of course, interest), while the law limits revenue obligations to only 110% of the cost of the property.

(f) The municipal bond counsel's opinion offered in evidence (Exs. 40–E, 40–F) covers only the original $320,000 issue, not the further obligations of the lease-purchase agreement.

(g) For the reasons stated, Milford is not "legally authorized" to engage in local distribution, a requirement of Section 7(a) of the Natural Gas Act.

Trunkline's memo seems to endorse the above and add one or two more—

(h) The attachment order under Section 7(a) must be with "the facilities of" an authorized distributor, which Panama-Williams (the legal owner) is not.

(i) There is a conflict between the ordinance and the lease-purchase contract as to whether the two obligations may share ratably in the revenues of the system.

The staff brief adds the further doubt (apart from that disposed of above) to the effect that the $200,000 optional purchase from Panama-Williams is cost plus financing to its most unprotected degree.[30]

This battery of objections does not go unnoticed in Milford's reply brief, which covers 33 pages, citing 33 cases and other authorities (14 of them Illinois court decisions). Its principal answer is that the demand for a new vote of the townspeople overlooks that the lease-purchase plan "does not provide for the construction and ownership of the transmission lateral by Milford." (P. 10.) [But note that it does call for *ownership* by Milford after the 25 years of "rental" payments, Ex. 40–D.] *Second*, the formal opinions obtained from the bond counsel make another election unnecessary. *Third*, the authorities cited by McQuillin, the authority relied upon for the claim the lease is really a purchase, do not support the result asserted (pages 13 and 14 analyze the cases cited in McQuillin on Municipal Corporations, none of them Illinois cases, while the next five pages analyze the Illinois cases). *Fourth*, the lease-purchase is not a matter of financing at all, but rather an operating mechanism to bring in the gas, i.e., a current expense. As such it is not subject to the statute regulating acquisition of a utility, but is *infra vires* under the implied powers of municipal corporations acting in their proprietary capacity, not subject to judicial revision. *Fifth*, the approval by bond counsel should allay any doubt (Exs. 40–E and 40–F, but *not* Appendix I to the reply brief, which is received out of time and is inadmissible). *Sixth*, the Central Illinois rates may not turn out to be lower; anyway the voters knew of the comparative levels. *Seventh*, the 1931 franchise is not exclusive, it is forfeit for non-user, and it has been revoked.

In this conflict of authority on the law of Illinois, the jurisdictional question must precede the merits. When there appears a conflict between two competing private utilities for the same town, the Commission wants the local authorities to decide (see the Commission's order of July 5, 1962, in this case, rehearing denied September 4, one Commissioner dissenting). When the conflict is between an authorized utility distributor and a proposed municipal operation, the Commission wants it to be determined locally, not by the FPC (Panhandle Eastern P. L. Company, G–1705, February 2, 1956, as noted at 12 PUR 3rd 376).

---

[30] It is true the contractor *might* profit by 25% or so on the whole job, or *might* lose the same amount or even more. That is not "cost plus" financing at all—see generally Reyes, "The Responsibility of a Government Cost Type Contractor" (1962), 22 Fed. Bar J. 68.

As applied to the present question, unless the Natural Gas Act requires the Commission to recapitulate the functions of the courts of Illinois, it would seem the same policy would apply where the only question is one of interpretation of the local statute and a reading of the judicial opinions as to whether the particular type of program proposed meets all the technical requirements of the local law. In Illinois (unlike Iowa, which was the subject of the July order just cited), the state public service commission stands ready to make initial determination of these questions so far as concerns the authority or power of a private utility, while the courts of Illinois appear to stand ready, willing and able to decide any such question as to the powers and prerogatives of the municipality and whether a particular plan proposed to go into effect meets the various detailed requirements of the statute—the very question such as here posed by Central Illinois (see the many decisions cited in the briefs of Milford and Central Illinois, and especially *People* v. *City of Paris*, 380 Ill. 503, 44 NE 2d 1954, which was a *quo warranto* proceeding to test the power of the city to issue certain public utility certificates, that is, preliminary revenue bonds, under the Municipal Ownership Act).

The problem of course is that, while the town has asked for a condition on Trunkline's certificate under Section 7(e) of the Natural Gas Act, it is the understanding, as stated, that the case is to be tried according to the tests of Section 7(a), which is the statute's specific coverage of the subject matter. That subsection is the basis for the Commission's proposed order on the pipeline to sell natural gas to, as the statute says, "any person or municipality engaged or legally authorized to engage in the local distribution of natural or artificial gas to the public . . ." It is the opposition's case that the apparent authority claimed by the Village of Milford on the basis of the Municipal Ownership Act of Illinois and the implementing election is deficient for the many and various reasons outlined above, *ergo*, the municipality is not "legally authorized" and does not qualify for a Section 7(a) order.

If there were no Illinois common law courts with primary jurisdiction to decide the question so well raised, it is evident Section 7(a) would require the Federal Power Commission to delve into and pass upon this question of local law. But as the many cases cited in the briefs so eloquently demonstrate, the Illinois courts are available, apparently to Central Illinois or anyone else, and whether a certificate is issued by FPC as requested or is not issued, the entire body of questions raised may be taken to the competent court by Central Illinois or by a taxpayer or others in interest. In contrast, the commanding purpose of Section 7(a) of the Natural Gas Act is to provide under federal law the order on the interstate line to furnish the gas, which, it will be recalled, the state law is not competent to give—as decided in a case involving this very protestant, *Illinois Natural Gas Company* v. *Central Illinois Public Service Company* (1942) 314 U.S. 498, which was an appeal from the Illinois Supreme Court.

The opposition briefs here, which assume without argument that the FPC must pass upon this collection of local legal issues, evidently read the words of Section 7(a) "municipality engaged or legally authorized to engage" to mean or at least to intend and be interpreted as "municipality which the Commission determines has complied with all the requirements of applicable state law permitting it to engage." It seems quite unnecessary to the purpose of the federal law so expansively to interpret the language quoted. If, rather, the words "legally authorized" mean merely "prima facie or apparently legally authorized", then the Commission's responsibility is discharged by noting (1) there is a municipal ownership act which calls for a local vote, (2) the local vote has

been had, (3) the outcome is favorable, and therefore the ostensible legal authority is fully demonstrated. To go beyond that, and try the many and devious questions peculiar to the local law of Illinois which are recited above would seem to call upon the Commission to step out of its normal regulatory function and supplant the regularly established courts of the State of Illinois which have the responsibility, the power of authoritative decision, and the special background so obviously called for. It is this sort of approach which is the very foundation of the doctrine of *forum non conveniens* as discussed above in the case of Bushnell, and it seems even more applicable here. Compare the notes at 94 L. ed. 879, 883; 3 L. ed. 2d 1827, 1828, citing cases to the effect—

> The United States Supreme Court has increasingly recognized the wisdom of staying actions in the federal courts pending determination by a state court of decisive issues of state law.

It would seem to be enough that Milford has shown that there is a law under which towns in Illinois may undertake such programs and they have received the favorable vote along the lines called for by that act. That makes a case of *prima facie* legal authorization and complies with Section 7(a). The many and diverse further problems of local law should, it would seem, be addressed to the courts of Illinois in an appropriate proceeding.

Accordingly, the order here subjoined makes provision for a supply of gas for the Village of Milford.[23]

(6) *Panhandle's Request For a Certificate Covering a 3-mile Lateral at Defiance, Ohio (CP60–60)*: The pipeline construction program presented by Panhandle in its Fourth Amended Application filed in February 1962 (designed to accomplish a one-third increase in the capacity of its entire system), involved "looping" of its main line for many miles at about a dozen different points, adding compressor station capacity and lateral line looping or replacing of 127 miles at 10 different points, all coming to about $68 million dollars of investment. Each and all of the items except one, a 3.11 mile lateral of 6-inch line at Defiance, Ohio, costing $87,000, was authorized by the FPC order of July 27 in this proceeding, with no question or objection raised as to any of the rest of the many pipeline construction projects. In view of the objections raised in the staff brief to this one item, it was reserved from the authorizations previously granted, and now remains to be decided.

An exhibit with the application (F–4) shows that the new line replaces or duplicates the *latter* half of the Defiance lateral off the main Panhandle system, the new pipe attaching at the mid-way point where there is also the connection for service for distribution to the city of Defiance. The new pipe extends beyond that point for a little over three miles and apparently is to serve two factories located a mile or two to the east of town. To the FPC staff, the new facility appeared to be entirely for service to the two interruptible industrial customers, whose need for the increase was thought not to have been explained. Nor, apparently, was it clear whether the cost was planned to be added to Panhandle's total rate base, and if so, why. Panhandle responds that the need was fully explained at the hearing, citing the transcript at 194T30,678–94.

A review of the materials does leave one or two uncertainties; particularly it is not quite clear which increase in service is the occasion for the added in-

---

[23] Surely no answer is really needed to Panhandle's point (see par. (h) on p. 749, above), which seems to be that a section 7(a) order for attachment to "the facilities of" a distributor must somehow be read to mean facilities owned, but not facilities leased, by the distributor.

vestment. Compare, for example, the answer given on page 30,678 with that on 30,693. On the other hand, the item is extremely minor compared to the tremendous scope of the entire program and it would be surprising indeed if fuller attention to and better explanation of this minor phase could not have (or could not now) result in an entire allaying of the staff's doubts. When the questioning of a proportionately very small item does not reach its turn until the 194th day of the hearing, it is also not too surprising that the inquiry fails to satisfy all parties. Conceivably, by a full study of the exhibits, the testimony and the several briefs, it might be possible for the initial and the final decisions in this matter now to come to a satisfactory or at least a sustainable conclusion, but the real doubt is whether the Commission should be called upon to make this minor determination at this stage of the record. The three pages of the February application which refer to this 3-mile pipe were perhaps rather lost in the two-inch volume containing the entire expansion program; anyway, since the hearing had already gone on for over a year, there was no opportunity for extensive staff studies and for working out such details as this at the staff level, as would normally be expected. The better course at this time would seem to be to reserve approval on this small item, by means of denial of the application without prejudice, in the expectation that it can be resubmitted separately, in small compass, and without expense since the present records can be incorporated by reference. Upon such resubmittal, with somewhat fuller explanation of the need and clearer indication of the effect of the investment on the jurisdictional customers, it would seem quite possible that a satisfactory solution could be worked out by the staff and could be processed under what is known as the shortened procedure, without the need for further hearing. Upon that basis—it being made clear that this is not a definitive ruling on the merits—this small and particular phase of Panhandle's application is herein dismissed without prejudice.

(7) *Direct Sale to the National Distillers:* Not listed in the Commission's general order of December 1, 1960, as one of the subject matters of this consolidated proceeding, and not adverted to in any way until the closing sessions of the 199-day hearing, a new subject is discussed in the staff brief (pp. 64–67), namely, the transportation and delivery of gas by Panhandle to an industrial firm located at the junction of the Panhandle and Trunkline pipelines at Tuscola, Illinois. The point is that this interstate transportation was authorized by FPC some years ago in a decision (12 FPC 686) that, according to the present brief, imposed certain limitations on the daily quantities delivered which come out to 5,156,000 Mcf per year, but the deliveries projected at the completion of the present expansion program are said to exceed that limit somewhat, for a total of 5,508,000 Mcf. It is said the delivery has a substantial effect on all rate payers beyond the plant; that is, in Indiana, Ohio, Michigan and Ontario, because the effect of the sale is to "strip" from the natural gas stream its hydrocarbon content in excess of about 983 Btu,[84] which results in the customers along the line receiving gas at about the minimum heat content which the tariff provides for, with, it says, the revenues retained for the benefit of Panhandle and no credit to its jurisdictional cost of service. Staff's recommendation is for a "cease and desist order against the deliveries of natural gas" to the National Petro-Chemicals plant in excess of the authorized quantity.

---

[84] For a discussion of this phase of Panhandle's operations, see Opinion No. 350 of January 15, 1962, 27 FPC 35, 47; also Opinion No. 344 of April 27, 1961, 25 FPC 787, 797.

There were a few questions and answers at the hearing which, it now appears, related to this suggestion made, but the actual point was never fully disclosed, responded to or comprehended. Panhandle's reply brief, filed two weeks after the staff brief, says the ownership of the plant referred to is now in the National Distillers and Chemical Corporation, but Panhandle pointedly denies the staff's suggestion that the jurisdictional customers along their lines are disadvantaged, also denies that its delivery exceeds the authorized totals, and generally protests the proposal for a cease and desist order. "Neverthless", adds the brief, "Panhandle is currently reviewing estimates of the usage at Tuscola, and will, if necessary, obtain such modifications of the contract and of the authorization, as may be indicated."

It is obvious from this brief summary that the issues upon this point are not clearly defined, the evidence is not fully developed, and there is nothing ripe for decision. For example, both briefs refer to Exhibit 281 for the data as to the proposed delivery in the coming three years, but nowhere in that exhibit is there found the name of this putative buyer, either in the version used by the staff or the version reported by Panhandle. (The coincidence of the figures listed in Exhibit 281 for three sales to the "U.S. Industrial Chemical Company" suggests that firm may quite possibly be the one the parties are referring to, and it was so testified when this new subject was first heard of on the one-hundred ninety-fourth day of the hearing, T30, 249). Among other deficiencies of the record, there is no indication that the buyer—by whatever name known—has been placed on notice of the question raised in this proceeding about the full continuance of its supply.

A "cease and desist" order as recommended by the staff carries with it most serious implications[36] and is, or should be, issued only after a full adjudicatory process as contemplated by Section 5 of the Administrative Procedure Act. As in the case of other types of administrative action, those charged and called upon to defend their conduct are entitled to advance notice of the nature of the accusation and of the evidentiary conclusions to be drawn against them.[37] This is seen as a specific requirement of Section 5 of the Administrative Procedure Act, Section 14 of the Natural Gas Act, Section 1.6, 1.9, 1.19 and 1.20 of the Commission's rules, perhaps also of due process, and, indeed, of elementary ethics.[37]

What is more, on purely practical grounds there is not called for at this stage the indictment which a final cease and desist order of the Federal Power Commission would necessarily imply. Panhandle is one of the largest and oldest of the major interstate pipelines and has been subject to the Natural Gas Act ever since its enactment in 1938. The staff is not dealing with a fugitive, nor is there the type of situation which in another field (internal revenue) induces a jeopardy assessment of taxes. It is clear enough that the staff has a basis for making inquiry and for requiring Panhandle to examine its operations in depth and to respond in full detail, all of which should be completed *before* the Commission is expected to pass upon the alleged dereliction. In that view, all that is called for at this stage is a simple letter from the staff, pointing out the questionable appearances and calling upon Panhandle for such explanations and reformations, if any, as may be indicated. It will then be time enough to issue

a formal "show cause" order, if some question still remains, and set the matter for separate hearing under its own docket, uncomplicated by its admixture in the present proceeding, which involves a dozen or more parties, two dozen or more separate issues, 50 or more interveners, 700 or more exhibits and items by references, and 30-odd thousand pages of transcript.[38]

FURTHER FINDINGS AND CONCLUSIONS

Upon consideration of the record and briefs, it is further found and concluded that:

(1) Panhandle Eastern Pipe Line Company, Trunkline Gas Company, American Louisiana Pipe Line Company, Michigan Wisconsin Pipe Line Company, severally are "natural-gas companies" within the purview of the Natural Gas Act, able and willing properly to do the acts and to perform the services herein proposed and to conform to the Act and the requirements of the Commission thereunder, and their facilities, and interstate transportation and sales for resale, are subject to the jurisdiction of the Federal Power Commission and the requirements of Section 7(c) of the statute.

(2) The transportation of gas by Panhandle for the service of the B. F. Goodrich Company in Indiana and the General Portland Cement Company in Ohio will be in interstate commerce and is and will be required by the public convenience and necessity.

(3) The continued delivery by American Louisiana to the Michigan Consolidated Gas Company of the gas allocated therefor by the Commission's order of December 19, 1958, G–10396, 20 FPC 851, 858, par. (C), is required by the public convenience and necessity.

(4) The certificates of convenience and necessity issued to Panhandle and Trunkline by the decision of July 11 and order of July 27, 1962, herein, are required by the public convenience and necessity and desirable in the public interest to be conditioned to require service by Panhandle to the City of Bushnell, Illinois, and by Trunkline to the Village of Milford, Illinois, as set forth above. Bushnell and Milford are municipalities authorized to engage in the local distribution of gas to the public. No undue burden will be placed upon Panhandle and Trunkline hereby, nor will this action impair their several abilities to render adequate service to their customers, respectively.

(5) The approval of Panhandle's Fourth Amended application, CP60–60, for a certificate authorizing a 3.11-mile pipeline for its Defiance lateral should be withheld.

ORDER

Accordingly, *it is ordered*, Subject to review by the Commission, that:

(A) Certificates of public convenience and necessity are hereby issued to Panhandle Eastern Pipe Line Company covering:

(i) The transportation of gas to the B. F. Goodrich Company plant in Indiana, as described above; and

(ii) The transportation of gas for sale to the General Portland Cement Company plant in Ohio, as described above.

(B) The allocation of the gas supply of the American Louisiana Pipe Line Company to the Michigan Consolidated Gas Company as contained in the Commission's order of December 19, 1958, G–10396, 20 F.P.C. 851, 858, par. (C), is

[38] *Cf. F.T.C.* v. *Gratz*, 253 U.S. 421, 427; *N.L.R.B.* v. *International Union* (CA 9, 1961) 287 F. 2d 605, 611; *States SS Co.* (Mar. Sub. Bd., 1962) 12 Pike & F. Adm. L. 2d 64; *Waukesha Sales & S. Co.* (N.L.R.B., 1962) 12 Pike & F. Adm. L. 2d 420; *Stokeley-Van Camp et al.*, 130 N.L.R.B. 869, 872.

hereby reaffirmed and the delivery and sale thereof is hereby directed to be continued.

(C) The certificates of public convenience and necessity issued in this proceeding on July 11 and 27, 1962, to Panhandle Eastern Pipe Line Company and Trunkline Gas Company are hereby conditioned respectively to require Panhandle to connect its line near Knoxville, Illinois, with the proposed facilities of the City of Bushnell, Illinois, and sell gas to the City of Bushnell in the amount of up to 2,000 Mcf per day, and to require Trunkline to connect its line with the facilities proposed to be operated by the Village of Milford, Illinois, and sell gas to the Village in the amount of 906 Mcf per day. The order for Bushnell is to be effective when the new Illinois Power Company lateral into Galesburg is placed in service.

(D) Panhandle's application for a certificate covering its proposed 3.11-mile lateral at Defiance, Ohio, is hereby dismissed without prejudice.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, Harold C. Woodward, and David S. Black.

MONSON GAS COMPANY, DOCKET NO. CP62-196

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTIONS OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued September 17, 1963)

Monson Gas Company (Applicant) filed an application on February 16, 1962, as supplemented on June 26, 1963, pursuant to Section 7(a) of the Natural Gas Act, for an order directing Tennessee Gas Transmission Company (Tennessee Gas) to establish physical connection of its facilities with those which Applicant proposes to construct and to sell and deliver to Applicant volumes of natural gas for distribution and resale in the towns of Monson and Palmer and their environs and to the Diamond National Corporation at Thorndike, all located in Massachusetts, as more fully described in the application.

Applicant proposes to construct and operate approximately 9.4 miles of 6-inch lateral pipeline extending from the 24-inch transmission line of Tennessee Gas to the Diamond National Corporation's plant at Thorndike together with delivery points along the course at Monson and Palmer. Distribution systems will be constructed and operated in the said towns by Applicant. All such proposed facilities have been authorized by the Massachusetts Department of Public Utilities.

Applicant estimates the natural gas requirements for the gas service to all its above named customers by the end of the third year to be 2,244 Mcf per day on peak days and 488,835 Mcf per year, both volumes at 14.73 psia. Approximately 90% of the gas to be taken by Applicant will be sold and consumed for industrial purposes by Diamond National Corporation.

The estimated cost of construction of the proposed facilities to the Applicant at the end of the third year is $396,891 including the annual increments. These costs will be financed by the sale of first mortgage bonds together with the sale of 4,900 shares of common stock and a deposit from the Diamond National Corporation.

Tennessee Gas offers no objection to applicant's request in this proceeding.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation with its principal place of business at Houston, Texas is a "natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 15, 1947, Docket No. G–910, (6 FPC 777).

(2) Applicant, Monson Gas Company, a Massachusetts corporation with its principal place of business in Monson, Massachusetts is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and convenient and in the public interest that Tennessee Gas Transmission Company be directed to establish physical connection of its transmission facilities with the facilities proposed by Applicant and to sell and deliver to it through such connecting facilities volumes of natural gas of 2,244 Mcf per day and 488,835 Mcf per year, at 14.73 psia.

(4) The requirement that Tennessee Gas serve Applicant, as hereinafter ordered, will not place an undue burden upon it, nor will the requirement that facilities be added to its transmission facilities impair ability to render adequate service to existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant as hereinabove described, and to sell and deliver up to 2,244 Mcf, at 14.73 psia, of natural gas daily to applicant for distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Tennessee's appropriate rate schedule now on file.

(B) Tennessee Gas shall report to the Commission in writing the date of commencement of service to Applicant within 15 days thereafter.

(C) Applicant shall prepare to receive service as directed within three months from the date of issuance of this order.

NORTHERN STATES POWER COMPANY, DOCKET NO. E–7118

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 18, 1963)

By order issued September 4, 1963, *supra*, p. 644, in the above-entitled matter, the Commission authorized Northern States Power Company (Applicant) to issue and sell at competitive bidding $15,000,000, principal amount of First Mortgage Bonds, due 1993, subject to the provisions, among others, set forth in Paragraph (B) of that orders, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be

received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on September 18, 1963, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept, as providing the lowest annual cost of money to it, the bid of Halsey, Stuart & Co. Inc. to purchase the proposed issuance of $15,000,000 principal amount of Bonds for the price of 99.19% of principal amount with an interest rate of 4⅜%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued September 4, 1963, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized subject only to the provisions of paragraphs (A), (C), (D), and (E) of the Commission's order issued September 4, 1963 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. G-15187

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 19, 1963)

On April 10, 1963, as supplemented on July 1, 1963, Arkansas Louisiana Gas Company (Applicant) filed an application to amend the Commission's order issued October 14, 1958, in Docket No. G-15187, as amended on January 28, 1959, by extending the terms of said order for an additional year in accordance with a letter agreement between Applicant and Mississippi River Fuel Corporation (Mississippi) dated March 6, 1963, amending the original agreement between the parties, so that the certificate authorization will terminate with the termination of said amended agreement, all as more fully set forth in the subject application to amend.

The order of October 14, 1958, as amended, authorized Applicant, among other things, to sell and deliver 35,000 Mcf per day of natural gas at 15.025 psia to Mississippi for resale from October 15 of each year through April 16 of the succeeding year for a five-year period ending April 16, 1963, and to sell and deliver 1,000 Mcf per day of natural gas at 15.025 psia from April 16, 1963, until May 1, 1963, the termination date of the original contract between the parties. The price of gas for sale to Mississippi is 26 cents per Mcf under the original

agreement dated February 5, 1958, which is on file as Applicant's FPC Gas Rate Schedule No. XFS–16, Original Volume No. 2.

The subject application for amendment seeks to extend the terms of the original agreement between the parties for an additional year in order to authorize Applicant to sell and deliver 35,000 Mcf of natural gas per day to Mississippi from October 15, 1963, to April 16, 1964, and to sell and deliver 1,000 Mcf of natural gas per day from April 16, 1964, until May 1, 1964, at the original price of 26 cents per Mcf. It appears that Mississippi urgently needs this additional gas for the coming heating season, and cannot replace this purchase with a like purchase at a similar price.

Applicant has tendered for filing its First Revised Sheet No. 190 superseding Original Sheet No. 190 of its FPC Gas Tariff, Original Volume No. 2, which has as the effect of extending the existing agreement an additional year through May 1, 1964, as described above.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on August 16, 1963 (28 F.R. 8430). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order in Docket No. G–15187 issued October 14, 1958, as amended on January 28, 1959, be further amended as hereinafter ordered.

(2) First Revised Sheet No. 190 to Applicant's Gas Rate Schedule No. XFS–16, Original Volume No. 2 should be accepted for filing as hereinafter ordered.

The Commission orders:

(A) The Commission's order in Docket No. G–15187 issued October 14, 1958, as amended on January 28, 1959, be and the same is hereby further amended by authorizing Arkansas Louisiana Gas Company to extend the sale and delivery of 35,000 Mcf of natural gas per day to Mississippi River Fuel Corporation from October 15, 1963, to April 16, 1964, and the sale and delivery of 1,000 Mcf of natural gas per day from April 16, 1964, until May 1, 1964, at the price of 26-cents per Mcf at 15.025 psia, all pursuant to the letter agreement dated March 6, 1963, in this proceeding.

(B) First Revised Sheet No. 190 to Arkansas Louisiana Gas Company's Gas Rate Schedule No. XFS–16, Original Volume No. 2, is hereby accepted for filing, to be effective on the date of issuance of this order.

(C) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, Harold C. Woodward, and David S. Black.

CONTINENTAL OIL COMPANY, THE ATLANTIC REFINING COMPANY, TIDEWATER OIL COMPANY, AND CITIES SERVICE PRODUCTION COMPANY, DOCKET NO. RI64–129

ORDER TO SHOW CAUSE WHY RESPONDENTS SHOULD NOT BE REQUIRED TO COMPLY WITH REQUIREMENTS OF THE NATURAL GAS ACT

(Issued September 19, 1963)

This is an order directing Continental Oil Company, The Atlantic Refining Company, Tidewater Oil Company, and Cities Service Production Company to

show cause why they should not be required to comply with Sections 7 and 4 of the Natural Gas Act, and Commission regulations thereunder. Each of the above-named producers has executed an agreement, dated May 10, 1961, with Tennessee Gas Transmission Company for the sale of natural gas from Blocks 198 and 199, offshore Louisiana, referred to as the Ship Shoal Field. In our opinion and order issued concurrently herewith in Docket Nos. G–16842, *et al.*, we concluded that the arrangement between these producers and Tennessee constitutes a sale of natural gas for resale and therefore subject to the applicable provisions of the Natural Gas Act.

The Commission orders:

(A) At the hearing provided for in paragraph (B) hereof, Continental Oil Company, The Atlantic Refining Company, Tidewater Oil Company and Cities Service Production Company shall show cause, if any there be, why they should not be found to be or to have been engaged in the the sale of natural gas for resale to Tennessee from the Ship Shoal Field subject to the jurisdiction of this Commission without having secured requisite authorization therefor pursuant to Sections 7 and 4 of the Natural Gas Act and the Commission's regulations thereunder.

(B) Pursuant to the authority contained in, and subject to the authority conferred upon the Federal Power Commission by the Natural Gas Act, including particularly Sections 7, 14, 15 and 16, and the Commission's Rules and Regulations under that Act, a public hearing shall be held concerning the issue presented by paragraph (A) hereof, at a date to be fixed by the Presiding Examiner following a prehearing conference to be held on or commencing October 18, 1963 at 10:00 a.m. (EDST) in a hearing room of the Federal Power Commission, 441 G Street NW., Washington 25, D.C.

(C) Protests or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before October 7, 1963.

Commissioner Black *not participating.*

OPINION NO. 403

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. G–16842 AND CP60–94; TENNESSEE NATURAL GAS LINES, INC., CP61–27; MIDWESTERN GAS TRANSMISSION COMPANY, CP62–116; ALABAMA-TENNESSEE NATURAL GAS COMPANY, CP62–133; CITY OF MARSHALL, ILLINOIS, CP62–187; CITY OF CASEY, ILLINOIS, CP62–188; CITY OF MARTINSVILLE, ILLINOIS, CP62–189*

OPINION AND ORDER ON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 19, 1963)**

Syllabus

1. To extent that public interest is satisfied by pipeline's recently certificated expansion to higher design day delivery capacity, *a fortiori*, it is satisfied by expansion to lesser capacity here. P. 764.

*Five 7(a) applications were severed from this proceeding and applications disposed of by order issued April 24, 1963, 29 FPC 835.

**Initial decisions appear on pp. 772 and 798. Rehearing denied 30 FPC 1287.

2. Based on reserve showing in recently approved docket, pipeline has sufficient reserves to justify certification of instant facilities. P. 764.
3. Transaction between CATCO companies and Tennessee is sale for resale in interstate commerce within provisions of Section 7(c) of the Natural Gas Act. P. 764.
4. Instant transaction constitutes sale of definite volumes of gas, at specified price per Mcf, which is destined for sale in interstate commerce—not a mere sale of underdeveloped leases. P. 766.
5. Certificate authorizing sale of natural gas should be issued before, not after, gas begins interstate journey—contention that gas must be flowing under an in-place purchase before Commission jurisdiction attaches is *rejected*. P. 766.
6. Commission *discusses* deficiencies of Ship Shoal transaction requiring denial of application. P. 766.
7. Under instant circumstances contractor-lessor is not required to apply for a Section 7(c) certificate. P. 768.
8. Under Section 7(a) it is sufficient that communities-applicants make a *prima facie* showing that they are legally authorized to engage in the distribution business. P. 768.
9. Commission *issues* certificates of public convenience and necessity; *defers* action on Ship Shoals lateral; and *directs* interconnection of facilities and sale of gas, in proceedings arising under Sections 7(c) and 7(a) of the Natural Gas Act. P. 769.

Robert L. Russell and *John J. Keating* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, Harold C. Woodward and David S. Black.

Ross, *Commissioner:*

Background of the Proceeding

This proceeding involves a proposal by Tennessee substantially to enlarge its system, and related applications by certain wholesale customers of Tennessee to expand their systems to meet increased market demands. In Docket No. G–16842, Tennessee requests authority to construct and operate 18,300 compressor horsepower on its Delta-Portland line in lieu of expanding the capacity of its Agua Kinder-Portland (K–P) line, which was previously authorized.[1] Docket No. CP60–94 proposed additional compressor horsepower on Tennessee's Delta-Portland line, substantial looping of Tennessee's main line between station 87 and its storage fields, and compressor horsepower and looping northeast of storage. The facilities proposed by Tennessee would increase its design day capacity from 2,669,031 to 2,785,000 Mcf. With this increase, Tennessee would meet 161,699 Mcf additional firm daily contract demand requirements and 10,120 Mcf of storage. About 9,000 of the unallocated 10,939 Mcf would satisfy the requests for new service of the intervenors herein. The cost of the facilities involved was estimated at $62,749,000.

Of the above sum, approximately $8½ million represents the cost of constructing 58 miles of 20" line to connect the Ship Shoal reserves. These reserves, estimated at 533,402,000 Mcf of gas (and 12,244,898 barrels of oil) were sold in-place by the CATC companies to Tennessee through two wholly-owned affiliates at a price of $97⅓ million of which $85⅓ million—or 87.67%—was attributed to gas. Tennessee's mineral rights extend to the MI Sands (13,076' to 13,123') and no lower. The gas would be taken over 26 years and paid for by a series of sixteen annual promissory notes, in addition to the down payment. Thus far, Tennessee, through Tennessee Gas Supply Co., has paid $21,166,666.08 for Ship Shoal gas, and through Tenneco, $6,750,000 for oil.[2] On a unit basis, the cost of the gas, in place, figures to 16¢ per Mcf. However, the operation and maintenance expenses incident to production, as estimated by Tennessee, raise the price to 28.3¢ per Mcf at 15.025 psia. After the sixth anniversary of the contract, redetermination of the gas reserves is permitted. The result of this determination would be reflected in amendment of the gas promissory notes at a 16¢ per Mcf rate (in place).

Beginning in 1960, the Commission granted a series of interim temporary certificates to Tennessee to construct and operate many of the facilities requested herein. In short, all of the additional compressor horsepower on the Delta-Portland line was temporarily authorized. The same is true regarding all of the looping and compressor horsepower northeast of Tennessee's storage. The cost of the temporarily authorized facilities represents about $32,000,000 of the $62,000,000 total facilities requested. While Tennessee's requests for temporaries were granted, temporary authority for related facilities and sales sought by other parties hereto were also issued. At the same time, producer applica-

[1] 21 FPC 653 (1959).

[2] Under the agreement, the CATC sellers agreed to purchase, and are purchasing all the Ship Shoal oil. In effect, Tenneco is merely the operator for the CATC companies, and the sale of the oil is a wash item for all practical purposes.

tions requesting certificates to sell gas to Tennessee in connection with Tennessee's expansion were severed and granted temporary certificates.[3]

In his initial Initial Decision (November 9, 1962), the Examiner considered only Tennessee's requirements for the 1962–1963 winter heating season and deferred decision regarding the alleged overbuilding of Tennessee's system and the propriety of the Ship Shoal Transaction. He did recommend certification of that portion of Tennessee's system already constructed under temporary authority, as well as the other applications herein. He further recommended certification of the Ship Shoal lateral to permit Tennessee to obtain some benefit from its already large expenditure for these reserves. The Commission then directed the Examiner to issue his decision on the deferred issues.

This decision was issued March 4, 1963. The Examiner found that the Ship Shoal acquisition is subject to the Commission's jurisdiction. He concluded that the Commission could not compel the producers to file appropriate certificate applications but recommended that the Commission apply to a U.S. District Court for an injunction restraining Tennessee from making further payments. Because of the possibility the Ship Shoal reserves would not be connected, he excluded them in calculating Tennessee's deliverability. Applying Staff's arithmetical relationship to Tennessee's initial deliverability study, he found 11.5 years of deliverability. However, his independent analysis of Tennessee's exhibits, not described in any detail in his decision, resulted in a coverage of from nine to ten years. The Examiner concluded that Tennessee had inadequate gas supplies to support its proposed expansion and recommended denial thereof as well as all related applications. He did not, however, reverse his previous determination to authorize those facilities northeast of storage and those facilities included in Docket No. G–16842.

Virtually all of the parties seeking an allocation of gas in this case filed exceptions to the effect that they needed the requested allocations and related facilities, irrespective of what the Commission does regarding the Ship Shoal leaseholds. As stated above, most of these applications have been temporarily certificated.

Due to the extremity of the 1962–1963 winter season, and the immediate need for increased deliverability to satisfy the firm demands of its customers, Tennessee filed an application for a further expansion of its transmission facilities involving a cost of $35,308,600 (Docket No. CP63–247). The proposal was to loop its Delta-Portland, Ohio, and Mercer-Hebron lines[4] and to add compressor horsepower, largely on the Delta-Portland line. With these facilities, Tennessee's design day delivery capacity would be increased to 2,840,000 Mcf compared to the figure of 2,785,000 Mcf proposed herein. This application was expressly predicated upon the Commission's approval of the facilities sought herein. The latter application was subsequently amended to specify all those facilities sought herein (excluding however, the Ship Shoal lateral) which had not previously been temporarily certificated, i.e., loop lines and compressor horsepower on Tennessee's main line between station 87 and its storage facilities. This application, as amended, was approved via the abridged hearing procedure on May 16, 1963. In addition certain 7(a) applicants and one intervenor who requested quite small allocations of gas herein filed a motion requesting severance and immediate grant of their applications in view of the time problem regarding their proposed financing. These applications were severed and granted by our orders of April 24, and May 29, 1963.

---

[3] Virtually all of these applications are consolidated in the So. Louisiana certificate proceeding—*Union Producing Co.*, Docket No. G–13221, *et al.*

[4] Over 150 miles principally of 36" line.

Our decision on the issues raised by the Examiner's decisions and exceptions thereto follows.

Feasibility of Tennessee's proposed expansion

The facilities remaining in issue are those on the Delta-Portland line (compressor horsepower), and those northeast of Tennessee's storage which received temporary authorization and which have been constructed. While Staff and Columbia companies initially contended some of these facilities were not required, no exception was taken to the Examiner's first decision to certificate a portion of them, i.e., those included in Docket G–16842 and those northeast of storage. Moreover, no party excepted to the Examiner's subsequent recommended denial of the remaining facilities solely on the basis of inadequate gas supply.

From a practical standpoint, the remaining facilities raise no real issue. In Docket CP63–247, Tennessee was permanently certificated to enlarge its system, mostly its Delta-Portland line with respect to which the facilities technically at issue here are proposed. Tennessee's recently authorized facilities will really be superimposed on those sought herein. Moreover, as stated above, Tennessee's application was premised upon permanent authorization of the facilities herein. To the extent that the public interest is satisfied by the proposed expansion of Tennessee's design day delivery capacity to 2,840,000 Mcf in CP63–247, *a fortiori*, it is satisfied by the expansion to 2,785,000 Mcf here, particularly since the same segments of Tennessee's line are involved in both proposals. In this connection, denial of the facilities remaining in issue here would preclude the use—at least the effective use—of the facilities certificated in Docket CP63–247.

Based on Tennessee's showing in Docket No. CP63–247, we were satisfied that it had adequate gas reserves to support its proposed expansion in that case. On that basis, we conclude that Tennessee has sufficient reserves to justify certification of the instant facilities. We therefore find it unnecessary to resolve the particular issues raised in this proceeding with respect to the question of reserves.

Ship Shoal Transaction

The examiner found the Ship Shoal transaction subject to the Commission's jurisdiction and concluded that the existing agreements were contrary to the public interest. He recommended court action to enjoin Tennessee from making further payments and the institution of a new proceeding looking toward the amendment of the transaction in a conventional manner.

We agree with the Examiner that the transaction between the CATC companies and Tennessee is a sale for resale in interstate commerce included within the provisions of Section 7(c) of the Natural Gas Act. An analysis of the transaction reveals that in financial effect and impact on the parties, it is a sale of gas.

The producer-sellers, before May 10, 1961, had erected three drilling platforms at Ship Shoal and had drilled about 12 wells, with multiple completions therefrom. With the knowledge obtained from this activity, the producers were able to estimate the amount of reserves underlying the subject leases involved. The Act of Sale and Mortgage and Pledge transfers only those oil and gas reserves down to and including the MI Sands, reserving to the producers all rights to hydrocarbons lying beneath this geological formation. Another significant factor relates to the provisions providing for acceleration of payment of the promissory notes if production is increased over that contemplated in the agreement. Moreover, provision is made for the execution of additional notes

or the elmination of existing notes if the reserves are subsequently determined to be more or less than that specified in the agreement. As noted by the Examiner, the sale of the oil reserves is essentially a wash transaction by virtue of the contractual provisions under which the CATC companies agreed to purchase all of the oil, including other liquid hydrocarbons, from the Ship Shoal properties.

These factors clearly demonstrate that the essential nature of the instant transaction is a sale of a definable volume of gas the price for which is geared to the actual volume found, and payment for which is directly related to its production. Thus, this situation is essentially analogous to the *Rayne Field* case[5] and easily distinguishable from that prevailing in the *Panhandle* case[6] cited by Tennessee. In the latter case, the leases were undeveloped so that the transfer did not resemble a sale of gas as does this one. Morever, the gas ultimately developed in the *Panhandle* case, *supra*, was sold in instrastate commerce whereas here the sale contemplates the transportation and sale of the gas in interstate commerce, as shown in more detail *infra*.

In addition to these controlling distinctions, the *Panhandle* case was decided in 1949, five years before the Supreme Court's Phillips decision.[7] A description of the impact of that and related cases on this issue is contained in our opinion in *Rayne Field*, *supra*, and is affirmed here.

The record further demonstrates that the Ship Shoal gas is destined for transportation and resale in interstate commerce. The Ship Shoal leases are located in Federal territory well beyond Louisanna Territorial domain, and it is evident that this gas could not be dedicated to an intrastate market.[8] More importantly, Tennessee has consistently maintained its intention to use Ship Shoal gas to meet the requirements of its resale customers. Throughout this proceeding, it heavily relied on Ship Shoal reserves in support of the proposed expansion of its jurisdictional pipeline facilities. It specifically requested certification of a lateral which would connect the Ship Shoal Field to its interstate pipeline in this proceeding. In its Reply to Exceptions, Tennessee states:

> The sole purpose for acquiring the leasehold interests in the Ship Shoal Field was to provide additional reserves and deliverability to meet the natural gas requirements of Tennessee's jurisdictional customers.

The facts demonstrate and we conclude that the instant transaction constitutes a sale of a definite volume of gas at a specified price per Mcf—and not a mere sale of undeveloped leases—which gas is destined for resale in interstate commerce. The transaction, therefore, comes within the provisions of Section 7(c) of the Natural Gas Act which requires certification of such sales by this Commission.

In *Rayne Field*, we made the following finding regarding the jurisdictional question which is equally applicable here:

> * * * Any other result would exalt form over substance, would give greater weight to the technicalities of contract draftmanship than to the achievement of the purposes of the Natural Gas Act, and would impair our ability to control the price received for gas sold to the pipelines in interstate commerce to the detriment of the ultimate consumer. Control limited to approving the costs of the gas to the purchasing pipeline is, of course, not

[7] *Phillips Petroleum Co. v. Wisconsin*, 347 U.S. 672.

[8] *United Gas Pipe Line Co.*, Docket No. CP62–161, Opinion No. 401, issued August 26, 1963, 30 FPC 560.

an effective way to regulate producer prices because in the large a pipeline must be allowed to pass on its purchased gas costs to the ultimate consumer or it cannot continue to discharge its public service responsibilities.

In its exceptions, Staff contends that the critical factor in *Rayne Field, supra,* is that the gas was actually flowing in interstate commerce when the Commission assumed jurisdiction. Staff states that situation differs materially from this one where the Ship Shoal gas is lying in its natural state and may never be sold in interstate commerce.

Section 7(c) of the Natural Gas Act provides in part:

> No natural-gas company or person which will be a natural-gas company upon completion of any proposed construction or extension shall engage in the transportation or sale of natural gas, subject to the jurisdiction of the Commission, or undertake the construction or extension of any facilities therefor, or acquire or operate any such facilities or extensions thereof, unless there is in force with respect to such natural-gas company a certificate of public convenience and necessity issued by the Commission authorizing such acts or operations:

This section contemplates that certificates authorizing the sale of natural gas should be issued before, not after, gas begins its journey in interstate commerce. Thus, producer certificates authorizing the sale of gas to interstate pipelines are customarily requested and granted before the contemplated sale and delivery occurs. Staff's contention that gas must be flowing under an in-place purchased in order for Commission jurisdiction to attach would create the anomalous situation of requiring a violation of the Act before jurisdiction would lie and must therefore be rejected.

The jurisdictional nature of the *Rayne Field* sale did not rest upon the fact that the gas was flowing in the pipeline's facilities. Rather, as our decision here makes clear, it was based upon our conclusion that the essential elements of the transaction constituted a sale of natural gas for resale in interstate commerce, the regulation of which is prescribed by the Natural Gas Act.

Apart from the jurisdictional question, Tennessee contends:

(1) the Commission is without authority to direct that presently effective contracts be rescinded and replaced by new agreements; (2) that rights have vested under the existing arrangements which would be adversely affected by the Examiner's proposal; (3) that purported abrogation of the existing contracts would result in a denial of due process to Tennessee and the CATC companies; and (4) that the benefits attendant to the present arrangements demonstrate that the Ship Shoal transaction is in the public interest.

There are certain deficiencies of the Ship Shoal transactions which require denial of Tennessee's application for a certificate to construct a line to connect these reserves, and to transport and sell the gas in interstate commerce. Initially, the absence of appropriate authorization on the part of the producers to sell the gas to Tennessee requires denial. Approval of Tennessee's request in such circumstances would be tantamount to sanctioning a transaction which was effected in part without the authorization required under the Natural Gas Act.

The uncertainty surrounding the cost of this gas constitutes another factor which precludes certification. The Examiner noted there is no way of predicting, even within a range, the market value of oil and condensates in future years. There is no way of forecasting royalty expense, which is based on the going price for gas in the Ship Shoal area, and which will fluctuate as prices change through the years. There is no way of predicting within a reasonable range the amount of depreciable property which will be needed at Ship Shoal, and

depletion and amortization will be subject to change throughout the estimated production schedule of the field. Return and income taxes constitute another item which cannot be presumed to remain constant for the next 26 years. Tennessee did not except to these findings of the Examiner and they are adopted.

Even if the estimates submitted by Tennessee could be considered reliable, they show that the unit cost of Ship Shoal gas on a 26 year production schedule would be 28.3¢ per Mcf at 15.025 psia. This is a cost 45 per cent higher than our present ceiling in that area of 19.5¢. Further evidence of the inordinate cost involved in the instant transaction is found in Docket CI64–5 wherein Humble requests a certificate to sell a particularly large volume of gas from the same area to United Fuel at 20.625¢ per Mcf with no price escalations.

In our opinion, none of the alleged benefits outweigh the initial price factor. In the light of the Supreme Court's injunction to hold the price line on the introduction of new gas into the interstate market,* we would be remiss in our obligations if we permitted Tennessee to attach the large Ship Shoal field at a cost which, under the only evidence submitted, is clearly excessive.

In addition to price, there are other questionable factors incident to the Ship Shoal transaction. Under the Natural Gas Act, the price that producers receive is a matter over which we have jurisdiction under Sections 4(e) and 5(a) of the Act. Under the proposed in place sale, the CATC producers would to a large extent be immune from such jurisdiction. This results from the fact that final payment of Ship Shoal gas within 16 years is required whereas a 26 year production schedule is contemplated. Thus application of a just and reasonable rate to be determined in any 4(e) or 5(a) proceeding would have only limited effect on the instant transaction. Since the terms of the promissory notes do not provide for any adjustment to comply with the exercise of the Commission's rate regulation, it is difficult to envision how we could exercise our regulatory authority within the framework of such an arrangement.

Contrary to Tennessee's legal arguments, we do not believe that our decision results in a denial of due process or forces the parties to enter any particular kind of new agreements. We have simply refused to approve an arrangement subject to our jurisdiction which we have concluded is inconsistent with the public interest.

Similar to our Rayne Field decision, we believe the parties should have ample opportunity to work out new arrangements which would not involve the problems herein described. In this connection we shall issue an order directing the CATC companies to show cause why they should not submit an application for a certificate under Section 7 of the Natural Gas Act covering the sale of Ship Shoal gas to Tennessee. Pending the final decision in that case, we shall defer decision on Tennessee's application for authority to construct a lateral connecting the Ship Shoal reserves to its interstate pipeline facilities. To afford some measure of protection to Tennessee's customers in the interim, we shall require Tennessee to keep an accurate record of all of its expenditures relating to the existing Ship Shoal arrangements.

Marshall, Casey, Martinsville, Illinois

These municipalities presented a joint proposal to establish a gas distribution system to serve their communities. The proposal is to tap the Midwestern line, and to construct a 6" lateral eight and one-half miles to Marshall, another ten miles to Martinsville, and six miles more to Casey. Panama Williams, Inc. would construct this line, and lease it to the communities under an agreement

* *Atlantic Refining Co.* v. *P.S.C.*, 360 U.S. 378.

giving the cities an option to purchase. The Examiner found the market, comparative fuel costs, feasibility and financing aspects of the cities' proposals to be satisfactory, and recommended the requested attachment and sales. We adopt his findings on these issues.

Exceptions to his recommendation were filed on three grounds: (1) Staff contends Panama Williams must apply for a certificate under Section 7(c) of the Natural Gas Act; (2) Central Illinois Public Service Company (CIPSCO), a privately owned distributor in the area,[10] contends the communities are not legally authorized to engage in the distribution of gas in the manner proposed herein; (3) CIPSCO also claims that the transportation agreements of the cities are not supported by prior appropriations as required by Illinois law.

In its exception, Staff distinguishes the *El Paso* case upon which the Examiner relied,[11] contending that the Commission had jurisdiction over the lessor in that case whereas the Commission would not in this case. Under the contracts, the municipalities have the sole and exclusive right to operate and to maintain the leased lateral. Once the lateral has been constructed, the lessor has no active role in the transportation or sale of gas for resale in interstate commerce. We therefore agree with the Examiner's findings on this issue.

CIPSCO's exceptions essentially claim that the Examiner improperly refused to consider the issue of the legal power of the communities to engage in the distribution business. In our opinion, it is sufficient under Section 7 if the record contains a prima facie showing that these communities are legally authorized to engage in the distribution business. We conclude that the record contains such a showing.

In its first argument, CIPSCO refers to the Illinois law which permits a municipality to acquire and construct a gas distribution utility only if an ordinance describing the plant and equipment has been submitted to and approved by the electors of the municipality. This law relates only to plant and equipment which is purchased and does not apply to that which is leased. The lateral to be constructed by Panama Williams, Inc. was not included in the ordinance approved by the voters of these municipalities. Because, in CIPSCO's opinion, the arrangement between Panama Williams, Inc. and the cities constitutes a sale of the lateral, CIPSCO asserts the referendums of the municipalities are fatally deficient. We disagree with the critical allegation of CIPSCO that the subject transaction is a sale. While CIPSCO correctly alleges that the cities have the irrevocable right solely and exclusively to use and operate the facilities, it failed to demonstrate that this provision changes the nature of the agreement from a lease to a sale.

With respect to CIPSCO's second argument, we note that the three cities executed Transportation Agreements whereby Marshall will transport, through the lateral it leases, the combined gas requirements of Martinsville and Casey at the rate of one cent per Mcf, payable by Casey. Casey will charge Martinsville six cents per Mcf for transporting Martinsville's requirements through a portion of the lateral leased by Casey. CIPSCO argues that these Transportation Agreements are invalid because they are not supported by prior appropriations, as required by Illinois law. However, we note that the Illinois law requiring prior appropriations applies only to the general obligations of municipalities. CIPSCO does not assert nor does the record demonstrate that the transportation agreements executed by the cities constitutes a liability payable from the general

---

[10] At the hearing, CIPSCO stated it was interested in providing service to these communities but it has not requested any allocation of gas to serve them.

[11] *El Paso Natural Gas Co.*, 19 FPC 371.

funds of the cities involved. Rather the testimony shows that the lease and gas payments precede the bond payment on the distribution system, which indicates that the liability of the cities under the Transportation Agreements is payable from the gas funds of those cities which are derived solely from revenues.

For the foregoing reasons, we conclude that Marshall, Casey and Martinsville have made an adequate legal and economic showing supporting their applications.

On March 1, 1963, CIPSCO filed a motion to reopen the record to present additional evidence. This motion alleged that the contractor, Panama Williams, Inc., had filed a petition for an arrangement under the Bankruptcy Act which may have the effect of rendering the plan of the three cities financially infeasible. While the bankruptcy filing could have some effect on the cities' plan, we believe reopening the record would further delay disposition of this issue and involve the expenditure of time and money to a degree wholly disproportionate to the materiality of the evidence possibly to be adduced. In our opinion, the question raised by CIPSCO in its motion can best be resolved by attaching a condition to the requested allocation requiring the cities to submit an agreement with a substitute contractor in essentially the same form as that executed with Panama Williams within three months together with a copy of a duly executed performance bond satisfactory to the Commission or, in the alternative, to complete construction within one year.

In view of the foregoing disposition of the applications of these three cities, their request for oral argument is denied.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby granted to Tennessee Gas Transmission Company (Tennessee) for the Construction and operation of an additional 18,300 compressor horsepower on Tennessee's Delta-Portland line, as more fully described in its motion of March 27, 1961, in Docket No. G–16842; and its previous authorization in that Docket contained in the order accompanying Opinion No. 320 issued May 12, 1959 to construct and operate 157.61 miles of 36 inch pipeline loops on the Agua Kinder-Portland line is cancelled.

(B) A certificate of public convenience and necessity is hereby granted Tennessee for the construction and operation of the facilities specified in its application in Docket No. CP60–94, with the exception of 58.2 miles of lateral line proposed between Tennessee's facilities at valve 523 and the Ship Shoal reserves. Action on the requested certification of that lateral is deferred pending final decision in the show cause proceeding described hereinabove. Until further order, Tennessee shall maintain an accurate accounting of all of its expenditures relative to the Ship Shoal transactions.

(C) A certificate of public convenience and necessity is hereby granted to Tennessee to transport for and sell and deliver to, existing customers, additional volumes of natural gas totalling 161,699 Mcf per day of firm service and 10,120 Mcf per day of storage service, as particularly described in its application in Docket No. CP60–94.

(D) A certificate of public convenience and necessity is hereby granted to Tennessee to sell and deliver to Midwestern Gas Transmission Company (Midwestern), natural gas not to exceed a maximum daily volume of 6,531 Mcf for service to new customers of Midwestern.

(E) Midwestern is hereby directed to establish and maintain physical connection of its facilities with facilities to be operated by the City of Marshall, Illinois; and to deliver and sell, through such connection, to the Cities of Marshall, Casey, and Martinsville, Illinois, respectively, natural gas not to exceed

maximum daily volumes of 1952 Mcf, 2,104 Mcf and 546 Mcf, for distribution through facilities to be constructed by the cities, as proposed in their respective applications in Docket Nos. CP62–187, CP62–188, and CP62–189.

This allocation is conditioned upon the cities effectuating completion of the construction of their proposed facilities either one year from the date of this order, or, in the alternative, that the cities submit to the Commission an agreement with a substitute contractor in essentially the same form as that contained in the record within three months together with a copy of a duly executed performance bond satisfactory to the Commission.

(F) In the light of the Commission's order in these proceedings issued May 29, 1963, the application of Lincoln Natural Gas Company for an order of the Commission directing Midwestern to establish physical connection of its facilities with facilities to be constructed by Lincoln Natural and to deliver and sell a volume of natural gas, as proposed in Lincoln Natural's petition to intervene in Docket No. CP62–116, is hereby denied.

(G) A certificate of public convenience and necessity is hereby granted to Midwestern for the transportation and sale of natural gas to Northern Illinois Gas Company for resale in existing service areas, as more fully described in the application in Docket No. CP62–116.

(H) A certificate of public convenience and necessity is hereby granted to Alabama Tennessee Natural Gas Company for the construction and operation of $310,000 of facilities, and for the transportation and sale of an additional 1,230 Mcf per day of natural gas, as more fully described in the application in Docket No. CP62–133.

(I) A certificate of public convenience and necessity is hereby granted to Tennessee Natural Gas Lines, Inc. for the transportation and sale of an additional firm volume of 5,300 Mcf of natural gas per day as more fully described in the application in Docket No. CP61–27.

(J) The time within which the facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at one year from the effective date of the final order herein.

(K) The motion of Tennessee for severance and disposition of limited issues filed June 26, 1963, as amended August 19, 1963, is denied as moot.

(L) Exceptions not granted herein are denied.

Commissioner Woodward *concurring in part* and *dissenting in part*.

Commissioner Black *not participating*.

WOODWARD, Commissioner, *concurring in part* and *dissenting in part:*

I respectfully dissent from the majority's decision that "the transaction between the CATC companies and Tennessee Gas Transmission Company constitutes a sale of a definite volume of gas at a specified price per Mcf—and not a mere sale of undeveloped leases—which gas is destined for resale in interstate commerce. The transaction therefore, comes within the provisions of Section 7(c) of the Natural Gas Act which requires certification of such sales by this Commission." (*Supra*, P. 765)

This Commission has no jurisdiction over the Ship Shoal lease transaction. The majority errs in its finding that, . . . "this situation is essentially analagous to the Rayne Field case[1] and easily distinguishable from that prevailing

[1] *Texas Eastern Transmission Corporation*, Docket No. G–12446, *et al.* Opinion No. 378 issued February 6, 1963, 29 FPC 249, and Opinion No. 378A issued July 12, 1963, 30 FPC 153.

in the Panhandle case."[2] The facts of this case are materially different from those in the *Rayne Field* case in that:

(1) Tennessee continues to pay for the reserves although they are not connected to its system. Ship Shoal gas is not flowing in interstate commerce; it continues to lie in its natural state in formations underlying the Gulf of Mexico.

(2) Redetermination of reserves is present.

(3) Both oil and gas interests were sold.

The Commission staff, conceding that the Commission has no jurisdiction over the Ship Shoal lease transaction, is correct in asserting, "The Natural Gas Act did not intend that the Commission's jurisdiction should extend to every sale of natural gas.[3] For the Commission to have jurisdiction over a sale of gas within the meaning of Section 1(b) of the Act, it must be a sale in interstate commerce of natural gas for resale." Clearly, the Ship Shoal transaction was not a sale of natural gas for resale but was a transfer of leases.

In the *Panhandle* case, *supra*, the Supreme Court stated:

> A proposed transfer cannot be stopped by the Commission. It should not be permitted to delay what it cannot prevent. If the Commission is of the Opinion that it should have power to control the disposition of leases by natural gas companies, it is authorized to call the attention of Congress to that fact.

Despite the Commission's repeated attempts to secure an amendment to Section 7 of the Natural Gas Act which would vest it with jurisdiction over transfer of leaseholds by natural gas companies, Congress has never conferred such jurisdiction on the Commission.[4]

Irrespective of its motivations or aspirations, this Commission is powerless to adopt a course of action that would prohibit the disposition of the Ship Shoal reserves. The fact that the gas may subsequently be transported in interstate commerce is irrelevant to the question of the character of the particular transaction in issue. Speculative possibility cannot be considered as sufficient ground for holding jurisdictional what is essentially non-jurisdictional. Judgment must be rendered on the basis of fact—not intent.

The final result of the majority's decision is that any sale of property containing gas in formation is subject to the jurisdiction of the Federal Power Commission; that pipeline companies cannot be permitted to enter into lease acquisitions such as that involved in the instant proceeding. Here is the fatal defect in the majority's opinion.

The *Rayne Field* case and other cases relied on by the majority are not factually analogous to the instant proceeding and cannot be controlling here; conversely, the authority cited herein conclusively establishes that the Ship Shoal lease-sale arrangement is not subject to the Commission's jurisdiction under the Natural Gas Act. The decision of the majority goes directly contrary to the intention of Congress in enacting the Natural Gas Act; there is no basis in fact or in law for their findings.

Exclusive of the issue involving the Ship Shoal transaction, I concur in the majority opinion.

---

INITIAL DECISION
ON THE FIRST ISSUES UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY PURSUANT TO THE NATURAL GAS ACT

(Issued November 9, 1962)

WESTON, *Presiding Examiner:* In general, this proceeding involves a proposal for the substantial enlargement of the Tennessee Gas Transmission Company system. Tennessee Gas, with its subsidiaries and affiliates, is a two-billion-dollar pipeline complex, principally engaged in the business of bringing gas from sources in Texas and Louisiana to consumers in the northeastern and midwestern States. In general, we here review Tennessee's current plans to meet currently expanding demands for gas service to such consumers from newly expanded gas resources.

The general project for expansion is, of course, a commendable further step towards the satisfaction of the growing energy requirements of gas consumers. However, the usefulness of this Commission is not in the general evaluation of general projects, general aims, and general ends. It is our statutory function to decide whether natural gas companies such as Tennessee have worked out their generally commendable projects so that consumers are protected in every aspect of rates to be charged and services to be rendered. In this regard, the present proceeding contains several very serious and unusual problems, including the problems (a) whether or not Tennessee is over-building part of its system in advance of need (as claimed by certain Columbia System customers, intervenors herein), to the detriment of present rate-paying consumers, and (b) how to deal with a partially consummated transaction for the purchase of over-priced gas "in-place," when the gas was bought in good faith by Tennessee under the impression that the purchase was not subject to regulation in the public interest by this Commission.

These and other problems may be deferred for later decision. It is feasible and necessary to sever and immediately concern ourselves with issues involving the expanded gas requirements of existing and new Tennessee customers for the winter heating season 1962–1963, and Tennessee's gas resources to meet such requirements. The issues presented by the record in this regard are conventional rather than unusual, and expedited decision thereon will not prejudice later consideration of deferred issues. We therefore presently concern ourselves only with (a) expansion of gas deliveries as proposed in this proceeding, (b) adequacy of Tennessee's gas resources to meet such expansion, and (c) related and incidental problems often dealt with in the day-by-day work of the Commission, presented by the record in this case.

Background

In 1959, Tennessee presented a proposal to sell to its subsidiary Midwestern Gas Transmission Company, a volume of up to 261,320 Mcf per day, increasing to a third-year volume of up to 363,432 Mcf per day, for service by the subsidiary to distributors in the Chicago-Gary area. *Midwestern Gas Transmission Co., et al.*, 21 FPC 653.

The record in that case showed Tennessee's reserves at 15,783,340,000 Mcf as of January 1, 1958, and Tennessee's ability "based on maximum requirements at the 1964 level" to meet demand through the year 1970. The Staff contended for, and the Commission found, a resulting deliverability life of eleven years starting with the year 1960 (21 FPC at 656).

The Commission stated that a "showing of twelve years deliverability life should be the minimal requirement," but authorized the new service subject to the condition that Tennessee—

> file with the Commission, gas supply estimates demonstrating its ability to supply its authorized system obligations for a period of at least twelve years prior to filing any new application for a certificate of public convenience and necessity covering system capacity expansion. (21 FPC at 657.)

Tennessee's "new application * * * covering system capacity expansion" for the 1960–1961 heating season was filed on May 2, 1960, under Docket No. CP60–94 in the proceeding at bar. However, formal proceedings on this application have been held in abeyance at Tennessee's request until the hearings herein commenced March 12, 1962. Tennessee filed extensive amendments to the application on November 7, 1961, and the application now involves customer requirements for the 1962–1963 heating season. In the intervening two winters, the increased customer demands have been met by "interim service" authorized by the Commission and new capacity installed by Tennessee under "temporary authorizations," which will be summarized in the succeeding paragraphs.

1. On November 30, 1960, the Commission authorized in Docket No. CP61–74 *et al.*, interim service of additional maximum daily volumes[1] in the amount of 71,856 Mcf to meet the requirements of customers for the 1960–1961 season. Tennessee furnished this gas with its existing facilities plus $5,469,000 of new facilities, comprising 6,800 compressor horsepower in new Station 241 near Syracuse, New York, and 24.75 miles of 30-inch loop line between Stations 229 and 237 west of Syracuse. The construction of these new facilities had been temporarily authorized by Commission order of July 1, 1960, in Docket No. CP60-94, and the order provided that the cost of the facilities was not to be placed in Tennessee's plant accounts or rate base until "permitted by further action of this Commission in this proceeding."

2. On October 6, 1961, the Commission authorized in Docket No.CP61–295 *et al.*, an extension of the existing interim service, together with an additional interim quantity of 21,694 Mcf per day, through the period ending November 30, 1962, to meet the requirements of customers for the 1961–1962 winter season. Tennessee furnished this gas with its existing facilities pus $6,125,000 of new facilities, comprising 18,300 compressor horsepower at Station 527 in Louisiana, Stations 534 and 542 in Mississippi, and Station 550 in Alabama.

As in the prior year, the new construction was pursuant to temporary authorization granted by the Commission. This temporary authorization, granted August 30, 1961, was unusual in that it covered facilities proposed by Tennessee in substitution for facilities that had been previously authorized by the Commission but not constructed in the *Midwestern* decision, *supra*, 21 FPC at 655, 664. It was and is Tennessee's claim that the facilities thus substituted provide substantially the same amount of capacity as the facilities originally authorized, at a savings of over $25 million in estimated construction costs, and at annual savings in cost of service of $3,246,000.[2] The August 30, 1961, order required that Tennessee establish on hearing, *i.e.*, in the proceeding at bar, that the substitute facilities are in fact preferable, under peril that investment therein might be removed from Tennessee's plant accounts and rate base. Conclusions on this issue, and on the convenience and necessity of other facilities

[1] Technically, "volumes of natural gas in excess of those [volumes] which Tennessee is presently authorized to deliver to [the customers] for a period of one year from the date of this order."

[2] Savings as finally determined by Tennessee and testified to in the record herein, and further described *infra* herein.

temporarily authorized prior to the hearing herein, and not questioned by the Columbia System intervenors, will be reached in a subsequent section of this opinion.

3. On February 27, 1962, in Docket No. CP62–93, the Commission temporarily authorized Tennessee to supply additional maximum daily quantities of 12,621 Mcf to three customers during the period ending November 30, 1962, in order to meet 1961–1962 requirements, including a volume of 5,300 Mcf to Tennessee Natural Gas Lines, Inc. By the same order, the Commission permitted Tennessee Natural, in Docket No. CP61–197, to redeliver during the interim period the additional 5,300 Mcf per day on a firm basis to the Ford Motor Company plant in Nashville, Tennessee. No additional new facilities were involved in this additional service.

* * * * * * *

Thus, under these three Commission orders, Tennessee has since November 1960 been serving the increased requirements of existing customers on an interim basis, with temporarily authorized facilities. In its order of August 30, 1961, *supra*, the Commission noted its desire and expectation that Tennessee put forth an "overall plan" for permanent service "prior to the winter heating season 1962–1963." It seems to be a fair inference that during the period of delay prior to the presentation of such overall plan herein, Tennessee has been building its store of gas reserves, which are the essential prerequisites to increased permanent service. We proceed, therefore, to detail (a) the permanent service for which authorization is requested herein, and (b) the gas supply presented by Tennessee for meeting such permanent service.

The Tennessee System and the Proposed Service

All other dockets listed in the caption hereof are peripheral[3] to Tennessee's application in Docket No. CP60–94, which proposes an increase in design day capacity from 2,669,031 Mcf (authorized in the *Midwestern* decision, *supra*) to 2,785,000 Mcf. With this increase in design day capacity, Tennessee claims it will be able to (a) meet the additional 161,669 Mcf additional firm daily contract quantities and 10,120 Mcf of storage quantities which it proposes in Docket No. CP60–94 to serve to existing customers, and (b) supply, out of 10,939 Mcf of unallocated design day capacity, the initial requests for new service by Section 7(a) applicants and intervenors, which requests as originally presented totalled about 9,000 Mcf.[4]

In considering requests for service herein disposed of, as well as in later consideration of reserved issues, it will be convenient to think of the Tennessee pipeline sectionalized into three parts, as follows:

1. The section southwest of Station 87 (Station 87 is located near Portland, Tennessee), including (a) the Tennessee mainline running northeast from Station

[3] Lowell Gas Company, Central Illinois Electric and Gas Company, Allied, Provencal, Cities of Marshall, Casey, and Martinsville, Illinois, and Central Illinois Public Service Company, listed in the caption hereof, are Section 7(a) applicants. Tennessee Natural wants 5,300 Mcf of interruptible service changed to firm service. Midwestern wants 15,000 Mcf of additional service for its customer Northern Illinois Gas Company. Alabama-Tennessee wants authorization for additional facilities. The lead docket, G–16842, involves the substitution of facilities noted *supra*. The caption, of course, does not list intervenors who seek allocations.

[4] Because part of Tennessee's firm peak day load is met from gas in storage, Tennessee's design day pipeline capacity is less than its peak day firm load.

1 in Texas, (b) the Delta-Portland line, running between southeastern Louisiana and Portland, (c) the Kinder-Portland line, running between central Louisiana and Portland, (d) the Agua Dulce-Kinder line, connecting Tennessee's Station 1 in Texas with Station 823 near Kinder, Louisiana, and (e) the lines of Tennessee's subsidiary East Tennessee Natural Gas Co. The Columbia System intervenors raise important questions as to the need for most of the additional capacity which Tennessee proposes to install in this section, which questions are reserved for later decision.

2. The section of Tennessee's system between Station 87 and Tennessee's three gas storage fields in Pennsylvania and New York, including the facilities of Tennessee's subsidiary Midwestern Gas Transmission Co. between Portland, Tennessee, and Chicago.[5] Most of the new service requested by Section 7(a) applicants and intervenors, *i.e.*, customers not heretofore connected, is in this area.

3. The section northeast of storage, serving many distribution companies and other customers in Pennsylvania, New Jersey, New York, and New England. In respect of peak-day requirements, this section may be thought of as being served, in substantial part, from the storage fields which Tennessee fills from its Texas and Louisiana sources during off-peak periods.

For illustrative purposes, the Tennessee system thus sectionalized appears on the map incorporated in this decision.

(1) *Proposed Service and Facilities Southwest of Station 87.*—The additional firm daily quantities shown in Table 1 at the end of this section total 34,366 Mcf. This amount includes volumes to be delivered to existing customers Alabama-Tennessee Natural Gas Company, applicant in Docket No. CP62–133, and Tennessee Natural Gas Lines, Inc., applicant in Docket No. CP61–27, but does not include the volume to be delivered to a proposed new customer, The Village of Provencal, Louisiana, which has filed its Section 7(a) application under Docket No. CP62–152 herein.

Alabama-Tennessee must construct and operate facilities estimated to cost $310,000 for the purpose of delivering an additional 1,230 Mcf per day to existing customers, commencing with the 1962–1963 heating season. Tennessee agrees to supply this additional volume. The feasibility and necessity for the additional facilities is fully established by the record, and is uncontroverted.[6] The facilities will accordingly be permanently authorized in this decision.

Tennessee Natural seeks permanent authorization of an additional 5,300 Mcf of firm gas for the Ford Motor Company plant in Nashville, Tennessee. As noted *supra*, this firm gas is now temporarily authorized. The effect of the application is to continue present firm deliveries of 8,300 Mcf and interruptible deliveries of 15,500 Mcf to Ford, rather than revert to past deliveries of 3,000 Mcf and 20,800 Mcf in the respective categories.

The firm gas is used in processing glass and other materials. The record is clear and uncontroverted that permanent authorization should be granted in accordance with Tennessee Natural's application.

The Village of Provencal, Louisiana, requests the Commission to issue an order directing Tennessee to establish physical connection and render natural

[5] Midwestern's connection with Tennessee is actually on the suction side of Station 87.

[6] In this and all other instances involving new and additional service, Staff recommends authorization "providing the Commission finds that Tennessee has a sufficient gas supply to warrant such an expansion." (Br. 74.) This qualification will be dealt with *infra* herein, and will not be further mentioned.

gas service. Provencal's estimated third-year requirements are 285 Mcf on peak day and 29,280 Mcf annually. The estimated cost of Provencal's facilities is $101,000, to be financed by issuance of $12,000 in General Purpose Bonds and $89,000 of Revenue Bonds. Debt service coverage will be 2.55. The record is clear and uncontroverted that the new service is entirely consonant with the public interest and should be authorized, insofar as this Commission is concerned.[7] Tennessee, in the case of the Provencal application and all other 7(a) applicants and intervenors seeking gas, has indicated on brief its willingness to serve, but Tennessee attempts to attach an unwarranted *proviso* that the Commission "authorizes the construction and operation of facilities requested by Tennessee in Docket No. CP60-94." The Commission, of course, retains full power to decide the reserved question, whether or not Tennessee needs the said facilities not covered specifically by this decision. The want of legal basis for Tennessee's effort to bind the Commission by conditioning its willingness to serve is plain, and will not be further adverted to in this decision. Inclusion of Provencal's peak-day requirements will increase to 34,651 Mcf the additional service to be rendered by Tennessee southwest of Station 87, as shown on Table 1.

(1-a). *Substitution of Facilities.*—As we have seen, Tennessee was, by Commission order of August 30, 1961, temporarily authorized to substitute 18,300 compressor horsepower on the Delta-Portland line for 157.61 miles of uninstalled pipeline loops on the Kinder-Portland line which had been authorized on May 12, 1959, in Opinion No. 320 (*Midwestern Gas Transmission Co.*, 21 FPC at 653).

These substitute facilities have been constructed and are now in service. The temporary authority for the substitution, here sought to be made permanent, was based on a substantial change which has occurred in the last few years in the location of Tennessee's principal source of gas supply. In the Fall of 1958, when Tennessee filed its application for expansion of the Kinder-Portland line, 74 per cent of such supply was purchased from sources in Texas, and 26 per cent similarly came from Louisiana. In 1960, Tennessee purchased 60 per cent of its total gas supply in Texas and 40 per cent in Louisiana. "During this same three year period Tennessee also purchased an additional 459,000 Mcf of natural gas per day to meet the increasing requirements of its customers so that on a volumetric basis Tennessee's purchases in Louisiana have approximately doubled." (Tr. 1158-1159.)

The main reason for the shift in purchase pattern is "the cold fact that more new gas has been found in Louisiana and less in Texas" (Tr. 1185-1186), and the fact that, to replace reserves being depleted in Texas and to improve its total gas supply position (discussed *supra*), Tennessee has had to increase its purchases in Louisiana.

Tennessee shows that the above-described substitution of facilities results in a savings in construction costs of over $21 million and an annual savings in cost

[7] For possible limitation on the extent of Federal concern over purely local aspects of this kind of application, see *Southern Natural Gas Co.*, 25 FPC 518, 522.

of service of $2,227,000. Additionally, it appears that Tennessee has concluded that it can relinquish 12,200 horsepower previously authorized by the Commission[8] at a savings in construction costs of $4,350,000 and annual savings in cost of service of $1,019,000. The total savings shown by Tennessee in construction costs and annual cost of service are, therefore, about $25,500,000 and $3,246,000, respectively. The record shows that the substitution and relinquishment of facilities will have no substantial effect on Tennessee's design day capacity.

No party other than the Staff raises any question in its brief regarding Tennessee's proposed substitution of facilities in Docket No. G–16842. While not opposing Tennessee's motion, the Staff alleges that (1) Tennessee has failed to reflect the extra expense of Louisiana gas over Texas gas as a part of the annual cost of the substitute facilities, and (2) Tennessee should be required to eliminate from its rate base a portion of the investment in the Agua Dulce-Kinder pipeline[9] which the Staff claims will no longer be fully useful as a result of the substitution of facilities (Staff Brief, pp. 70–72).

Regarding the first contention, the record indicates that, in this instance, Tennessee's purchase pattern is independent of the facilities employed to transport the gas:

> Thus, Tennessee had the alternative of either constructing additional facilities on the Muskrat Line in Louisiana and moving gas from eastern Louisiana to western Louisiana and hence up the Kinder-Portland Line, or to provide capacity on the Delta-Portland Line and move the gas in a more direct route at a substantial savings in cost. [Tr. 1158–1159.]

There is no testimony indicating that there is any problem, or alternative, as to where Tennessee is to purchase new gas; the problem is simply how the gas is to be transported. There is no suggestion that Tennessee has improvidently entered the market for Louisiana gas. Tennessee buys where it finds supplies available, in Louisiana as in Texas, at the best price it can make under Commission-established price-lines. Staff's criticism is unjustified, and the substitution of facilities will be permanently authorized.

Regarding the Staff's second contention, *i.e.*, deleting from the rate base a portion of the investment in the Agua Dulce-Kinder line, Staff counsel (Br. 71) relies solely on his interpretation of Exhibit 3 to substantiate his position. There is no affirmative testimony supporting the contention that "under the present proposal, Tennessee will in effect be relinquishing three-fourths of the capacity of that line."

Exhibit 3 is a flow diagram showing flowing volumes of 397,760 Mcf per day 119,031 Mcf per day and 100,000 Mcf per day into Station 823 from the Agua Dulce-Kinder Line. These volumes reflect utilization of the line as authorized in Docket No. G–16842 (Opinion No. 320 *supra*), as proposed in Motion to Amend in Docket No. G–16842, and as proposed in Docket No. CP60–94, respectively.

---

[8] This relinquishment of horsepower was not reflected in the Commission's order of August 30, 1961, nor does it appear to be the subject of any subsequent Section 7 application by Tennessee. However, the proposed relinquishment is sufficiently a part of this record to warrant disposition herein.

[9] The Staff also has referred to deletion from the rate base of the investment in the 12,200 horsepower now proposed to be relinquished by Tennessee. Although authorized, these facilities had never been constructed (Tennessee reply brief, p. 83).

[1] As authorized in Docket Nos. CP61–74 and CP61–295.
[2] 5,300 Mcf of this amount was authorized in Docket No. CP62–93.
[3] As authorized in Docket No. CP62–93.

Tennessee admits (Reply Br. 85) that its exhibits show a volume of only 100,000 Mcf as being transported through the Agua Dulce-Kinder Line but asserts that that figure does not reflect an additional 125,000 Mcf per day of non-jurisdictional volumes transported for others through that line, the revenues from which are credited to Tennessee's jurisdictional cost of service.

Tennessee also states that, notwithstanding the fact that the Agua Dulce-Kinder pipeline is now, and has been, utilized to the fullest extent possible, studies indicate the public interest would be better served if Tennessee were to abandon the line by sale thereof to Monterey Gas Transmission Company.[10]

The record in the case at bar does not contain facts and figures justifying Staff's proposal that a portion of Tennessee's investment in the Agua Dulce-Kinder Line should be eliminated from Tennessee's rate base by way of condition imposed on the grant of authority to substitute facilities, or otherwise. If such facts and figures exist, they should, of course, be presented in Docket No. CP62–291, or other proceedings involving Tennessee's rate base properties. Staff's proposal is rejected.

(2) *Proposed Service and Facilities From Station 87 Northeast to Storage, Including Midwestern.*—Table 2 incorporated in the text of this second section shows a total of 40,875 Mcf additional firm maximum daily quantities which Tennessee, in its amended application in Docket No. CP60–94, has proposed to supply to existing customers between Station 87 and storage, including deliveries

[10] Application for authority to abandon the Agua Dulce-Kinder Line was filed June 11, 1962, in Docket No. CP62–291.

to Tennessee's subsidiary Midwestern Gas Transmission Company. Tennessee's proposal included an increase of 15,000 Mcf for Midwestern's supply to Northern Illinois Gas Company, but such proposal did not include volumes requested by nine Section 7(a) applicants and intervenors herein seeking new service from Midwestern. These requests for new service will also be considered in the following paragraphs of this section.

(2-a) *Midwestern.*—Midwestern in Docket No. CP62-116 has filed, to implement Tennessee's allocation, the application to furnish 15,000 Mcf per day to Northern Illinois Gas Company, commencing with the 1962-1963 heating season. No additional facilities are required to render the proposed service.[11] The uncontroverted testimony presented for Northern Illinois shows that the additional volumes are required to meet the normal load growth of its existing customers. No party contests the feasibility or necessity of Midwestern's proposal. Appropriate conclusions will be drawn as to the convenience and necessity of the additional service and the other additional service dealt with in this decision after the discussion, *infra*, of Tennessee's gas supply.

(2-b) *Central Illinois Electric and Gas Company.*—This distributor, in Docket No. CP61-122, requests an order directing Midwestern to establish physical connection to provide service to the Village of Oakwood, Illinois, which has estimated third-year requirements of 365 Mcf on peak day and 34,400 Mcf on an annual basis.

Chief Examiner Marsh on October 6, 1961, issued a decision based on a prior hearing of this same docket, and recommended denial of Central Illinois' request solely because Midwestern's supply of gas from Tennessee was then shown to be fully allocated. Subsequently, when it became apparent that Midwestern would have available additional supplies of gas, Central Illinois petitioned to reopen the matter; the petition was granted by Commission order of December 15, 1961, and the proceeding was consolidated herein on January 15, 1962.

No issue as to the feasibility or necessity of the new service was raised or existed in the original presentation, or in the instant reopened proceedings. It now appears (Exh. 12, p. 2) that Tennessee, on the basis of its gas supply showing herein, considered *infra*, has and would make available to Midwestern at Station 87 the 365 Mcf peak day requirements of Central Illinois.

(2-c) *Allied Gas Company.*—In Docket No. CP62-132, Allied requests an order directing Midwestern to establish physical connection with its facilities and supply it with natural gas for distribution in Potomac, Rankin, and Cissna Park, Illinois. Allied seeks a third-year peak day allocation of 528 Mcf and third-year annual volume of 64,250 Mcf.[12] Internally generated cash and funds available from previous bond issues will be used to finance the cost of facilities, estimated at $186,856. There is no opposition to Allied's proposal, and the convenience and necessity of the service is clearly established.

(2-d) *Cities of Marshall, Casey, and Martinsville, Illinois.*—These municipalities, in Docket Nos. CP62-187, CP62-188, and CP62-189, respectively, have

---

[11] The record (Tr. 1577, 1597) shows that Midwestern presently has sufficient excess pipeline capacity to serve the Northern Illinois volumes, and also serve all Midwestern's Section 7(a) applicants and intervenors, if so directed. A part of the present excess capacity results from Midwestern's installing compression facilities in excess of authorization in Docket No. G-16841. On October 27, 1961, Midwestern filed a motion to amend its certificate issued in Docket No. G-16841 to conform the authorization therein granted to the facilities actually installed. No party opposes the motion and Staff's brief herein recommends that it be granted. However, the motion pends before the Commission, and is not a part of this proceeding.

[12] Excluding all requirements shown in Exhibit 88 for Onargo, Illinois. Allied's franchise in that community expired by its own terms on April 6, 1962.

jointly presented their separate proposals for the construction of three separate municipal gas utilities to be served from one lateral. They request an order directing Midwestern to establish physical connection with that lateral, to be constructed by the Panama-Williams Corporation, and to provide gas allocations to meet their requirements.

The proposal is to tap the Midwestern mainline at Dunlap, Illinois, at a point where the mainline crosses U.S. Route 40 approximately on the Illinois-Indiana border. The new six-inch lateral will be laid westerly along Route 40, and will extend 8½ miles to Marshall, thence about 10 miles to Martinsville, and thence about six miles to Casey.

The several proposed agreements between the parties may be summarized as follows:

Marshall will lease from Panama-Williams and operate and maintain (with an option to purchase within one year of execution of the lease agreement) the portion of the lateral to be constructed between the Midwestern tap and the City of Marshall at an estimated cost of $193,328. The lease charges payable by Marshall will be $1,425 per month for 30 years. Marshall will also transport, through the lateral it leases, the combined requirements of Martinsville and Casey at a rate of one cent per Mcf, payable by Casey.

Casey will lease from Panama-Williams, under terms similar to the Marshall lease agreement, the remainder of the lateral, estimated to cost $244,220. Monthly lease charges will be $1,800 for 30 years. Casey will charge Martinsville six cents per Mcf for transporting Martinsville's requirements through a portion of the lateral leased by Casey.

The three cities show 54 cents per Mcf as the price of gas to be purchased from Midwestern.

Marshall, which as a service area population of about 3,850 persons, will construct a distribution system to serve customers within the municipality and vicinity and along the lateral from Dunlap. The cost of the municipal system is estimated at $600,000. By ordinance, the City Council has provided for the establishment of the system and authorized the issurance of gas revenue certificates to finance the project. The ordinance was approved by the voters of the City at a special election held March 3, 1960. Marshall is experienced in utility operation as the operator of its own electric, water, and sewer facilities.

Midwest Securities Company of Chicago, municipal bond specialists, will underwrite the proposed 30 year certificates, which will bear interest at the market, estimated to be 5 per cent.[12]

Martinsville, with a service area of about 1,360 persons, will serve within the municipality and environs. The cost of its distribution facilities is estimated at $225,000.

Casey, with a service area population of about 3,625 persons, will serve within the municipal limits and vicinity, and along the lateral from the point, about 15 miles to the east, where at Casey's metering station its operation of the lateral will commence. The Casey distribution system is estimated to cost $650,000.

The plans of all three cities are carefully worked out in terms of market, comparative fuel costs, feasibility, and financing. Midwestern is ready and willing to undertake the service, which will amount in the third year to 1,952 Mcf peak day and 285,600 Mcf annual for Marshall, 2,104 Mcf peak day and 299,900 Mcf annual for Casey, and 546 Mcf peak day and 62,700 Mcf annual for Martinsville. Debt coverage for the three cities is shown at 1.92, 1.94, and 1.70, respectively, on a 20 year amortization schedule.

---

[12] Midwest Securities will also underwrite on the same terms the certificates for Martinsville and Casey. These cities also have approved ordinances similar to Marshall's.

Objections to the proposed service are raised by Staff and by Central Illinois Public Service Company (CIPS). The Staff contends, without supporting data or concrete argument, that Panama-Williams should be certificated under Section 7(c) of the Natural Gas Act to construct the lateral which will supply the three cities. Section 7(c) states that no natural-gas company, or "person which will be a natural-gas company upon completion of any proposed construction or extension," shall transport or sell natural gas subject to the jurisdiction of the Commission, or construct, acquire, or operate facilities therefor, without a certificate of public convenience and necessity.

So far as the record shows, Panama-Williams is a contractor, and not a natural-gas company. After the contractor builds the lateral line, the municipalities will have the "irrevocable right solely and exclusively to use and to operate the facilities hereinabove described"—*i.e.*, the transmission lateral. (Exhs. 89, 94.) Panama-Williams will be paid for its construction work and capital outlay by monthly charges over a 30 year period of time, or the respective cities may buy the lateral "at a price computed on the basis of actual construction and installation computed by the contractor at the unit prices designated in the engineers' estimates," not exceeding $250,000 for Casey and $200,000 for Marshall. Payment may be made in gas revenue bonds at par. It is quite impossible to see how this arrangement makes Panama-Williams a natural-gas company, *i.e.*, "a person engaged in the transportation of natural gas in interstate commerce, or the sale in interstate commerce of such gas for resale." Act, Sec. 2(6); see *El Paso Natural Gas Co.*, 19 FPC 371, 372–373.

CIPS, which serves electricity in portions of the southern two-thirds of Illinois and natural gas in central Illinois, has presented an elaborate argument against certain details of the general plan of the three municipalities to construct distribution utilities and contract with Panama-Williams for the construction of the service lateral, and contends that by reason of claimed technical faults in their implementation of the Illinios statutes governing procedure for creation of municipal utilities, the cities lack authority to proceed with construction.

It is, of course, quite clear under the Illinois Municipal Code, Article 11, Division 117, that the three municipalities are generally authorized to construct a gas public utility in the general manner outlined in the record in this case. However, CIPS claims in particular that (a) the approval of the voters of the three cities for the construction of the systems is not legally adequate to cover the project as it has now evolved, (b) Casey and Martinsville have not made appropriations covering cost of transporting the gas along the lateral to be constructed by Panama-Williams, and (c) further action must be taken by the three municipalities before their projects can be put into operation. In this connection, counsel for CIPS and for the three municipalities have extensively briefed the local law regarding CIPS' claim that the lease agreements between Casey and Marshall and Panama-Williams are really "sales contracts" and regarding the appropriate procedural details of the financing of municipal gas plants under the Illinois statutes. We should at this point pause to examine the need for Commission decision on these matters of Illinois municipal law.

In the record of the proceeding at bar, competent engineers have set forth preliminary plans for the transmission lateral and for the plan of distribution of the gas to be supplied. A responsible investment banking firm has established that the financing plans of the three municipalities can be effected and that the revenue bonds can be sold. There is no question from the record but that the anticipated debt coverage, and other general aspects of the project,

are within conventional limits. For the purposes of the Natural Gas Act, competent local interests have thus established to the necessary degree that their proposals are within the "public interest" safeguarded by this Commission.

It is not the function of this Commission to consider and decide the highly technical questions of Illinois municipal law advanced by CIPS in opposition to the proposals of the three municipalities for new gas service. The financial backers and the engineers and contractor for the municipalities are ready to proceed, and are apparently unimpressed by the objections of CIPS. Midwestern is ready and willing to furnish the service when the three municipalities have consummated their arrangements for construction and have, pursuant to such arrangements, installed the necessary facilities. In the event that legal objections raised by CIPS to the details of the preliminary legal arrangements made by the three municipalities have validity, as may be established in the Illinois courts, service will, of course, be interdicted and Midwestern will have available capacity for service elsewhere. Should this event occur, the prejudice to Midwestern and the national public interest protected by this Commission, as distinguished from local interests, would be minimal.

Accordingly, there is no need for this Commission to pass on the alleged technical deficiencies in the implementation of the general authority of the municipalities to construct distribution systems and contract with Panama-Williams for construction of a service lateral. If such deficiencies actually exist, they will no doubt either be corrected and supplied or declared in the appropriate forum, the Illinois courts. Midwestern will be directed to undertake the supply of gas to Marshall, Casey, and Martinsville as applied for in this proceeding.

(2–e) *Village of Vermilion, Illinois.*—In Docket No. CP62–168, CIPS requests an order directing Midwestern to establish physical connection and to sell and deliver to CIPS natural gas for new supply to the Village of Vermilion, Illinois, and environs. Estimated third year peak day and annual requirements are 175 Mcf and 17,710 Mcf, respectively, for 103 estimated average number of customers. The required facilities in Vermilion will cost $30,415, and will be financed with internally generated funds. The CIPS application is unopposed, and Midwestern is willing to furnish the gas. CIPS is generally authorized to serve Vermilion and environs. The service will be directed as requested.

(2–f) *City of Morgantown, Kentucky.*—Morgantown is an intervenor in Docket No. CP62–116, seeking new service from Midwestern, which is willing to undertake the service. Morgantown's third year peak day and annual requirements are 556 Mcf and 43,538 Mcf, respectively. The required distribution facilities are estimated to cost $215,000 and will be financed through the sale of 30 year revenue bonds bearing interest at 5½ per cent.[14] The debt coverage ration, based on third year sales and 30 year amortization schedule for the bond issue, is 1.66.

Staff points to the fact that the debt coverage ratio would be about 1.25 on a 20 year amortization schedule and a 5½ per cent interest rate. Staff recommends that Morgantown's request for gas service be granted only on condition that the interest rate on the proposed bond issue be lowered to the extent necessary to show a debt coverage ratio not less than 1.5 with a 20 year amortization schedule.

Staff's recommendation is rejected. As indicated in other connections, *supra*, 30 year bond issues for municipal distribution systems are commonplace. The interest rate will be fixed by the municipal bond market, over which neither

[14] The city's engineering witness used 5½ percent in developing debt coverage. Its financial witness testified the bonds may go at an interest rate as low as 5 percent (Tr. 2387).

Morgantown nor this Commission has any control. It may be observed that the extent to which the Commission can or should, in terms of the national public interest, concern itself with, and thus appear to assume some responsibility for, the financial arrangements of new intrastate gas distribution systems, would seem to be very limited. That matter is one primarily, and perhaps usually exclusively, of concern to the local distribution system, the local authorities, and the investors, over whom the Commission has no control. Service will be authorized in accordance with the proposal.

(2–g) *Competing Application: Grandview v. Lincoln.*—On February 6, 1962, the City of Grandview, Indiana, petitioned to intervene in these proceedings, asking for a third-year volumes of 305 Mcf peak day and 24,157 Mcf annually from Midwestern for "distribution through municipally-owned facilities which it plans to construct and operate." On February 9, 1962, Lincoln Natural Gas Company, Inc., of Rockport, Indiana, similarly petitioned to intervene, asking for a third-year [15] volumes of 106 Mcf peak day and 16,020 Mcf annually from Midwestern for "the requirements of a new industrial customer, the Glenmore Distilleries Company, which has recently commenced the construction of a new plant and warehouses in Spencer County, Indiana, * * * northeast of Rockport, Indiana, near Grandview, Indiana."

The crux of the competition is for the service to Glenmore Distilleries, which is building four new warehouses and a bottling plant just outside the city limits of Grandview. It happens that Midwestern's mainline passes directly over this new Glenmore property, thus minimizing investment in pipeline, and it appears that the Glenmore load will be relatively stable and profitable. The investment will be only $5,200, covering 1,000 feet of two-inch pipe and appurtenant facilities. (Exh. 105, Lincoln.)

Grandview is proposing to undertake the construction of a municipal gas distribution system for general service within and adjacent to the city limits and also for service to the Glenmore plant. Lincoln Natural has an existing distribution system in Rockport, Illinois, some six miles distant from the Glenmore plant, serving gas transmitted by American Louisiana Pipe Line Company. Lincoln Natural, like Grandview, would attach the Glenmore load to the Midwestern mainline. There would thus be no physical effect from the new connection on Lincoln's existing facilities; the effect would be entirely financial.

The "public interest" in the business of transporting and selling natural gas, to be fostered by this Commission under Section 7 of the Natural Gas Act, certainly includes the interest of communities seeking to have gas service installed. As will be seen, the feasibility of the Grandview project for new gas service to the whole community, including residential and business customers, depends upon the connection of the Glenmore load by Granview. Lincoln Natural's interest in the Glenmore load is entirely financial. Without disparaging the importance of advantaging the financial situation of existing distributors, where possible, by authorizing profitable industrial service,[16] it seems quite clear that, in principle, Grandview's project should be given preferential consideration if all other substantial elements are equal.

(2–g–1) *Specifics of Grandview Application.*—According to its presentation, Grandview, on the basis of its market survey, expects to serve (a) 120 residential

---

[15] Shown as fourth-year in petition and testimony; actually third-year based on contemplated completion of and full requirements for the Glenmore plant during the third year from the 1962–1963 heating season.

[16] *Inter alia,* such authorizations tend to reduce costs of gas to household customers.

and small commercial customers, (b) 11 medium commercials, and (c) four large commercials. The "large commercials" are the warehouses being built by Glenmore; Grandview has not included in its request a volume of gas for the bottling plant which will be in operation during the winter 1965–1966. The volumes in the three customers categories are, in Mcfs, respectively, (a) 16,383, (b) 3,300, and (c) 4,000 on an annual basis, and (a) 219, (b) 36, and (c) 44 on a peak day basis. After allowances for unaccounted for losses, service will be 24,157 Mcf annually and 305 Mcf peak day.

Grandview expects to serve its residential and small customers at an average rate of $1.30 per Mcf, medium commercials at $1.00 per Mcf, and large commercials at 90 cents per Mcf, for total revenues, third year, of $28,198. The cost of gas is stated at 54 cents per Mcf, the anticipated Midwestern rate, and operating and maintenance expenses are at the low figure of $2,595 per annum. Grandview thus expects to realize net revenues of $12,561 per annum from all sales, beginning in the third year.

Cost of facilities is estimated to be $110,000, to be financed by 30 year revenue bonds at an interest rate of 5½ per cent maximum, or less if market conditions warrant. Debt coverage is projected at 1.60 on this basis, and is adequate insofar as it is a matter with which this Commission is concerned.[17] Competent engineers have reported that the Grandview project is feasible, and two well-known investment banking firms have reported that the revenue bonds can be marketed as proposed.

(2–g–2) *Specifics of Lincoln Application.*—Lincoln's carefully prepared plans include proof of the exact requirements of the Glenmore plant, based on the aging calendar for the whiskey there to be stored and bottled. As of the time of hearing herein:

> One warehouse is completed and ready for use; a second warehouse will be completed in 1962; the third and fourth warehouses will be built in 1963 and 1964 respectively. The bottling plant will be constructed in time to begin operations in late 1965 or 1966.

Based on exact knowledge of boiler requirements and observed operations in comparable warehouses, the maximum day requirement (a) for each warehouse boiler will be 14 Mcf and (b) for the bottling plant boiler will be 50.6 Mcf, or total third-year peak day (end of 1965) of 106 Mcf. Annual requirements will be 1,470 Mcf for each warehouse and 10,140 Mcf for the bottling plant, or a total of 16,020 Mcf.

Construction costs and plans are itemized in detail. Total construction costs, including $1,500 in legal fees, amounts to $5,205, which would be paid out of Lincoln's retained earnings.

Lincoln would serve Glenmore under its existing 4-part industrial customer tariff, which will amount to an average price of 80 cents per Mcf for the volumes here involved. After deducting cost of gas, operating and administrative expense, depreciation and Indiana taxes, Lincoln expects to realize third-year operating revenue before federal income taxes of some $1,351 per year from the service to Glenmore.

---

[17] Staff questions the propriety of a 30 year rather than a 20 year bond issue and seems to implicitly question the interest rate. Staff in no way connects these questions with the affairs of Midwestern, or any other matters of national as distinguished from purely local concern. It is noted that Midwestern's investment in the project will only be the cost of a tap, and regulator and metering. In any event, a 30 year bond issue at 5½ percent interest is not unreasonable. *United Gas Pipe Line Co.*, 24 FPC 933 (40 year bonds at 5½ percent); *Southern Natural Gas Co.*, 25 FPC 518 (7 percent debentures).

(2–g–3) *Evaluation of Competing Applications.*—Grandview's application lacks the careful detail which might be expected from final plans of an established gas utility operator. Grandview has estimated the Glenmore load at 44 Mcf peak, 4,000 Mcf annually, whereas the load, including bottling plant, is accurately estimated to be 106 Mcf peak, 16,020 Mcf annually. The increased revenues thus indicated may compensate for indications that Grandview's operating expense estimates are somewhat low. The engineering and banking services available to Grandview are competent, and there is no reason to suspect that the proposed system is not feasible or bankable.

Service from Lincoln, the existing gas utility operator six miles distant, would be simple and direct. Lincoln's operating plan is careful and conservative. However, neither Glenmore nor Midwestern have expressed any preference for service from Lincoln rather than Grandview.

Grandview estimates, for its entire distribution service, third year gross revenues of $28,198, and net revenues of $12,561 after allowance of $13,045 for cost of gas and $2,592 for operations and maintenance. On Grandview's figures, $3,600 of revenues will be derived from the Glenmore sales at an average rate of 90 cents per Mcf;[18] elimination of these revenues would bring debt coverage under the accepted 1.5 ratio. On Lincoln's more accurate estimates, the Glenmore sales at 70 cents per Mcf will produce $11,200 of third year revenues. Lincoln's presentation enhances the likelihood that, with the Glenmore sales, Grandview can operate within a conservative debt coverage, even if Grandview's operating and construction costs turn out to be somewhat higher than now estimated.

It is to be remembered that these proceedings involve preliminary plans subject to a degree of improvement in the process of finalization under the guidance of engineering and financial experts working with Grandview. On balance, Grandview should be authorized to proceed with its municipal plant.

(2–g–4) *Grandview's Franchise Authority.*—Lincoln contends that it has the exclusive right to serve all of the rural area outside of the town of Grandview, and that the Grandview municipal system, if built, can serve only customers within the town limits. The contention is based on an order of the Indiana Public Service Commission approved December 23, 1960 (Exhibit 104). This order gives Lincoln the right to distribute gas "to all customers residing in the area and territory described and set forth in said 'Exhibits A and B' attached to said Petition,[19] in Spencer County, Indiana, except the portions of said territory lying within the corporate limits of the town of Grandview . . ." (continuing with exact description by section, township and range).

The Indiana Commission order has not been acted upon by Lincoln in respect of the laying down of distribution lines to serve customers adjacent to the town of Grandview. Indeed, the record is silent as to any concrete action taken by Lincoln to implement its formal authorization. The franchise is not in terms an exclusive right to operate at the Grandview borders, and, under the circumstances of this case, should not be considered as an exclusive franchise. The contrary conclusion would mean that domestic and other customers just outside Grandview, and not within Lincoln's economic service area, would forever be unable to attach any gas service at all, because they could not be served by

[18] The record indicates a debt coverage for Grandview of 1.55 if the average rate to Glenmore were reduced, as Grandview has suggested on the record, to 83 cents per Mcf.

[19] *I.e.*, attachments to Lincoln's application for authority to serve. The exhibits are not part of the present record, but it will be assumed that the Glenmore plant lies within the territory there described.

Grandview's projected municipal plant. The effect would be that a franchise, presumably contemplating actual service, would be the instrument by which service is prohibited.

[1] As authorized in Docket Nos. CP61-74 and CP61-295.
[2] As authorized in Docket No. CP62-93.

Upon completion of formal proceedings by Grandview under Section 54–602 of Chapter 6, Burns Indiana Statutes—Annotated (1951), which gives Grandview the right to operate its municipal gas system within a radius of six miles from the city limits, and commencement of gas plant operations, Lincoln's inchoate franchise should, of course, be the subject of a petition to the Indiana Commission, looking towards a realistic definition of Lincoln's present and contemplated actual service area.

* * * * * * *

The peak day requirements of the Section 7(a) applicants and intervenors whose requests for service from Midwestern are granted in this section of this decision, total 6,531 Mcf. Tennessee will therefore be required to increase Midwestern's contract demand by 21,531 Mcf, in lieu of the 15,000 Mcf increase originally proposed in Docket No. CP60–94. Tennessee's proposed increase in maximum daily delivery obligation from this section of its transmission system, as shown in Table 2, is 40,875 Mcf. The inclusion of the Section 7(a) applicant and intervenor requests granted herein will increase that obligation to 47,406 Mcf.

(3) *Proposed Service and Facilities Northeast of Storage.*—As shown on Table 3, Tennessee proposes to serve to existing customers, and asks authorization for, 86,428 Mcf of additional firm maximum daily quantities, as well as 10,120 Mcf of additional daily storage quantities. There is no issue or contention regarding the need for this additional service.

(3–a) *Lowell Gas Company.*—In Docket No. CP61–9, Lowell requests an order directing Tennessee to establish physical connection and deliver a peak-day volume of 1,756 Mcf for distribution in Wilmington, Massachusetts. Estimated third-year annual requirement is 204,611 Mcf. Lowell's construction cost for

the necessary facilities is esimated at $841,994 during the first three years to be financed temporarily by funds available under a construction credit allowance from four banks for which $1,400,000 is presently available. The request is unopposed. The record clearly establishes the need for the new service to Wilmington, and appropriate conclusions will be made. Table 3 quantities will thus increase to 88,183 Mcf.

(3-b) *Facilities Northeast of Storage.*—As noted (see "Background," *supra*), Tennessee has been temporarily authorized to construct and operate 6,800 compressor horsepower and 24.75 miles of loop line near Syracuse, New York. There is no question, and no reason to question, the need for these facilities, which will be permanently authorized herein.

Total storage		8,080	2,040	10,120	10,120

[1] As authorized in Docket Nos. CP61-74 and CP61-295.

Additionally, Tennessee, on April 9, 1962, applied *inter alia* for temporary authority to construct and operate 5,000 compressor horsepower at Pennsylvania Station 321 and 2.37 miles of lateral line near Northhampton, Massachusetts, at a total cost of about $1,845,000.[20] Temporary authority was granted by Commission letter order of May 23, 1962. There is no opposition and no issue as to Tennessee's need for these additional facilities northeast of storage, which will also be permanently authorized herein.

Gas Supply and Deliverability

Tennessee's evidence shows recoverable gas reserves as of January 1, 1962, of 18,828,898 MMcf, or some three trillion cubic feet more than January 1, 1958, reserves. This showing of recoverable reserves results from recent addition of gross reserves of 4.1 trillion cubic feet in Louisiana and 719 billion cubic feet in Texas. The testimony of Tennessee's Director of Reserves shows a reserve life index of 19.7 years from January 1, 1962. No testimony was presented to dispute the gas supply showing made by Tennessee.

Under the "most rigid test of deliverability" (Tr. 340), the backpressure method,[21] the testimony of Tennessee's senior Petroleum Engineer shows that its reserves have a deliverability life of 12 years from January 1, 1963. At the request of Commission Staff, Tennessee also prepared a deliverability study based on the "Davis Curve."[22] This study shows a deliverability life of 15 years.

The testimony clearly shows that water-drive is to be expected in some of Tennessee's Gulf Coast reservoirs, based on general experience in the area, and that as encountered water-drive will improve the reservoir deliverability shown by the back-pressure method. Consequently, it may be said that Tennessee has shown "at least" 12 years of deliverability life for the reserves on which it relies in this proceeding.

The Staff has presented no substantial questions or contentions regarding the methods used by Tennessee in computing deliverability.[23] However, Staff's brief, although not entirely clear, seems to contend for the exclusion of certain reservoirs and classes of reserves counted by Tennessee in making its reserve study. This exclusion, Staff contends, would reduce Tennessee's deliverability from 12 years to 9.4 years[24] and presumably result in a failure by Tennessee to show the deliverability coverage required by the Commission (21 FPC at 657), discussed *supra*.

Staff's Proposed Exclusions.—From the reserves presented by Tennessee, Staff thus would delete—

---

[20] Costs of this and other single facilities and groups of facilities mentioned *infra* are derived by adding to the direct costs shown by Tennessee on Exhibit No. 19 a pro-ration of Tennessee's estimated overhead costs.

[21] *I.e.*, the ability of the wells to produce against a fixed wellhead or line pressure, substantially based on observation, and without allowance for water-drive.

[22] This is a performance curve based on actual production of 308 depleted reservoirs located in the Gulf Coastal Plain area of Mississippi, Louisiana, and Texas. Staff has attacked the use of the Davis Curve, but has presented no understandable basis for the attack.

[23] Staff, which required Tennessee to make the "Davis Curve" presentation, questioned the presentation on brief. However, Staff has not submitted an alternative expert interpretation of Tennessee's conclusions therefrom. The Tennessee presentation is accepted.

[24] Staff also criticizes other features of Tennessee's reserves showing but has not contended for a further reduction in deliverability based on these criticisms.

	Mcf
1. Reserves purchased in-place:	
(a) MCN	496, 398, 000
(b) Bastian Bay	938, 160, 000
(c) Ship Shoal	661, 323, 000
Sub-total	2, 095, 881, 000
2. Non flow-tested reserves	605, 220, 000
3. Compressor fuel contracts	427, 434, 000
4. Certificated but no deliveries	324, 488, 000
5. Tenneco West Cameron acreage	342, 489, 000
Total exclusions	3, 795, 512, 000

Staff's proposal is thus for the exclusion of over 20 per cent of the reserves on which Tennessee relies to support future service.

1. *In-place Purchases.*—(a) The offshore Louisiana reserves involved in what has become known as the "MCN purchase" have been rededicated to Tennessee by contracts dated January 31, 1962. These contracts provide for conventional per-Mcf sale of the gas by the MCN producers to Tennessee. Proceedings looking towards certification of this supply at the present writing pend before the undersigned Examiner in Docket No. G–14562 *et al.* The only issue presented in such proceedings is the price issue, as to which a settlement is being arranged.

Because of the location of the MCN gas in federal territory offshore Louisiana, it is physically impossible, as a practical matter, to use or sell the gas except by way of interstate movement thereof; this means that the gas must be used or sold pursuant to the authority and direction of the Commission. There is no question but that the Commission will allow Tennessee to connect the gas at the proper price. It is therefore, for practical purposes, part of Tennessee's committed reserves.

(b) The Bastian Bay gas, purchased in-place, is currently being taken into the Tennessee system. The Bastian Bay field lies offshore Louisiana, and was purchased by Tennessee from Pan American Petroleum Company. Under the purported authority of a "budget type" certificate issued in Docket No. CP61–106, Tennessee has connected the field by means of 2.63 miles of 12-inch gathering line from the Tennessee general system in southern Louisiana.

On March 12, 1962, the Commission, in Docket No. CI62–1034, consolidated with Docket No. CP61–106 above-mentioned, ordered Pan American to show cause why it should not be found to be engaged in the sale of gas from Bastian Bay without having secured Commission authorization. This proceeding, which has been heard but not decided, looks towards the rationalization of the jurisdictional situation rather than the cessation of the supply. Whatever the outcome of the proceeding in Docket No. CI62–1034, it will not be the removal of the Bastian Bay reserves from Tennessee's connected gas resources.

(c) In considering the Ship Shoal reserves, we are dealing with a consummated transaction, the substantial jurisdictional, accounting, financial, operating, and pricing aspects of which will be dealt with in a future "Decision on Remaining Issues" herein. As of the time of the hearing, the Tennessee System had paid out some $18 million for the Ship Shoal reserves, pursuant to its contracts of May 10, 1961, with the CATC companies. On August 10, 1962, further payments of $4,583,332.80 became due, and presumably were paid. The total consideration to be paid is $97,333,333.

The Ship Shoal reserves have not been connected. If Tennessee and its customers are to realize benefits from the 97 million dollar purchase price thus partly paid and partly committed, 58.2 miles of 20-inch gathering line must be

authorized by the Commission and laid from Tennessee's mainline valve 523 to the Ship Shoal area, at a cost of $8,503,962. (Exh. 19.) Total cost including overheads will be $10,100,000.

The situation thus presented is exactly that envisaged in the initial decision issued January 8, 1962, in *Tennessee Gas Transmission Co.*, Docket No. G–14562 *et al.* In stating the several deficiencies of the so-called "Rayne Field approach" to the problem of in-place sales, the following appears:

> * * * Furthermore, under Rayne Field, the Commission would have no jurisdiction to pass on pipeline acquisitions of gas in-place, except where the pipeline, as a part of the acquisition transaction, contemplates immediate connection of the gas and makes application to the Commission for authority to make such connection. Pipelines could still buy gas (gas leases) at an unregulated price and in a separate subsequent transaction, apply for authority to make the connection. In such case, the Commission might well be under considerable constraint to approve the connection. Cf., in an analogous situation, Statement of General Policy No. 62–1, issued October 19, 1961, adding Section 2.57 to the Commission's Rules of Practice and Procedure (18 CFR 2.57).

On re-appraisal of the language in the light of the actual case at bar in which, unlike *Rayne Field* and *MCN*, the gas purchase antedated the request for authority to connect, the language is found to be overcautious and tentative. In an actual situation, the degree of "constraint" to approve the connection is found to be substantial; perhaps compelling. Whatever the solution to the important reserved questions as to the appropriate terms and conditions under which deliveries of the gas will be effected, it will not be a totally unrealistic solution resulting in 661 billion cubic feet of unusable (because unconnected) gas supply at Ship Shoal or the diversion of this potential supply from the Tennessee system. This means that we are constrained to approve the connection. This means that all Ship Shoal gas reserves are properly included in Tennessee's showing of supply and deliverability.

There is no issue or question as to the soundness of the engineering, costing, and other details of the proposed line for the connection of Ship Shoal with Tennessee's system. Without going into reserved substantial questions, "connection of the gas should be routine and as-of-course, depending only on matters of engineering and costing of the physical facilities not in issue here and rarely, if ever, in issue in other Commission proceedings." Initial Decision of January 8, 1962, in Docket No. G–14562 *et al.*, [unreported]. Therefore, the connection to Ship Shoal should also be authorized in this decision without prejudice to deferred issues.

2. *Non Flow-tested Reserves.*—The Commission has no general requirement to the effect that flow-testing is a prerequisite to all reserve determinations. There is presently apparent no reason for such a general requirement, and no reason for such a particular requirement based on the record in this case. Non flow-tested reserves presented by Tennessee amount to only slightly over three percent of total recoverable reserves shown. There is no reason shown in the record to doubt that as Tennessee's flow-testing program is carried out, these non flow-tested reserves will prove up in accordance with Tennessee's estimates. The uncontroverted evidence requires inclusion in Tennessee's gas supply showing.

3. *Compressor Fuel Contracts.*—Tennessee has a contract with Magnolia Petroleum Company and another contract with Socony Mobil Oil Company providing for the supply of gas by the said producers "for use only in Buyer's compression

facilities." (Exh. 1, Vol. III, Tables 49 and 50.) Gas is and has been flowing into the Tennessee system pursuant to such contracts, although Tennessee, and the producers, presumably under the mistaken impression that the supply is non-jurisdictional,[25] have not applied for or received certificates authorizing the sales and deliveries.

The contractual price for the so-called compressor fuel contracts, 22⅛ cents per Mcf escalating to 23⅛ cents in November 1962, is considerably higher than the General Policy Statement ceiling for the area of the sale. The matter should clearly be the subject of Commission action enforcing the filing and other requirements of the Natural Gas Act—a proceeding which will have no relevance to the issues in the case at bar. For present purposes, it is sufficient to note that the gas is connected, cannot be disconnected and reassigned without breach of contract and abandonment proceedings before the Commission, and is thus a part of Tennessee's committed supply.

4. *Reserves Certificated But No Deliveries.*—On March 13, 1962, the CATC companies commenced deliveries to Tennessee from the reserves in the Cameron Area, Block 64 field, thus mooting Staff's objection.

5. *Tenneco West Cameron Acreage.*—On August 28, 1962, in *Tenneco Corp. et al.*, Docket No. CI61–1272 *et al.*, the Commission in effect approved a settlement of a questioned transaction in which Tennessee had transferred to its affiliate Tenneco Corp. certain of Tennessee's gas reserves. Under the settlement, the West Cameron acreage reserves were retransferred to Tennessee. The order of August 28, 1962, granted Tennessee the authority to construct and operate a $1,320,000 field line to connect the Block 180 (West Cameron) offshore acreage with the Tennessee system. This disposes of all questions regarding the propriety of including these reserves in the Tennessee supply.

* * * * * * *

It is concluded that Tennessee has shown recoverable gas reserves of 18,828,898 MMcf, as of January 1, 1962. Based thereon, Tennessee has also shown its ability to supply its presently authorized system obligations and the additional obligations proposed by Tennessee in its amended and supplemented application in Docket No. CP60–94 for a period of at least 12 years.

However, Tennessee did not consider the requirements of Section 7(a) applicants and intervenors, herein requesting service, in its showing of deliverability coverage. The question is: To what extent would the inclusion of such additional requirements affect the 12-year deliverability? We note that the third-year average day requirements of the Section 7(a) applicants and intervenors, whose requests for service are granted herein, total about 2,900 Mcf. This amount is about one-tenth of one per cent of Tennessee's proposed average day system obligations to be met from reserves during each of the years 1963 through 1974, as shown in Exhibit 24. Exhibit 9 shows that Tennessee has scheduled *substantial* purchases of gas in the years subsequent to 1974.

It would appear that Tennessee, by a very slight rescheduling of purchases, can meet the relatively minute requirements of the Section 7(a) applicants and intervenors without sacrificing its over-all 12-year deliverability coverage. However, we need not speculate about this. It is clear and certain that the public interest will not be served by denial of these Section 7(a) and intervenor requests solely on the ground that a granting thereof would result in an unmeasurably small impairment of a 12-year deliverability showing which is based substantially on estimated data. Tennessee's supply picture is subject to rela-

[25] The gas flows into Tennessee's integrated interstate system, and is assigned to compressor stations only by conceptual artifice. See *Montana-Dakota Utilities Co.*, Docket No. CP61–234 *et al.*, Examiner's Decision of September 5, 1962.

tively gross variations from one period of years to another there is no indication that Tennessee will not continue to obtain gas resources to meet its obligations for the reasonably foreseeable future.[36]

Reserved Issue as to Tennessee's Capacity

In the foregoing substantial quantities of gas, in excess of volumes heretofore permanently authorized for service by Tennessee, have been allocated to various existing and new customers of Tennessee and its subsidiary Midwestern. The question arises as to how this additional service can be presently and permanently authorized herein without deciding at the same time, expressly or by implication, the reserved issue as to Tennessee's need for new capacity southwest of storage.

The issue can be and is reserved for future decision because Tennessee, pursuant to temporary authorization issued in 1962, has installed or is presently installing, at its own risk, sufficient new facilities to provide the capacity which Tennessee now claims to be necessary to cover the additional service during the immediate 1962–1963 winter season. Whether or not all such temporarily authorized facilities are or will be actually needed to render the services remains to be decided. Stated differently, it remains to be determined whether, as claimed by the Columbia System intervenors, Tennessee could just as well have served the quantities of gas herein authorized without installing the contested facilities temporarily authorized in 1962.

Summary of Current Status of New Tennessee Facilities.—It will be helpful at this point to trace and exactly define the origin and extent of Tennessee's actual construction undertaken to date, indicating that at present, and for the time being, the dollar amount involved in the reserved issue is sharply reduced.

1. As noted *supra*, the need for Tennessee's construction of facilities northeast of storage is not contested. The specific items are:

Facilities	H.P. or miles	Cost [37]
Station 241	6,800	$5,469,000
Loop between Stations 229, 231	24.62	
Station 321	5,000	1,845,000
Northhampton lateral	2.37	

[37] Costs in this and all subsequent tables reflect allocation to individual facilities of gross overheads and contingencies presented by Tennessee.

The first two items were temporarily authorized in Docket No. CP60–94 on July 1, 1960. The second two items were temporarily authorized in the same docket on May 23, 1962. All will be permanently authorized herein.

2. The Columbia System intervenors do not contest the need for two facilities southwest of Station 87. The specific items are:

Facilities	H.P. or miles	Cost
Station 526A–102	5,000	$1,680,000
Ship shoal lateral	58.2	10,100,000

[36] Further in this regard, we may note Chairman Swidler's speech before the American Gas Association on October 9, 1962, wherein the Chairman indicated that the Commission is presently reexamining its policy with regard to the 12-year deliverability requirement as applied to expansions of well-established pipelines.

As indicated above, construction of the Ship Shoal lateral is to be permanently authorized herein, because the lateral is essential to connect and start utilization of the now idle and expensive reserves, and since there is no question as to the need for, engineering of, or cost of, the physical facilities which will make the physical connection with Ship Shoal. The Ship Shoal reserves lie beneath Federal waters offshore Louisiana. Therefore, the gas cannot be sold or otherwise disposed of without interstate movement. Therefore, connection of the gas, if it is to be usefully and profitably disposed of, is entirely within the jurisdiction of the Federal Power Commission; the producers, *e.g.*, have no intrastate sales alternatives. The only necessary implication from the connection is that Tennessee, rather than another pipeline, will take delivery of the gas. The financial and other bases for the deliveries set forth in the Tennessee-CATC contracts remains to be redetermined.

"The existence of large blocks of idle and expensive energy is not healthy or productive from the standpoint either of the given producers or of the national economy. The Commission should give the producers every opportunity to connect their new discoveries, to start cash realizations therefrom, and to move on to further exploration." Initial Decision of January 8, 1962, in Docket No. G–14562, *supra*. Following this principle, physical connection of Ship Shoal can be and should be made as soon as Tennessee needs the gas, without prejudice to, or implication concerning, the reserved financial, accounting, economic and legal issues inhering in the fact that Tennessee bought and the producers sold the gas without Commission authorization, at an excessive price, and that the purchase transaction between Tennessee and the CATC producers must therefore be revised to reflect a purchase on terms and conditions consonant with the public interest.

Construction of Station 526A–102 will also be permanently authorized herein. There is no question but that this compression is needed to move Tennessee's gas supplies originating in the Delta area of Louisiana to the Delta-Portland line.

3. The Columbia System intervenors contest Tennessee's need for the following specific facilities southwest of Station 87, all on the Delta-Portland line, which have actually been installed pursuant to temporary authorization issued July 6, 1962:

Facilities	*Horsepower*
Station 527, Louisiana	4,000
" 530, Mississippi	6,000
" 534, "	9,000
" 538, "	8,000
" 542, "	11,000
" 546, "	5,000
" 550, Alabama	11,000
" 555, Tennessee	7,500
" 860, "	5,400

The direct costs of this compression as presented by Tennessee are $14,357,000; the allocation of gross overheads and contingencies to these specific stations results in a total amount in question of about $17 million.

As will be seen, these installations cover only a portion of the total facilities proposed by Tennessee in this proceeding. The origin of these and three other [28] installations effected during 1962 has been in the following procedural steps and Commission orders:

[28] Station 321, the Northampton lateral, and Station 526A–102, none of which are contested.

On April 9, 1962, Tennessee filed its application for temporary authorization for the new facilities, claiming that they were necessary to meet 1962–1963 winter requirements and would provide 135,969 Mcf of additional design day capacity southwest of Station 87. This application was opposed, insofar as the Delta-Portland line compression was concerned, by the Columbia System intervenors, and on May 2, 1962, the Commission's Secretary notified all parties to the proceeding that an informal conference would be held concerning the matter on May 10, 1962.

On May 14, 1962, the Columbia System intervenors withdrew opposition to the issuance of the requested temporary authorization "without prejudice to their [Columbia's] position with regard to permanent certification of the facilities." On that same day, the Commission issued a notice of Tennessee's April 9, 1962, application and set the matter for hearing to be held on May 21, 1962. Subsequently, this hearing was cancelled by notice issued May 17, 1962.

On May 23, 1962, the Commission issued a letter order in Docket No. CP60–94 denying waiver of intermediate decision procedure and granting Tennessee temporary authority to construct and operate only such facilities on the Delta-Portland Line as required to increase design day capacity by 70,000 Mcf in lieu of the 135,969 Mcf requested in the April 9, 1962, application. The letter order also gave temporary authorization for the facilities northeast of storage and the compression at Station 526A–102.

On June 7, 1962, Tennessee filed a petition for rehearing of the Commission's letter order. The Commission, by order issued July 6, 1962, granted Tennessee's petition and issued temporary authorization for the construction and operation of all facilities as applied for in Tennessee's April 9, 1962, application. Tennessee notified the Commission that construction commenced on July 16, 1962.

On August 31, 1962, Tennessee filed an application, as supplemented on October 1, 1962, requesting temporary authorization to render during the 1962–1963 winter season the additional service at issue in this proceeding, *i.e.*, the additional 161,669 Mcf firm daily contract quantities and 10,120 Mcf of storage quantities discussed *supra*. This latest application was granted by Commission order of October 26, 1962.

4. A substantial amount of contested facilities originally proposed by Tennessee have not been covered by applications for temporary authority. Tennessee admits (Br. 15) that these facilities are not needed to meet requirements of the 1962–1963 winter peak season, but says that they will be needed "at a later date to meet the customers' loads as they increase." These facilities, which lie near Columbia's principal service area between Station 87 and storage, are as follows:

Facilities	*Horsepower or miles*
Station 871, Kentucky	4,000
Loop between Stations 203 and 206	41.52
" " " 213 and 216	34.06
" " " 303 and 308	51.68

The total cost of these facilities is about $20,500,000.

Recapitulating, the Columbia System intervenors contest about $17 million of facilities actually constructed. Tennessee has not asked for immediate construction of about $20.5 million of contested facilities. There is no issue not herein disposed of regarding some $19.1 million of facilities, part of which have been constructed under temporary authorization and part of which Tennessee will, no doubt, construct in due course.

ORDER

Wherefore, *it is ordered*, Subject to review by the Commission, as provided in its Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity is hereby granted to Tennessee Gas Transmission Company (hereafter called "Tennessee") for the construction and operation of substitute facilities temporarily authorized by Commission order issued August 30, 1961, pursuant to Tennessee's motion to amend the Commission's order issued May 12, 1959 in Docket No. G–16842; which facilities are described in said motion to amend, the Commission order, and the foregoing text of this Decision.

(B) Tennessee's authorization, deriving from the same Commission order issued May 12, 1959, to construct a total of 12,200 horsepower of compression facilities at Stations 1, 812 and 524, which facilities are described in the record in this proceeding and the foregoing text of this Decision, is hereby rescinded.

(C) A certificate of public convenience and necessity is hereby granted to Tennessee for the construction and operation of compression facilities at Station 241 and loop lines between Stations 229 and 231 all located northeast of storage in New York, as temporarily authorized by Commission order of July 1, 1960, in Docket No. CP60–94; similarly, for the construction and operation of compression facilities at Station 321 in Pennsylvania, compression facilities at Station 526A–102 in Louisiana, and a pipeline designated as the Northampton lateral in Massachusetts, all as temporarily authorized by Commission order of May 23, 1962, in Docket No. CP60–94, and as described in the application herein, the said Commission order, and the text of this Decision.

(D) A certificate of public convenience and necessity is hereby granted to Tennessee for the construction and operation of 58.2 miles of lateral line connecting the reserves offshore Louisiana known and herein described as the Ship Shoal reserves with Tennessee's facilities at valve 523; such lateral line being particularly described in the application herein.

(E) A certificate of public convenience and necessity is hereby granted to Tennessee to transport for, and sell and deliver to, existing customers, additional volumes of natural gas totalling 161,669 Mcf per day of firm service and 10,120 Mcf per day of storage service, as particularly described in Tables 1, 2 and 3 of this Decision and accompanying text.

(F) Tennessee is hereby directed to establish and maintain physical connection of its facilities with the facilities to be constructed by the Village of Provencal, Louisiana, as proposed in the application of such Village in Docket No. CP62–152; and to deliver and sell through such connection natural gas not exceeding a maximum daily volume of 285 Mcf.

(G) Tennessee is hereby directed to establish and maintain physical connection of its facilities with the facilities to be constructed by Lowell Gas Company in the Town of Wilmington, Massachusetts, as proposed in Lowell's application in Docket No. CP61–9; and to deliver and sell through such connection natural gas not exceed a maximum daily volume of 1756 Mcf.

(H) A certificate of public convenience and necessity is hereby granted to Tennessee to sell and deliver to Midwestern Gas Transmission Company (hereafter called "Midwestern"), natural gas not to exceed a maximum daily volume of 6531 Mcf for service to Midwestern's new customers identified in succeeding paragraphs (I) through (N) hereof.

(I) Midwestern is hereby directed to establish and maintain physical connection of its facilities with the facilities of Central Illinois Electric and Gas Company to be constructed in the Village of Oakwood, Illinois, as proposed in Central Illinois Electric and Gas Company's application in Docket No. CP61–122;

and to deliver and sell through such connection natural gas not to exceed a maximum daily volume of 365 Mcf.

(J) Midwestern is hereby directed to establish and maintain physical connection of its facilities with the facilities of Allied Gas Company to be constructed in the Villages of Potomac, Rankin, and Cissna Park, Illinois, as proposed in Allied's application in Docket No. CP62–132; and to deliver and sell through such connection natural gas not to exceed a maximum daily volume of 528 Mcf.

(K) Midwestern is hereby directed to establish and maintain physical connection of its facilities with facilities to be operated by the City of Marshall, Illinois; and to deliver and sell, through such connection, to the Cities of Marshall, Casey, and Martinsville, Illinois, respectively, natural gas not to exceed maximum daily volumes of 1952 Mcf, 2104 Mcf and 546 Mcf, for distribution through facilities to be constructed by the cities, as proposed in their respective applications in Docket Nos. CP62–187, CP62–188, and CP62–189.

(L) Midwestern is hereby directed to establish and maintain physical connection of its facilities with facilities to be constructed by Central Illinois Public Service Company, for service to Vermilion, Illinois, as proposed in Central Illinois Public Service Company's application in Docket No. CP62–168; and to deliver and sell through such connection natural gas not to exceed a maximum daily volume of 175 Mcf.

(M) Midwestern is hereby directed to establish and maintain physical connection of its facilities with the facilities to be constructed by the City of Morgantown, Kentucky, as proposed in Morgantown's petition to intervene in Docket No. CP62–116, and to deliver and sell through such connection natural gas not to exceed a maximum daily volume of 556 Mcf.

(N) Midwestern is hereby directed to establish and maintain physical connection of its facilities with the facilities to be constructed by the City of Grandview, Indiana, as proposed in Grandview's petition to intervene in Docket No. CP62–116; and to deliver and sell through such connection natural gas not to exceed a maximum daily volume of 305 Mcf.

(O) The application of Lincoln Natural Gas Company for an order of the Commission directing Midwestern to establish physical connection of its facilities with facilities to be constructed by Lincoln Natural and to deliver and sell a volume of natural gas, as proposed in Lincoln Natural's petition to intervene in Docket No. CP62–116, is hereby denied.

(P) A certificate of public convenience and necessity is hereby granted to Midwestern for the transportation and sale of natural gas to Northern Illinois Gas Company for resale in existing service areas, as hereinbefore described and as more fully described in the application in Docket No. CP62–116.

(Q) A certificate of public convenience and necessity is hereby granted to Alabama Tennessee Natural Gas Company for the construction and operation of $310,000 of facilities, and for the transportation and sale of an additional 1,230 Mcf per day of natural gas, both as hereinbefore described and as more fully described in the application in Docket No. CP62–133.

(R) A certificate of public convenience and necessity is hereby granted to Tennessee Natural Gas Lines, Inc. for the transportation and sale of an additional firm volume of 5300 Mcf of natural gas per day as herein described and as more fully described in the application in Docket No. CP61–27.

(S) The certificates of public convenience and necessity hereinbefore issued to Tennessee, Midwestern, Alabama-Tennessee Natural Gas Company and Tennessee Natural Gas Lines, Inc. shall be accepted in writing and under oath by a responsible official of each, and the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of the

Commission's Regulations under the Natural Gas Act where applicable, shall attach to the issuance of the certificates hereinbefore granted and to the exercise of the rights granted thereunder.

(T) The time within which the facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (d) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at one year from the effective date of the final order herein.

ROBERT M. WESTON,
Presiding Examiner.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY PURSUANT TO THE NATURAL GAS ACT COVERING REMAINING ISSUES

(Issued March 4, 1963)

WESTON, *Presiding Examiner:* The "Decision on the First Issues" of November 9, 1962, left two problems unresolved. First and most important, the Commission should redetermine in this proceeding the basis upon which certain producers may sell, and Tennessee may buy, gas from the so-called Ship Shoal reserves offshore Louisiana. The second issue is whether or not Tennessee in Docket No. CP60-94 proposes to overbuild facilities in advance of need to the detriment of present rate-paying consumers.

As will be seen, the Ship Shoal gas is a vital resource on which Tennessee relies to back up the adequacy of its reserves and deliverability covering the increased service proposed in this proceeding. This gas, ready for action since 1960, can be and should be connected without further delay, at a proper price per Mcf to be established by redetermination of the contracts between Tennessee and the producers. However, there is a procedural block to such redetermination: the Commission cannot act on the contract rights of the producers without giving them notice and opportunity to be heard—but the producers are not parties to, and cannot be heard in, this proceeding. If the *impasse* controls, Tennessee cannot connect the excessively priced Ship Shoal reserves; for want of gas supply, all increased service proposed herein must be denied; and the findings and conclusions made in the "Decision on the First Issues" must be reversed. However, the procedural *impasse* can be corrected, to the end that the Ship Shoal gas can be connected on proper terms. After carefully weighing adverse considerations as to the restricted nature of the Examiner's responsibilities, it has been decided to deal with and resolve the substantial question—the terms under which Ship Shoal gas will start to flow—on the assumption that procedural *impasse* will be corrected.

I. *The Issue as to the Ship Shoal In-Place Sale*

Prior to May 10, 1961, the four CATC[1] companies owned developed oil and gas leaseholds in the area commonly called Ship Shoal Blocks 198 and 199, offshore Louisiana. The area is in Federal territory, and is well beyond the Louisiana territorial domain. See Exhibits A–1 to Sections 2, 3, and 4 of Exhibit 4 in this proceeding; *United States* v. *Louisiana*, 363 U.S. 1. The CATC producers owned the leaseholds by virtue of Lease Serial Nos. 0593 and 0594

[1] Continental Oil Company, The Atlantic Refining Company, Tidewater Oil Company, and Cities Service Production Company.

issued by the United States, the government retaining a one-sixth royalty interest; see Section 6(b) of the Outer Continental Shelf Lands Act of August 7, 1953, 43 U.S.C. Sec. 1331 *et seq.*, and see the Submerged Lands Act, 43 U.S.C. Sec. 1301 *et seq.*

The CATC producers before May 10, 1961 had erected three drilling platforms at Ship Shoal and had drilled about 12 wells, with multiple completions, therefrom. Costs to the producers do not appear, but depreciable property of the producers at Ship Shoal seems to have been $2,280,000. Exhibit 28, Section 4, p. 3. Substantial quantities of gas and oil were found. The gas was shut in, and has remained unconnected to date. Some of the oil was produced, and was barged to shore from storage tanks on the platforms.

Early in 1960, the CATC producers advised Tennessee that they wanted to sell the Ship Shoal leaseholds—not the gas and the oil as produced, but the leaseholds themselves. Negotiations commenced and continued on the basis of arm's length bargaining, on the hypothesis that the sale inplace of the gas, as well as the oil, was not subject to price control by the Federal Power Commission. On December 19, 1960, the parties reached an agreement in principle as to the terms of sale, which, with minor changes, was more fully set forth in the separate "Act of Sale and Mortgage and Pledge" entered into concurrently between each of the CATC companies and Tennessee's subsidiaries, as next considered.

Details of Instant Transaction.—The basic documents are dated May 10, 1961. Each of the CATC vendors sold its undivided one-quarter net interest in the Ship Shoal leaseholds under a separate set of identical documents. The purchase covered both the gas and the oil in the leaseholds, to a described depth. The gas was sold to Tennessee's 100 percent owned subsidiary Tennessee Gas Supply Company (Gas Supply) and the *oil* was sold to Tenneco Oil Company, a 100 percent owned subsidiary of Tenneco Corporation, which in turn is substantially owned and wholly controlled by Tennessee, and which is Tennessee's principal holding company for non-pipeline activities.[2] Gas Supply acts as a conduit with regard to the gas; it assigned all gas and appurtenant properties to Tennessee by instrument dated June 27, 1961, and Tennessee in return furnishes Gas Supply with all the funds with which the purchase of gas was made. Gas Supply was used as a corporate intermediary because the CATC producers wanted the protection of a purchase-money mortgage covering the leasehold properties, which Gas Supply was able to and did enter into. Tennessee's indentures cover after-acquired property, and therefore Tennessee could not participate as principal in a purchase-money mortgage.

Tenneco Oil was used as Tennessee's nominee for the oil involved in the transaction because Tennessee has sharply distinguished, in its corporate system, its pipeline subsidiaries (whose prices are controlled by the Commission on the basis of rate-base and cost-of-service) from its subsidiaries engaged in other activities. Tennessee has through two sets of subsidiaries segregated its regulated ("jurisdictional") properties (in which consumers have a cost interest and are otherwise concerned from its unregulated business activities. Tennessee's pipeline subsidiaries file a consolidated Federal income tax return; its other subsidiaries, through Tenneco Corporation, file a separate consolidated return. In principle, Tennessee's pipeline customers get no direct benefit or detriment from the activities of Tenneco and subsidiaries. Insofar as oil is involved in

[2] *E.g.*, oil and gas exploration and production, refining, marketing, and chemicals.

the Ship Shoal contracts, it is, of course, unrelated to Tennessee's pipeline activities or matters of concern to the Commission under the Natural Gas Act; however, as we shall see, oil is only incidentally involved, as a "wash" transaction, in such contracts.

The "Act of Sale and Mortgage and Pledge" between each of the CATC companies and the Tennessee subsidiaries purports to state with great exactitude the amounts of gas and oil purchased in-place. Article IV in part, as paraphrased, is to the effect that—

> The total quantity of recoverable gas reserves which are attributable to the CATC companies net leasehold interests was agreed upon * * * to be 533,333,333 Mcf at 15.025 psia. The total quantity of recoverable oil reserves attributable to the CATC companies net interest was agreed upon by the parties to be 12,244,898 barrels. [Tr. 61–62.]

For these amounts of gas and oil, Tennessee through its subsidiaries has agreed to pay a total consideration of $97,333,333, consisting of down-payment made May 10, 1961, and a complex of promissory notes payable over a period of years beginning January 2, 1962. Unlike the *MCN* case, see Initial Decision issued January 8, 1962, in *Tennessee Gas Transmission Co. et al.*, Docket No. G–14562 *et. al.*, the instant transaction is not wholly executory. On the contrary, Tennessee has to date contracted to pay, and presumably has paid out, $25,437,499.44 to the CATC companies on account of the $97,333,333 gross purchase price, and this before delivery of a single Mcf of gas.[3] More payments on account are due quarterly beginning May 10, 1963, and each quarter thereafter, in the amount of $1,239,583.32.

Before going to the details of the payments on account made and to be made, the general basis for arriving at the purchase price should be stated. From Tennessee's point of view, the 533,333,333 Mcf was priced at 16 cents per Mcf *in the ground*. "We took a price that we thought the producers would get for the gas, and then we worked backward; we worked up the total reserves, estimated the operating and development costs, used the present worth of the down-payment and arrived at the 16-cent price in that fashion." (Tr. 179.) Tennessee assumed the CATC producers would receive an average of 23 cents or 24 cents per Mcf if sold and delivered to Tennessee under a conventional gas sales contract. (Tr. 188–189.) The 12,244,898 barrels of oil were priced at 98 cents per barrel *in the ground*. Simple multiplication produces an allocation to the gas account of $85,333,333, or 87.6712 percent of the gross purchase price, and an allocation of $12,000,000, or 12.3288 per cent to oil. The down payments and promissory notes covering the purchase price were accordingly divided between gas and oil; the notes were divided into "Series G Notes" (gas) and "Series O Notes" (oil). Gas Supply is the obligor on both series of notes; it is the sole obligor on the gas notes, and "is the maker of and is and shall remain primarily liable for payment of" the oil notes. (Act of Sale, Art. IV, Sec. 4.1.) Tenneco Oil is an additional obligor on the series "O" notes.

The details as to the payments heretofore made by Gas Supply on account of the Ship Shoal gas, including down-payment made May 10, 1961, and payments of Series "G" Notes (gas) as they became due, are as follows:

---

[3] As brought out in the *MCN* Initial Decision, this and other in-place purchases of gas have been effected as though they were private transactions not subject to control in the public interest, and this under color of right deriving from *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498 (1949). The vitality and coverage of this case as authority for avoidance of price control, where gas is wholesaled in interstate commerce, as here, has been at least doubtful, and is understood to have been deprecated by prudent oil company counsel, since *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954).

Date	Continental	Atlantic	Tidewater	Cities Service
May 10, 1961	$875,000.00	$875,000.00	$87,500.00	$87,500.00
Jan. 2, 1962	2,125,000.00	2,125,000.00	2,912,500.00	2,912,500.00
Aug. 10, 1962	1,145,833.20	1,145,833.20	1,145,823.20	1,145,833.20
Nov. 10, 1962	286,458.33	286,458.33	286,458.33	286,458.33
Feb. 10, 1963	286,458.33	286,458.33	286,458.33	286,458.33
Total	4,718,749.86	4,718,749.86	4,718,749.86	4,718,749.86

The payments on November 10, 1962, and February 10, 1963, represent the first and second quarterly installments on each of the separate notes No. G–2 issued to the producers—each of such notes being in the principal amount of $1,145,833.32. Further installments in the same amount fall due on the tenth of May and August, 1963. Notes No. G–3 through G–16, in identical amounts, become due consecutively in quarterly installments beginning November 10, 1963, and continuing through August 1977.

The details as to the payments heretofore made by Tenneco Oil on account of the Ship Shoal oil, including down-payment and Series "O" Notes (oil), are as follows:

Date	Continental	Atlantic	Tidewater	Cities Service
May 10, 1961	$125,000.00	$125,000.00	$12,500.00	$12,500.00
Jan. 2, 1962	1,375,000.00	1,375,000.00	1,487,500.00	1,487,500.00
Aug. 10, 1962	93,750.00	93,750.00	93,750.00	93,750.00
Nov. 10, 1962	23,437.50	23,437.50	23,437.50	23,437.50
Feb. 10, 1963	23,437.50	23,437.50	23,437.50	23,437.50
Total	1,640,625.00	1,640,625.00	1,640,625.00	1,640,625.00

As in the case of the G Notes, the Series O Notes are due in quarterly installments. The amounts paid November 10, 1962, and February 10, 1963, represent the first installments on Notes No. O–2, each in the principal amount of $93,750. Notes No. O–3 through O–15, in identical amounts, become due in quarterly installments beginning November 10, 1963, and continuing through August 1976.

It is strange, but true, that the $95,338,333 of separate notes representing the balance due on the purchase price, commencing with notes due January 2, 1962, and ending with payments August 10, 1977 (as to gas) and August 10, 1976 (as to oil) bear no interest unless and until the notes covering such payments mature.

Provision for Renegotiation.—Upon notice given within 90 days after the sixth year of the contract, *i.e.*, after May 10, 1967, the recoverable reserves of gas and oil may be redetermined, and the consideration payable under the sales agreements would in that event be adjusted upward or downward according to any new reserve estimates.[4] Additional consideration, or deficiency in consideration, is to be figured on the original basis of 16 cents per Mcf for gas and 98 cents per barrel for oil. If reserves as redetermined exceed the originally agreed amounts, Gas Supply must make out and pay additional notes for the excess.

Evaluation of Renegotiation Provision.—In the *MCN* proceeding, *supra*, a very large gas distribution customer of Tennessee made an independent investigation of the reserves there in question and came up with its own reserve estimates,

[4] Although no doubt inserted as a matter of excessive caution, it is noteworthy in this regard that a minimum consideration of $6,250,000 covering all the properties conveyed is provided in connection with redetermination of reserves. Article IV, Sec. 4.2(h). This might be taken to indicate substantial doubts in the minds of the producers as to the amounts of gas and oil actually involved.

which were substantially less than Tennessee's estimates. The distributor in question presented expert testimony in support of its conclusion that on a conservative basis, reserves would not be realized in the quantities anticipated by Tennessee and the producers. It was necessarily found in the Initial Decision that Tennessee had not met its burden of proof as to the quantities of gas actually present under the MCN leaseholds.

In the case at bar, we have not had the benefit of an independent appraisal and estimation of the Ship Shoal reserves. We have no evidence except the evidence of Tennessee, which, of course, is interested in supporting its own conclusions on the subject. In the present case, unlike *MCN*, the contract provides for a redetermination of reserves in the sixth year. However, we are not dealing with a six year contract, or even a ten or fifteen year contract. We are dealing with gas reserves to be taken down over a 26-year period of time. The danger of over-estimation of reserves in the sixth year of the contract term after production has commenced is, of course, substantially less than the danger of over-estimation at the inception of the contract before any deliveries have been made. The danger, however, still exists and the margin of error is still present with a possible adverse effect upon consumers amounting to many millions of dollars. This problem adheres in all in-place sales transactions and can be eliminated only by continuous contract redeterminations based on actual realizations during the entire term of the contract.[5]

The redetermination provision gives Tennessee a measure of protection against over-estimation of Ship Shoal reserves which may be reflected in the May 10, 1961 contract estimates. Such measure of protection is no substitute for the *insurance* against over-estimation provided to consumers by conventional contracts for the retail of gas per-Mcf from producers to pipelines. Conventional contracts tie payments to actual receipts of gas. The per-Mcf price in such contracts is the price set by the Commission according to the facts and circumstances of the time of delivery, and reflects the proper statutory price level contemplated by the Natural Gas Act. Neither the Commission, nor Tennessee, nor the CATC companies, nor all in conjunction, can properly determine now, or in the 90-day period after May 10, 1967, for consumers in the period 1975–1987 (expiration years of 26-year take-down) either (a) the available Ship Shoal reserves or (b) the proper price then payable therefor.[6]

Early Take-Down.—If production of gas exceeds one-eighteenth of estimated reserves in any year, Gas Supply must prepay its notes proportionately, in inverse order. This means that payments on account of the gross purchase price will always substantially exceed the dollar value, at 16 cents per Mcf, of the gas taken down from the reserves.

Purchase of Oil by CATC.—The May 10, 1961 contracts include, as a "principal condition" and "moving consideration" to Gas Supply and Tenneco Oil a "Crude Oil Purchase Contract" with each of the CATC companies, under which the CATC companies agree to buy all the oil produced from the Ship Shoal properties. Delivery of the oil is to be made at Lake Charles, Louisiana, at the average of posted prices (at time of delivery) being paid by Esso Standard, Texaco, and Shell for similar oil in nearby localities.

---

[5] This, of course, would amount to the same thing as selling the gas on the conventional per-Mcf basis.

[6] Of course, it may be that reserves are currently *under-estimated* to the advantage of Tennessee and the consumers. This consideration is irrelevant. The Commission exists for the purpose of protecting consumers against risks, and requires consumers to pay cost-of-service whatever such cost may be for a given time being. Risks are properly undertaken by companies which do not operate on the basis of rate-base and rate of return—such companies as Tenneco and subsidiaries.

From the standpoint of Tennessee, the oil from Ship Shoal may thus be produced, and redelivered to CATC at the going prices for the given time being. Tennessee assumes certain production and market-price risks. CATC, however, assumes the functions and risks of refining and marketing the Ship Shoal crude oil. Aside from the element of risk, the repurchase agreement is in substance a "wash sale," under which CATC will presumably, over the term of the contract, take back title and possession of all the Ship Shoal oil sold to Tennessee by the May 10, 1961 contracts.

Ship Shoal Costs and Operations.—Estimated total[7] Ship Shoal production costs, including both operating expenses and investment costs, are to be allocated 87.6712 percent to gas, payable by Tennessee, and 12.3288 percent to oil, payable by Tenneco. Tenneco will be the operator of the leases. (Tr. 509, 617.) These percentages are identical to those developed, *supra*, in regard to the relative amount of cash consideration payable to the CATC companies for the gas and oil reserves. There can be no question but that Tennessee's allocation of these costs is based solely on the relative in-place value assigned to each of the two commodities by the contracting parties.

At May 10, 1961, there was $2,280,000 of depreciable property on the Ship Shoal leaseholds, taken over by the Tennessee subsidiaries. Tennessee, in accordance with its basic CATC agreements, presumably has drilled four additional wells in 1962, and has also erected a new drilling platform. It was estimated that development costs totalling $8,260,000 payable by Tennessee (apparently including certain cost items to be expensed) would be incurred in 1962 in connection with Tenneco's plan for development of the leaseholds. (Tr. 513.) Tennessee shows 1962 additions of $5,605,000 of depreciable property allocable to gas. Additional gas development costs of $2,845,000 are estimated for later years. (Exh. 28, Sec. 4.)

Since the Ship Shoal property has been acquired, no gas has been produced. Oil in an unknown amount has been barged to shore. Louisiana Conservation Commission allowables for oil production from Ship Shoal are 2,314 barrels per day. (Tr. 502).

On the basis that operations in taking down gas begin with the year 1963, Tennessee estimates first-year gas operating and maintenance expense of $853,400 (no well-workover expense) and similar expense of over $1.3 million per year for the next 16 years. Over the 26-year life of the property, total gas operating and maintenance expense is estimated at $31,008,900 for deliveries of gas totalling 653,402,000 Mcf at 14.73 psia. (Exh. 28, Secs. 1 and 2.)

Evaluation of Cost Allocations.—The New York Public Service Commission strongly contests the allocation of 87.6712 percent of all Ship Shoal costs to gas, and the relatively minor remaining costs to oil. PSC computes on brief a rate of return applicable to oil resulting to Tenneco—a nonjurisdictional company—of approximately 38 percent. PSC accepts on brief Tennessee's explanation that the allocation is based on the "reservoir space method," and contests the validity of this allocation procedure.

The record does not contain sufficient evidence to support the allocation of costs between gas and oil as made by Tennessee, nor any substitute allocation. The difficulties of allocation of costs have been fully analyzed in *Phillips*, 24 FPC 537, and subsequent Commission decisions. Since other factors, *infra*,

[7] These total costs include, in addition to direct Ship Shoal costs, an allocated portion of (1) Tenneco's system overhead production; (2) Tennessee's administrative and general expense, and exploration costs; and (3) common operating expenses to be incurred in the joint operation of the Ship Shoal leases and Tenneco's nearby Eugene Island Block 215 leases, in which Tennessee has no working interest.

control the disposition of the proceeding at bar, no further discussion of the subject is here necessary.

Total Cost of Gas.—On a 26-year production schedule, Tennessee estimates that the Ship Shoal gas produced will cost an average of 27.97 cents per Mcf at 14.73 psia, which translates to a price of 28.3 cents per Mcf at 15.025 psia (the pressure base used in the agreements between Tennessee and CATC). This average is derived in Exhibit 28, Section 4, from Tennessee's estimates of operation and maintenance cost, discussed above, royalty expense of over $1.2 million during the first 14 years of operation (decreasing in subsequent years),[8] and other estimates. A credit for condensate is included in the figures on the basis of $3.00 per barrel and amounting to $13.2 million over the 26-year production period. The basis for this estimate is the $3.00 per barrel current price being received for Ship Shoal oil. (Tr. 590.) Return and income taxes are figured annually on the basis of the 11 percent composite rate claimed by Tennessee in rate proceedings which were before the Commission at the time of the hearing. Depreciation expense was estimated on the basis of what Tennessee now projects as the depreciable property associated with the Ship Shoal leases during the 26 year take-down period.

The following tabulation summarizes Tennessee's estimated cost-of-service for production of gas from Ship Shoal during the 28-year life of the property (Exh. 28, Sec. 4).

Operation and maintenance expense	$31,008,000
Royalty expense	22,847,000
Depreciation	10,227,000
Depletion and amortization	86,726,000
Return and income taxes	45,210,000
Net condensate revenue (cr.)	(13,236,000)
Net condensate revenue (cr.)	(13,236,000)
Net cost of service	$182,782,900
Mcf to be delivered to pipeline (14.73 psia)	653,402,000
Cost per Mcf	***27.97¢

***It is noted *supra* at p. 800 that Tennessee assumed that the CATC companies would receive an average of 23 cents or 24 cents per Mcf if the gas were sold to Tennessee under a conventional gas sales contract.

It must be observed at this point, and found as a controlling consideration of ultimate fact, that all of these estimates are sheer speculation. There is no way of predicting, even within a range, what oil and condensates will bring on the market in 1988, or even in 1975. There is no way of predicting royalty expense, which is based on the going prices for gas in the neighborhood of Ship Shoal, and which will fluctuate as prices change through the years. There is no way of predicting within a reasonable range the amount of depreciable property which will be needed at Ship Shoal 20 years from now, or even five years from now. Depletion and amortization expense will be subject to wide change as the facts develop through the years, as to future intangible drilling expenditures and net gas deliveries. Return and income taxes will, of course, not be stabilized at 11 percent or at any other precise percent.

From the mass of conjecture and speculation as to actual future cost of this gas to Tennessee, one figure emerges clearly and certainly from the record—

[8] Figured on the royalties paid to the United States from neighboring leaseholds, which at the time of the hearing amounted to 21.4 cents per Mcf at 15.025 psia purchase price, one-sixth proportion.

Tennessee estimates that the gas will cost an average of 28.3 cents per Mcf delivered, at 15.025 psia; which is to be compared with an initial price ceiling currently effective of 19.5 cents per Mcf at 15.025 psia. See price ceiling set by Fourth Amendment to Statement of General Policy No. 61–1.

Costs will be reduced if the gas is taken down over a period of time shorter than 26 years, because return and income taxes for the later years will be eliminated. The possibility that Tennessee may take down the gas in a period of time shorter than 26 years was mentioned by several Tennessee witnesses. As we have seen in the "Decision on the First Issues" in this proceeding, Tennessee is by no means "long" on gas supply, and a 16-year delivery schedule might well have been supportable, in view of the sheerly speculative nature of the gas production estimates. Under such a schedule, of course, gas deliveries could have readily been equated to annual payments from Tennessee to the CATC companies (except for the prepayment feature) and the in-place sale transaction would have had the substantial appearance of being the substitute for the retail of the gas on an annual per-Mcf basis.

1(a) *Discussion of and Conclusions Regarding the Ship Shoal Transaction*

The foregoing facts show that this is another in the series of recent cases in which gas producers have sold and pipeline companies have bought gas "in-place" rather than "per-Mcf" in an effort to avoid price control under the Natural Gas Act.

The facts follow the familiar pattern. Essentially, the pattern is the wholesale of a large volume of natural gas in bulk, *in the form of* a "sale of leasehold interests," at an excessive price ultimately payable by gas consumers, who also bear the risk of loss in respect of overestimation of the gas reserves being transferred. Payment is made over a term of years while the gas is being taken down by the pipeline company, but payments to any given date are always much in excess of the per-Mcf value of price of the gas; *i.e.*, the gas is substantially prepaid. The whole transaction, except for the lifting of price control and risk from the producers, merely replaces the conventional gas purchase arrangements (under which gas is sold at retail, per-Mcf, over a 20-year or life-of-the field term) with a new set of formal relationships.

As in matters of tax avoidance and other avoidance of statutory obligations, the substance of the transaction must control and prevail over the legal forms; the sale of the gas is subject to price control despite the fact that the sale is given the superficial appearance of a transfer of interests in real property. The transaction must have Commission approval before it is carried out.

Other cases in the same pattern are mentioned in *Tennessee Gas Transmission Co.*, Docket No. G–14562, *et al.*, Initial Decision issued January 8, 1962.[9] That docket involved the sale of the so-called "MCN" reserves (Vermilion Block 46 and East Cameron Block 64, offshore Louisiana) by producers Continental Oil, Socony Mobil Oil, and Newmont Oil to Tennessee for $68,339,272. The sale of the leaseholds, *i.e.*, the sale of the gas in place, replaced a prior sale of the gas per-Mcf, over a 20-year term, between the same parties. The facts in that case

[9] The other cases are: G–12446, commonly called the "Rayne Field" sale, which is the subject of the Commission's very recent decision in *Texas Eastern Transmission Corp.*, Opinion No. 378 of February 6, 1963, 29 FPC 249; CP62–88, commonly called the "King Ranch" or "Monterey" sale, decided by Examiner Kane in *Monterey Gas Transmission Co.*, decision of January 28, 1963 [Decision printed *infra*, p. 836, was rendered moot with respect to the King Ranch sale by reason of withdrawal of Monterey's application permitted by order issued May 15, 1963]: CP 61–106, commonly called the "Bastian Bay" sale, Opinion No. 413, 30 FPC 1477; and the case at bar. Decision in G–14562 issued January 8, 1962, unreported.

made it perfectly clear that the new arrangement was entered into in order to avoid the price control envisaged in the *Catco* decision (*Atlantic Refining Co.* v. *Public Service Comm'n.*, 360 U.S. 378, affirming 257 F. 2d 717 (CA3)). In Docket No. G–14562, following disapproval of the proposed leasehold sales in the Initial Decision of January 8, 1962, the MCN producers and Tennessee cancelled the in-place sale arrangement and reinstated the per-Mcf sale of the MCN gas. This mooted the Initial Decision of January 8, 1962; see *Tennessee Gas Transmission Co., et al.*, 27 FPC 610. The matter of the proper per-Mcf price for the gas under the new contracts remained in issue, but has been settled, and the Commission has recently certificated the sale at a price of 19.0 cents per Mcf at 15.025 psia, plus 1.625 cents per Mcf Louisiana tax reimbursement to be escrowed until the applicability of the tax is adjudicated. *Tennessee Gas Transmission Co.*, Docket No. G–14562, *et al.*, Order Granting Motion, etc., issued January 2, 1963.

The *MCN* decision of January 8, 1962, dealt extensively with matters of principle and policy, and was in effect a challenge to those interests favoring in-place sales to muster principle and policy in opposition. The challenge was "ducked" by the MCN producers in the manner above indicated, and has not been met or faced in the case at bar, or in the other cases within the pattern. The matters of principle and policy adduced in *MCN* still apply, and may be partially restated as follows:

1. Considerations founded on improvement of pipeline company bargaining position *vis-a-vis* producers in the open marketplace have no relevancy to a gas supply economy controlled by the Commission under the Natural Gas Act. This conclusion is a plain and necessary concomitant of the *Phillips* decision of June 7, 1954, 347 U.S. 672. In carefully non-encroaching language, Judge Fahy implicitly suggested that the Commission draw such conclusion in the *City of Detroit* case, 230 F. 2d 810, decided December 15, 1955. Judge Fahy, after ordering new proceedings on remand, said (230 F. 2d at 819)—

> In such proceedings, the Commission should also consider the impact, of Phillips Petroleum Co. v. State of Wisconsin, 347 U.S. 672, 74 S. Ct. 794, 98 L. Ed. 1035, upon its stated reasons for desiring to encourage pipeline companies to produce their own gas. In Phillips, decided subsequently to the Commission's order in the instant case, the Supreme Court held that the Federal Power Commission has jurisdiction "over the rates of all wholesales of natural gas in interstate commerce whether by a pipeline company or not and whether occurring before, during, or after transmission by an interstate pipeline company." 347 U.S. at page 682, 74 S. Ct. at page 799. The effect of the decision will probably be to subject to federal regulation the prices paid by pipeline companies for most of the gas they purchase. Consequently, the question of indirectly influencing these prices by the means here chosen by the Commission, such as augmenting the bargaining power of the pipeline company, may be considerably affected.

Despite the inapplicability of open-marketplace considerations in weighing the desirability of purchasing gas in-place, such considerations alone are presented by Tennessee to support the Ship Shoal purchase. (Tr. 1143–1155.)

2. As a general rule, large volumes of gas bought in-place at unregulated prices for requirements of the distant future have no proper place at specific dollar values in the rate base of pipeline companies because (a) such values have no relationship to proper pricing of the gas when produced in the future, and (b) since there is a sound alternative, the consumers should not be required

to pay return and taxes on such values while the gas lies idle in the ground awaiting future use.

3. The alternative mentioned in 2(b) is to maintain the existing general structure of the gas supply economy, in which the functions of the production industry are separate and distinct from those of the pipeline transmission industry. Producers generally find and sell gas at retail (per-Mcf) under long-term contracts geared to the life of the field, then move on to new exploration and development. The investment characteristics of this operation are quite different from those of the pipeline industry in respect of adaptability of rate-base rate-of-return conceptions. Producers claim that they take unusual risks and find and sell a commodity (gas) and that the pricing of that commodity should reflect allowances for risks, incentive, and management not considered in pipeline rate making. If risk and allowance of extra profits on account of risks are attributes of the producer industry, then that industry, in the context of the regulatory process, should be kept distinct from, and not (by way of in-place sales) be partially merged into, the pipeline transmission industry.

Finally, in this connection, there would seem to be a value in the preservation of industrial specialization in the technology of development of and production of gas resources, which is a technology wholly distinct and different from that of gas transmission. Tennessee has made the distinction in its own corporate structure, but would inconsistently eliminate the distinction, on the vital matter of ultimate financial responsibility, in respect of reserves bought in-place.

4. In-place sales throw inappropriate risks upon pipeline companies and ultimately upon the consumers, who must pay cost-of-service with respect to pipeline companies. These risks include the possibility of significant differential between reserve estimates at the time of the sale and actual realizations at the end of the take-down period many years from the date of the sale. The risks include future variations in the per-Mcf price for gas delivered to pipeline companies as established by the Commission from time to time at fair and reasonable levels. Restating part of paragraph 3 above, we may here note that the risks also include the direct assumption by the pipeline transmission company of direct financial responsibility for gas production, a function more appropriately left with the oil and gas production industry, which latter industry is compensated for such risks by Commission allowance of "revenue requirements," whatever they may turn out to be, rather than cost-of-service.

5. The allowance of in-place sales will inevitably tend to destroy and will ultimately destroy price control, which is based necessarily on the retail of gas per Mcf at a price fixed according to the facts and circumstances for a given time being, and which price control is subject to fluctuation reflecting changes in the facts and circumstances for any given future period of time. The whole conception of pipeline regulation involves flexibility in rates and charges. The whole conception of the in-place sales transactions is the freezing of prices at a gross amount arrived at by negotiation reflecting current conditions.

6. The attempt to determine future costs in relation to the production by the pipeline company of gas bought wholesale in-place involves all concerned in matters of future investment, future tax rates, future labor costs, and other contingencies 15 years or more from now, which are all matters of sheer speculation and conjecture. It is utterly impossible for the Commission to now project a fair and reasonable price per Mcf to be assigned to gas which will be supplied to consumers at times in relatively distant future years.

7. The disallowance of in-place sales in principle will not prevent producers from disposing of their properties whenever that may become desirable. In the context of the present case, there is no reason why the CATC producers cannot sell their properties to Tenneco Corporation, or to a Tenneco subsidiary, at whatever price the parties may agree upon. The assets of Tenneco Corporation and its subsidiaries are not rate-base assets. If Tenneco takes over the Ship Shoal properties it will be at the risk of, and to the possible profit of Tennessee Gas Transmission Company's *stockholders* rather than Tennessee's *consumers*. Such a sale would have no impact upon consumers. In the ordinary case, since the sale would not be premised on resale by Tenneco in interstate commerce, the sale would be non-jurisdictional, so far as the Commission is concerned, under the Natural Gas Act. Tenneco, selling the gas to Tennessee in future years, would be allowed a fair and reasonable price for the gas produced from the Ship Shoal leaseholds as such gas is priced "as a commodity" by the Commission and with an eye to the "revenue requirements" of the production industry for the future time being.

8. Acceptance of these general principles would in no way stultify Tennessee Gas Transmission Company, or any other pipeline, in the proper transaction of its ordinary business in relation to dealing in, or providing funds for gas exploration, production, or gas leaseholds. Pipelines would in this connection only adhere to one requirement, and that is that the purchase of gas in-place at unregulated prices may not be reflected in, or affect, the pipeline rate base or cost-of-service.

Jurisdiction of the Commission.—When the transaction, as here, essentially involves the wholesale of gas rather than the acquisition of real estate, the jurisdiction of the Commission over the transaction is very plain and not subject to substantial doubt, despite *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 377 U.S. 498 (1949). On this matter, and all other subjects there dealt with, the Examiner is, of course, bound by the expressions of the Commission in the *Rayne Field* case, Opinion No. 378, *supra*. Reference is also made to the authorities and reasoning of Examiner Kane in the *Monterey* case, *supra*, and the discussion of the present vitality of the 1949 *Panhandle* case contained in the *MCN* decision, *supra*, mimeo. pp. 17–22 and 39–45.

Since the sales transaction is jurisdictional, the contracts and other documents of May 10, 1961, should have been filed by the CATC companies with the Commission, and certificate should have been applied for.

Partial Performance of Contracts.—Unlike the situation in *MCN*, and the usual situation with respect to other current in-place transactions, the proceeding at bar involves a purchase contract which has been partially executed. As we have seen, Decision on the First Issues, *supra*, pp. 790–791, no lateral line has been built to the Ship Shoal Field and no gas has flowed therefrom. However Tennessee has presumably made payments to CATC on account of the purchase price totalling $25,437,499.44 as of the present date. Of this amount, $18,874,999.44 has been paid on account of the gross purchase price allocated by Tennessee to gas and $6,562,500 has been similarly allocated to oil.

As we have seen, the agreement between Tennessee and each of the four producers provides for two series of annual notes. Each of the outstanding Series "G" Notes executed by Tennessee Gas Supply Company is in the principal amount of $1,145,833.32; one note for each of the years 1962 through 1976 in favor of each of the four producer-vendors remains to be paid. These notes, however, are payable in four annual quarterly installments. On November 10, 1962, and February 10, 1963, Tennessee presumably paid the first and second installments on Note No. G–2 (the 1962 note) executed in favor of each of the

four producer-vendors and thus paid an aggregate amount of $1,145,833.32. On May 10, 1963, and each quarter thereafter, further installments aggregating the same amount will be due. Similarly with respect to the Series "O" (oil) Notes, further quarterly installments of $93,750 will be due and payable beginning May 10, 1963.

It has been noted that Tenneco Oil assumed operation of the CATC Ship Shoal leases on June 27, 1961, on behalf of itself in respect of the oil properties and on behalf of Tennessee Gas Transmission Company in respect of the gas properties. Tenneco Oil operates the property on a cost basis, with cost allocations of 87.6712 percent to gas borne by Tennessee, and 12.3288 percent to oil borne by Tenneco.

As we have seen, considerable capital investment in the Ship Shoal properties has been made by the Tennessee companies. The extent to which capital investment is completed or underway is not known.

It appears that the properties have been producing oil from the well completions that have been effected in the oil zones of the Ship Shoal reserves. The testimony indicates that production is at the level of 2,314 barrels per day. (Tr. 502.) This oil has presumably been barged to shore and sold under the repurchase agreements by Tennessee to the CATC producers at prevailing onshore prices. The oil transaction is *prima facie* nonjurisdictional. However, the oil transaction is in reality a "wash sale," wholly incidental to and dependent upon the sale of the gas.[10]

Unscrambling Process.—On the showing made in the foregoing, it appears that the primary responsibility for the current untenable situation lies with the CATC companies, who insisted on an in-place sale and then failed to file applications for approval or disclaimer with the Commission. It would be wholly unsound to require Tennessee to bear the enormous losses which would accrue from non-action with respect to the May 10, 1961 arrangements, and equally unsound to permit Tennessee to continue payments on account of notes issued as an incident to such arrangements.

On the record made to date, it appears *prima facie* that the basis for a sound redetermination of the CATC situation *vis-a-vis* Tennessee would be to place both parties, as nearly as possible, by way of financial settlements, *in status quo ante* the May 10, 1961 agreements.

It is readily apparent that this will require a number of readjustments. These are the readjustments which are necessary if the CATC producers are to achieve a position under which they will be permitted to sell and deliver the Ship Shoal gas. The situation should be rationalized on an equitable basis so that expenditures on the Ship Shoal properties and amounts of oil taken from the properties will be settled on a dollar basis between the parties, as a part of the more important return to Tennessee of amounts of money paid by Tennessee on account of the May 10, 1961, contracts.

Although the matter is one of considerable detail, the functions of expense and offset are those of simple addition and subtraction, under a plan designed to place the parties in the same situation they would have been in had the contracts of May 10, 1961, remained entirely executory and had such contracts been presented herein by CATC for Commission approval, as they should have been, before performance thereunder commenced. By further submission to the Commission

[10] It is significant in this regard that there is no severability provision in the May 10, 1961 contracts, which are otherwise drawn with the most elaborate precautionary provisions. It is inconceivable that the CATC producer oil companies and Tennessee would have contemplated Tennessee's production and resale to CATC of the oil from the CATC leaseholds, if, as happens to be the event, the substantial transaction covering the gas cannot be performed.

after the citing-in of CATC hereinafter recommended, the parties may present for consideration their plans to this end.[11]

Power-Position of Commission and Contracting Parties.—What if the parties fail to agree to equitably readjust their present position? The Commission, of course, has no power to order the CATC companies or Tennessee to enter into new contracts regarding the Ship Shoal reserves replacing the contracts of May 10, 1961, even though the Commission does have jurisdiction to determine that the May 10, 1961, contracts do not comport with the public interest protected by the Commission. Aside from the enforcement and penalty provisions of the Act, can the Commission effectively induce compliance herewith?

We have seen that the Ship Shoal reserves lie in Federal territory; whatever sale is made of the hydrocarbons from this area is necessarily a sale in interstate commerce, *i.e.*, a sale contemplating transmission of the gas hydrocarbons from offshore Federal lands to the continental United States and one or more of the separate States therein. Any such sale will necessarily require Commission approval under the Natural Gas Act.

The Commission has already established the initial price standards under which gas from the Federal areas offshore Louisiana will be authorized for sale within the continental United States. The Commission has established an initial price of 19.5 cents per Mcf at 15.025 psia covering such sales. This is the standard applicable to the Ship Shoal gas, just as it is applicable to other gas from the same area. The standard binds the CATC companies in any proposed sale of the Ship Shoal gas, which is necessarily a sale in interstate commerce. The standard does not speak on the question to whom the Ship Shoal gas must be sold, but a determination on that point, to the effect that the gas should be sold to Tennessee, is warranted. The premises are:

1. Price control imposed by the Commission has replaced the open market in dealings between gas producers and interstate pipelines.

2. Where demand exceeds supply, the Commission, in certificating sales at less than market values, is necessarily in the position of allocating the gas as between competing pipeline buyers.

3. Tennessee needs the Ship Shoal gas in order to make out 12-year deliverability; Tennessee's markets are expanding rapidly and will continue to expand, *e.g.*, to Portland, Maine, whose application for new service was for the time being abandoned in this proceeding.

4. Tennessee's system in the area of gas supply extends conveniently near the Ship Shoal properties.

5. There is no indication that it would be desirable to allocate the Ship Shoal reserves at the Commission controlled price to a pipeline system other than Tennessee; there is no competing application.

The CATC companies and Tennessee should know from the text hereof that the Commission proposes to certificate the sale of the Ship Shoal gas reserves only on the basis of fair and reasonable terms consonant with the public convenience

[11] Such plans would seem to involve the following steps: (1) cancellation of the May 10, 1961, transactions, (2) financial settlement of partial performance undertaken (without authority) since May 10, 1961, (3) entry into, and presentation to the Commission of, new contracts between CATC and Tennessee essentially providing for the retail of the Ship Shoal gas per-Mcf at a proper price under the Commission's "Statement of General Policy," (4) Commission approval of such contracts and Tennessee's lateral line to Ship Shoal, and (5) commencement of deliveries. All these steps can be quickly and efficiently accomplished, to the end that gas and lawful payments therefor will start to flow immediately, if the CATC producers and Tennessee voluntarily renegotiate the May 10, 1961 transactions.

and necessity. Those terms and conditions are properly to be arrived at by contract between the producers and Tennessee as they have been arrived at in other conventional per-Mcf contracts (covering a long term of years or the exhaustion of the field) in the case of other reserves—including CATC reserves—offshore Louisiana. The practical fact of the matter is that the May 10, 1961, transactions must be recast in a form compatible with the public interest if (a) the CATC producers are to usefully and profitably dispose of the Ship Shoal gas and move on to new exploration, development and production, and (b) Tennessee is to get the gas it needs. The only alternative—shocking to reasonable minds, and no doubt *ultra vires*—would be for CATC to shut in and abandon these valuable and needed resources.

Preservation of Status Quo Pending Decision.—As we have seen, an additional $1,239,583.32 will be due from Tennessee to the four CATC companies on May 10, 1963, and quarterly thereafter, under the 1961 contracts. Continuation of payments under these contracts which must be redetermined in accordance with the foregoing would be futile and wasteful, especially when they are not being offset by actual deliveries of gas. If payments are not voluntarily suspended pending final determination by the Commission, what may the Commission do on behalf of the consumers to prevent further inroads on the jurisdictional assets of Tennessee?

On notice and opportunity to be heard, the Commission can, of course, issue appropriate orders under Section 16 of the Act to carry out the filing and certification provisions of Sections 4(c) and 7(c) of the Act. After the issuance of an order based on similar notice, the aid of the U.S. District Courts may be invoked under Section 22 of the Act.[12]

Based on the Commission's duty to prevent further inroads upon Tennessee's rate-base assets pending determination of the substantial issues presented by the Ship Shoal transaction, and to preserve the jurisdiction of the U.S. Courts of Appeal to review such determination (Act, Section 19), application may also be made under 28 U.S.C. 1651 for a writ of injunction restraining further payments by Tennessee *pendente lite*. *Board of Governors, etc.* v. *Transamerica Corp.*, 184 F. 2d 311, 315, 316 (CA9), cert. den. 340 U.S. 883, reh. den. 340 U.S. 907; *West India Fruit & Steamship Co.* v. *Seatrain Lines*, 170 F. 2d 775, 779 (CA2); *In re Transamerica Corp.*, 184 F. 2d 319, 325 (CA9), cert. den. 340 U.S. 883, reh. den. 340 U.S. 907; *Barber Asphalt Paving Co.* v. *Morris*, 132 F. 2d 945, 955 (CA8); *Capital Service* v. *N.L.R.B.*, 204 F. 2d 848 (CA9), affirmed, 347 U.S. 501; *Public Utilities Commission* v. *Capital Transit Co.*, 214 F. 2d 242 (CADC); see *Roche* v. *Evaporated Milk Ass'n*, 319 U.S. 21.

1(b). *The Procedural Impasse Preventing Resolution of the Ship Shoal Issue*

In the foregoing, evidence has been analyzed and facts have been presented looking towards a solution of the substantial issues presented by the Ship Shoal contracts. It seems perfectly clear that the contracts cannot be approved, and must be renegotiated to reflect a price and manner of sale consonant with the public interest. On the other hand, the contracts cannot be disapproved in this proceeding; no final action can be taken thereon for a technical reason: want of indispensible parties herein.

Facts as to the Parties not Present.—The CATC companies have never been given notice of this proceeding or opportunity to be heard. The CATC companies have not filed their contracts of May 10, 1961, with the Commission under Section 4(c) of the Natural Gas Act or otherwise; they have not asked the

[12] This seems to have been the procedure followed in the 1949 *Panhandle* case, *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498; see lower Court decision therein, 172 F. 2d 57 (CA 3).

Commission for certificates of public convenience and necessity or disclaimer of jurisdiction; indeed, the CATC producers have made no filings at all. The CATC companies are not in this proceeding, or in any other proceeding involving the sale of the Ship Shoal gas.

The only matter presented in this proceeding in that regard is Tennessee's application to build a $10 million lateral wherewith to pick up the Ship Shoal gas. The May 10, 1961, contracts and the substantive facts regarding the Ship Shoal deal are in the record in the present proceeding, but these documents and facts appear only in connection with Tennessee's application to build the lateral. It is of significance in connection with the necessity of further building of a factual record herein that all material facts are based on uncontrovertible documentary evidence. Conclusions of fact and public policy—whether or not accepted by CATC and Tennessee as correct—are equally founded on the documents. Thus we have in the record all material facts necessary to a decision on the Ship Shoal issue, but we do not have CATC's inferences, interpretations and arguments concerning such facts.

The want of indispensible parties to a final determination hereof has been obvious from the outset. The hearings herein commenced March 12, 1962, two months after the *MCN* Initial Decision, which made it clear that an issue arises in this pattern of cases whether or not the sale of gas in-place here proposed by CATC and Tennessee is jurisdictional. The issue exists without regard to its outcome; the CATC companies must have notice and an opportunity to be heard before the issue can be decided.

On March 21, 1962, during the progress of the hearing, it was indicated by the Examiner to Tennessee's policy witness that his attorneys—

> might very well get together and decide what kind of questions they want me to pose to the Commission in the light of my "MCN" decision, and the fact that there is no authority for the connection of these essential reserves at all, and that the producers herein who might be granted authorization *nunc pro tunc* are not here, nor is any showing made how the deal might be recast, or otherwise, by an Examiner. I am not involved in this matter at all. [Tr. 1137.]

On January 18, 1963, there was issued an order herein for "Limited Reopening of Proceedings on Reserved Issues," drawing attention to the "want of indispensible parties to a final Initial Decision in this proceeding on the matter of the redetermination of the financial basis on which the Ship Shoal reserves will be taken down by Tennessee," and giving an opportunity for the citing-in of CATC by order to show cause. The limited reopening was scheduled for and held on February 4, 1963, without order to appear or appearance of the CATC companies.

Existence of Procedural Requirements.—Section 7(c) of the Natural Gas Act and Section 5 of the Administrative Procedure Act specify notice and opportunity to be heard in proceedings such as those at bar. See also, Davis, Administrative Law Treatise (West Pub. Co., 1958) Chapter 7 *passim*, section 7.02: "* * * a party who has a sufficient interest or right at stake in a determination of Governmental action should be entitled to an opportunity to know and to meet, with the weapons of rebuttal evidence, cross-examination, and argument, unfavorable evidence of adjudicative facts, except in the rare circumstances when some other interest, such as national security, justifies an overriding of the interest in fair hearing."

The existence of the procedural requirement has been recognized by the Commission in a case on all fours with the case at bar. In that case, the

Commission made the producer-seller a party to proceedings on the jurisdictional and certification issues. *Tennessee Gas Transmission Co.*, 27 FPC 502, "Order to Show Cause" issued March 12, 1962.

1(c). *Action on Assumption That Procedural Impasse is Deliberate*

If the Commission does not wish to cite-in the CATC companies, then, for want of an adequate hearing, no order can be entered looking towards conditional certification based on redetermination of the Ship Shoal transactions. For want of the required certification of the Ship Shoal gas deliveries, Tennessee's lateral and proposal to attach the Ship Shoal gas must be denied. For want of these reserves, Tennessee's deliverability is insufficient, and all new service proposed herein must be denied.

Deliverability Requirement.—In *Midwestern Gas Transmission Co.*, 21 FPC 653, the Commission considered at length the terms of Tennessee's most recent expansion program prior to the program here considered. The Commission, with evident doubts—and specific reference to the "apparent slimness" of Tennessee's gas supplies—permitted the expansion on the "peculiar facts"—

> * * * particularly since we also have the means of protecting the consuming public dependent in whole or in part upon Tennessee. This protection can be afforded by assuring the consuming public that Tennessee will not be permitted to assume additional market obligations unless it demonstrates that it has improved its gas supply.
>
> Accordingly, we shall require Tennessee to file with the Commission, gas supply estimates demonstrating its ability to supply its authorized system obligations and proposed additional obligations for a period of at least twelve years prior to filing any new application for a certificate of public convenience and necessity covering system capacity expansion. To assure that the additions to the gas supply warrant consideration, Tennessee shall also demonstrate that the terms and conditions of its new gas purchase contracts are not unreasonable. [21 FPC at 657.]

Accordingly, no new service can be permitted in the current application, absent a showing of the "minimal requirement" (21 FPC at 657) of a twelve year deliverability life. In view of the Commission's language in the cited case, the showing must be clear and certain.

Effect of Ship Shoal Exclusion.—Tennessee has, and we have so found at page 792 of the "Decision on the First Issues," remaining recoverable dry gas reserves of 18,828,898,000 Mcf at 14.73 psia as of January 1, 1962. The resultant reserve life index is 19.7 years from that date. Based thereon, it has been found that Tennessee's reserves have a deliverability life of at least twelve years from January 1, 1963.

These findings were predicated on the supposition that Ship Shoal reserves of 661,323,000 Mcf were properly includible in Tennessee's total system reserve showing. Excluding these reserves, Tennessee's remaining recoverable gas reserves, as of January 1, 1962, amount to 18,167,575,000 Mcf. The reserve life index based thereon, reffecting pre-existing and new markets now proposed to be served, is 19.0 years.

The findings of deliverability coverage of at least twelve years from January 1, 1963, based on total reserves which included Ship Shoal gas, resulted from: (1) a 12-year showing based on the uncontroverted "back-pressure" method of determination; (2) failure to reflect in such method an allowance for water drive which reasonably can be expected to occur in Gulf Coast reservoirs and which, if present, would tend to improve deliverability; and (3) a 15-year showing based on Tennessee's interpretation of the so-called "Davis Curve"

method of determination—the interpretation being strongly contested by the Staff.

We do not find in the record exactly how much this deliverability is reduced by the elimination of the Ship Shoal reserves. The Tennessee witness testified he had not made a deliverability study based on the "back-pressure" method reflecting exclusion of any claimed reserves; that such study would have to be on a "field-by-field" basis; and that "* * * in order to make a determination as to what the deliverability coverage would be, [we] would have to go back, exclude the * * * reserves, and schedule gas on the basis of the reserves we had left." (Tr. 360–362.)

It would appear that exclusion of Ship Shoal reserves will result in a reduction of Tennessee's 12-year deliverability coverage. Staff shows in its brief (pp. 43–51) pro-rata reductions in deliverability, based on the simple arithmetical relationship resulting from exclusion of various reserves. Applying this method to the Ship Shoal exclusion would result in 11.5 years of deliverability. On the other hand, an analysis of Exhibit 9 (Tennessee's deliverability study based on the "back-pressure" method) indicates that exclusion of Ship Shoal reserves and a rescheduling of deliveries from the remaining reserves would result in a revised deliverability coverage of from 9 to 10 years.

Obviously, in light of the expert testimony, neither of these methods of redetermination of deliverability can reasonably be expected to produce a result upon which a specific, conclusive finding can be made. Tennessee's witness has indicated that a completely new study done on a field-by-field basis, taking into consideration contractual and physical conditions existing in each field, would be required in order to determine a new deliverability coverage reflecting exclusion of any substantial reserves. Nevertheless, such estimates as have been made by the Staff and by the analysis of Exhibit 9 are indicative of the range within which a properly redetermined deliverability would lie. Such deliverability is clearly insufficient to meet the Commission's expressions in Opinion 320, *supra*.

Consequences of Ship Shoal Exclusion.—Ordering clauses (D), (E), (F), (G), (H), (I), (J), (K), (L), (M), (N), (P), (Q), and (R) of the Decision on the First Issues, issued November 9, 1962, must be annulled, and give no force or effect as the proper Initial Decision herein. All matters relating to new and additional service discussed in the Decision on the First Issues become irrelevant. For want of adequate gas supply, all new service must be denied. For want of a duly certificated gas supply at Commission-accepted price levels at Ship Shoal, the proposal to build a Ship Shoal lateral must be denied.

II. *The Issue as to Excess Capacity*

The "Decision on the First Issues" shows that we are no longer ruling on abstract proposals for construction of new facilities as originally presented in the CP60–94 application. Part of the facilities have been constructed and are in operation pursuant to temporary authorization issued by the Commission. A larger part of such facilities have not been constructed, but Tennessee says on brief that such part will be needed "at a later date," without specifying or justifying a construction schedule. As of today, the practical issue is Tennessee's winter 1963–1964 requirements, rather than 1962 design day requirements. The Columbia System intervenors alone contest, and would have the Commission exclude from Tennessee's rate base for such future period the facilities constructed and in operation. All of these facilities lie south of Tennessee's Station 87, in the portion of the Tennessee system which incurs the heaviest and most constant use.

The Capacity Already Installed.—The public files of the Commission show that, on notice to all parties, a conference was held on May 10, 1962, between certain of the parties to these proceedings and the Commission Staff, concerning Tennessee's application filed April 9, 1962, for temporary authority to construct certain of the facilities, the need for which is now in question.

At the conference of May 10, 1962, as supplemented by further filings, Tennessee estimated its market requirements for the 12 months period ending March 1, 1963, at 973,236,000 Mcf—slightly higher, but in the range of Tennessee's Exhibit 71 herein, showing market requirements of 970,203,000 Mcf. The Columbia System intervenors have taken note of and have challenged Tennessee's presentation, *inter alia*, by stating that "Tennessee laid before the conference a completely new set of figures," and "may plan to hinge its case on the new theory" of capacity needs. *Supplement to Brief on Behalf of The Manufacturers Light & Heat Company, et al.* (Columbia System), filed May 28, 1962, p. 2; discussing pp. 4–8, the "Fallacy of New Theory Advanced by Tennessee."

After the conference of May 10, 1962, the following Commission actions were taken: (a) Tennessee's application for temporary authority for construction of certain facilities was set for public hearing; (b) the public hearing was cancelled; (c) authorization was granted in part; and (d) on rehearing the temporary authorization for the facilities requested was granted *in toto*. As noted, the contested facilities applied for, temporarily authorized, and installed, all lie south of Tennessee's Station 87. No facilities in Columbia's principal service area are involved in the current, as distinguished from the proposed, situation. As to all such matter, see *Decision on the First Issues*, pp. 794–795, and map, p. 776.

The installation of about $17 million of facilities under temporary certificates is, of course, an unusual procedure. See Part II, Section 2.57 of the Commission's Rules of Practice and Procedure. The Commission therefore took the unusual precautionary step of ordering a formal hearing with regard to the need for such facilities. In that hearing, the Columbia System would have had full opportunity, in an expedited proceeding limited to the single question of need, to pin-point objections. Nonetheless, for reasons which have not been currently explained, Columbia, on May 14, 1962, filed its "Notice of Withdrawal of Opposition Of The Ohio Fuel Gas Company, The Manufacturers Light and Heat Company, and United Fuel Gas Company To Application For Temporary Certificate of Public Convenience And Necessity."

On May 17, 1962, after Columbia withdrew its opposition, the Commission issued its "Notice Of Cancellation Of Hearing," which cancelled the scheduled hearings on the matter of Tennessee's need for the new temporarily authorized facilities. There can be no doubt that Columbia induced this cancellation of hearing, and that Columbia thereby surrendered its opportunity to demonstrate that the contested portion of the new facilities south of Station 87—as distinguished from total contested facilities—were unnecessary and excessive, in terms of Tennessee's capacity needs. The Coal Intervenors, whose position simply echoes Columbia's, stood silent and their objections are thus subject to the same disposition.[13]

---

[13] A second opportunity was given to all interested parties to present evidence relating to the new circumstances occasioned by Tennessee's building of only the lesser portion of the contested facilities. The Examiner's order of January 18, 1963 (*supra*) reopened the hearing on the excess capacity issue, as to facilities temporarily authorized and installed. Neither Columbia nor any other parties offered new evidence or argument in the reopened hearing.

Is the Over-Expansion Issue of Practical Consequence?—Let us assume, for the sake of argument, that some portion of the new capacity which has been installed by Tennessee south of Station 87 is not required by 1962 design day loads, or 1962–1963 winter peak loads. As we have seen, all costs in regard to such contested facilities actually installed pursuant to temporary authorization issued July 6, 1962, amount to about $17 million. "Decision on the First Issues," p. 794. For comparison, it is noted that the Tennessee Gas Transmission Company rate base, excluding all wellhead plant, amounted to $833,001,883 for the 12-months ended July 31, 1959, according to the Initial Decision of Presiding Examiner in *Tennessee Gas Transmission Co.*, Docket No. G–19983, issued May 28, 1962, Appendix 2. For the 12-months ended March 31, 1960, transmission rate base on the Examiner's basis of computation amounted to $876,558,324.[14] Second Stipulation and Agreement accompanying rate settlement proposal, Exhibit C–2, Schedule 5, in the Consolidated Proceedings in Docket No. G–11980, *et al.* Installed items contested herein constitute only 1.94 percent of such rate base. Tennessee's 1962 and 1963 transmission rate base, excluding contested items, would show further growth and further relative unimportance of the amount involved in contested construction actually installed.

On December 21, 1962, the Commission issued its "Order Approving Rate Settlement, Prescribing Refunds, Terminating Proceedings In Part And Providing For Further Hearings," in the matter of *Tennessee Gas Transmission Company*, Docket No. G–11980, *et al.* The final docket considered in such order and in the settlement involved rates made effective April 5, 1960, and covering the period from that date to the indefinite future. The order shows that the agreed-upon and approved cost-of-service to be used for the design of rates for the period commencing October 1, 1962, is $272,500,000. Part of the settlement is the following stipulation:

Tennessee will make no rate increase filings prior to January 1, 1964.

Assuming the 30 days' notice and five months suspension provided for in Section 4 of the Act, this stipulation, of course, means that no Tennessee increased rates can become effective until July 1, 1964.

It is perfectly clear that Tennessee is not in a static or declining position with regard to pipeline operations and sales. On the contrary, all aspects of Tennessee's operations show steady growth in all recent years. See Tennessee's *Annual Report For 1961*, p. 31. Planning for the movement of gas to meet 1963–1964 winter peaks is in progress as of the time of the present writing. There will be a substantial increase in capacity needs to meet increased demands for the immediate future. See uncontroverted statement of Tennessee counsel at the reopened hearing of February 4, 1963, detailing matters of common and expert knowledge.[15]

For present purposes, we may assume *arguendo* that *all* the contested capacity installed during 1962 pursuant to temporary certificates has not been necessary to carry loads anticipated or realized during 1962 and 1963. Nonetheless, it is evident that such excess capacity (a) is not in an amount of practical current

[14] Whether or not this figure is exactly correct has not been (and will not be) determined specifically by the Commission. This figure is, however, clearly appropriate for use, as here, to determine the order of magnitude.

[15] Note also, that the question of mootness (in the light of Tennessee's rate settlements) was specifically set down for evidence and argument at the reopened hearing by the Examiner's order of January 18, 1963. No witness or argument on the point was advanced by Columbia, the Coal Intervenors, or any other party to the record.

adverse consequence to Tennessee's ratepayers, and (b) will become of even less significance in terms of Tennessee's total rate base as Tennessee's total capacity grows to meet new loads.

Otherwise stated, the question of whether or not Tennessee currently needs the relatively small amount of contested installed capacity is a moot question until at least July 1, 1964, and the only real issue is whether or not Tennessee will need such capacity to meet the "future" service required by public convenience and necessity. For the indefinite immediate future, Tennessee will absorb the cost of over-expansion, if any, in its presently agreed-upon and approved rates.

The Capacity Not Installed.—The capacity here in question, detailed in the Decision on the First Issues, consists of about $20.5 million of facilities between Tennessee's Station 87 and storage. On brief, Tennessee admits that these facilities are not necessary to meet 1962–1963 peaks, but says that they will be needed "at a later date to meet the customers' loads as they increase."

Authorization of facilities for construction in the indefinite future, as late as 1970 under the evidence herein, subject to Tennessee's unilateral determination of proper timing, would not seem to be appropriate Commission action. Therefore, the Examiner's order for limited reopening of proceedings, issued January 18, 1963, provided *inter alia* that "Tennessee should specifically program installation of the remainder of requested facilities," and by necessary inference submit such program at the hearing set down for February 4, 1963.

At that hearing, Tennessee presented no evidence in this connection, but, by counsel, gave the following statement, in pertinent part:

> We have now received, however, since the passage of time [referring to time since filing of applications herein], requests from our customers for additional service commencing with the '63–'64 heating season. The additional peak day requirements of our customers commencing with the 1963–64 heating season will be in excess of 100 million cubic feet per day.
>
> Now, in view of these substantial increased requirements and considerations as to the future long-range growth of the Tennessee system, our engineers have undertaken studies to determine what would be the most economical design of facilities north of Station 87 for the future.
>
> These studies have not as yet been completed. Since these studies must take into consideration requirements in addition to those that are here involved in these instant proceedings, we may find that economies could be realized by altering the design of the facilities here proposed north of Station 87.
>
> If this should be the case, our new application which we hope to file within 30 to 45 days would reflect these alterations.
>
> In view of these circumstances, Mr. Examiner, we can't state at this time a specific program of installation of the remaining facilities between Station 87 and storage. When we file our new application within the next 30 to 45 days, we will advise Your Honor and the parties as to the status of these facilities and the applicable construction schedules.

It must be recognized that Tennessee may need to construct some of these facilities during the Summer of 1963, and that if the time schedule attained in the proceeding at bar is not improved, the undesirable use of temporary certification procedure may again have to be used. It would be preferable, if possible, to authorize in this decision such of the uninstalled capacity as is justified by the record evidence.

The record, however, does not warrant any such authorization. The record deals with 1962 design day and 1962–1963 peaks. Tennessee admits, *supra*,

that changes in facilities proposed on the 1962 basis may be required in the light of current anticipations and estimates. Existing facilities (supplemented by 1962 installations under temporary certificates, *supra*) have been adequate for needs actually encountered to date. Supplement to application for authority to operate facilities and render service (Dockets G–16842 and CP60–94) filed October 1, 1962. Contested facilities between Station 87 and storage, specified in the Decision on the First Issues, must therefore be disallowed for want of evidence of need and time of need.[16]

Certification in the Light of Procedural Impasse.—Logically, if the Ship Shoal reserves are lost to this proceeding and all expansion of service proposed herein must be denied for want of gas supply, see Section 1(c) *supra*, then all expansion of facilities based on such new service should also be denied. However, the facilities south of Station 87 were justified, not on the basis of new service but on the basis of design day capacity adequate to send gas to storage to make up deficiencies in storage caused by 1961–1962 emergencies. (Tr. 985–6; 1012; 1124; 1215–16.) By the best estimates as of the time of trial, Tennessee would have been completely out of top storage gas by January 31, 1963, had the proposed facilities south of Station 87 not been installed.[17] Thus, certification of the facilities already installed is not dependent upon the Commission's course of action with regard to the procedural *impasse*.

Contested Matters Not Disposed Of.—(1) East Tennessee Gas Transmission Company, a 93 percent subsidiary of Tennessee Gas Transmission Company, has an authorized delivery from the latter of 206,496 Mcf per day, and an estimated 1963 peak day requirement of only 155,551 Mcf. Columbia argues, and is echoed by Staff, that East Tennessee's contract obligation should accordingly be reduced by the 50,945 Mcf differential.

The differential exists because, in 1957, the Atomic Energy Commission, which had been purchasing 60,000 Mcf per day of firm gas at 100 percent load factor, plus large volumes of interruptible gas, converted its installations to coal. Thereafter, the AEC contract quantity has been the present volume of 6,000 Mcf per day.

In a proper proceeding, presumably in Tennessee's next certificate case, the contract quantities to be supplied by Tennessee to East Tennessee should be adjusted to reflect East Tennessee's actual current and near-future requirements. This cannot be effected in the proceeding at bar, because East Tennessee is not a party hereto. East Tennessee has had no notice or opportunity to be heard on the issue of the proposed reduction in its contract quantities. Nor is the matter one of mere formality or disregard of the corporate entity. East Tennessee is an operating utility, with minority security holders and customers. East Tennessee and its customers have a substantial interest in being heard on their own behalf before action adverse to their gas supply may be taken.[18]

(2) Tennessee's existing design day delivery capacity, prior to addition of temporarily authorized facilities installed in 1962, was 2,669,031 Mcf, according to the projection in *Midwestern Gas Transmission Co.*, Docket No. G–16842, *supra*. Columbia argues that (a) Tennessee's pipeline efficiency factors are to low, (b) Tennessee's winter peaks greater than existing capacity have been

[16] It is not to be anticipated that Tennessee's next expansion certificate application will present problems of absent necessary parties, which are the problems which produced much of the delay in the issuance hereof.

[17] To meet 22,704,000 Mcf of requirements from storage, Tennessee would have had only 17,500,000 Mcf of usable top storage. See Tr. 1215–16; see table, Tennessee's Reply Br., p. 25.

[18] Docket No. CP61–199 is a service application by East Tennessee for 1963, 1964, and 1965 requirements, which would seem an appropriate vehicle for restating East Tennessee's contract quantities.

and can be met through line pack[19] and storage withdrawals, and (c) Tennessee has understated the volumes of top storage gas available to Tennessee at the commencement of the 1962–1963 heating season and subsequent heating seasons.

Findings and conclusions with respect to these and related contentions made by Columbia are unnecessary because the theoretical situation basing such contentions no longer exists. As of the date of the reopened hearing, February 4, 1963, Columbia had been made aware of the current realities as to Tennessee's capacity, by the careful breakdowns contained in the "Decision on the First Issues" of November 9, 1962. Columbia might have, but did not, based new contentions on the actualities of 1962 design day and 1962–1963 winter day situations. We are, as of the present writing, concerned with projections for a new season, in which Tennessee will have the benefit of actual experience with only the smaller part of its contested facilities proposed herein. Columbia's objections to any new construction hereafter proposed in connection therewith, including construction proposed herein but not undertaken, will properly be heard in connection with any future Tennessee certificate cases.

Capacity Authorized.—In the light of: (a) the Commission's temporary authorization of increased service for the 1962–1963 winter peak season, (b) Tennessee's normal and increased capacity needs, (c) Tennessee's depleted storage as of the time of hearing, (d) the requirements to inject large amounts of new gas into storage during the 1962 injection season, under the best estimates adduced into evidence, which could not be accomplished without the contested capacity south of Station 87, (e) the future public convenience and necessity as Tennessee, from one source or another, gets supply to meet uncontrovertible increased demand requiring new capacity, and (f) the foregoing evaluations of the significance of the contested installed capacity: it is found that there should be permanently authorized for construction and operation all facilities temporarily authorized by Commission order of July 6, 1962.

ORDER

Wherefore, *It is ordered*, Subject to review by the Commission as provided in its Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity is hereby granted to Tennessee Gas Transmission Company (Tennessee) for the construction and operation of the facilities temporarily authorized by Commission order issued July 6, 1962, pursuant to Tennessee's filings of April 9, 1962, and June 7, 1962; said facilities being described in detail in said order and filings, in the Decision on the First Issues issued November 9, 1962, and in the foregoing text.

(B) Tennessee's application for a certificate of public convenience and necessity for the construction and operation of the following facilities is hereby denied:

Facilities[20]	*Horsepower or Miles*
Station 871, near Campbellsville, Kentucky	4,000
36" Loop between Stations 200 and 204	14.37
36" Loop between Stations 204 and 209	27.15
36" Loop between Stations 209 and 214	10.03
36" Loop between Stations 214 and 219	24.03
30" Loop between Stations 219 and 307	40.35
30" Loop between Stations 307 and 313	11.33

[19] It is intended here to suggest the Columbia argument based on a dispatcher's report for February 3, 1961 (Columbia Br. 29–30) showing *estimated* through-put higher than Tennessee flow diagrams.

[20] Restatement of summary listing on page 795, "Decision on the First Issues."

(C) Upon approval of the following procedure by the Commission, communicated to the Secretary:

(1) A copy of this Decision shall be served upon each of the CATC companies (hereinbefore specifically identified) in the manner prescribed in Section 1.17 of the Commission's Rules of Practice and Procedure;

(2) The text hereof shall be taken and considered to constitute an order to show cause to the CATC companies, pursuant to Section 1.6 of the Commission's Rules of Practice and Procedure;

(3) In lieu of answer to show cause specified in Section 1.9(c) of the said Rules, the CATC companies shall, within 20 days of the service of the copy hereof hereinbefore prescribed, file exceptions hereto, and otherwise follow the answering procedure set out in Section 1.31 of such Rules, to the end that the CATC companies shall be fully and expeditiously heard on the matters herein disposed of;

(4) Such exceptions shall deal with all matters of law, public policy under the Natural Gas Act, and argument as may be relevant to this proceeding and determination, including (a) CATC's apparent violation of the terms of the Natural Gas Act in failing and refusing to make the filings with the Commission of the contracts of May 10, 1961, required by Sections 4(c) and 7(c) of the Natural Gas Act, and (b) considerations bearing on the public convenience and necessity of the sale by CATC, pursuant to such contracts of May 10, 1961, of gas in interstate commerce for resale by Tennessee for ultimate consumption for domestic, commercial, industrial, and other use;

(5) The Secretary shall open a new docket with respect to each of the CATC companies so joined herein by order to show cause; and

(6) Such new dockets shall be consolidated herewith and further considered by the Commission in conjunction with Tennessee Gas Transmission Company, Docket Nos. G–16842 and CP60–94.

(D) In the event that the foregoing procedure for joining the CATC companies herein, or its equivalent,[2] is effected by the Commission—

(1) The contracts and arrangements for the sale of Ship Shoal gas of May 10, 1961, between CATC and Tennessee are disapproved *in toto;*

(2) Further performance of such contracts shall cease in all respects, except in respect of production, transportation and sale of oil during the interim period to the renegotiation of such contracts;

(3) The CATC companies and Tennessee shall take appropriate steps in accordance with the text hereof to reverse all financial and other results of partial performance under the unauthorized contracts of May 10, 1961, and to restore the situation that would have existed had such partial performance not been undertaken; and

(4) The CATC companies and Tennessee may, after compliance with subparagraphs (2) and (3) above, present for the consideration of the Commission pursuant to Section 7(c) of the Natural Gas Act a new contract covering the sale of the Ship Shoal gas per-Mcf rather than in bulk, and at a price which is not excessive under the Commission's Statement of General Policy No. 61–1.

(E) In the event that the foregoing procedure for joining the CATC companies herein, or its equivalent, is not effected by the Commission, all new service and increased service proposed herein is denied, as well as the proposed

[2] *E.g.*, voluntary entry of CATC into this proceeding by petition to the Commission, accepted by the Commission.

58.2 miles of lateral line connecting the Ship Shoal reserves with Tennessee's pipeline system. In such event, ordering clauses (D), (E), (F), (G), (H), (I), (J), (K), (L), (M), (N), (P), (Q), and (R) of the Decision on the First Issues, issued November 9, 1962, are annulled, and the particular applications therein dealt with are, for want of gas supply, all denied.

ROBERT M. WESTON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, ET AL., DOCKET NO. G-18338, ET AL.

FINDINGS AND ORDER AMENDING ORDERS ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1963)

On March 8, 1963, as supplemented on April 22, 1963, Florida Gas Transmission Company (Movant) filed in Docket No. G-18338, *et al.*, a motion to amend the orders heretofore issued in said dockets by substituting South Florida Natural Gas Company (South Florida) for the City of New Smyrna Beach, Florida (New Smyrna), as the resale customer and distributor of natural gas to be sold and delivered by Movant for resale for ultimate public consumption in New Smyrna and environs.

The Commission's order issued August 9, 1961, as modified on November 2, 1961, in the subject dockets authorized Movant to provide natural gas service to New Smyrna for resale and distribution through a municipal system to be owned and operated by the city. New Smyrna has elected not to proceed with a municipally-owned distribution system but has granted a franchise to South Florida for this service. The estimated third year annual and peak day natural gas requirements for New Smyrna in M^2Btu are as follows:

Annual:	
Firm	106,664
Preferred interruptible	630,000
Total	736,664
Peak day:	
Firm	1,069
Preferred interruptible	2,237
Total	3,306

These quantities represent an increase of 31,500 M^2Btu in third year annual firm requirements and 598,500 M^2Btu in third year annual preferred interruptible requirements over the quantities heretofore authorized. Third year total peak day requirements have been increased by 2,125 M^2Btu, but firm peak day requirements have been decreased by 112 M^2Btu. The largest part of the increased requirements is represented by the quantities required for service to a newly constructed steam power electric generating plant owned by New Smyrna.

Movant proposes to install a line tap at a point on its existing 6-inch Daytona Beach lateral approximately one mile west of the city limits of

Daytona Beach, Volusia County, Florida, and to construct and operate approximately 14.2 miles of 4½-inch pipeline extending from said point in a southerly and easterly direction to a city gate delivery point at New Smyrna, together with a meter and regulator station and appurtenant facilities for the sale and delivery of natural gas to South Florida. Movant was heretofore authorized to construct and operate a 2⅞-inch line over the same route to serve New Smyrna. By order issued March 13, 1963, the Commission extended for six months the time within which the subject lateral, among others, might be constructed. It appears to be appropriate to extend the time for the construction of the lateral to serve New Smyrna for another six months.

Movant has entered into service agreements dated September 13, 1962, with South Florida for preferred interruptible and general service, providing for the sale of gas under Rate Schedules G and I of Movant's FPC Gas Tariff, Original Volume No. 1.

Due notice of the filing of the subject motion was issued August 14, 1963, and published in the Federal Register on August 21, 1963 (28 F.R. 9221). No protest, request for hearing, or petition to intervene has been received.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the orders heretofore issued in Docket No. G–18338, *et al.*, should be amended to substitute South Florida Natural Gas Company for the City of New Smyrna Beach, Florida, as the resale customer and distributor of natural gas to be sold and delivered by Florida Gas Transmission Company for resale for ultimate public consumption in the City of New Smyrna Beach and environs.

(2) The lateral to serve the City of New Smyrna Beach should be constructed, modified as proposed in the motion herein, within six months from the date on which this order issues.

The Commission orders:

(A) The orders heretofore issued in Docket No. G–18338, *et al.*, be and the same are hereby amended to substitute South Florida Natural Gas Company for the City of New Smyrna Beach, Florida, as the resale customer and distributor of natural gas to be sold and delivered by Florida Gas Transmission Company for resale for ultimate public consumption in the City of New Smyrna Beach and environs.

(B) The lateral to serve the City of New Smyrna Beach shall be constructed, modified as proposed in the motion herein, within six months from the date on which this order issues.

(C) In all other respects, the orders heretofore issued in Docket No. G–18338, *et al.*, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

RATON NATURAL GAS COMPANY, DOCKET NO. CP62–131

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1963)

On July 31, 1963, Raton Natural Gas Company (Applicant) filed a motion to amend the Commission's order issuing a certificate of public convenience and necessity to Applicant on July 19, 1963, in Docket No. CP62–131, 30 FPC 356, by

authorizing the construction and operation of 20.5 miles of 8-inch pipeline in lieu of 20.5 miles of 6-inch pipeline specified in said order of July 19, 1963.

Applicant wishes to construct the line for use during the 1963–1964 winter heating season, and 6-inch pipe will not be available before that time; 8-inch pipe is presently available.

The additional incremental cost of the 8-inch pipe will be $55,000, to be financed from cash on hand.

Due notice of this motion to amend was given by publication in the Federal Register on August 21, 1963 (29 F.R. 9223). No protests to the granting of the motion have been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 19, 1963, in Docket No. CP62–131 be amended as hereinafter ordered.

The Commission orders:

(A) The said order issued on July 19, 1963, be and the same is hereby amended by authorizing the construction and operation of 20.5 miles of 8-inch pipeline in lieu of the presently authorized 20.5 miles of 6-inch pipeline.

(B) In all other respects, the said order issued July 19, 1963, in Docket No. CP62–131 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–187

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1963)

On December 28, 1962, as supplemented on January 18, 1963 and amended on May 10, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63–187 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas in interstate commerce for resale as hereinafter described, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate a sales meter station and appurtenant facilities near Applicant's Compressor Station No. 35 in Harris County, Texas for the purpose of rendering services to Houston Pipe Line Company (Houston) of Houston, Texas. The estimated cost of the proposed facilities is $47,000.

Service by Applicant to Houston will be rendered in accordance with a three year contract between the parties whereunder Applicant will make available to Houston a total volume of 1,000,000 Mcf of gas during each Winter Period (November 1–April 1), with a daily maximum obligation of 75,000 Mcf. After a total volume of 1,000,000 Mcf has been purchased by Houston during the Winter Period, Houston may request, but Applicant need not deliver, additional daily volumes not in excess of 75,000 Mcf during the remainder of the year until the next Winter Period. The contract specifically provides that if at any time there shall be a curtailment or interruption of gas supply into Applicant's main trans-

mission lines which will cause Applicant, in its opinion, to be deficient in fulfilling the then existing requirements of its other customers, Applicant may curtail or interrupt deliveries to Houston for the period such condition exists.

The contract price for the gas is 20¢ per Mcf at 14.7 psia, with a minimum bill amounting to $50,000 annually.

The gas to be delivered by Applicant will be used to supplement existing sources of gas of Houston required to meet the needs of its customers. Furthermore, it will alleviate an oversupply situation in Applicant's system.

Pursuant to due notice, a hearing was held on September 12, 1963 respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware Corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63-348

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1963)

On June 20, 1963 Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63-348 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale of additional volumes of natural gas for ultimate public consumption to the following named existing customers:

	Rate schedule	Mcf per day at 14.7 psia
Manufacturers Light & Heat Co., The (Muncy)	CD-3	4,000
Avis Gas Co.	OG-3	119
Blacksburg, S.C. City of	OG-2	300
United Cities Gas Co., North Carolina Division	G-2	100
Winder, Georgia, City of	OG-1	300
Total proposed additional pipeline service		4,819

No additional facilities are required in order to render the service proposed in the application. The service to be rendered here is from unallocated capacity resulting from facilities to be authorized in Docket No. CP63-222.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 10, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Trancontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston Texas is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G-1143 (7 FPC 139).

(2) The sale and delivery of additional volumes of natural gas as hereinbefore described, as more fully described in the application, will be made in interstate commerce subject to the jurisdiction of the Commission, and said sale and delivery are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale and delivery of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (3), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to sell and deliver natural gas in additional volumes to the customers named, as more fully described in the application.

(B) Issuance of a certificate in this docket is conditioned upon issuance of a certificate in Docket No. CP63–222.

(C) The certificate issued and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (3), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

CITY OF UNIONTOWN, KANSAS, DOCKET NO. CP63–343

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 20, 1963)

On June 13, 1963, the City of Uniontown, Kansas, (Applicant) filed in Docket No. CP63–343 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in Uniontown, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately six miles of lateral pipeline extending from a point of connection on Cities Service's transmission line, Bourbon County, Kansas, to the proposed distribution facilities for Uniontown.

The application shows Applicant's estimated third year peak day and annual natural gas requirements to be 215 Mcf and 18,960 Mcf, respectively.

The total estimated cost of transmission and distribution facilities for the project is $65,000, which cost will be financed by the issuance of revenue bonds.

On June 28, 1963, Cities Service filed an answer to the subject application stating that it had no objection to the granting of said application.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 8, 1963 (28 F.R. 8175). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, the City of Uniontown, Kansas, is a municipal corporation incorporated under the laws of the State of Kansas and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in Uniontown.

(3) It is necessary and desirable in the public interest that Cities Service be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 215 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Cities Service, as proposed, within one year from the date on which this order issues and upon the execution of the service agreement between Applicant and Cities Service in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Cities Service serve Applicant, as proposed, will not place any undue burden upon Cities Service nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 215 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Cities Service shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Cities Service, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Cities Service in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

COLORADO-WYOMING GAS COMPANY, DOCKET NO. CP63-347

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 23, 1963)

On June 17, 1963, Colorado-Wyoming Gas Company (Applicant) filed an application in Docket No. CP63-347 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing it to acquire from McWood Corporation (McWood) 8.35 miles of 4-inch pipeline located in the Southwest Roggen Field, Weld County, Colorado, and to operate the same. This pipeline is presently owned and operated by McWood to deliver residue gas from its gasoline plant to Applicant at a point near Keenesburg, Colorado. Applicant further requests authority to install metering facilities to receive gas from McWood at a point near the said McWood gasoline plant. Applicant also requests authority to provide a new delivery point for the sale of 9,500 Mcf of gas to Greeley Gas Company, an existing resale customer. The total estimated cost of the facilities to be acquired and constructed is $91,645, to be financed from current working funds.

Applicant also requests permission to abandon, pursuant to Section 7(b), a small metering station serving Kansas Brick and Tile Company, near Loveland, Larimer County, Colorado, all as more fully set forth in the application.

The acquisition of the line from McWood and operation thereof will enable Applicant to supply gas to Greeley Gas Company for resale to a new school and several residential and industrial customers.

The abandonment of the metering station has been requested due to the termination of the service agreement by the parties.

Applicant's contract demand for peak day gas for the 1963–1964 heating season will not be affected by the small additional volume of gas to be made available to Greeley Gas Company through the proposed facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 5, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado-Wyoming Gas Company, a Delaware Corporation having its principal place of business in Denver, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be or are being used in the transportation and/or sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the abandonment, construction, acquisition and operation thereof by Applicant are subject to the requirements of Subsections (b), (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction, acquisition and operation of the proposed facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The abandonment of the aforementioned facility is required by the public convenience and necessity, and permission and approval therefor should be granted as hereinafter ordered.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado-Wyoming Gas Company, to acquire, construct and operate the facilities as hereinbefore described, all as more fully

described in the application in this proceeding, upon the terms and conditions of this order.

(B) Permission and approval be and the same is hereby granted to abandon the facility as hereinbefore described, all as more fully described in the application in this proceeding.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3), and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be installed, purchased, and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within ninety days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

TRUNKLINE GAS COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP62-41

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 24, 1963)

On June 28, 1963, Trunkline Gas Company (Trunkline) filed a motion to amend the order granting a certificate of public convenience and necessity issued by the Commission on January 25, 1962, in Docket Nos. CP62-41 and CP62-120, by amending the Commission's orders (A) and (B) so as to renew the authorization and to permit the continuation of the sales of natural gas and operation of the facilities therein provided until July 1, 1964.

The Commission's said order (A) of January 25, 1962, authorized Trunkline to construct and operate approximately 491 feet of 4-inch O.D. pipeline and a metering station to interconnect its facilities with the pipeline facilities of Texas Eastern Transmission Corporation (Texas Eastern) and to sell and deliver a maximum of 30,000 Mcf of natural gas per day at 14.65 psia to Texas Eastern on an interruptible basis until July 1, 1962.

The Commission's said order (B) of January 25, 1962, authorized Texas Eastern to construct and operate a main line tap and related facilities on its 30-inch McAllen-Vidor pipeline in Hidalgo County, Texas, in order to receive said short-term supply of gas from Trunkline until July 1, 1962.

On June 19, 1962, Trunkline filed a motion to amend said order so as to permit the continuation of the sale of natural gas and operation of the facilities authorized by said order until July 1, 1963. Notice of said motion to amend was issued on August 3, 1962. On August 20, 1962, the Public Service Commission of the State of New York filed notice of intervention.

By the instant motion, filed June 28, 1963, Trunkline proposes to increase the maximum daily quantity of gas to be sold from 30,000 Mcf to 36,750 Mcf, as provided in the amendment to the contract, dated June 4, 1963, between Texas Eastern and Trunkline.

Trunkline shows that it has need to continue the sale to Texas Eastern in order to further alleviate the take or pay situation with respect to its gas purchase contracts, as described in the Commission's order of January 25, 1962.

Trunkline shows that it has been advised by Texas Eastern that Texas

Eastern has need for the gas proposed to be delivered by Trunkline, which will be used to supplement its total system requirements.

Pursuant to due notice, a public hearing was held in Washington, D.C. on September 5, 1963, respecting the matters involved in and the issues presented by the motions herein. No protest to the granting of said motions or petitions to intervene other than the notice of intervention filed by the Public Service Commission of the State of New York has been received. Said New York Public Service Commission appeared at said hearing and following statements of counsel for Trunkline and Texas Eastern, counsel for the New York Public Service Commission stated that it does not oppose the amendment of the certificate as proposed by Trunkline and has no objection to the waiving of the filing of briefs and the omission of the intermediate decision procedure. Staff counsel moved orally that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Movant, Trunkline Gas Company, a Delaware Corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Texas Eastern Transmission Corporation, a Delaware Corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–1089 (8 FPC 228).

(3)) The proposed amendment to the Commission's order granting a certificate of public convenience and necessity issued January 25, 1962, in Docket Nos. CP62–41 and CP62–120, as described in said motion to amend, is required by the public convenience and necessity and said certificate should be amended as hereinafter ordered.

(4) A request having been made by staff counsel for omission of the intermediate decision procedure and all requirements of the provisions of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

In order to renew the authorization and to permit the continuation of the sales of natural gas and operation of the facilities therein provided; ordering paragraphs (A) and (B) of the Commission's order in Docket Nos. CP62–41 and CP62–120 issued January 25, 1962, be and the same are hereby amended to read as follows:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Trunkline Gas Company, to construct and operate the proposed facilities and to sell and deliver a maximum of 36,750 Mcf of natural gas per day at 14.65 psia to Texas Eastern Transmission Corporation until July 1, 1964, as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP62–41, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to construct and operate the proposed facilities in order to receive natural gas from Trunkline until July 1, 1964, as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP62–120, upon the terms and conditions of this order.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP62-89; UNITED FUEL GAS COMPANY, DOCKET NO. CP62-90; THE OHIO FUEL GAS COMPANY, DOCKET NO. CP62-91

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AFFIRMING EXAMINER'S DECISION TO EXTENT APPLICABLE

(Issued September 25, 1963)*

Syllabus

1. Pipeline's certificate conditioned to provide that facilities may not be used to transport any additional gas purchased purportedly for compressor fuel or other company use until producer obtains certificate therefor under *Lo Vaca* holding. P. 833.
2. Commission *issues* certificates of public convenience and necessity under Section 7, of the Natural Gas Act. P. 835.

J. Evans Attwell and *David T. Searls* for Monterey Gas Transmission Company.**

Brooks E. Smith, Daniel L. Bell, Jr., Alfred A. Green and William C. Hart for Columbia Gulf Transmission Company, United Fuel Gas Company and The Ohio Fuel Gas Company.

R. K. Talbot, C. E. Goodwin, J. M. Hill, William C. Battle and *John S. Battle, Jr.*, for United Fuel Gas Company.

E. O. Bottler for Columbia Gulf Transmission Company.

W. F. Laird for The Ohio Fuel Gas Company.

Carl Illig, William H. Holloway, Albert C. McClain and *Jesse Foster* for Humble Oil & Refining Company.

Julian DeBruyn Kops and *William E. Herron* for The Dayton Power and Light Company.

Reuben Goldberg, George Spiegel and *Charles E. Thomas* for Pennsylvania Gas and Water Company.

Robert J. White, James W. Farrell, Jr. and *Paul J. Doppes* for City of Cincinnati, Ohio.

C. Howard Johnson, Jr., Russell Leach, Edward D. Means, Jr. and *George C. Smith* for City of Columbus, Ohio.

J. David Mann, Jr., J. Frederick Moring and *John E. Holtzinger, Jr.* for United Gas Improvement Company.

James A. Biddison, Jr. for Baltimore Gas and Electric Company.

Walter E. Beckjord and *Richard H. Rhein* for The Cincinnati Gas and Electric Company.

William L. Howland for Portsmouth Gas Company.

James O. Watts, Jr. for Commonwealth Natural Gas Corporation.

Jerome J. McGrath, John A. McGrath and *James A. Gammon* for Fuels Research Council, Inc., National Coal Association, United Mine Workers of America and the Anthracite Institute.

John S. Schmid and *John W. Glendening, Jr.* for The Berkshire Gas Company, The Bridgeport Gas Company, Concord Natural Gas Corporation, Manchester Gas Company, Fitchburg Gas and Electric Light Company, Springfield Gas Light

*Initial decision appears on p. 836. The original lead docket, *Monterey Gas Transmission Co.*, docket No. CP62-88, was severed from these proceedings on May 15, 1963, 29 FPC 929, along with docket No. CP62-291.

**Monterey withdrew as applicant herein—29 FPC 929.

Company, The Greenwich Gas Company, The Hartford Electric Light Company, City of Holyoke, Massachusetts Gas and Electric Department, Lowell Gas Company, Mystic Valley Gas Company, Valley Gas Company, and City of Westfield Gas and Electric Light Department.

Daniel F. Wheeler for The Bridgeport Gas Company.

Charles H. Toll, Jr. for Concord Natural Gas Corporation and Manchester Gas Company.

William R. Cook and *Halycon G. Skinner* for Fitchburg Gas and Electric Light Company and Springfield Gas Light Company.

Frank J. Coyle for The Greenwich Gas Company.

H. Bissell Carey, Jr. for The Hartford Electric Light Company.

George N. Beauregard for City of Holyoke, Massachusetts Gas and Electric Department.

Edmund L. Twomey for Lowell Gas Company.

D. G. Allen for Mystic Valley Gas Company.

Ernest N. Agresti for Valley Gas Company.

Edward M. Lee for City of Westfield Gas and Electric Light Department.

Stanley M. Morley, B. J. Williamson, Robert Shaw and *John D. Lane* for Tennessee Gas Transmission Company.*

Frederick D. Cornelius, Herbert E. Squires and *Alan R. Squires* for Pennsylvania Public Utilities Commission.

Kent H. Brown, Charles J. Cox, and *Mrs. Barbara M. Suchow* for the Public Service Commission of the State of New York.

Robert L. Stewart for the Public Service Commission of West Virginia.

Charles E. McGee, James D. McKinney, Jr. and *R. E. Christiansen* for United Natural Gas Company.

Richard C. Steffey for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

On July 1, 1963, Columbia Gulf Transmission Company (Columbia Gulf) filed an amendment to its application in Docket No. CP62–89 requesting that a permanent certificate of public convenience and necessity be issued authorizing the facilities which Columbia Gulf has heretofore constructed, or commenced constructing, pursuant to two temporary certificates granted in that docket by letter orders dated August 14, 1962, and April 5, 1963. The letter order dated August 14, 1962, granted Columbia Gulf temporary authorization (1) to construct and operate nine main-line loops consisting of 132.7 miles of 30-inch pipeline, (2) to install and operate a new Compressor Station 10A, near Bunkie, Louisiana, utilizing a centrifugal compressor driven by a 10,500-horsepower jet gas turbine, and (3) to use on a full-time basis the 4,000-horsepower centrifugal compressor unit located at Columbia Gulf's Compressor Station No. 4 and the 10,500-horsepower centrifugal compressor unit located at Columbia Gulf's Compressor Station No. 2, both units having previously been authorized on a stand-by basis only in Docket Nos. G–18121 and G–19376, respectively. These facilities were needed to meet the Columbia System's gas requirements for the 1962–63 heating season and were estimated to cost $20,192,000, exclusive of the two compressor units previously authorized only on a stand-by basis. The letter order dated April 5, 1963, granted Columbia Gulf temporary authority to construct 10 main-line loops consisting of 144.2 miles of 30-inch pipeline at an estimated cost of $19,281,800. Columbia Gulf alleges that the facilities authorized in the

*Tennessee withdrew as applicant herein—29 FPC 929.

latter temporary certificate are needed to meet the Columbia System's requirements for the 1963–64 heating season.

The letter order of August 14, 1962, contained a condition providing that Columbia Gulf should not use any part of the facilities authorized in Docket No. CP62–89 "* * * to transport any additional gas purchased by Columbia Gulf purportedly for compressor fuel or other company use" until the producer involved had obtained a certificate authorizing such sales under the Commission's holding in *Lo Vaca Gas Gathering Company, et al.*, Opinion No. 348, 26 FPC 606. Since it does not appear that the circumstances described in the temporary authorization have changed up to the present time, it is appropriate that this condition contained in the temporary certificate of August 14, 1962, be made a part of the permanent certificate hereinafter issued in Docket No. CP62–89.

The letter order of April 5, 1963, contained the condition that "* * * United Fuel Gas Company shall, within a reasonable time, contract for adequate gas reserves to bring its total gas supply to such level as the Commission may subsequently determine to be required." The amendment filed July 1, 1963, by Columbia Gulf in Docket No. CP62–89 states that United Fuel has now entered into conventional gas sales contracts with Humble Oil & Refining Company and Isaac Arnold, *et al.*, involving the purchase by United Fuel of approximately 6.2 trillion cubic feet of gas. Columbia Gulf alleges that execution of these contracts has satisfied the gas-supply condition imposed in the letter order of April 5, 1963. This condition as to United Fuel's gas-supply obligations in Docket No. CP62–89 will remain contingent upon the outcome of subsequent proceedings involving the producers' applications and their acceptance of any certificates which may be issued to them in such proceedings.

Columbia Gulf's original application in Docket No. CP62–89 had also requested authorization to construct and operate additional looping and compressor facilities in order that Columbia Gulf could meet the estimated increased requirements of the Columbia System for the 1964–65 and 1965–66 heating seasons. However, Columbia Gulf's amendment filed July 1, 1963, in Docket No. CP62–89 asks that its request for authorization to construct the facilities described in its application in Docket No. CP62–89 to meet estimated increased gas requirements for the 1964–65 and 1965–66 heating seasons be deleted therefrom. The facilities which Columbia Gulf had originally requested authorization to construct during 1964 consisted of 52.1 miles of 30-inch main-line loops and 79,900 horsepower of additional compressor facilities, at an estimated cost of $20,191,600. The 1965 facilities for which a certificate was sought consisted of 89.6 miles of 30-inch main-line loops and crossings of the Cumberland and Kentucky Rivers, at an estimated cost of $12,559,000.

The facilities which Columbia Gulf was authorized to construct, pursuant to temporary authority granted in Docket No. CP62–89, enabled United Fuel to receive additional quantities of gas at the latter's Ceredo compressor station in Wayne County, West Virginia. Consequently, United Fuel's application filed October 9, 1961, in Docket No. CP62–90, as supplemented June 5, 1962, requested a certificate authorizing it (1) to turbocharge all of the six existing compressor units at the Ceredo station so as to increase the existing horsepower of each unit from 2,000 horsepower to 2,800 horsepower, or a total increase of 4,800 horsepower and (2) to construct and operate 2.3 miles of 26-inch pipeline northward from the Ceredo station to the Ohio River where gas is delivered to The Ohio Fuel Gas Company (Ohio Fuel) at United Fuel's Burlington delivery point. The total estimated cost of those facilities is $1,679,900. In order for Ohio Fuel to take delivery of additional quantities of gas from United Fuel, Ohio Fuel's application filed October 9, 1961, in Docket No. CP62–91 requested a certificate

authorizing it to construct 15.3 miles of 20-inch pipeline in Lawrence County, Ohio, extending its Line R–601 to United Fuel's Burlington delivery point, at a total estimated cost of $1,300,000.

By letter orders dated August 14, 1962, and October 26, 1962, respectively, the Commission, in Docket No. CP62–90, granted to United Fuel temporary authority to construct and operate the requested 2.3 miles of 26-inch pipeline and to turbocharge the six existing compressor units at its Ceredo compressor station. On August 14, 1962, Ohio Fuel was granted temporary authority to construct and operate the 15.3 miles of 20-inch transmission line for which it sought a certificate in Docket No. CP62–91.

In his decision issued January 28, 1963, in the consolidated proceeding *Monterey Gas Transmission Company, et al.*, Docket No. CP62–88, *et al.*, the presiding examiner, subject to review by the Commission, authorized Columbia Gulf, United Fuel, and Ohio Fuel to construct and operate all of the facilities for which those companies had been granted temporary certificates on August 14, 1962, and October 26, 1962. The major portion of the examiner's decision in Docket No. CP62–88, *et al.*, is devoted to a consideration of the application of Monterey Gas Transmission Company (Monterey) in Docket No. CP62–88. By order issued May 15, 1963, the Commission allowed the withdrawal of Monterey's application in Docket No. CP62–88 as well as the withdrawal of the "companion application" of Tennessee Gas Transmission Company (Tennessee) in Docket No. CP62–291. In response to the joint request of Columbia Gulf, United Fuel, and Ohio Fuel, the order issued May 15, 1963, held in abeyance further action upon the applications of the three companies of the Columbia System until these companies had had time to submit additional filings related to their contemplated purchase of gas from Humble Oil & Refining Company. It appears that these "additional filings" have been made in Columbia Gulf's Docket No. CP64–1, Ohio Fuel's Docket No. CP64–14, and United Fuel's Docket No. CP64–16. Consequently, the aforementioned examiner's decision in Docket No. CP62–88, *et al.*, should be affirmed to the extent that it was not rendered moot by Monterey's and Tennessee's withdrawal of their applications in Dockets Nos. CP62–88 and CP62–291, respectively.

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 5, 1958, in Docket No. G–15524, 20 FPC 681.

(2) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G–341, 4 FPC 534.

(3) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 2, 1942, in Docket No. G–408, 3 FPC 301.

(4) The facilities heretofore authorized by temporary certificates granted in Docket Nos. CP62–89, CP62–90, and CP62–91, as more fully described in the applications in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of the Applicants' pipeline system and the construction and operation thereof by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation by Applicants of the facilities authorized herein are required by the public convenience and necessity, and permanent certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that as to Docket Nos. CP62–90 and CP62–91 the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(8) Public convenience and necessity require that as to Docket No. CP62–89 the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b) (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(9) The examiner's decision issued January 28, 1963, in Docket Nos. CP62–88, *et al.*, recommended that permanent certificates be issued in Docket Nos. CP62–89, CP62–90, and CP62–91 authorizing the construction and operation of the facilities required by Columbia Gulf, United Fuel, and Ohio Fuel, respectively, for the 1962–63 heating season; therefore, the examiner's decision in Docket No. CP62–88, et al., should be affirmed insofar as such decision was not rendered moot by the withdrawal of Monterey's and Tennessee's applications in Docket Nos. CP62–88 and CP62–291, respectively.

(10) All exceptions filed to the examiner's decision issued January 28, 1963, in Docket No. CP62–88, *et al.*, should be denied to the extent that such exceptions were not rendered moot by the withdrawal of Monterey's and Tennessee's applications in Docket Nos. CP62–88 and CP62–291, respectively.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicants to construct and operate the facilities heretofore constructed, or to be constructed, pursuant to the temporary certificates granted in Docket No. CP62–89 on August 14, 1962, and April 5, 1963; in Docket No. CP62–90 on August 14, 1962, and October 26, 1962; and in Docket No. CP62–91 on August 14, 1962, all as more fully described in the applications herein, upon the terms and conditions of this order.

(B) The application in Docket No. CP62–89 is hereby amended by the deletion therefrom of Columbia Gulf's request for authorization to construct facilities required for the 1964–65 and 1965–66 heating seasons in accordance with the request contained in Columbia Gulf's amendment, filed July 1, 1963, to its application in Docket No. CP62–89.

(C) The certificates issued in Docket Nos. CP62–90 and CP62–91 in paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(D) The certificate issued in Docket No. CP62–89 in paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(E) The construction authorized in Docket No. CP62–89 by paragraph (A) above shall be completed and the facilities placed in actual operation, as required by Section 157.20(b) of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order is issued.

(F) The grant of the certificates in paragraph (A) hereof shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Regulations under the Natural Gas Act, requiring the filing of rate schedules for the service authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted against the Applicants in Docket Nos. CP62–89, CP62–90, and CP62–91.

(G) The examiner's decision issued January 28, 1963, in Docket No. CP62–88, *et al.*, is hereby affirmed to the extent that such decision was not rendered moot by the withdrawal of Monterey's and Tennessee's applications in Docket Nos. CP62–88 and CP62–291, respectively.

(H) All exceptions filed to the examiner's decision issued January 28, 1963, in Docket Nos. CP62–88, *et al.*, are hereby denied to the extent that such exceptions were not rendered moot by the withdrawal of Monterey's and Tennessee's applications in Docket Nos. CP62–88 and CP62–291, respectively.

(I) The certificate issued in Docket No. CP62–89 by paragraph (A) above is subject to the condition that no part of the facilities herein authorized shall be used to transport any additional gas purchased by Columbia Gulf purportedly for compressor fuel or other company use.

INITIAL DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND FOR PERMISSION TO ABANDON FACILITIES AND SERVICE

(Issued January 28, 1963)

KANE, *Presiding Examiner:* This consolidated Section 7 certificate proceeding involves applications seeking authorization and approval from the Federal Power Commission (Commission) of integrated transactions whereby Monterey Gas Transmission Company (Monterey) sought to acquire, construct, and operate a pipeline system extending from the King Ranch area in South Texas to the existing pipeline of Columbia Gulf Transmission Company (Columbia Gulf) near Bunkie, Louisiana. Columbia Gulf would accept the deliveries of the gas from the King Ranch area for the account of United Fuel Gas Company (United Fuel) and would transport and deliver such gas to United Fuel at a point near the Kentucky-West Virginia border. United Fuel would then distribute the gas as needed by its customers and the constituent parts of the Columbia Gas System, Inc., including the Ohio Fuel Gas Company (Ohio Fuel).

Monterey proposes to obtain the gas through the purchase of certain leaseholds containing gas reservoirs, from Humble Oil and Refining Company (Humble) for $536,276,520[1] which leasehold interests will provide an estimated 3.778 trillion cubic feet of gas contained in 89 reservoirs in four gas fields, Santa Fe East, North Alazan, Viboras, and Laguna Larga, all located in the King Ranch area

[1] This payment covers only Humble's 84.97172 percent interest in the leases and the remaining 15.02828 percent, constituting the royalty interest, is to be paid for at the rate of 18.1 cents per Mcf, applicable only to the gas actually produced and measured at the entrance to Monterey's main transmission line.

in South Texas.[2] Monterey also proposes to pay Humble $5,070,000 for existing gathering lines extending approximately 92 miles from such leaseholds and connecting with the inlet side of Humble's King Ranch Gas Processing Plant, and approximately $7,000,000 (the adjusted purchase price) for Humble's leasehold facilities.[3] The wet gas would be transported to Humble's King Ranch plant where Humble would process up to 23,000 Mcf per hour or 552,000 Mcf per day (at 14.65 psia). The dry pipeline quality gas would then be delivered by Humble at the tailgate of its plant into Monterey's proposed 438.3 mile 30-inch transmission line. This line would comprise 366.7 miles of 30-inch line extending from Agua Dulce, Texas, to Kinder, Louisiana ("the A–K line") to be purchased and acquired from Tennessee Gas Transmission Company (Tennessee) and 71.6 miles of a new 30-inch transmission line to be constructed for the connections of the southern and northern ends of the "A–K" line to Humble's plant and to Columbia Gulf's transmission system near Bunkie, Louisiana, respectively. Monterey's gas would be delivered on a cost-of-service basis to Columbia Gulf's compressor station 10–A for the account of United Fuel,[4] another wholly-owned subsidiary of the Columbia System; Columbia Gulf would deliver the gas for the account of United Fuel at three delivery points in Kentucky at Stanton, Means, and Leach. The gas purchased from and delivered by Monterey would thereafter become a new source of supply for the Columbia System to use in its service area located primarily to the north and east of the delivery points mentioned above.

Columbia Gulf, United Fuel, and Ohio Fuel also request authorization to construct and operate additional pipeline and compressor facilities deemed necessary to receive and utilize additional volumes of gas allegedly required to meet increased demands. Columbia Gulf in its application as supplemented, Docket No. CP62–89, seeks authorization to construct and operate additional facilities over a four-year construction period 1962–1965. Such facilities, aggregating 418.6 miles of 30-inch pipeline loop and 90,400 horsepower at a total cost of $72,225,300, are designed to increase Columbia's existing estimated capacity of 688,500 Mcfd to 1,078,500 Mcfd by November 1, 1965, in order to meet the additional requirements of United Fuel.

On August 14, 1962, Columbia Gulf was granted a temporary certificate[5] authorizing it, subject to certain conditions, to (a) Construct and operate nine main loop sections of 30-inch pipeline totaling 132.7 miles; (b) Utilize on a full time basis compressor horsepower currently authorized to be used only for standby purposes; (c) Install and operate a 10,500 horsepower compressor station near Ville Platte, Louisiana.

---

[2] The agreement between Monterey and Humble provides for a second purchase from Humble to be concluded on or by January 3, 1967, consisting of additional leasehold interests acceptable to Monterey in the vicinity of Monterey's pipeline system covering additional wet gas reserves of 2.902 trillion cubic feet. However, the instant certificate application is independent of this so-called second purchase.

[3] Humble has not filed any certificate application as seller but was permitted to intervene in the proceedings by the Commission's order of April 17, 1962.

[4] United Fuel's gas purchase contract with Monterey provides that it will pay the latter's full cost of service, including a 6.5 percent rate of return on Monterey's investment.

[5] This temporary authorization as well as the temporary authorizations sought by United Fuel and Ohio Fuel referred to *infra.*, were originally denied by the Commission by letters of July 6, 1962. However, after these companies filed a joint application for rehearing and reconsideration, the Commission, based upon assurances from, and a showing by, such companies that the facilities were necessary to meet increased requirements for the 1962–1963 heating season without reference to the certification of the Monterey project, granted the applications.

In Docket No. CP62–90,[6] United Fuel, in its supplemented application, seeks authorization to turbocharge all six compressor units at its existing Ceredo compressor station in Wayne County, West Virginia, in order to increase the existing horsepower of each unit from 2,000 to 2,800 horsepower or a total of 4,800 horsepower; and to construct 2.3 miles of 26-inch pipeline north from Ceredo station to the Ohio River at a total estimated cost of approximately $1,679,900. By letters dated August 14, 1962, and October 26, 1962, the Commission granted United Fuel temporary authorization[7] to construct and operate the facilities sought in the application as supplemented.

In Docket No. CP62–91, Ohio Fuel seeks a certificate authorizing it to construct and operate approximately 15.3 miles of 20-inch line at an estimated total cost of $1,300,000. The additional line would extend its line R–601 to United Fuel's existing Burlington delivery point. The Commission, on August 14, 1962, granted temporary authorization to Ohio Fuel to construct and operate the additional 15.3 miles of 20-inch line.[8]

Tennessee, in Docket No. CP62–291, seeks permission pursuant to Section 7(b) of the Natural Gas Act, to abandon its "A–K" line,[9] extending 366.7 miles from Agua Dulce, Texas, to Kinder, Louisiana, and to construct and operate facilities at Tennessee's station No. 1 near Agua Dulce, Texas, and station No. 823 near Kinder, Louisiana. Such facilities would be required in order to carry out the provisions of a transportation and exchange agreement between Monterey and Tennessee whereby Monterey would transport up to 60,000 Mcf of gas per day for Tennessee from points on the "A–K" line to Kinder, Louisiana, for a period of not less than three nor more than six years. Upon cancellation of this agreement after three years, or upon expiration after six years, the exchange arrangements become operative whereby Monterey will exchange up to 60,000 Mcf per day with Tennessee for the remainder of a 20-year contract term, Monterey delivering gas to Tennessee at the terminus of the "A–K" line near Agua Dulce, Texas, and at a few small-volume points and receiving equivalent volumes from Tennessee at existing points of receipt along the "A–K" line.

Procedural Developments

By Secretary's notice dated March 14, 1962, all of the applications in this proceeding except that of Tennessee in Docket No. CP62–291 were consolidated for hearing scheduled to commence on April 19, 1962. By its order issued April 17, 1962, the Commission granted sixteen petitions to intervene and indicated that ten state commissions had filed notices of intervention. In addition, after Tennessee's application had been consolidated with the other applications in this proceeding, the Commission in its order issued August 2, 1962, granted three additional petitions to intervene. Since some of the petitions to intervene were filed jointly by several different companies the total number of parties permitted to intervene in this proceeding totals forty-six exclusive of the ten state commissions.

On June 5, 1962, while the hearing was in progress, the Presiding Examiner pursuant to Section 1.11(a) of the Commission's Rules of Practice and Procedure, permitted Monterey and United Fuel to file amendments to their applications in Dockets No. CP62–88 and CP62–90, respectively, and received direct testimony and exhibits in support of the amended applications. In special

[6] Kentucky Gas Transmission Corporation originally a joint applicant in this docket filed a notice of withdrawal on April 9, 1962, which became effective as of May 10, 1962.

[7] See footnote 5, *supra*.

[8] See footnote 5, *supra*.

[9] The line sought to be acquired by Monterey in these proceedings.

rulings dated June 11, 1962, the Presiding Examiner also permitted Columbia Gulf to file first and second supplements to its application in Docket No. CP62–89. The hearing was then recessed until July 5, 1962, to enable Tennessee to prepare and file its application to abandon in Docket No. CP62–291, and to permit the issuance of the notice required by Section 1.19 of the Commission's rules. Such notice issued on June 14, 1962, consolidated Tennessee's application with the other applications in this proceeding and provided for the consolidated proceeding to reconvene on July 5, 1962. The hearing was concluded on July 30, 1962. Briefing was completed and the case fully submitted on October 17, 1962.

The following issues may be deemed involved in this proceeding:

1. Whether Monterey has established that its proposed services, sales, operations, construction, extensions, and acquisitions are required by the future public convenience and necessity.

2. Whether the proposed assignment and conveyance of Humble's leasehold interests to Monterey under the circumstances involved constitute a long-term sale of gas in interstate commerce subject to the jurisdiction of the Commission.

3. Whether Tennessee's application for permission and approval to abandon its "A–K" line should be granted on the basis that the present or future public convenience and necessity permits such abandonment.

4. Whether any certificates issued to Columbia Gulf in this proceeding be conditioned so as to restrict each of the Columbia Gas system companies from taking any gas from any of its pipeline suppliers at load factors greater than the load factors of purchasers under contract with Tennessee.

5. Should any permanent certificate issued to Columbia Gulf be conditioned to prohibit Columbia Gulf from utilizing its facilities to transport gas purchased by Columbia Gulf purportedly for compressor fuel or other company use pending compliance by Texaco, Inc. and Columbia Gulf with the principles expressed by the Commission in Lo-Vaca Gathering Co. Opinion No. 348, at 26 FPC 606, (appeal pending).

6. Whether permanent certificates should be issued to Columbia Gulf, United Fuel, and Ohio Fuel authorizing the operation and construction of the facilities requested in their respective applications in order to enable them to meet the increased requirements of their customers for the 1962–1963 heating season and 1963 summer storage operations.

7. In the event that Monterey's application for a certificate be granted, should a condition be attached to United Fuel's certificate permitting the cost equalization proposal?

The instant interrelated proceedings present a fundamental threshold issue which because of its jurisdictional nature and impact on the other issues usually involved in certificate proceedings must be resolved before such other issues can even be considered. Thus, the applicants and advocates for permanent certification, including Humble the proposed seller and an intervener in these proceedings, assert that the Commission does not have jurisdiction under the provisions of the Natural Gas Act to pass upon the aspects, price or other items involved in Humble's sale or assignment to Monterey of the leaseholds and the gas reserves contained therein.[10]

The Staff, on the other hand, asserts that the Federal Power Commission does have such jurisdiction and that "it is clear that it would be a useless endeavor for the Commission to use its conditioning powers, as suggested by the court in *CATCO*, in an effort to issue Monterey a certificate conditioned upon Humble's

[10] Humble in its brief characterizes the subject of the sale to be "interests in oil and gas leases covering the reservoirs from which Monterey will produce the gas for transportation and ultimate sale to United Fuel."

being allowed to charge 16 cents per Mcf (at 14.65 psia) for the gas involved in Monterey's contemplated leasehold purchase." [11]

This important issue has already been dealt within initial decisions in somewhat analogous situations. See *Tennessee Gas Transmission Company, et al.*, Docket No. G–14562 *et al.*, January 8, 1962, and *Texas Eastern Transmission Corporation, et al.*, Docket No. G–12446, *et al.*, June 29, 1962. In the latter case the Hearing Examiner basing his conclusion on his interpretation of the decisions in Panhandle (*F.P.C.* v. *Panhandle Eastern Pipe Line Company, et al.*, 337 U.S. 498) and Phillips (*Phillips Petroleum Co.* v. *Wisconsin, et al.*, 347 U.S. 672) decided that the Commission was without jurisdiction over the sale of certain leases and the natural gas under said leases until (1) the gas was connected to an interstate system of pipelines, or (2) the gas was dedicated to a sale in interstate commerce.[12]

In the Tennessee Gas Transmission case the Hearing Examiner after a thorough review of the legal precedents involved, including an analysis and reexamination of the effect of Panhandle viewed in light of the later Phillips decision, and for other cogent reasons contained in the well reasoned opinion concluded in favor of Commission jurisdiction saying, "* * * the statutory certification procedure should be followed when producers sell and pipelines buy gas in place (*i.e.* in bulk) as in the case of conventional per Mcf sales."

The issue assumes critical significance in the instant proceedings when viewed in the light of the irreconcilable conflict engendered on the one hand by Humble's insistance that it would not sell the gas to Monterey under a conditional certificate and that it would prefer to sell the gas intrastate if the proposed sales price were affected by any condition or any other form of Commission regulation in this proceeding [13] and, on the other hand, by the duty and obligation imposed on the Commission requiring it to attach to any producer certificate such conditions at it believes necessary, including conditions based upon the determination of the impact of proposed producer prices and "initial price." Furthermore, compliance with such duty and obligation necessarily entails the concomitant responsibility to examine the terms of the proposed contract not only to determine whether the proposed initial price is required by the public convenience and necessity but also whether other criteria for such determination are also satisfied. *Atlantic Refining Co., et al.* v. *Public Service Commission of New York, et al.*, 360 U.S. 360 U.S. 378; *United Gas Improvement Co.* v. *F.P.C.*, 287 F. 2d 159.

---

[11] Interveners, United Gas Improvement Company and New York Public Service Commission, strongly support the Staff's position with respect to Commission jurisdiction over the sales of the leaseholds from Humble to Monterey requiring Commission regulation of the transaction. The former, however, asserts that an alternative regulatory technique is available to the Commission which will require Commission examination of the price of the King Ranch reserves in accordance with the rationale of the *CATCO* case.

[12] This decision of the Hearing Examiner was qualified as follows:

> This is not to say, however, that the Commission is without jurisdiction to regulate the purchaser of the natural gas. * * * and to determine at what price the public convenience and necessity requires the dedication of the Rayne Field gas by Texas-Eastern (the purchaser of the leaseholds) to a sale in interstate commerce for resale to consumers of natural gas in other states. [29 FPC 263–264; parenthesis supplied.]

[13] It is well to note in this connection that the Tennessee Gas Transmission Company in the *CATCO* case, in a somewhat similar situation also threatened that if any price limitation were imposed in the certificate the producers would terminate the contracts with consequent loss of natural gas supplies required by its customers. The court in that case was apparently unimpressed by the threatened consequences.

The independent producer, of course, owning and selling a commodity, need not dedicate its gas supply to the interstate market at all or may propose and limit the amount it will so dedicate.[14] However, it must be recognized that the Commission cannot abdicate its responsibilities simply because the parties insist that the whole transaction will collapse unless the entire package as presented and the full price asked is approved. *Cf. Public Service Commission of the State of New York* v. *F.P.C.*, 287 F. 2d 143, 145. The Commission controlling the basis on which "gas may be initially dedicated to interstate use", (*cf. CATCO*, 360 U.S. 378, 389) is free to reject the producer's proposal.

The Natural Gas Act is framed to afford consumers a complete permanent and effective bond of protection from excessive rates and charges. It was designed to effectuate a legislative program for Federal regulatory responsibility. No construction should be placed upon it which could or would result in the emasculation of effective regulation. The heart of the Act is found in those provisions requiring initially that any proposed service, sale, operation, construction, extension or acquisition * * * will be required by the present or future public convenience and necessity (Section 7(e)). In view of the framework in which the Commission is authorized and directed to act, the initial certificating of a proposal under Section 7(e) of the Act as being required by the public convenience and necessity becomes crucial. See *Atlantic Refining Co., et al.* v. *Public Service Commission of New York, et al.*, 360 U.S. 378, 389. This is especially true where as here the determination by the Commission will undoubtedly set a pattern for future contracts in an area where enormous reserves of gas appear to be present.

The applicant in this proceeding, in effect, attempts to circumvent the scope of the Commission's power to inquire into the issue of public convenience and necessity by implicitly attaching a condition requiring the Commission to forego consideration of a critical element which is necessary in the formulation of a considered judgment as to the price the ultimate consumer will pay for the natural gas involved. Under such theory the evidence presented could be used to justify almost any price which it might be thought to be required as an incentive to bring adequate supplies of new gas to the interstate market and which has been negotiated at arms length in the competitive market. To accept the producer's contract price according to its theory of regulation would be tantamount to an abdication of the Commission's regulatory responsibility under the Natural Gas Act. *Cf. El Paso Natural Gas Company, et al.*, Opinion No. 358, June 11, 1962, 27 FPC 1134.

Suffice it to say in response to such attempt that the Commission's mandated authority cannot be deemed to be so tenuous as to be thwarted by contractual artifice. It cannot be so limited whether by direct or indirect methods. *Cf. Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137, 152.

The negotiations between Humble and Columbia were allegedly conducted at arms length and there appears to be no evidence indicating the contrary.[15] However, the end result of such negotiations is that the estimated average price of the gas at the entrance to Monterey's main transmission system, to be

[14] The sale of the vast quantities of gas in other than interstate markets would hardly satisfy the many requirements urged by Humble as being a sine qua non for the sale to Monterey.

[15] Neither is there any evidence to indicate that such "arms-length" negotiations were carried on with the end in view of approximating the "in-line" price for the gas whether on an individual company basis or on an area price basis.

transported by Monterey and paid for by United on a cost-of-service basis[16] has been irrevocably fixed under a sale which the parties thereto allege to be beyond the jurisdiction and control of the Commission. The inevitable result of absence of Federal control over the initial transaction would be that the cost of the gas to the ultimate consumer would be fixed prior to the incidence of Federal regulation, and Federal rate control would be substantially impaired if not rendered futile. *Cf. Jersey Central Power and Light Co.* v. *F.P.C.*, 319 U.S. 61, 71, 72. The Natural Gas Act, however, was designed to avoid such situations where unreasonable charges become perpetuated in fixed items of cost which must be covered by rates charged subsequent purchasers of the gas, including the ultimate consumer. *Public Service Commission of the State of New York* v. *Federal Power Commission*, 287 F. 2d 143, 146, quoting with approval from *Interstate Natural Gas Company, Inc.*, v. *F.P.C., et al.*, 331 U.S. 682, 693.

The conclusion appears to be inescapable that any such result cannot be justified in view of the Supreme Court's pronouncement in *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, 682, to the effect that "* * * *we believe that the legislative history* (of the Natural Gas Act) *indicates a congressional intent to give the Commission jurisdiction over the rates of all wholesales of natural gas in interstate commerce, whether by a pipeline company or not and whether occurring before, during, or after transmission by an interstate pipeline company.*" [Parenthetical material and emphasis supplied.]

The Commission's responsibility in this connection takes on additional significance in light of the admonition and advice of the court in *Public Service Commission of the State of New York* v. *F.P.C.*, 287 F. 2d 147, 150, to the effect that, "We believe that the Supreme Court meant to impress upon the Commission an interpretation of the 'public interest' which, in the context of a rising natural gas market demands a real administrative effort to hold back prices."

It is against this backdrop of Federal regulation of interstate sales and transportation of natural gas, the purposes of the Natural Gas Act, as interpreted by the courts, *cf. Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137, 147, the practical consequences of the applicant's, as well as Humble's claim, and the details of the transaction involved, that we must assess the validity of the applicant's argument that the Commission in determining whether to issue a certificate of public convenience and necessity has no jurisdiction over the very transaction which might well effectively nullify any future attempt to exercise effectual control not only over the initial rates to be charged but over the mode of their regulation thereafter.

All the factors involved surrounding the negotiation and execution of the agreements between Humble and Monterey establish the ultimate nature of the transaction. Humble's business was to sell gas. On the other hand, Columbia had to buy the gas competitively in such a manner that it could be shown that the purchase was in the public interest. No such guideline was deemed necessary in connection with the leasehold sales. The price negotiations were carried on significantly between Humble and Columbia System on the basis of Mcf, and when it was tested at 18 cents, the deal was made. Such negotiations furthermore, were admittedly carried on with the understanding that there would be formed a new company to acquire the leaseholds, build the transmission facilities and enter into a gas sales contract with United Fuel. Monterey became a corporate entity only after the consideration set forth in Exhibit 19 for the gas had been agreed upon between United Fuel and Humble.

[16] The fact that United is willing to pay the proposed price for the gas lends no substantial support for a determination that such proposed price is required by the public interest. See *Panhandle Eastern Pipe Line Company, et al.*, 27 FPC 35, 44.

A review of the complicated contractual arrangements between the two companies reveals the following:

(1) Humble conveys leaseholds warranted to contain 3,778,278,000 Mcf at a total cost of $536,276,520. It retains an oil and gas liquids net profits interest in such leaseholds.

(2) Upon Humble's conveyance of the leasehold interests to Monterey, the latter is obligated to employ Humble to manage the leasehold interests and process all gas. Parenthetically, it is indicative of the fact that Humble has complete freedom to develop the leaseholds, produce the wet gas therefrom, and transport the gas to its own processing plant.

(3) Humble is obligated to deliver a minimum quantity of 550,000 Mcf per day from the first leasehold purchase.

(4) When the gas enters Humble's plant title to all liquids extracted therefrom passes to Humble.

(5) Humble is given authority under the management agreement to sell liquids to which it has reserved full title unless a contract is involved with more than a one-year term in which case Monterey is given an opportunity to approve the contract.

(6) Monterey is obligated to take all reasonable steps to keep Humble in possession of leaseholds which Humble purported to convey to Monterey so long as there is any economic production from such leaseholds, including any extensions of renewals thereof.

(7) Humble is permitted to determine the maximum efficient rate of production from any reservoir. Humble is not obligated to perform any operation when such operation would "* * * be uneconomic to a lessee owning the full beneficial leasehold interests." In connection with the leasehold operations purportedly performed for Monterey, Humble has complete control of any pressure maintenance or secondary recovery operations and is not liable for errors in judgment so long as no willful misconduct is involved.

(8) Humble will file all necessary reports with the Texas Railroad Commission in its own name and conduct all hearings before the Texas Commission regarding the operation of the leaseholds which Monterey purports to own.

(9) The respective obligations of Monterey and Humble under the basic agreement are subject to the condition that the Federal Power Commission shall issue the necessary and appropriate certificates and orders under the Natural Gas Act, in form and substance satisfactory to Monterey and Humble permitting all the transactions including the transactions called for in Monterey's Gas Sales Contract with United.

Humble, in effect, retains complete control of the leasehold premises at all times and cannot be removed from physical possession of such leaseholds. While Attachment F to the Humble-Monterey agreement, the gas processing agreement, purports to show that Monterey is the producer of gas, the management and other agreements reveal the true situation, namely, should Monterey's application be approved Humble would continue to operate the leaseholds purportedly conveyed to Monterey as if no conveyance had ever taken place.

The testimony is clear, establishing beyond any doubt, that all the gas reserves contained in the assigned leaseholds to be purchased by Monterey was designed for shipment to and sale in other states. That was the course of the business and fixed and determined the interstate character of the transaction. *Cf. Lemke, etc.* v. *Farmer's Grain Co., etc.*, 258 U.S. 50, 55; *Currin, et al.* v. *Wallace, et al.*, 306 U.S. 1, 10. No imagination is required to bring the inter-

related transactions into proper focus. The agreements constitute in their entirety a transparent device to avoid Commission jurisdiction and regulation over ultimate rates to be charged for gas. The form which these agreements took should not and do not control, their essence is determined not by subtleties of draftsmanship but by their total effect. *Cf. Commissioner of Internal Revenue, et al.* v. *P. G. Lake, Inc., et al.*, 356 U.S. 260, 266, and 267.

Humble, in the final analysis, is selling natural gas to a proposed interstate pipeline transmission company. The gas flows from the producing wells to Humble's processing plant where extractable products and impurities are removed. After processing is completed the gas flows from the processing plant to a delivery point where the gas is delivered to Monterey, a proposed interstate pipeline company. The gas then continues its flow through the interstate pipeline system until delivery at Bunkie, Louisiana. This then, except for the format of an indirect sale of the gas, is the same pattern described, and held to be subject to Commission jurisdiction in *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, 675. No reason exists why such sales which are in essence sales in interstate commerce within the purview of the Natural Gas Act should not be similarly regulated as sales subject to the jurisdiction and regulation of the Commission. See *Deep South Oil Company of Texas* v. *F.P.C.*, 247 F. 2d 882.

The legal determination of the question rests not upon the parties' use of the word leaseholds but upon the actual disposition of the commodity involved, namely, natural gas. *Cf. Shell Oil Company* v. *F.P.C.*, 247 F. 2d 900, certiorari denied, 355 U.S. 930. Nor is the legal character of the transaction affected by the complicated device employed to circumvent Commission jurisdiction and regulation. The actual facts must govern. *Cf. Sprout* v. *City of South Bend*, 277 U.S. 163, 168. It is the nature of the beast not the label that is controlling. *Lo-Vaca Gathering Company, et al.*, 26 FPC 606, 612.

It is difficult to conceive that an independent producer can, by separating the sale of gas into its component parts, that is, a sale of leaseholds with reservations with respect to all items except the gas, convert the interstate shipment of the gas, and the concomitant Commission jurisdiction over the sale, into a nonjurisdictional transaction, thereby depriving the consumer of the benefits to which he is entitled by virtue of the design and intent of the Natural Gas Act. *Cf. Baltimore & Ohio Southwestern Railroad Company* v. *Settle, et al.*, etc., 260 U.S. 166, 170.

A decision negating jurisdiction over the initial purchase in the instant proceedings would, by legalistic legerdemain, in effect, make effective regulation dependent upon the desire of the regulated enterprise to subject itself to such regulation. In fact, Humble's position amounts to a declaration that not only does it prefer not to be subject to any regulation but that the entire transaction depends upon its freedom from such regulation. "But," as was said in *Sunray Mid-Continent Oil Company, et al.*, 19 FPC 618, 635, "Congress, this Commission and the courts have decreed otherwise."

As succinctly stated in *Saturn Oil & Gas Co., Inc.*, v. *F.P.C.*, 250 F. 2d 61, 66, citing from 347 U.S. 683, 684, "We are satisfied that Congress sought to regulate wholesales of natural gas occurring at both ends of the interstate transmission systems" and as was indicated in the *Phillips* case, sales in interstate commerce for resale by producers to interstate pipeline companies do not come within the producing or gathering exception. 347 U.S. 672, 680, 681, see also *Deep South Oil Company of Texas* v. *F.P.C.*, 247 F. 2d 882, 888, and 889.

There can only be one rational conclusion, that is, that the sale provided for in Exhibit 19, the contract of sale between Monterey and Humble and the interrelated contract between Monterey and United Fuel, taken together constitute a conventional sale in interstate commerce of natural gas for resale within the

purview of the Natural Gas Act, and, by reason of such sale, each of the companies so involved is subject to the regulatory provisions of the Act.[17]

Humble has not filed any application for a certificate seeking authorization for the sale of the leases and the subsisting gas reserves. If such application had been filed in the instant proceedings, there is no question but that the Commission would have authority to impose such conditions which may be required by the public convenience and necessity upon the seller where they belong rather than upon the purchasing pipeline which actually proposes to incur the costs without further recourse. *Cf. CATCO*, 360 U.S. 378, 391. The present and public convenience and necessity does not require that gas be allowed to flow at higher prices whatever the method, however disguised, employed in the sale of that gas. It would be difficult to deny that the channeling of vast quantities of natural gas into unregulated transactions at unregulated prices would result in a scarcity to regulated distributors and attendant general price increases. *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 30.[18] Certainly, no higher price should be allowed in those instances where the producer denies the jurisdiction of the Commission to regulate such price than that allowed others employing conventional methods for the sale of gas at the same time and in the same area. The sales price of the leaseholds and other aspects of the arrangements necessitated by the formation of Monterey and arising out of its contract with Humble have a direct and substantial effect on the price paid for the gas by ultimate consumers, *Cf. Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, 685, and any unreasonable charges enacted at this stage of the interstate movement of the gas would have to be covered by rates charged the ultimate consumers of such gas. The Natural Gas Act was designed to avoid such situations. *Cf. Peoples Natural Gas Co.* v. *F.P.C.*, 127, F. 2d 153, cert. den., 316 U.S. 700; *Interstate Natural Gas Co.* v. *F.P.C.*, 331 U.S. 682. The Commission is not required to blind itself to the effects of the purchase and use of the gas when its authority to certificate the transportation of such gas is involved.

The average annual cost of service for the first purchase leaseholds (3,487,200 Mmcf at 14.73 psia) at the entrance to Monterey's main transmission system is calculated by the applicant's own witness to be 24.48 cents per Mcf. This calculated price is substantially higher than the area price for Texas District No. 4,[19] as appears from the Commission's findings in *Skelly*, Opinion No. 362,

[17] Furthermore, a finding to the contrary might conceivably lead to an abandonment of interstate service without reference to or compliance with the terms of Section 7(b) of the Natural Gas Act. Thus, in the event of default by Monterey in its payments to Humble, the latter could, under the terms of the subsisting contract, foreclose its reserved lien and obtain the return of its leaseholds and the subsisting gas therein. Under such circumstances, Humble, still maintaining that the Commission has no jurisdiction over the transaction, might cut off United Fuel's source of supply without complying with the provisions of Section 7(b) of the Act. This anomalous result could undermine, if not entirely nullify, the Commission's function to provide for the continuity of service furnished and to determine the circumstances under which a natural gas company could withdraw, abandon, or cease its service. See *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137, 142, affirming 267 F. 2d 471.

[18] *Cf. United States, et al.* v. *Detroit and Cleveland Navigation Co.*, 326 U.S. 236, 241, where the court upheld the Interstate Commerce Commission's forecast of the future public convenience and necessity over an objection that there was no absolute showing that the forecast would come true.

[19] With respect to such area price ceilings it should be noted that the Commission in *El Paso Natural Gas Company, et al.*, Opinion No. 358, issued June 11, 1962, reiterated its position that the area ceiling represents the price line to be held by the Commission in the absence of compelling evidence to show that a higher price is required by the public convenience and necessity.

and in the contemporaneous amendment of its policy statement. (Fifth Amendment 61–1, August 30, 1962.) The wide discrepancy between the area price and the proposed cost-of-service price clearly signals a situation which is not in the public interest under the *CATCO* doctrine. 360 U.S. 378, 391. Any attempt to condition a certificate to Monterey at the lower price would be a futile gesture in view of the position with respect to jurisdiction adopted by the applicant and Humble. Such futility is furthermore apparent since such conditional price would render the entire project economically unfeasible. The complicated interrelated and dependent financial transactions, including Monterey's agreement to pay Humble a fixed contract price and United Fuel's agreement to pay for the gas under a complicated cost-of-service formula, renders it impossible to devise a method by which the Commission could so condition a certificate as to satisfy all the complicated financial arrangements including methods of payment, and at the same time do justice to the *CATCO* mandate.

All the circumstances have been considered pertaining to Monterey's acquisition of the leases and the effects of this transaction on the need and convenience of the public proposed to be served, including the extent and accessibility of this gas supply; the benefits to be derived therefrom in enabling United to meet consumer demands; the terms and conditions of the lease sale and purchase agreements including the price to Monterey of the gas thereunder; the claimed savings accruing to Monterey from acquiring the leases rather than purchasing the gas under gas purchase contracts; and the other benefits allegedly accruing to the public from the nature of the transaction employed here, and we conclude that Monterey's project, as it would include and rely on the acquisition of the King Ranch leases, the exclusion of Commission jurisdiction over the initial sale of the leaseholds and subsisting gas reserves, and acceptance on the basis of the terms of the proposed contracts, is not required by the public convenience and necessity under the requirements of Section 7(e) of the Act. *Cf. Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149, 155.

The objectives of the Columbia companies in attempting to acquire the King Ranch reserves in a manner which will achieve rate stability of course deserve support. Clearly, the King Ranch reserves represent a desirable supply of gas and it is quite understandable that United Fuel has sought to acquire such gas for its use in the interstate market. However, as important as this project is to the Columbia System and to its customers it need not, and should not, be the vehicle for departure from Commission jurisdiction, or for that matter from the Commission's in-line pricing policies. It is clearly apparent that Commission jurisdiction to control effectively the acquisition price of the King Ranch gas either by regulation of the Humble-Monterey transaction or by conditioning any authorization granted to Monterey is essential to any certification of the project. The Commission must exercise its jurisdiction over the price at which natural gas, whether in the King Ranch reserves, or otherwise, will be sold in interstate commerce, and it has no choice but to fulfill its duty in the manner consistent with its statutory mandate. Only a showing of exceptional circumstances and compelling public necessity should be considered any justification for granting certificate authorization under these circumstances. The showing in the instant proceedings fails to warrant such an exception.

In view of the dispositive conclusion reached herein denying Monterey's application for a certificate of public convenience and necessity, no attempt has been made to evaluate the evidence bearing on the other issues involved in the usual 7(c) certificate application case. Suffice it to say, however, that failure to consider such evidence does not indicate blanket approval or acceptance of the applicant's case. Thus, for example, a substantial question is posed by the financial proposals submitted by Monterey. The Staff has raised serious objec-

tions to the financial plan basing such objections upon economic feasibility and stability. Such objections appear to be well founded possibly requiring either detailed conditions or the filing of amended plans of financing to satisfy Commission standards, particularly those requiring that not more than 75 percent of the total capitalization of the company be long-term debt and not less than 15 percent be common equity. See Opinion No. 371, *Transcontinental Gas Pipe Line Corporation*, December 11, 1962, 28 FPC 979 at p. 983 Fn. 7; *Northern Natural Gas Company, et al.*, 22 FPC 164, 169; *Houston, Texas Gas and Oil Corporation, et al.*, 16 FPC 118, 141.

Another issue of great importance involves the rather unique equalization cost proposal designed to effectuate United Fuel's payments to Monterey for the gas to be taken by United under its cost-of-service contract. The Staff strenuously opposes the proposal, for the reason, among others, that permitting such proposal would result in a departure from the cost concept for rate determination not only with respect to the cost of purchased gas but also with respect to taxes. No attempt has been made herein to evaluate either the validity of the objections or the advantages or disadvantages of the proposed equalization formula.

Tennessee Gas Transmission Company's Application for Abandonment Under Section 7(b), Docket No. CP62-291

In its application filed June 11, 1962, Tennessee seeks permission under Section 7(b) of the Act to abandon its "A–K" line consisting of 366.7 miles of 30-inch pipeline extending in a northeasterly direction from its compressor station No. 1, near Agua Dulce, in Nueces County, Texas, to compressor station No. 823, near Kinder, in Jefferson Davis Parish, Louisiana, together with related facilities, easements, rights of way, and compressor station sites.

Tennessee and Monterey have entered into an agreement dated June 1, 1962, in which Tennessee agrees to sell and Monterey agrees to purchase the "A–K" line and the related facilities all of which Tennessee proposes to abandon. In connection with this purchase, a proposed transportation exchange agreement is contemplated between the two parties which will allegedly enable Tennessee to continue performance of the functions now being performed through service from the "A–K" line, with one exception. Tennessee proposes to cure such exception through the proposed purchase by a subsidiary company of an undivided half interest in Humble's present King Ranch to Clear Lake pipeline for $11,000,000. In order for Monterey initially to transport gas for Tennessee through the "A–K" line and in order for Tennessee and Monterey subsequently to exchange gas through utilization of the "A–K" line, Tennessee also seeks authorization to construct and operate two metering stations, one to be a dual six-inch tube installation located at station No. 1, near Agua Dulce, Texas, and the other to be a dual eight-inch tube installation at Tennessee station No. 823, near Kinder, Louisiana, plus piping alterations at both stations. The total cost of the construction and operation of these jurisdictional facilities is estimated to be $92,200 which will be financed from cash on hand.

The Staff opposes the abandonment application, without reference to the entire transaction involved in this consolidated hearing, on the ground that the evidence submitted does not support the conclusion that the abandonment is permitted by the present public convenience and necessity. See *Michigan Consolidated Gas Co.* v. *F.P.C.*, 283 F. 2d 204, cert. denied, 364 U.S. 913. However, the abandonment application, it is clearly apparent, is inextricably intertwined with, constitutes and integral and indivisible part of, and is dependent upon authorization of the Monterey project and resultant approval

of Monterey's acquisition of the "A–K" line and the transportation and exchange agreement between the two parties. It cannot be considered separate and apart therefrom. Tennessee urges that its abandonment to Monterey of the "A–K" line is in the public interest because not only would such transaction avoid duplication of pipelines but there would also be a resultant greater utilization of existing facilities. Furthermore, it is alleged, the abandonment and substitution would also result in substantial economies. These claims cannot be sustained without reference to the substitute arrangements which are bottomed upon authorization and approval of the Monterey project in these proceedings. Accordingly, this dependent application must fall in view of the denial of the application upon which its possible validity depends. The application for abandonment in this docket is, therefore, denied.

Columbia Gulf, United Fuel, and Ohio Fuel Applications, Docket Nos. CP62–89, 90, and 91

The applications for certificates requested by Columbia Gulf, United Fuel, and Ohio Fuel, authorizing construction and operation of facilities required for the 1962–63 heating season for the summer of 1963, are unopposed. The conventional issues generally considered in certificate application proceedings were not raised by the Staff or any other parties as contested questions requiring special rulings by the Examiner. The evidence submitted in support thereof satisfies the usual criteria required in Section 7(c) applications without reference or dependence upon Monterey for a gas supply.

Temporary certificates have already been issued to these applicants authorizing them to construct and operate all the facilities which they had requested in their original applications for the 1962–63 heating season. The necessity for the condition attached to the temporary certificate issued to Columbia appears to be supported by the evidence adduced at the hearing, and, consequently, the permanent certificate issued to Columbia should be conditioned to provide that "no part of the facilities herein authorized shall be used to transport any additional gas purchase by Columbia Gulf purportedly for compressor fuel or any other company use.

In connection with any certificate issued to the Columbia System companies in these proceedings Tennessee has requested that the final order be conditioned to "provide a condition that the constituent companies in the Columbia System be required to maintain as high a load factor in their purchases from Tennessee as they maintain from any other pipeline suppliers including their controlled supplier, Columbia Gulf." Tennessee also urged the Commission to attach a similar condition to the temporary authorization issued to Columbia Gulf. The Commission, in its letter dated August 14, 1962, effectively disposed of such issue by stating, "So long as the Columbia companies purchase gas from Tennessee in accordance with the provisions of Tennessee's filed F.P.C. Gas Tariff it appears that Tennessee has no just cause for complaint. It would not be appropriate for the Commission in a certificate proceeding, without notice to all parties, to change the provisions of a filed tariff." The evidence adduced at the hearing does not support any contrary conclusion. Accordingly, Tennessee's request for such condition is denied.

ADDITIONAL FINDINGS AND CONCLUSIONS

The following findings are made upon consideration of the record made of these proceedings and constitute a summary of and are deemed to be supplementary to, the foregoing findings and conclusions:

(1) Monterey Gas Transmission Company is a Delaware corporation with its principal place of business located in Houston, Texas. Upon completion of the proposed construction of the proposed project and commencement of operations thereunder, Monterey would be a natural gas company within the purview of the Natural Gas Act.

(2) The facilities, as proposed by Monterey, would be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the construction and operation thereof by Monterey are subject to the requirements of Section 7, subsections (c) and (e) of the Natural Gas Act.

(3) The proposed sale of the leasehold interests and the gas reserves contained therein, under the contract between Humble and Monterey, is subject to the jurisdiction of the Federal Power Commission.

(4) The acquisition, construction, and operation of the facilities including the service to be provided as proposed by Monterey are not required by the public convenience and necessity and a certificate therefor should not be issued and an order should be entered denying the application for such certificate.

(5) The facilities proposed to be abandoned by Tennessee as hereinbefore described and as more fully described in the application herein are used in the transportation and sale of natural gas in interstate commerce and are subject to the jurisdiction of the Commission. Such abandonment is subject to the requirements of Section 7(b) of the Natural Gas Act.

(6) The proposed abandonment by Tennessee is neither permitted nor required by public convenience and necessity and permission and approval therefor should be denied.

(7) The applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a natural gas company within the meaning of the Natural Gas Act.

(8) The applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a natural gas company within the meaning of the Natural Gas Act.

(9) The applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a natural gas company within the meaning of the Natural Gas Act.

(10) The facilities of the Columbia applicants hereinbefore described are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the construction and operation thereof by the Columbia applicants are subject to the requirements of Section 7, subsections (c) and (e) of the Natural Gas Act.

(11) The construction and operation of the facilities hereinbefore described as proposed by the Columbia applicants for the 1962–63 heating season are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(12) The public convenience and necessity required that the general terms and conditions as set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of the Commission's Regulations shall attach to the issuance of the certificates to the Columbia applicants.

ORDER

Wherefore, *it is ordered*, Subject to review by the Commission on appeal, or review by the Commission on its own motion as provided by its Rules of Practice and Procedure, that:

(A) The application by Monterey for permission and approval of the acquisition, construction, and operation of the facilities including the services thereby

provided as proposed in its application and as more fully described in said application and exhibits in this proceeding is hereby denied.

(B) The application by Tennessee for permission and approval of its abandonment of its "A–K" line and the facilities hereinbefore described and more fully described in the application and exhibits in this proceeding is hereby denied.

(C) Permanent certificates of public convenience and necessity shall be issued authorizing Columbia Gulf Transmission Company, United Fuel Gas Company, and The Ohio Fuel Gas Company to construct and operate the proposed facilities and to transport natural gas as hereinbefore described in the applications of these companies in this proceeding for the 1962–63 heating season subject to the condition imposed upon Columbia Gulf Transmission Company to the effect that no part of the facilities herein authorized shall be used to transport any additional gas purchased by Columbia Gulf purportedly for compressor fuel or other company use.

(D) The certificates granted in paragraph (C) and the rights granted thereunder are conditioned upon the applicants' compliance with all applicable Commission regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said regulations.

MAX L. KANE,
Presiding Examiner

ORDER NO. 271

AMENDING REGULATIONS TO GOVERN THE FILING OF RATE SCHEDULES BY PUBLIC UTILITIES AND LICENSEES, DOCKET NO. R–227

(Issued September 26, 1963)*

The Commission has under consideration in this proceeding the amendment of Part 35—Filing of Rate Schedules, of Subchapter B—Regulations under the Federal Power Act, of Chapter I of Title 18 of the Code of Federal Regulations, to prescribe revised regulations governing the filing of rate schedules by public utilities and licensees.

Part 35 corresponds to and appears at pages 60–67 of the Commission's pamphlet publication of its Regulations under the Federal Power Act. It was included as part of the Regulations under the Federal Power Act by Order No. 141, effective January 1, 1948 (12 F.R. 8498), as amended by Order No. 158, effective May 1, 1951 (16 F.R. 2388).

This amendment completely revises the present regulations. More detailed cost and other data will be required hereafter in support of rate schedule submittals, which will enable the Commission to process rate schedule filings more expeditiously.

This proceeding was commenced by notice of proposed rulemaking served upon interested parties, including State and Federal regulatory agencies, and by publication in the Federal Register on January 4, 1963 (28 F.R. 128). Copies of the proposed regulations were served and published as a part of that general notice. Subsequent to the general public notice of rulemaking in this pro-

*Published in The Federal Register on October 2, 1963 (28 F.R. 10572).

ceeding, comments and suggestions were filed by the following classes of respondents:[1]

Public Utilities	57
State Commissions	8
Accounting Firms	1
Law Firms	1
Total	57

The majority of the comments were directed to the cost of service data required to be filed in support of rate schedule filings, and particularly to the data required to be submitted under Section 35.13 in support of rate increases. Most of the parties filing comments stated that they considered this data to be burdensome and costly to compile. Many parties stated that the required cost of service data is not appropriate for power pooling and interchange agreements, and several objected to the required submission of over-all cost of service data. Objection was also made to the requirement of an opinion of an independent public accountant.

Accordingly, several changes have been made in Section 35.13. The cutoff figure for rate increases which will require a full cost of service showing has been increased from $5000 to $50,000; the rate of return information required has been reduced substantially; and the requirement of an opinion of an independent public accountant has been eliminated. In addition, for rate increases comprising an integral part of coordination and interchange arrangements in the nature of power pooling transactions, only a summary statement of cost computations is required, rather than the detailed cost data required to be filed in support of other rate increases.

The requirement of over-all cost of service data, where applicable, has been retained because it is necessary to assess cost components recoverable through rates which are not subject to this Commission's jurisdiction in order to make the essential allocations between jurisdictional and nonjurisdictional factors. The remaining detailed cost data, which has been retained, is necessary for expeditious processing of rate schedule filings by the Commission.

There was also a substantial number of comments directed to the basic priniciples for design of fuel clauses. These principles have been simplified and numerous clairfying editorial changes have been made. It is anticipated that this simplification and clarification will satisfy many of the objections which were made to the fuel clause principles.

Clarifying editorial changes have also been made in several other sections of the Regulations, in response to suggestions made in the written comments.

Other comments not incorporated in the revision of the Regulations were rejected because they were considered to be unnecessary or impractical. Several requests were made for a hearing. Since the parties have set forth their positions fully and completely in their written presentations, further amplification of these views in a hearing would serve no constructive purpose.

The Commission finds:

(1) The notice and opportunity to comment in this rulemaking proceeding with respect to the matters presently before the Commission through the sub-

[1] All parties were given to and including February 5, 1963, which date was later extended to March 1, 1963, to submit views and comments in writing concerning the aforesaid proposed revisions in the Commission's Regulations to Govern the Filing of Rate Schedules by Public Utilities and Licensees.

mission, in writing, of data, views, comments and suggestions in the manner described above are consistent and in accordance with all procedural requirements therefor as prescribed in Section 4 of the Administrative Procedure Act (60 Stat. 238; 5 U.S.C. 1003).

(2) In view of the foregoing, and upon consideration of all relevant matters presented, it is necessary and appropriate for the purposes of the Federal Power Act that Part 35—Filing of Rate Schedules, of Subchapter B—Regulations under the Federal Power Act, of Chapter I of Title 18 of the Code of Federal Regulations be amended in its entirety as hereinafter provided.

(3) Good cause exists for the amendment of the Regulations to Govern the Filing of Rate Schedules by Public Utilities and Licensees, effective November 1, 1963; all as hereinafter provided.

The Commission acting pursuant to its authority under the Federal Power Act, as amended, particularly Sections 19, 20, 205, 206(a), 208, 209, 301, and 309 thereof (41 Stat. 1073, 49 Stat. 851, 852, 853, 854, 858; 16 U.S.C. 812, 813, 824d, 824e(b), 824g, 824h, 825, and 825h), *orders:*

(A) Part 35—Filing of Rate Schedules, of Subchapter B—Regulations under the Federal Power Act, of Chapter I of Title 18 of the Code of Federal Regulations is amended in its entirety to read as follows:

(B) This order shall become effective on November 1, 1963.

(C) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Commissioner Ross *dissenting* to that part of Section 35.14(a)(i), prescribed by this order, which requires a public utility "at least every five years" to make appropriate amendments in fuel clauses of its filed rate schedules.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; ROBERT B. PRENTICE, ET AL., DOCKET NO. G–18710, ET AL.[1]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS, PRESCRIBING REFUNDS, AND ISSUING A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 26, 1963)

On August 7, 1963, Robert B. Prentice, *et al.* (Prentice), filed a Settlement Proposal encompassing its currently effective gas rate schedules. No objections or protests to said proposal have been filed.

In summary the settlement proposal provides:

(1) In one instance a settlement rate, including tax reimbursement, below the applicable area ceiling, and, in the other, a rate which is an exception to said ceiling;

(2) Prentice waives the right to file for contractually authorized increased rates until July 1, 1966. Prentice reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels determined through area hearing, or other proceeding, or by amendment of the Commission's Statement of General Policy No. 61–1, or any contractually authorized increase in tax reimbursement;

[1] See the appendix hereto for the additional dockets and applicable proceedings.

(3) Extension of the make-up period under the take-or-pay provision in Prentice's FPC Gas Rate Schedule No. 2 from the present one year period to five years;

(4) Refunds, with interest at the applicable rate, under the rate schedule where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the applicable initial ceiling rate, for a period of five months preceding the date of issuance of an order approving said settlement proposal.

In support of its proposal, Prentice states that the settlement rates, moratorium periods and other provisions thereof, some of which are not specifically noted herein, with the added benefit of termination of its rate proceeding, are in the public interest in that the proposed rates are reasonable, and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the various parties to the settlement conferences utilized cost of service studies. Such studies revealed that Prentice's costs for its jurisdictional sales of natural gas exceeded its jurisdictional revenues. However, its proposed increased rate, which it had been charging and collecting, subject to refund, exceeded the applicable area ceiling for initial service. Consequently, we believe it appropriate that Prentice make refunds for amounts collected by it over and above said ceiling rate for the period agreed to by the parties herein. Prentice's future annual revenues will be decreased approximately fifteen percent as a result of the settlement.

One of the proposed settlement rates is an exception to the applicable area ceiling. This is a sale to United Gas Pipe Line (United) by Prentice in the Houma Field, Terrebonne Parish, Louisiana. Prior to May 14, 1959, this sale was made under a ten year contract, which was to expire in 1960. On May 14, 1959, Prentice and United entered into two contracts for twenty-year terms, and subsequent thereto Prentice dedicated additional acreage to the sale, which resulted in increased annual deliveries under these contracts.[2]

The renegotiated contracts were filed on August 21, 1959, and concurrently therewith, Prentice filed a proposed increase in rate thereunder, under Section 4 of the Act. The renegotiated contracts were filed in Docket No. G–19292, and the proposed increase in rate was subsequently suspended and proceedings initiated in Docket No. G–19475. The renegotiated contracts did not encompass any acreage which was not covered by the certificate originally granted Prentice in Docket No. G–9018, and therefore, such filings should properly have been considered as amendments to the original filing. Therefore, we shall sever Docket No. G–19292 from the proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, and cancel such proceeding.

The current rate for gas sold under the renegotiated contracts is 23.25 cents per Mcf, while the settlement rate is 17.5 cents per Mcf. The proposed settlement rate therefore exceeds the increased rate ceiling, but is below the initial rate ceiling. In view of the above circumstances, we find the settlement rate of 17.5 cents per Mcf for this sale to be proper, and approve the same.

The settlement proposal includes one rate for which issuance of a related permanent certificate is pending (Rate Schedule No. 2, Docket No. G–18710). This proceeding was consolidated with the proceeding in *Union Texas Petroleum, et al.*, Docket No. G–13221; *et al.*, wherein the hearings were concluded on July

[2] One contract is for natural gas produced from "shallow" horizons, and the second is for natural gas produced from "deep" horizons. A definite and certain drilling obligation was imposed upon Prentice by the deep horizon contract.

25, 1963. Consequently, we shall sever Prentice's application from *Union Texas* and shall issue it a certificate of public convenience and necessity herein.

Our action herein should not be construed as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, involving Prentice's rates and rate schedules.

The Commission finds:

(1) The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on August 7, 1963, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be approved and made effective, and good cause exists for approving the settlement rates, for terminating proceedings, and providing for refunds.

(2) The sale of natural gas by Prentice, as more fully described in its application, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Prentice together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale of natural gas by Prentice together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate therefor should be issued.

(4) Prentice is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) The settlement of these proceedings on the basis of the Settlement Proposal, filed August 7, 1963, is approved and made effective.

(B) The applicable settlement rates set out in the appendix hereto is approved and such rates shall be effective as of the date of issuance of this order.

(C) Within 90 days from the date of this order, Prentice shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Proposal.

(D) Within 90 days from the date of this order, Prentice shall (1) refund, with interest as specified computed to the date of actual refund, the difference between the rate collected subject to refund, for a period five months prior to the issuance of this order and the related settlement rate; and (2) report to the Commission, in writing, the amount of refunds made to its purchaser, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchaser showing receipt of the refunds in conformity with the Settlement Proposal as approved herein.

(E) The proceedings in Docket No. G–18710 are hereby severed from the consolidated proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*

(F) A certificate of public convenience and necessity be and the same is hereby issued in Docket No. G–18710, upon the terms and conditions of this order, authorizing the sale by Prentice of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as fully described in its application and exhibits in this consolidated proceeding.

(G) The certificate granted in paragraph (F) above is not transferable and shall be effective only so long as Prentice continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificate issued in paragraph (F) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Prentice. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

(I) Docket No. G–19292 is hereby severed from the proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, and is hereby canceled.

(J) Upon full compliance by Prentice with all the terms and provisions of this order applicable to it, the section 4(e) proceeding in Docket No. G–19475, listed in the appendix hereto, shall terminate.

(K) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Prentice, the Commission staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Prentice or any other companies, person or parties affected by this order.

Commissioner Black *not participating.*

APPENDIX A

ROBERT B. PRENTICE, ET AL., DOCKET NO. G–18710, ET AL.

Rate schedule No.	Field	Purchaser	Contract date	Certificate docket	Initial rate	Last firm rate	Last effective rate	Settlement rate [f]
					Cents	*Cents*	*Cents*	*Cents*
2	Hollywood	United G.P.L. Co.	5–14–59	G–18710 [a]	[b] 20.25	20.25	20.25	20.25
[c] 3	Houma	do	5–14–59	G–19292 [d]	10	10	[e] 23.25	17.5

[a] Temporary authorization issued June 30, 1959. No rate condition.

[b] 18.5¢ base price, plus 1.75¢ tax reimbursement.

[c] The original contract covering this sale, dated March 13, 1950, provided for a ten-year term extending into 1960. It was filed with the Commission by letter dated June 6, 1955, and was designated as Rate Schedule No. 1. This contract was later superseded by two contracts, both executed May 14, 1959, one covering "shallow" gas and the other covering "deep" gas. The "shallow" gas contract was designated as Rate Schedule No. 3. The "deep" gas contract was designated as Supplement No. 2 to Rate Schedule No. 3. The rate provided by Rate Schedule No. 3 was suspended by order issued September 18, 1959, in Docket No. G–19475.

[d] Upon application seeking authorization for the sale under the March 13, 1950, contract, the Commission issued a certificate of public convenience and necessity on January 4, 1956, in Docket No. G–9018.

[e] 21.5¢ base price, plus 1.75¢ tax reimbursement.

[f] The total settlement rates set out above, as applicable to each sale to United, include a commodity rate and tax reimbursement. The reimbursement portion of each such total settlement rate shall be that portion expressed as tax reimbursement in each respective contract and the remaining balance of such total settlement rate shall be considered as the commodity rate.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HASSIE HUNT TRUST, DOCKET NO. RI64–53; WILLIAM HERBERT HUNT TRUST ESTATE, DOCKET NO RI64–54

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued September 27, 1963)

On August 29, 1963, Hassie Hunt Trust (Hassie Hunt) and William Herbert Hunt Trust Estate (William Herbert Hunt) filed a motion for reconsideration[1] of the Commission's suspension order issued July 31, 1963, in Docket Nos. RI64–53 and RI64–54, 30 FPC 413, requesting that the Commission vacate its suspension order.

The proceeding in Docket No. RI64–53 involves a proposed increase in rate from 13.8733 cents per Mcf to 14.3733 cents per Mcf for sales of gas to Texas Eastern Transmission Corporation from Southwest Speaks Field, Lavaca County, Texas (Railroad District No. 2). The proposed increased rate[2] was suspended until January 1, 1964 and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

The proceeding in Docket No. RI64–54 involves a proposed increase in rate from 13.8733 cents per Mcf to 14.3733 cents per Mcf for sales of gas to Texas Eastern Transmission Corporation from Arneckeville Field, DeWitt County, Texas (Railroad District No. 2). The proposed increased rate[3] was suspended until January 1, 1964, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

The proposed rates of 14.3733 cents per Mcf were suspended as in excess of the applicable 14.6 cents per Mcf increased rate ceiling because they were considered to be equivalent to rates of 14.8733 cents per Mcf when the cost to the buyer of 0.5 cent per Mcf for dehydration and central point delivery was taken into consideration.

In support of their motion, Hassie Hunt and William Herbert Hunt contend that there is no cost to Texas Eastern for dehydration because dehydration is performed at Socony Mobil Oil Company's (Socony) Goliad plant[4] and that the cost of delivery is minimal because of the short distance of Hunt's wells from Texas Eastern's transmission line. They conclude on the foregoing basis that the proposed rates of 14.3733 cents per Mcf, plus the actual cost to Texas Eastern for dehydration and central point delivery, are less than the 14.6 cents per Mcf area price level for Texas Railroad Commission District No. 2, as established under the Second Amendment to the Commission's Statement of

---

[1] Hassie Hunt and William Herbert Hunt termed their motion as an application for rehearing and reconsideration. Applications for rehearing of an interlocutory order such as here involved, may not properly be filed. [Section 1.30(e) of the Rules of Practice and Procedure (18 CFR 1.30(e)).] The instant tender has been considered as a motion for reconsideration pursuant to Section 1.12 of the Commission's Rules of Practice and Procedure.

[2] The increased rate filing was designated as Supplement No. 14 to Hassie Hunt Trust FPC Gas Rate Schedule No. 2.

[3] The increased rate filing was designated as Supplement No. 13 to William Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 2.

[4] Hunt's position, however, fails to take cognizance of the fact that the dehydration cost of Socony is offset against Texas Eastern's transportation charge when the processing plant is in operation, and when the processing plant is not in operation under the contract between Texas Eastern and Socony there is a one-fourth cent per Mcf charge by Socony for dehydration.

General Policy No. 61–1,[5] and, therefore, the increased rate filings should not have been suspended.

The area price levels set forth in the Statement of General Policy No. 61–1, as amended (18 CFR, Chapter I, Part 2, Section 2.56), are applicable to pipeline quality gas as that term is generally understood in each area. The announced price levels for Texas Railroad Commission District No. 2 are considered to apply to sales of dehydrated natural gas with delivery at a central point in the field. Texas Eastern maintains a standard contract differential of 0.5¢ per Mcf for dehydration of gas to 7 pounds of water per 1,000,000 cubic feet, and central point delivery in the area. Since the actual cost for the dehydration and central point delivery of Hassie Hunt's and William Herbert Hunt's gas is not ascertainable pending a hearing, it was proper for us to utilize the standard 0.5¢ differential for the limited purposes of exercising our discretionary suspension functions under Section 4(e) of the Act. Specifically, petitioners are not entitled to have factual issues resolved in their favor without a hearing whenever they file increased rates and the Commission must within the 30 day statutory period decide whether to allow them to become effective or suspend them. Accordingly, the proposed rates were properly suspended because they appear to exceed the 14.6¢ per Mcf applicable area rate ceiling under the Second Amendment.[6]

The Commission finds:

The motion for reconsideration filed by Hassie Hunt and William Herbert Hunt on August 29, 1963, in the above-designated proceedings, sets forth no new facts or legal considerations which were not fully considered prior to the issuance of our order of July 31, 1963, or which now having been considered, warrant the modification of said order.

The Commission orders:

Hassie Hunt Trust's and William Herbert Hunt Trust's August 29, 1963, motion for reconsideration of the Commission's order issued July 31, 1963, in the proceedings in Docket Nos. RI64–53 and RI64–54, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

KASKASKIA NATURAL GAS COMPANY, DOCKET NO. CP63–326

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 27, 1963)

On May 28, 1963, as supplemented on June 28 and July 23, 1963, Kaskaskia Natural Gas Company (Applicant) filed in Docket No. CP63–326 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Com-

[5] The Second Amendment price ceiling is applicable, since pursuant to a settlement agreement accepted by the Commission's orders issued May 29, 1963, petitioners eliminated favored nation and price redetermination clauses from the contracts which relate to the subject rate schedules.

[6] The suspended rate increases will in due time be consolidated with the area hearing governing Texas Railroad District No. 2, and we will determine therein the materiality of any claim that an individual producer is entitled to special consideration as a result of any differences which may exist in the cost of processing its gas to bring it up to pipeline quality.

mission directing Natural Gas Pipeline Company of America (Natural) to establish physical connection of its transmission facilities at a point in Marion County, Illinois, with facilities proposed to be constructed by Applicant, and to sell and deliver to Applicant 400 Mcf of natural gas per day for resale and distribution in the community of Kinmundy, Illinois, as hereinafter described, all as more fully described in the application.

Applicant proposes to construct and operate a 4.2-mile 2-inch lateral transmission line, with appurtenant facilities, and a distribution system to serve the community of Kinmundy. The estimated cost of these facilities is $140,000, to be financed by the issuance of common stock and mortgage notes. Applicant's third-year maximum requirements are estimated to be 400 Mcf of natural gas per day, and 35,800 Mcf per annum (at 14.73 psia).

Applicant has received appropriate authorization from Kinmundy and the Illinois Commerce Commission.

On June 12, 1963, Natural advised the Commission that it is willing to provide the requested connection and service. Natural estimates its cost of installing facilities at the new delivery point at $11,320.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 29, 1963 (28 F.R. 9488). No protest, petition to intervene or request for hearing has been received.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant, Kaskaskia Gas Company, an Illinois corporation having its principal place of business in Salem, Illinois, is duly authorized to engage in, and will engage in, the distribution of natural gas in the community of Kinmundy, Illinois, upon the completion and operation of the facilities proposed to be constructed as hereinbefore described.

(3) It is necessary and desirable in the public interest to direct Natural Gas Pipeline Company of America to establish physical connection of its transmission facilities with those proposed to be constructed and operated by Applicant, and to sell and deliver natural gas to Applicant under Natural's appropriate rate schedules on file with the Commission, for resale as described in the application in this proceedings.

(4) Natural should be required to sell and deliver to Applicant up to its estimated third year peak day requirement of 400 Mcf of natural gas per day and such requirement will not place any undue burden on Natural nor impair its ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Natural within one year from the date on which this order issues.

The Commission orders:

(A) Natural Gas Pipeline Company of America be and it is hereby directed to establish physical connection of its transmission facilities with the proposed facilities of Applicant, and to sell and deliver up to 400 Mcf per day to Applicant, all as hereinbefore described and as set forth in the application in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Natural within one year from the date on which this order issues.

(C) Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days after said commencement.

OPINION NO. 404

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. CP62-85 AND CP62-178; IOWA ELECTRIC LIGHT & POWER COMPANY, CP62-119; AMERICAN GAS COMPANY OF WISCONSIN, INC., CP63-34; WISCONSIN SOUTHERN GAS COMPANY, INC., CP63-11; CITY OF TIPTON, IOWA, CP63-54

OPINION AND ORDER ADOPTING IN PART AND MODIFYING IN PART DECISION OF THE PRESIDING EXAMINER

(Issued September 30, 1963)*

Syllabus

1. The 12-year deliverability standard has never been so rigid that Commission would ignore circumstances justifying a departure therefrom. P. 862.
2. Pipeline's showing with respect to gas supplies and reserves is such that its 10-year deliverability life is sufficient to meet requirements of its presently certificated and anticipated increased markets as proposed . P. 863.
3. General rule is that firm commitments will be required only where the contemplated large volume industrial sales appear to have a strong bearing on economic feasibility of expansion project and where there is reason to question whether in fact sales will be made. P. 864.
4. To properly determine whether signed contracts should be required for proposed industrial sales, it is necessary to calculate relative importance of each individual sale to the total revenues from applicable branch line. P. 865.
5. Under instant circumstances industrial sales which account for more than 15 percent of projected branch line revenues require signed contracts. P. 865.
6. Proposed base zone feasibility test *rejected* as unreasonable and unneeded—rather each branch line must be tested for feasibility upon revenues it will actually receive as measured against incremental costs which will actually be incurred, using best projection available at time of proposal. P. 866.
7. Commission *approves* employment of branch line feasibility test of Opinion No. 324. P. 866.
8. Aggressive branch line extension policy is in the public interest; Commission encourages such investment and service where there is no significant threat of detriment to present customers of pipeline. P. 866.
9. Cost of additional system compression facilities, benefiting all mainline customers, cannot properly be used to measure economic feasibility of the branch lines. P. 867.
10. Curtailment of overrun sales *rejected* as factor in determination of branch line feasibility. P. 867.
11. Commission *issues* certificates of public convenience and necessity under Section 7, of the Natural Gas Act. P. 868.

Justin R. Wolf, C. A. Case, Jr., Donegan Mann, L. I. Shaw, F. Vinson Roach and *D. B. O'Brien* for Northern Natural Gas Company.

John F. Gaston and *Ted P. Lewis* for Iowa Electric Light & Power Company.

Albert J. Feigen for American Gas Company of Wisconsin, Inc. and City of Tipton, Iowa.

Glen H. Bell for Wisconsin Southern Gas Co., Inc.

Richard M. Merriman, Peyton G. Bowman, III and *Donald R. Ross* for Great Plains Natural Gas Company.

*Initial decision appears on p. 869.

John W. Scott and *Louis L. DaPra* for Minnesota Valley Natural Gas Company.

John A. McGrath, Jerome S. McGrath and *Thomas C. Williams* for Fuels Research Council, Inc., Midwest Coal Producers Institute, National Coal Association, United Mine Workers of America and Upper Lake Docks Coal Bureau, Inc.

William E. Torkelson and *Leonard Bessman* for Wisconsin Public Service Commission.

Lloyd J. Marti for Western Power & Gas Company.

Robert S. Hunt for Northwestern Public Service Company.

George C. Pardee for Metropolitan Utilities District of Omaha.

A. R. Renquist for Northern States Power Company.

Edward J. Hartman for Iowa-Illinois Gas and Electric Company.

Mark W. Putney for Iowa Power and Light Company.

Justin A. Stanley for Northern Illinois Gas Company.

C. A. Ellwanger for Iowa Public Service Company.

George C. Mastor and *Patrick L. Farnand* for Minneapolis Gas Company.

Eugene O. Gehl and *R. J. Sutherland* for Wisconsin Power and Light Company.

Willard S. Stafford, Charles V. Shannon and *Louis Flax* for Milwaukee Gas Light Company.

W. F. Spurrier and *Ned Willis* for North Central Public Service Company.

Henry F. Lowe for NR Gas, Inc.

Robert Edward Losch for North Central Public Service Company and New Richmond Gas Company.

David S. Lichtenstein and *John J. Mullally* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

O'CONNOR, *Commissioner:*

This consolidated proceeding is before us on exceptions to the Presiding Examiner's decision issued on April 26, 1963. That decision would grant certificates of public convenience and necessity under Section 7 of the Natural Gas Act, as amended, (the Act) to Northern Natural Gas Company (Northern) authorizing it to construct and operate certain facilities in order to initiate natural gas service to 76 communities in the states of Nebraska, Iowa, Minnesota, and Wisconsin and to increase its system capacity to meet the increased contract demand of its present customers. As set forth below, we are granting the applications with modifications.

Northern owns an interstate pipeline system originating in the Panhandle of Texas and extending northeasterly through Kansas, Nebraska, and Iowa with branches running east to Dubuque, Iowa, north to Minneapolis, Minnesota, and parts of Wisconsin and northwest into South Dakota. Northern's application in Docket No. CP62-85 proposes the construction and operation of facilities consisting of a mainline loop, branchlines and appurtenant facilities estimated at a cost of $16,126,800 to provide service to 71 communities in the above-mentioned states. The cost of these facilities is proposed to be financed from cash on hand and operating revenues.

Applications were filed pursuant to Section 7(a) of the Act by Iowa Electric Light and Power Company (Docket No. CP62-119), American Gas Company of Wisconsin, Inc. (Docket No. CP63-34), Wisconsin Southern Gas Company, Inc. (Docket No. CP63-11) and City of Tipton, Iowa (Docket No. CP63-54).[1] These distributors requested orders of the Commission directing Northern to construct certain branchline and measuring facilities and to sell natural gas to each

[1] Additionally, Great Plains Natural Gas Company (Great Plains) filed a Section 7(a) application (Docket No. CP63-78). By order issued January 2, 1963, the Commission granted Great Plains' motion filed November 13, 1962, to withdraw its application.

for resale in five communities. Their applications were consolidated with Northern's application in Docket No. CP62–85. Thus, the combined proposals are to serve 76 new communities, 47 of which are in Wisconsin,[2] 15 in Minnesota, 13 in Iowa and 1 in Nebraska. Northern proposes to supply from its Redfield, Iowa underground storage field 53,454 Mcf per day of contract demand to these communities in their third year of service. To supply the pipeline capacity for the requirements of these 76 communities, Northern proposes to construct and operate 14.1 miles of 26-inch mainline loop east of its Waterloo, Iowa compressor station and the necessary branchlines and measuring stations, at an estimated cost of $17,883,500 including interest and overhead. Upon completion of these facilities, Northern will have a system salable capacity of 1,876,973 Mcf per day.

In Docket No. CP62–178 Northern requests authority to construct and operate additional facilities required to provide certain of its existing customers 34,718 Mcf per day of increased contract demand. To meet these increased requirements Northern proposes to install 3,000 horsepower of compression at its Redfield, Iowa, compressor station and to turbo-charge two existing 2,000 horsepower units to 2,700 horsepower each for a total increase of 4,400 horsepower at the Redfield Station. In addition, Northern will construct 2.4 miles of 30-inch pipeline loop north of South Sioux City, Nebraska. The estimated $1,853,400 cost of these additions, including interest and overhead, is to be financed by short term loans and funds on hand. Northern also requests in this docket that the authorized maximum inventories for the St. Peter-Elgin Reservoir be increased from 40 billion cubic feet to 50 billion cubic feet and for the Mt. Simon Reservoir from 56 billion cubic feet to 70 billion cubic feet. On October 5, 1962, the Commission issued a temporary certificate authorizing the sale of the additional contract demand and the increase in maximum storage inventories as requested in Northern's application in Docket No. CP62–178.[3]

---

[2] Included in these 76 communities is the community of Monroe, Wisconsin, served by North Central Public Service Corporation (North Central). This community was originally proposed for service in Docket No. CP 62–85. Subsequent to filing and before hearing commenced, the Commission, by order issued November 16, 1962, in Docket No. CP62–292, directed Northern to establish physical connection of its facilities with the facilities of North Central and to sell gas to North Central for resale in Monroe. As stated in that order, it was agreed by Northern and North Central that Northern would purchase the necessary branchlines and appurtenant facilities to be constructed by North Central, on condition that such purchase is authorized in Docket No. CP62–85. Northern amended its application in that docket to apply for such authority (Tr. 2191).

[3] Northern's application in Docket No. CP62–85 was filed on September 29, 1961, supplemented on January 12, 1962, and amended on April 30, 1962. Northern's application in Docket No. CP62–178 was filed on February 5, 1962, and amended on May 9, 1962, September 4, 1962, and September 24, 1962. By order issued October 19, 1962, the 7(a) applications were consolidated with Northern's application in Docket No. CP62–85. Wisconsin Public Service Commission filed notice of intervention in these proceedings and the Commission permitted intervention by 25 additional parties. There were 22 days of hearing, commencing October 23, 1962, and concluding February 1, 1963. Briefs were exchanged and the Presiding Examiner's decision was issued on April 26, 1963. Exceptions to the examiner's decision were filed by Northern; jointly by Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc. and Upper Lake Docks Coal Bureau, Inc. (hereinafter referred to as the Coal Intervenors); jointly by Iowa Power and Light Company, Metropolitan Utilities District of Omaha, Minneapolis Gas Company, Northern States Power Company and Western Power and Gas Company (hereinafter referred to as Joint Intervenors) and by Wisconsin Southern Gas Company. Minnesota Valley Natural Gas Company (Minnesota Valley) filed a response to the exceptions of Joint Interveners. On May 13, 1963, four interveners filed a joint motion for opportunity to present oral argument. This motion was denied by order issued June 3, 1963.

The examiner found that Northern's evidence satisfied the conventional elements of public convenience and necessity, that Northern is able and willing to perform the service proposed and that certificates accordingly should be issued subject to the conditions contained in Ordering Paragraphs (B) and (C) of his decision.

Considering the facts of record we find that the basic elements properly to be considered in determining public convenience and necessity, as contained in the Natural Gas Act and as applied in the Commission and judicial decisions, have been amply satisfied.

The Issues.—The principal issues in this proceeding are the adequacy of Northern's gas reserves to meet the proposed expansion of service; the reasonableness of the market estimates; the necessity of obtaining firm commitments from interruptible customers; and the proper test for measuring the economic feasibility of the proposed branchlines.

Gas Supply.—We agree with the examiner's findings that, on the basis of the record, Northern has adequate gas resources to meet the anticipated requirements of its expanded markets as proposed in this proceeding, and that such expansion will not jeopardize the rest of Northern's system. However, in view of the fact that Northern's gas reserves do not meet the 12-year deliverability life standard used by the Commission in the past, it is appropriate here to discuss in more detail Northern's reserves and deliverability.

The 12-year deliverability standard has never been so rigid that the Commission would ignore circumstances justifying a departure from it. On this point we stated in *Midwestern Gas Transmission Company, et al.*, 21 FPC 653 at 657; "While we believe that a showing of a twelve year deliverability life should be the minimal requirement, we also believe that our judgment should be tempered by the peculiar facts surrounding the situation before us."[4] In that case the Commission allowed Tennessee Gas Transmission Company an 11-year deliverability life. This was found to be adequate in view of the location of Tennessee's system with regard to possible new supplies and its demonstrated ability to attach new sources of supply.

In this proceeding Northern has shown that a nine to eleven year full line load or deliverability life will enable it to maintain a maximum reserve status without serious over-supply problems, and will permit it to negotiate new gas purchase contracts on a more favorable basis from the standpoint of price stabilization and volumes purchased. Northern showed that if it is required to maintain 12 years of full line load at all times, it will accumulate excess supplies and will incur additional costs associated with maintaining an unneeded supply.

The record shows that as of December 31, 1961, total gas reserves under contract to Northern were estimated to be 12.196 trillion cubic feet of gas. These dedicated reserves will enable Northern to meet the combined peak day and annual requirements of its presently certificated and anticipated increased markets as proposed in Docket Nos. CP62–85 and CP62–178 for a period of ten years without a deficiency.[5]

Northern is an established pipeline with an active gas purchasing organization. In the past it has demonstrated as much as a 13-year deliverability life. *Northern Natural Gas Company*, 22 FPC 164, 169. Its lines extend into production areas in which new reserves are being discovered continuously. The principal sources of supply for Northern are the Hugoton-Panhandle area, the

[4] Compare Docket No. R–239, 18 CFR 260.7, proposed rulemaking relating to gas supply.

[5] On the basis of the total expanded markets Northern has a reserve life index of 20.1 years.

Anadarko Basin area and the Permian Basin. Northern showed (Tr. 52) that these producing areas are by no means fully explored or developed and will be a source of new supplies for many years in the future, and that there are now in the Anadarko and Permian areas discovered but uncommitted reserves available for purchase by Northern. It was shown that Northern could enter into gas purchase contracts covering approximately two to three trillion cubic feet of gas from these reserves. Northern's showing herein with respect to gas supply and reserves is such that its 10-year deliverability life is sufficient to meet the requirements of its presently certificated and anticipated increased markets as proposed in Docket Nos. CP62–85 and CP62–178.[6]

Any future proposed expansion of Northern's markets will, of course, require a determination, at the time of such proposal, that Northern as of that date has gas reserves of an adequate deliverability life after considering Northern's purchase patterns in the interim and the then available undedicated reserves. In the future we propose to maintain a periodic scrutiny of the adequacy of the reserves of all jurisdictional pipelines, including Northern. We do not believe, however, that any reason exists to reopen Docket No. CP62–85, as requested by Coal Interveners in their brief and exceptions, in order to make an investigation of Northern's gas supply picture beyond that contained in the present record.

Market Estimates.—The examiner, after requiring that firm contracts be obtained from two prospective industrial customers, concluded that the estimates of peak day and annual sales presented on the record are both reasonable and attainable, based upon his finding that all the proposed distributors demonstrated the need for natural gas in the communities proposed for service.[7] The distributors for the original 71 communities proposed for service in Docket No. CP62–85 have all executed service agreements reflecting their first, second and third year contract demands. All of the 7(a) applicants expressed a willingness on the record to execute similar service agreements reflecting the contract demands which Northern considers to be reasonable for each of their proposed communities.

Exception is taken by Joint Interveners to the examiner's finding and conclusion regarding Northern's favorable experience in attaching new communities to its system, arguing that it is contrary to the actual experience in towns connected to Northern's system in 1959 and 1960, and that the market estimates made by Northern in Docket No. G–17485, *et al.* in support of the communities connected in 1959 were not realistic nor obtained. However, the record shows that the market estimates in this proceeding are comparable to actual performances of communities similar in size after they were connected to Northern's system in 1959 and 1960. Northern showed (Exhibit No. 63, p. 1) that those communities attained an average residential heating saturation of 27.4 percent in the first full year of service compared with a like figure of 29.2 percent estimated for the 71 communities originally proposed for service in Docket No. CP62–85. The residential heating saturation for the second full year of service for communities connected in 1959 was shown to be 40.7 percent compared with

---

[6] Coal Interveners contend in their exceptions that Northern has not demonstrated beyond a reasonable doubt that it should be permitted to deviate from the 12-year rule. As previously noted, the 12-year rule has never imposed a rigid test. It is sufficient that we are convinced that Northern's application here is required by the public convenience and necessity despite its present failure to meet a 12-year deliverability test, which is being re-examined in a pending rulemaking proceeding.

[7] Northern refused to propose the City of Tipton for service because it did not believe that the City's market estimates were reasonable and attainable. The City consented to service on the basis of Northern's own market estimates, which the examiner approved.

a like figure of 37.1 percent estimated for the 71 communities.[8] We adopt the examiner's findings that the market estimates in these proceedings are reasonable.

Firm Commitments.—The examiner conditioned the issuance to Northern of certificates for two laterals upon two distributors obtaining firm commitments in the form of signed contracts with their large volume industrial customers. His order required American Gas Company of Wisconsin, Inc. to obtain a signed contract covering the sale of natural gas to Peavy Paper Mills, and required Wisconsin Southern Gas Company, Inc., to obtain a signed contract covering the sale of natural gas to the Burgess Cellulose Company.

Coal Interveners except to the examiner's failure to require other distributors to submit firm commitments from prospective industrial customers, which they contend the record shows are necessary in order to assure Northern and its present customers that the proposed branchline extensions will be economically feasible. In support of this exception, it is contended that there are many industries proposed to be served herein whose present fuel costs are such that it is highly questionable whether or not the distributor will be able to displace the present fuel being used, thus jeopardizing the revenues to be received by Northern to defray the branchline costs; and that the highly competitive market demands more firm commitments than the examiner would require.

Joint Interveners also except to the examiner's finding to the effect that all large volume interruptible customers need not execute firm contracts, claiming that the economic feasibility of many of the proposed projects depends heavily on estimated large volumes of interruptible sales at prices equal to or in excess of present competitive fuels. They state that other large volume interruptible sales, in addition to those designated by the examiner, constitute such a substantial percentage of sales within the communities involved that the economic feasibility of the branchlines will be adversely affected if these estimated loads are not attached.

The Commission concluded long ago in *Kansas Pipe Line & Gas Co.*, 2 FPC 29, that there is no reason to require certificate applicants in all cases to obtain firm commitments from their anticipated customers. It is sufficient, the Commission held, "if the applicants show that, on the basis of experience in similar territory, there are reasonable grounds for anticipating that customers will be attached to the proposed facilities." 2 FPC at 45. Stated generally, the rule which has developed for expansions which include sales to large volume industrial customers is that firm commitments will be required only where the contemplated sales appear to have a strong bearing on the economic feasibility of the project and where there is reason to question whether in fact the sales will be made. See *Kansas–Nebraska Natural Gas Co., Inc.*, 29 FPC 1058, 1067, Opinion 389 (1963); *City of Grant City, Mo.*, 29 FPC 754, 758, Opinion 386 (1963); *Midwestern Gas Transmission Co.*, 22 FPC 775.

We note that none of the proposed industrial sales here questioned are firm sales providing demand service at all times and requiring increased capacity in the lateral, as were the sales in several past cases requiring firm commitments. Moreover, both the distributors and Northern have included the disputed sales in their market estimates notwithstanding the absence of contracts. Northern's experience demonstrates that most industrial plants are committed to receiving

[8] Joint Interveners also contend that Northern's experience with communities connected in 1959 and 1960 is distorted by the inclusion of Blaine, Minn., and therefore unrepresentative of the experience which can be expected in the Wisconsin communities which the record shows have a relatively stagnant economy. However, the elimination of Blaine from Northern's exhibit would have no material effect on the average residential heating saturation for the communities shown therein. See Tr. 2559 and Ex. 63.

natural gas after the first year of operation of a new distribution system. Finally, the examiner found that in this proceeding the distributors adequately supported their estimated sales to anticipated industrial customers and that, on the basis of their previous experience, there are grounds in this record for anticipating that most of the estimated industrial sales will be made.

Under these circumstances we conclude that the proper method for determining whether signed contracts should be required for the proposed industrial sales is to calculate first the relative importance of each individual sale to the total revenues of the branchline from which it will be made. This is done by comparing the projected annual revenues from each industrial sale to the projected total annual revenues of the related lateral. We do not find that all industrial sales in a given community or all industrial sales from a given lateral should be grouped together for these purposes. No sufficient grounds have been presented which suggest that all or even many of the anticipated sales will not materialize. Rather, the risk, if any, is that perhaps one or two sales may not develop as anticipated.

Having calculated the relative importance of each individual sale, we can identify those industrial sales which will have such a strong bearing upon the branchline's economic feasibility that a contract should be required. It is our judgment that in the circumstances of this case industrial sales which account for more than 15 percent of the projected branchline revenues can reasonably be classified as such. In this category are the sale from the Belleville Lateral to the Pet Milk Company, the sale from the Buffalo Lateral to a milk drying plant and the sale from the Winthrop Lateral to the Tri County Dairy. We shall condition the certificates for these three laterals upon the submission of contracts covering these sales or upon a showing by Northern that the lateral involved meets the feasibility test even if revenues (and costs) associated with the industrial sale are excluded. Any materials submitted hereunder shall be served on all parties to this case, who shall have an opportunity to comment thereon within 15 days from such service.

In the light of these determinations, we conclude that the exceptions of the Joint and Coal Interveners are not justified and that the examiner erred in requiring firm commitments in the two cited instances.

Economic Feasibility.—In determining the economic feasibility of the 29 new laterals proposed by Northern, the examiner employed the branchline feasibility test prescribed in Opinion 324, *Northern Natural Gas Co.*, 22 FPC 164. This test requires that third year revenues from a proposed lateral or branchline be at least sufficient to defray the annual cost of service of the branchline (including measuring stations) and out-of-pocket costs of the gas to be delivered at the town border stations (cost of gas in the field plus incremental transmission costs). If the revenues from a particular branchline do not cover these costs, contributions to the cost of construction of the branchline are required by the distributor involved or service must be denied.

Joint Interveners except to the method of applying this branchline feasibility test by the examiner. They note that in determining the incremental costs associated with a branchline, which are compared with the incremental revenues from branchline sales, the examiner and Northern used *system-wide average* incremental transmission costs rather than the *actual* incremental transmission costs for the gas delivered to the distributors by each proposed lateral. Thus, the interveners argue the incremental transmission costs for gas delivered by laterals at the northern end of Northern's system were understated.

Joint Interveners in essence contend that since the average incremental transmission costs were used in determining branchline feasibility, average

branchline revenues should also be used. Thus, they propose the base zone feasibility test whereby Zone 2 (presumably an average zone) rates are used in computing branchline revenues in all zones, which are then compared with branchline costs to determine feasibility. The result is that a number of proposed laterals become economically infeasible.

We agree with the Joint Interveners that a technical error was committed by the examiner in using system-wide average incremental transmission costs rather than the actual incremental transmission costs for each branchline. However, we believe the proposed base zone feasibility test is unreasonable and unneeded, in that it uses Zone 2 rates to determine the revenues for branchlines which will be located in Zone 3 and which will in fact realize higher rates and thus much larger revenues. Rather, we believe that each branchline must be tested for feasibility upon revenues it actually will receive as measured against the incremental costs which actually will be incurred, using the best projections available at the time of the proposal.

In determining the feasibility of each branchline the examiner correctly determined the prospective revenues of the branchline from actual rates to be charged. To ascertain the incremental costs associated with the branchline and thereby measure feasibility, the examiner correctly determined the actual annual cost of service of each branchline and the actual field cost of gas. His error, as noted above, was in using average rather than actual out-of-pocket transmission costs.

We note that incremental transmission costs, which cover only compression fuel, line losses, etc., are a very minor part of the total incremental costs of branchline sales which also include the field cost of gas and the branchline annual cost of service. The average incremental transmission cost on Northern's system is only 1.26 cents per Mcf (See Exh. 60). Thus, the difference between average and actual incremental transmission costs could only be very slight in terms of the total incremental costs. We believe this demonstrates *prima facie* that the examiner's error in using average incremental transmission costs was *de minimus*. Joint Interveners neither allege nor show that the use of actual incremental transmission costs would render any of the branchlines economically infeasible. For this reason we conclude that there was no prejudicial error.

We believe the examiner was correct in employing the branchline feasibility test of Opinion No. 324 and in finding all 29 laterals economically feasible thereunder. Northern has proposed service to 71 of the communities involved and has agreed to serve the 5 additional communities that request service. Northern has not requested contributions in aid of construction of the branchlines from the customers to be served, but has agreed to undertake the full construction cost of each of the 29 laterals. While an aggressive branchline extension policy of this nature is not uniform in the industry, we believe it is in the public interest and we encourage such investment and service where we are assured that there is no significant threat of detriment to the present customers of the pipeline. We find that the branchline feasibility test of Opinion 324 provides such assurance by requiring that the incremental revenues from the proposed branchline sales cover the incremental costs associated with the sales.[9]

[9] Of course in approving Northern's voluntary adoption of a relatively liberal branchline feasibility test, we are not here deciding that this test should also be used to formulate the minimum investment in branchlines to be imposed upon companies under the more restrictive standards of Section 7(a). See *Kansas-Nebraska Natural Gas Co., Inc.*, 29 FPC 1058 (1963), Opinion 389.

Other Exceptions.—Joint Interveners except to the examiner's finding that the proposed service to all 76 communities would return incremental net revenues of $456,070 annually. They contend that the examiner omitted as an incremental investment $1,261,936 of compression facilities which would have an estimated annual cost of $252,387 [10] and that Northern should deduct from projected branchline revenues $740,740 annually to reflect curtailment of overrun sales now made to present customers which will be pre-empted by the new branchline service. With these two adjustments, Joint Interveners allege that the proposed branchline service will result in an annual deficiency of $993,127 in lieu of the excess of $456,070 found by the examiner.

The compression facilities referred to by Joint Interveners are those proposed at Redfield Storage Field in Docket No. CP62-178. These facilities were proposed in a separate application by Northern, and the record does not conclusively show that the facilities would be needed only in conjunction with the new service proposed from the 29 laterals. However, assuming arguendo that the service proposed for the new communities accelerated the need for additional mainline compression, the cost of the additional compression facilities is an addition to mainline investment which benefits all mainline customers and cannot properly be used to measure the economic feasibility of the branchlines.

In *Battle Creek Gas Company* v. *Federal Power Commission*, 281 F. 2d 42 (CADC), the court affirmed the Commission's holding that where a pipeline's expanded facilities, including an additional compressor station, will form part of an integrated system and where new gas is to be commingled with old gas and both are to be distributed together to all customers, the cost of those facilities should be treated as system-wide costs and not as incremental costs to be borne by a new customer served from a new line forming part of the expansion. Thus, Joint Interveners' contention that the examiner erred in not including the $1,261,936 of additional compression facilities as an incremental branchline cost in Docket No. CP62-85 is without merit.

The second argument by the Joint Interveners—that in determining economic feasibility the Commission should subtract from branchline revenues all revenues from current overrun sales which allegedly will be curtailed by the branchline sales—was not covered in the record. However, it will not be necessary to reopen the record to develop the facts pertinent to this point, for we do not deem it meritorious.

The essence of Joint Interveners' argument is that revenue losses from curtailment of overrun sales, which allegedly will result by initiating branchline service, should figure in the determination of branchline feasibility. However, overrun sales represent merely volumes of gas available on the pipeline system in excess of customers' firm requirements as they may exist from day to day. Since there is no assurance that any specific volume of overrun gas may be available during a period of time and since there is fluctuation in the volume of available overrun gas from season to season and year to year, there can be no assurance of continuation of a particular amount of revenues from such sales. Thus to calculate the curtailment of overrun sales as a real and permanent loss to the pipeline system would be to give far greater significance and permanence than either the pipeline or the customers can properly attribute to them. Moreover, and most important, such a policy would eliminate all but the most lucrative branchline expansions,[11] and valuable pipeline capacity would continue to be

[10] Joint Interveners estimate cost of service at 20 percent of net investment.

[11] Under the Joint Interveners' formula only the contract demand revenues to be paid by branchline customers under the firm schedule would be available as branchline revenues to measure against incremental branchline costs. Joint Interveners would also eliminate present costs associated with the overrun gas from branchline incremental costs.

used for the temporary expedient of overrun sales rather than providing needed demand gas service to new customers and new communities. We find nothing in the statute or prior cases which compels this Commission, which was established to promote the public interest in its broadest sense, to adopt such a result.

Finally, Northern excepts to the figure of 280,000 Mcf per day of contract demand which the examiner would authorize Northern to supply from its Redfield Storage Field. It contends that the third year peak day requirements of the 5 communities proposed to be served in the 7(a) applications, in the amount of 3,610 Mcf of contract demand were inadvertently omitted and the figures should be changed to 283,610. The record shows that Northern is correct and we will modify the 280,000 figure accordingly.

The Commission further finds:

(1) Applicant, Northern Natural Gas Company, a Delaware Corporation having its principal place of business in Omaha, Nebraska, is a "natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the applications as supplemented and amended in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the acquisition, construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities are required by the public convenience and necessity, and permanent certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), (d), and (e) of Section 157.20 of said regulations.

The Commission orders:

(A) Permanent certificates of public convenience and necessity be and the same are hereby issued in Docket Nos. CP62–85 and CP62–178, *et al.*, authorizing Applicant to construct and operate the facilities hereinbefore described, all as more fully described in the respective applications (and in the applications in Docket Nos. CP62–119, CP63–34, CP63–11 and CP63–54), as supplemented and amended, in these proceedings, upon the terms and conditions of this order.

(B) The following condition shall attach to the certificate issued in Docket No. CP62–85 in Paragraph (A): With respect to the Belleville, Buffalo and Winthrop laterals, Northern shall submit contracts covering the proposed sales by the distributors to the Pet Milk Co., the milk drying plant and the Tri County Dairy, respectively, or shall demonstrate that each lateral is economically feasible after excluding revenues (and costs) associated with these sales. Any such submission or demonstration shall be served on all parties to this case, who shall have an opportunity to comment thereon within 15 days from such service.

(C) Pursuant to our determination, *supra*, Applicant is authorized to supply from its Redfield Storage Field 283,610 Mcf per day of contract demand.

(D) The certificates issued in Paragraph (A) are conditioned and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission regulations under the Natural Gas Act, and particularly

the general terms and conditions set forth in paragraphs (a), (b), (c), (d), and (e) of Section 157.20 of said regulations.

(E) Applicant is authorized to acquire by purchase and to operate the branchline and measuring facilities constructed by North Central Public Service Corporation to serve the community of Monroe, Wisconsin, in accordance with the agreement set forth in the order issued November 16, 1962, in Docket No. CP62-292.

(F) The facilities hereby authorized shall be acquired (in the case of North Central), constructed and placed in actual operation and the transportation and delivery of natural gas authorized in Paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order is issued.

(G) The Presiding Examiner's initial decision issued herein on April 26, 1963, is hereby adopted by the Commission to the extent not inconsistent herewith. Exceptions to the examiner's decision not herein granted are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued April 26, 1963)

LANDE, *Presiding Examiner:* Involved herein is a consolidated proceeding concerning two separate applications filed by Northern Natural Gas Company (Northern) for Certificates of Public Convenience and Necessity pursuant to Section 7 of the Natural Gas Act, as amended, and four separate applications filed pursuant to Section 7(a) of the Natural Gas Act, by Iowa Electric Light and Power Company (Iowa Electric), American Gas Company of Wisconsin, Inc. (American), Wisconsin Southern Gas Company, Inc. (Wisconsin), and City of Tipton, Iowa (Tipton), for orders of the Commission directing Northern to construct certain branchline and measuring facilities and to sell natural gas to each for resale in the communities as more fully described in their respective applications. Various of Northern's present utility customers, the proposed new distributors and the 7(a) applicants intervened in the proceedings and participated in the hearing. The Public Service Commission of Wisconsin filed a Notice of Intervention and presented on the record a Statement of Position urging the certification of Docket No. CP62-85. Fuels Research Council, Inc., Mid-West Coal Producers Institute, Inc., National Coal Association, United Mine Workers of America and Upper Lake Docks Coal Bureau, Inc. (The Coal Interest) also intervened in the proceeding. The Coal Interest presented no witness, but actively cross-examined the witnesses of all the other parties.

The hearing commenced as scheduled on October 23, 1962, and was concluded on February 1, 1963, embracing in all 22 days of actual hearing. The evidence presented at the hearing consisted of the direct and cross-examination of Northern's witnesses, the utility customer witnesses and the witnesses presented by the Section 7(a) applicants. Northern's witnesses sponsored 31 exhibits and the utility customer and Section 7(a) interveners sponsored approximately 28 exhibits in support of Northern's projects. Opposition testimony to some of the service proposed by Northern in Docket No. CP62-85 was presented on behalf of five interveners, Metropolitan Utilities District of Omaha, Iowa Power and Light Co., Minneapolis Gas Company, Northern States Power Co. and Western Power and Gas Co. (Joint Interveners). Two members of the Commission's technical staff testified with respect to the views of the staff on gas supply and branchline standards. Chairman Bessman of the Wisconsin Public Service

Commission made a statement in which he said his Commission supported Northern's application. He said that the Wisconsin communities proposed to be served in this proceeding have a relatively stagnant economy, and are historically dependent on the lead and zinc mining industries. His Commission believes that those economies would be aided if natural gas is delivered to these communities.

Opportunity to file briefs was afforded to all parties. The initial brief was filed by Northern. Briefs were subsequently filed by the Commission Staff Counsel, the Public Service Commission of Wisconsin and by all other parties to the proceeding. Applicants replied thereto on April 1, 1963, as of which date the case was considered submitted for decision.

The Applications

Northern owns an interstate pipeline system originating in the Panhandle of Texas and extending northeasterly through Kansas, Nebraska, and Iowa with branches running east to Dubuque, Iowa, north to Minneapolis, Minnesota and northwest into South Dakota. Northern's application is Docket No. CP62–85, originally filed on September 29, 1961, supplemented on January 12, 1962, and amended on April 30, 1962, for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to render initial service to 71 communities in the states of Nebraska, Iowa, Minnesota, and Wisconsin.

The proposed new facilities consist of a main line loop, branchlines and appurtenant facilities estimated to cost a total of $16,126,800 which is proposed to be financed from cash on hand and operating revenues.

The 71 communities would have a third year contract demand of 49,844 Mcf/d in the third year of service. Northern Natural proposes to provide the peak requirements from its Redfield Storage Field (*i.e.*, through increased injections and withdrawals from that field).

To make the sales proposed herein, Northern relies upon a gas supply in excess of 12.2 trillion cubic feet as of January 1, 1962. Assuming expansion of the Northern system including services certificated but not yet connected, projects now pending before the Commission and the instant proposal, these reserves represent a life index of 20.5 years.

On February 5, 1962, as amended on May 9, 1962, Northern Natural also filed an application in Docket No. CP62–178 for a certificate of public convenience and necessity under Section 7 of the Natural Gas Act, authorizing the construction and operation of 4,400 additional horsepower at the Redfield Compressor Station and 2.4 miles of 30-inch line in order to increase its system capacity in the amount of 34,718 Mcf per day to meet the increased contract demand requirements of its present customers.

The cost of the above facilities would amount to about $1,853,400. Northern Natural would finance the proposed project by short term loans and funds on hand.

The application was further amended on the record to conform the proof to include the additional communities proposed by the 7(a) applicants. There were four separate applications filed pursuant to Section 7(a) of the Natural Gas Act by Iowa Electric Light & Power Company (Iowa Electric); American Gas Company of Wisconsin, Inc. (American); Wisconsin Southern Gas Company, Inc. (Wisconsin Southern); and City of Tipton, Iowa (Tipton) for orders of the Commission directing Northern to construct certain branchline and measuring facilities and to sell natural gas to each for resale in the communities described in their respective applications. These 7(a) applications were con-

solidated with the main application of Northern by order issued October 19, 1962. Additionally, Great Plains Natural Gas Company (Great Plains) also filed an application pursuant to Section 7(a) of the Natural Gas Act (Docket No. CP67–78). By order issued January 2, 1963, the Commission granted a motion filed by Great Plains on November 13, 1962, to withdraw its application. By including the five 7(a) towns the total project cost for the 76 towns would be $17,883,500. The communities involved are: Alden, Conrad, DeWitt, Ellsworth, Jewell, Maynard, Mount Vernon, Lisbon, Radcliffe, Randall, Monroe, Prairie City and Tipton, *Iowa;* Albany, Amery, Bangor, Barron, Belleville, Bloomer, Boscobel, Brodhead, Cameron, Chetek, Clear Lake, Cuba City, Cumberland, Evansville, Fennimore, Lancaster, Monticello, Muscoda, New Auburn, New Glarus, Rice Lake, Richland Center, Shullsburg, Sparta, Camp McCoy, Tomah, West Salem, Baraboo, Benton, Darlington, Dodgeville, Hazel Green, Lake Delton, Mineral Point, Platteville, Portage, Reedsburg, Sauk City, Prairie Du Sac, Spring Green, Wisconsin Dells, New Richmond and Monroe, *Wisconsin;* Mound, Spring Park, Saint Bonifacius, Arlington, Eagle Lake, Gaylord, Pierz, Sauk Centre, Winthrop, Big Lake, Buffalo, Monticello, Foley, Lake City, Wabash, *Minnesota,* and Gretna, *Nebraska.*

The Issues

The following issues may be deemed involved in this proceeding:

1. Whether Northern's expansion into new territory is warranted though its deliverability life of gas reserves may be sufficient to meet a demand of less than 12 years?

2. Whether Docket No. CP62–85 should be reopened in order to fully investigate Northern's gas supply picture?

3. Is Northern's proposal in Docket No. CP62–178 required by the public convenience and necessity?

4. Does the public convenience and necessity require extension of service to the 76 communities herein or to any of said communities?

5. Do the 76 communities proposed for service herein meet the branchline feasibility test of *Northern Natural Gas Co.* (1959), 22 FPC 164, at 174, so as to require no contributions?

6. Whether the distributors of gas off of Northern's proposed branchline extensions should be required to present signed contracts with interruptible customers?

7. Is the market data submitted adequate and accurate enough to permit reaching a conclusion regarding economic feasibility of the project as a whole?

8. Are the cost estimates for facilities submitted herein by Northern and the Section 7(a) Applicants accurate and complete?

Adequacy of Northern's Gas Reserves

Coal Interest Contentions.—Northern's gas supply and deliverability life falls short of minimum requirements. In this proceeding Northern is attempting to avoid compliance with the Commission's 12-year deliverability test, referred to in 21 FPC 653 at 657, 709; 24 FPC 1 at 4, 349. Northern has not attempted to increase its reserve picture even though it could do so and satisfy the 12-year requirement. This allegedly places Northern in a position to negotiate a better deal and to protect itself against take-or-pay-for penalties. Docket No. CP62–85 should be reopened to make a thorough analysis of the 12-year deliverability standard and to determine whether, in fact, any relaxation of the rule is warranted. The reopened proceeding could also deal with the production allocation and allowable take problems posed before the Supreme Court in *Northern*

Natural Gas Co. v. *State Corporation Commission of the State of Kansas*, No. 62. Opinion issued February 18, 1963. Since all of the 76 communities proposed to be served presently have ample supplies of fuels other than natural gas, reopening of the record herein would work no hardship on them.

Northern's Rebuttal.—The record readily demonstrates that it would not be in the public interest to require Northern to maintain a 12-year full line load life because such deliverability coverage cannot be maintained without a serious oversupply which would be costly to the ultimate consumer. Northern has an adequate gas supply to meet the peak day and annual requirements of its expanded markets as proposed in this proceeding. The various matters which the Coal Interest contends that they should be further explained are matters upon which a full and complete record has already been made. The recent decision of the Supreme Court in the Kansas case affords no basis for reopening this record, because the decision is not relevant to any issue in the instant proceeding.

The Opinion of the Experts.—Mr. Grimm, Northern's Manager of Gas Supply, testified that Northern's market is a growing rather than a static market and that Northern's dedicated reserves come from reservoirs in various stages of depletion and possess a wide range of characteristics. Northern's gas supply is made up of both associated and non-associated gas and includes some casinghead gas, the latter having a relatively short life as compared to dry gas preserves. Considering the factors as they affect Northern's operations, Mr. Grimm demonstrated that if Northern is permitted a range of nine to eleven years of full line load or deliverability life, Northern will be able to maintain a maximum reserve status without serious oversupply problems and will be able to negotiate new gas purchase contracts on a more favorable basis both from the standpoint of price stabilization and volumes purchased. Mr. Grimm stated that in his judgment, Northern could assure its customers adequate gas supplies in the future at lower cost under a flexible full line load situation than is possible under a rigid 12-year full line load requirement. He said that recently discovered and uncommitted reserves in the areas tributary to Northern's pipeline system are plentiful; that these areas are by no means fully explored or developed and will be a source of new supplies for many years in the future. Northern's gas supply is obtained from the Hugoton-Panhandle area of Kansas, Oklahoma and Texas, the Anadarko Basin area of Kansas, Oklahoma and Texas, and the Permian Basin area of West Texas and Southeastern New Mexico. Individual fields range in size from the Hugoton field, the largest, single gas reservoir in the United States, down to various smaller areas. As of December 31, 1961, total proven reserves dedicated to Northern are estimated to be 12.196 trillion cubic feet of gas. These dedicated reserves will enable Northern to meet the combined peak day, average day and annual requirements of its presently certificated and anticipated increased markets as proposed in Docket Nos. CP62–85 and CP62–178 for a period of ten years without a deficiency. On the basis of the total expanded markets Northern has a Reserve Life Index of 20.1 years.

Mr. Nelson, Staff witness, testified that until 1959, there was no indicated minimum deliverability life set by the Commission although it had indicated dissatisfaction in certain cases with gas supply showings. In the Midwestern opinion issued in G–16841, May 12, 1959, the Commission stated that a 12-year deliverability life was the minimum requirement to satisfy the "adequacy criteria" as to gas supply, but did not explain the reason for choosing the figure of 12 years. The witness said that in his opinion three points should be considered in setting up a deliverability life standard: effect on rate of return

of pipeline companies, effect on producers, and the effect on consumers. On cross-examination, Mr. Nelson said that under present conditions Northern could get along with approximately nine years, and might be able to maintain nine-year deliverability in the near future. He suggested that the Commission should give the various pipelines an opportunity to build up to the 12-years deliverability if they are now below 12 because of take-or-pay, and with the reduction of the 100% provisions to 80% there would be the opportunity for them to grow back up to 12-years deliverability.

Finding.—It is noted that the Coal Interest are the only party that questions the adequacy of Northern's gas supply. They urge that Northern be required to maintain 12 years of deliverability or full line load life. Yet, should a shortage of gas occur in that area the Coal Interest business would only benefit from such deficiency. On the other hand, the other parties herein, all customers of Northern showed no concern over foreseeable gas shortages. The testimony of the Staff witness and the testimony of Mr. Grimm respecting the adequacy of Northern's gas supply is compatible. Mr. Nelson recommends that the Commission adopt a flexible approach toward the problem of deliverability life of the reserves dedicated to natural gas pipelines, particularly in regard to established pipeline companies such as Northern. He recognizes that under present conditions with producer sales contracts reflecting a 1 to 7300 or 1 to 8000 ratio, pipeline companies cannot continue to maintain 12 years of deliverability life without increasing the cost of gas sold. Mr. Nelson suggests that ultimately the solution to the problem is modification of the take-or-pay-for provisions in producer sales contracts but he recognizes that such modification cannot and should not be accomplished in this proceeding.

We are not concerned herein with the broad aspects of gas supply reserves. In issue is whether Northern has sufficient gas reserves and a sufficient gas supply potential to meet the additional gas requirements of the service proposed for the 76 new communities and at the same time not jeopardize the rest of its system. On the basis of this record it is found that Northern does have adequate gas resources to meet the anticipated requirements of its expanded markets as proposed in this proceeding. Such expansion will not jeopardize the rest of Northern's system.

Branchline Feasibility

Northern's Presentation. The economic feasibility of Northern's project to initiate natural gas service to the proposed 76 communities has been tested by a comparison of Northern's incremental revenues in the third year of service with Northern's incremental cost of service in the same year, including a 6.25% return on Northern's additional plant investment. Northern's computations were supported by a competent industry witness and accepted in substance by the Commission's Staff. The record shows that the revenues from the proposed new service will exceed incremental cost of service by $456,070. The proposed service will benefit Northern's system operations and the consumers served from its system. Northern's showing in this regard is consistent with the requirements of Section 157.14, Exhibit N of the Commission's Regulations under the Natural Gas Act and, in light of the facts of record, is adequate. In the selection of the 76 communities proposed for service, Northern applied the criteria initially adopted by the Commission in *Northern Natural Gas Company*, Opinion No. 324, 22 FPC 164. This opinion provides for contributions in aid of construction for a given branchline *only* if the estimated annual revenues from the sale of natural gas to communities served from a given branchline in the third year of service do not cover (1) the estimated variable cost of gas delivered to the town border measuring station, (2) the cost of service including return attributable to the

branchline and measuring stations, and (3) some additional revenue to defray the mainline cost of service.

Each of the 29 branchlines proposed by Northern in this proceeding meets or exceeds the branchline criteria of Opinion No. 324 and yields some additional revenues to defray Northern's mainline costs. The estimated net revenue from the individual branchlines ranges from a high of $47.94 Mcf of contract demand to a low of $2.23 per Mcf of contract demand. Under the criteria of Opinion No. 324, no contributions in aid of construction are required and none has been requested by Northern from the proposed distributors.

Staff Position. Staff witness Wassom presented testimony outlining the criteria he would recommend to test the economic feasibility of the lateral extensions in this proceeding. It was Staff witness' opinion that in the third year of service each individual lateral's revenues must be greater than its associated costs. Such costs would be the sum of the average purchased gas costs, the out-of-pocket transportation costs, and the lateral line cost of service, including measuring station facilities. Such excess revenues would, under his criterion, be available to pay something in addition to the out-of-pocket transportation costs toward the cost of service of the mainline facilities. He further indicated that it is impossible to determine, with any degree of exactness, what the new customers' "proper or equitable share" is of the mainline incremental cost of service. It would appear that a proposal that each lateral or branchline carry a fixed amount of mainline costs is tantamount to saying that a specific set of facilities is associated with this same lateral. The Commission has consistently rejected allocation methods which would in effect assign costs of particular mainline facilities to a specific customer (see *Battle Creek Gas Co.* v. *F.P.C.*, 281 F. 2d 42). Staff's position is that every lateral or branchline must independently produce revenues sufficient to meet incremental lateral facility costs with something beyond that to be applied on mainline costs.

In proposing any feasibility test, four primary interrelated factors must be considered: (1) the pipeline companies' financial integrity must be protected; (2) the existing customers must not be submitted to undue burdens; (3) the pipeline company must be allowed to expand its system in an orderly fashion, in order that it might render natural gas service in an efficient and economic manner, and (4) a lateral line policy which would unreasonably restrict the growth of major pipelines and prevent service to growing communities would not be in the public interest.

Assuming that Northern's cost and revenue data were reasonably accurate, Staff witness determined that each of the several laterals Northern proposes to construct to serve the 76 communities meet the proposed staff criterion and yield an excess.

Position of Joint Interveners. The rebuttal case of the Joint Interveners was directed towards the issue of economic feasibility and consisted of the testimony of five witnesses, seven exhibits and one item by reference.

Joint Interveners contend that proof of the economic feasibility to the pipeline of a proposed extension is one of the minimum requirements for a showing of public convenience and necessity. *El Paso Natural Gas Co.* 26 FPC 687, 688 (1961). The burden of proving this requirement is on an applicant. This principle has long been recognized. *Kansas Pipe Line & Gas Co.*, 2 FPC 29, 55 (1939). The feasibility test now applied by Northern in this proceeding is unduly discriminatory and preferential between rate zones on Northern's system, between present and new customers and among pipelines in the general market area. The Commission, in *Northern Natural Gas Company*, 14 FPC 11 (1955), established zone rates on Northern's system. It prescribed a 2-cent differential between zones at a 70 percent load factor. The rates therefore for Zone 2 were

two cents per Mcf higher than Zone 1 and Zone 3 rates were four cents per Mcf higher than Zone 1 based on a 70 percent load factor. Subsequent to this change Zones B and C were established on Northern's system with rates six cents and eight cents higher than Zone 1 at a 70 percent load factor. Each successive zone is further north on Northern's system and further away from the gas supply than the preceding zone. Northern's present feasibility test does not, however, give recognition to the basis for the existing rate differentials between zones. The feasibility test applied by Northern produces different results based solely on the location of a branchline. This difference in treatment unreasonably discriminates against the lower rate zones on Northern's system and gives an undue advantage to the higher rate zones. Northern's feasibility test unreasonably discriminates among pipelines because it places Northern in the unique position of being able to invest more money to serve a new community without cost to the community than any other pipeline in the general area.

Position of Milwaukee Gas Light Co. Joint Interveners who are present customers of Northern Natural are in the position of having already accepted the benefits of Northern Natural's branchline formula to provide natural gas to their own communities, now argue that the Wisconsin communities should be denied the application of the same formula. Northern States Power attached six new communities pursuant to Opinion 324 and Iowa Power and Light attached 21 new communities. Until these objectors show a clear and substantial difference between selling natural gas in small communities in Wisconsin and selling to similar communities in Minnesota and Iowa, their self-serving objections should be dismissed. It would be improper at this juncture to change a lateral line policy which has made it possible for so many midwestern communities to receive this natural resource and, at the same time, has been in no small measure responsible for Northern Natural's continued prosperity. The only new matter raised by the Joint Interveners in this docket that wasn't passed upon in the earlier case is that Zone 2 rates be used in computing revenues from communities which pay Zone 3 rates. Milwaukee Gas Light Co. contends that this is an attempt to rationalize a result which the Joint Interveners would like to attain, to wit: a substantial contribution by the Wisconsin distributors. In the first place, it has no relationship to the actual revenues generated by the sale of gas in the new communities. Secondly, and more important if the standards of actual revenues and actual rates are to be abandoned, ficticious markets might just as logically be used. The fundamental fallacy in this approach is that it fails to recognize that the zone rate differential covers *both main and branchline differential costs.* The cost of delivering gas throughout the zone, and not only in areas adjacent to the mainline extension, is included in the higher zone rate and the customer who pays this higher cost is, therefore, entitled to a more expensive lateral if necessary to effect delivery. Undue discrimination would result if this were not true.

Findings. The base zone feasibility test proposed by the Joint Interveners would require many distributors to make substantial contributions in aid of construction despite the fact that such contributions are not needed to make Northern's proposal herein economically feasible.

Northern and the proposed utility customers have demonstrated that the proposed markets have reasonably estimated and in fact are attainable. The project as a whole will yield third year incremental revenues in excess of third year incremental cost of service including a 6.25 percent rate of return. In the face of this favorable economic showing which adequately protects the financial integrity of Northern and which casts no burden on Northern's present customers, there is no justification for adopting a more stringent branchline test than the one prescribed by the Commission in Opinion No. 324. The Opinion requires

contributions in aid of construction by a proposed distributor only if Northern's third year revenues on a given branchline do not equal third year branchline and applicable measuring station cost of service plus the cost of gas. Each of the 29 branchlines proposed in Docket No. CP62–85 meet or exceed this test. The test prescribed in Opinion No. 324 does not require a branchline in any zone to yield excess revenues to defray mainline cost of service. Under the base zone feasibility test of the Joint Interveners only communities located in Zone 2 would meet the requirement because only a Zone 2 community would have its feasibility tested by the same rates which it would in fact pay for gas service. Conversely, communities located in Zones 3, B or C would have their feasibility tested by rates substantially lower than they would actually pay. This means that communities located in Zones 3, B or C would in fact be required to make a substantial revenue contribution to mainline costs in order to qualify for service.

The Joint Interveners complain that the branchline formula prescribed in Opinion No. 324 ignores the differential between rate zones. The only way in which the differential between rate zones can be given effect is to recognize that a distributor in Zone 3, B or C pays higher rates than one located in a lower rate zone. Opinion No. 324 achieves this objective by using applicable zone rates to test the feasibility of each branchline.

The Joint Interveners failed to substantiate their claim that the branchline test prescribed by Opinion No. 324 unlawfully discriminates against present customers in favor of new customers. *Cf. Minneapolis Gas Company* v. *F.P.C.* 278 F. 2d 870 cert. denied 364 U.S. 891. It is impossible to achieve with mathematical precision perfect equity between old, recent and prospective customers of any pipe line. At best zone rates are a method of rendering substantial equity between customers in reference to the location of their markets and the source of supply. The Opinion 324 Branch Line Formula is the current best means of achieving equity on the basis of averaging estimated costs and revenues from all of the markets on a particular branch. As a practical matter, it has worked well. Where it has been applied estimates have become actual, and Northern Natural is enjoying reasonable rate of return on the incremental facilities costs. No undue burden has been cast upon the old customers and the new service adds to the financial health of the entire system.

The Interruptible Loads

The Coal Interest argue that in almost every major branchline extension proposed herein the distributors are relying heavily upon the assumption that large sales of gas would be made on an interruptible basis. Northern in making its branchline feasibility studies has assumed that these interruptible sales will be made. It is therefore appropriate for the Commission to once again insist that where interruptible sales are relied upon the distributors obtain signed contracts with the anticipated interruptible customers. Northern proposes to build 29 branchlines. There are interruptible loads on 17 of the these lines. The most uneconomic branchline is the extension into the Bloomer, Wisconsin area. Should the distributors along that line not attach the anticipated interruptibles, an annual deficit would occur. The Richland Center, Wisconsin, and Lake City and Winthrop, Minnesota, extensions and the Belleville branchline may also be marginal operations.

The Joint Interveners propose that Northern shall serve the Bloomer, Richland Center, Sparta and Winthrop branchline communities only if prior to the commencement of construction of the branchline involved, the distributors serving those communities obtain and file firm contracts with each of the large

volume interruptible customers included in the estimated third-year market estimates applicable to said communities stipulating that they will convert their facilities to burn natural gas for the purpose and in the general amount indicated in the market estimates prior to the start of the third year of service and further provided that prior to commencement of construction of the branchline involved, the distributors serving those communities make contributions to the cost construction of the branchline. In the event that a distributor serving a community on said branchlines does not obtain said contracts with large volume interruptible customers prior to commencement of construction of the branchline involved, Northern shall serve said communities if prior to construction of the branchline the distributor serving those communities makes a contribution to the cost of the construction of the branchline.

The Staff points out that in the often cited case of *Kansas Pipe Line & Gas Co., et al.*, 2 FPC 45, the Commission said that there was *no* reason to require applicants to submit *firm commitments* for the sale of natural gas *in all cases.* This ruling is sufficiently flexible to give us a certain latitude. In the cases cited by interveners it was clear that the service was not feasible without sale to the large interruptible industrial market. (*Cf. Iron Ranges* 22 FPC 164, 174; *Atlantic Gulf Gas Co.* 10 FPC 79, 83; *Midwestern Gas Transmission Co.*, 22 FPC 775, 792, 796.) The Staff submits that it can find no merit in a proposal which would virtually remove the Commission from its statutory responsibility of determining whether a project is economically feasible on the basis of estimates. There have been cases where some industrials have not signed but there are other cases where industrials that were not even suggested by the applicant have also been signed. So radical a remedy as proposed herein by interveners should only be adopted by a showing that Commission practice has resulted in a widespread failure of estimates and some actual grievance resulting therefrom. Experience has not demonstrated any such wide divergence between estimates and the capacity of major lines to build feasible branch projects.

Finding. In the Commission's decisions which required contracts in advance, the loads were very large and of such major importance that they could be dealt with considerably in advance of the time when gas might become available. The problem is quite different in dealing with the generally small interruptible loads involved herein. On the basis of this record, there is no factual justification for the recommendation that the proposed distributors be required to obtain signed contracts from *all* prospective industrial customers prior to branchline construction by Northern. The Joint Interveners have expressed fear that industrial sales may not materialize. They have not shown that such fear has been the result of either their own experience or the experience of Northern. Evidence shows that as a general rule industrial plants are reluctant to sign contracts prior to the time a distribution system is in actual operation. Northern's experience demonstrates that most industrial plants are connected and begin receiving natural gas after the first year of operation of a new distribution system. Nor is there any reason to expect an industrial plant to contract for the purchase of natural gas substantially in advance of the time when gas will be actually available. In these circumstances the requirement of a signed contract with industrial plants prior to branchline construction by Northern will place a hardship on the proposed distributor. Staff Counsel has correctly analyzed previous Commission decisions on this point. Nothing in those decisions would support the conclusion that signed contracts in advance of branchline construction should be the general rule in the instant proceeding. The next chapter will deal with two special cases of the Wisconsin-Southern and American Gas Companies.

Market Estimates

The market estimates in this record will be evaluated in light of the prior finding that: (1) The base zone feasibility test advocated by Joint Interveners is not applicable in this proceeding, and (2) Signed contracts from prospective industrial customers will be required only in extreme instances.

American Gas Co. of Wisconsin, Inc. On July 31, 1962, this company filed an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Northern to establish physical connection between its existing transmission facilities and certain proposed facilities of Applicant and to sell and deliver natural gas to Applicant for resale in the communities of Ladysmith, Bruce, and Weyerhauser, Wisconsin.

There is no existing gas distribution facilities in any of the three communities proposed to be served by Applicant. Applicant proposes to construct the distribution systems in the communities of Ladysmith, Bruce, and Weyerhauser at a cost of $541,870 which will be financed by the issuance of bonds. Cost of additions estimated to be required during the second and third years of operation in the amounts of $35,550 and $23,160, respectively, will be financed out of earnings. The total estimated cost at the end of three years operations will be $600,580.

Northern, in its answer to the application, states that service to the three above-mentioned communities was not proposed in CP62–85 or in its amendment to CP62–85. However, Northern moved on the record to amend its application in Docket No. CP62–85 to include service to the three communities.

The branchline required to bring gas to Ladysmith, Bruce, and Weyerhauser is actually an extension of the so-called Rice Lake branchline proposed to be constructed by Northern. It is proposed to intergrate the operation of the Ladysmith, Bruce, and Weyerhauser systems with the operations of a 15-town project which is presently under construction and which will obtain its gas supply from the Mid-western Gas Transmission Company under Docket No. CP62–104. The three towns have combined population of approximately 47,308 and are located due east of Northern's proposed extension to Rice Lake, Wisconsin.

The prospective industrial customers are all located in Ladysmith. The anticipated interruptible sales will amount to a total of 525,400 Mcf annually. By far the largest prospective industrial customer is Peavy Paper Mills, accounting for 346,000 Mcf volume or $117,640 in revenues.

There is considerable discussion in the record as to whether American Gas can sell to Peavy Paper Mills on a competitive basis with other fuels. It appears that industrial sales will constitute about 75% of total sales, of which Peavy Paper Mills is the main customer. The witness for American Gas indicates that he made contact with potential industrial customers. However, there is no evidence that signed contracts have been obtained from such customers. This falls within the rule in the *Kansas Pipe Line & Gas Co.* case, 2 FPC 29 at p. 45, that where a substantial percentage of sales from a branchline depends upon a large volume customer, the Commission will require firm contracts. An exception can be made for American's smaller industrial customers, but not for Peavy Paper Mills, which is expected to use 346,000 Mcf of gas. Therefore, it is found that as a condition to the issuance of a certificate to American Gas Co., that firm commitments be obtained from the Peavy Paper Mills. If that condition were met the project becomes economically feasible and the requested authorization for service to the three communities by American Gas Co. will be granted.

Wisconsin Southern Gas Co., Inc. On July 12, 1962, this company filed an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Com-

mission directing Northern Natural Gas Company (Northern) to establish physical connection between its existing transmission facilities and certain proposed facilities of Applicant and to sell and deliver natural gas to Applicant for resale in the city of Prairie du Chien, Wisconsin, as hereinafter described, or as more fully described in the application herein.

Applicant states that it has been informed by Northern that in order to supply natural gas to Prairie du Chien, Northern will be required to construct a 26½ mile 6-inch lateral from a point near Fennimore, Wisconsin, on Northern's proposed Cuba City-Richland Center line. Applicant is advised that the cost of such lateral is estimated by Northern at approximately $622,000, that the town border station at Prairie du Chien will cost approximately $22,000, and that the cost of enlarging the Cuba City-Richland Center line will be approximately $57,000.

Applicant will construct a distribution system for service to Prairie du Chien at a total estimated cost of $298,689. Applicant will finance its project through temporary bank loans. It appears that prospective industrial sales will amount to 191,537 Mcf and total sales to 363,037 Mcf.

On the basis of the percentage of industrial load to total sales and calculations which assume the absence of the industrial interruptible load and the revenues attributable thereto, it appears that the project would not be economically feasible without such load. The Staff recommended as a condition to the issuance of a certificate to Wisconsin Southern that firm commitments be obtained from the prospective industrial customers.

In rebuttal Wisconsin Southern submitted that no contracts should be required for interruptible loads. No special contract requirements should be imposed upon Wisconsin Southern with respect to interruptible loads at Prairie du Chien. Many communities have larger interruptible loads than Prairie du Chien. Wisconsin Southern is an established, financially sound and successful gas distributing company in Wisconsin. Estimates for Prairie du Chien, including interruptible gas, are reasonable and reliable. Wisconsin Southern has a low interruptible rate. It is impracticable to secure contracts two and three years in advance. The project at Prairie du Chien has been approved by the Public Service Commission of Wisconsin. Both Northern and Wisconsin Southern are willing to make the investments required to serve Priarie du Chien. To impose special contract requirements at Prairie du Chien would constitute discrimination. The time involved to secure contracts may upset Northern's Construction program. If Prairie du Chien does not get natural gas in this proceeding it will lose its only chance for natural gas service.

Wisconsin Southern prepared a table comparing the percentages of interruptible loads to total sales in the third year of operations proposed for the other communities in this proceeding. This comparison fails to distinguish between the large volume and the small volume of interruptible loads. The company relies on a letter from its large prospective industrial customer—Burgess Cellulose. The manager of said company said that they "would be interested in natural gas when it is available". However, this particular prospective industrial load is the subject of some controversial cost comparisons:

> Q. You say "For instance, in the case of Burgess Cellulose Company the coal cost per 1,000 [100,000] BTU's is 3.62 cents, while the equivalent gas cost is 4.10 cents, but the annual coal cost is $29,686.08, compared with $29,831.60 for gas."
>
> Now, are you saying that that is a valid comparison sir?
>
> A. It would be the—it would be on the total fuel usage, yes. [Tr. 1390]

The evidence in this record as applicable to the Burgess Cellulose Company is not satisfactory. Under these circumstances it is found that as a condition to the issuance of a certificate to Wisconsin Southern firm commitments be obtained for the Burgess Cellulose Company gas load. If this condition were met, the project would be economically feasible, and the authorization for service by Wisconsin Southern should be granted.

The Other Communities. The market evidence in this record demonstrates that the estimates of peak day and annual sales for the other new communities are both reasonable and attainable.

Northern satisfied itself with the estimates submitted by the distributors respecting the total peak day and annual sales in the third full year of service. To this end, upon receipt of the market estimates submitted by various utilities, Northern made a "working" market estimate for each community based on a field survey of the community by Northern personnel and historical fuel use factors and meter saturations developed from a study of nearly 150 communities connected to Northern's system since 1950. Northern's "working" market estimates were then checked against the estimates submitted by the utilities for the various communities. If there was no great disparity between the two, Northern accepted the utility estimate as being reasonable and attainable despite the fact that the individual factors employed by the utility might not in all instances agree with the individual factors used by Northern.

If, on the other hand, there was a substantial disparity between the estimates, Northern further analyzed the market data submitted by the utility to ascertain the elements of the underlying calculation which caused the difference. If no reconciliation could be affected, the community was not proposed for service. Even though the City of Tipton, Iowa, a 7(a) applicant, was feasible for service under the branchline test utilized by Northern in this proceeding, Northern refused to propose the City of Tipton for service because it was felt that the market estimates submitted by the witness for the City were not reasonable and attainable. Thus, Northern presented its own market estimates for the City of Tipton. Northern's witness estimates a third year contract demand of 914 Mcf per day and annual sales in the third year of 139,534 Mcf. The record indicates that Northern is willing to initiate service to the City of Tipton, but only on the basis of the above figures. This was consented to by the City of Tipton.

All of the other proposed distributors sponsored detailed exhibits and testimony which demonstrate the need for natural gas in the communities here proposed for service and that there is indeed a market for the gas estimated to be sold. As stated before, this proceeding pertains to 76 communities, of which 47 are in Wisconsin, 15 in Minnesota, 13 in Iowa and 1 in Nebraska.

The Public Service Commission of Wisconsin filed a brief contending that the present or future public convenience and necessity requires that service to all the 47 Wisconsin communities should be granted. Also, all Wisconsin distributors herein have obtained certificates of authority from the Public Service Commission of Wisconsin authorizing them to construct and serve in the communities involved. These certificates were obtained after full public hearing before the Wisconsin Commission.

Joint Interveners, Milwaukee Gas, Minnesota Valley Natural Gas, Wisconsin Power and Light, Iowa Electric Light and Power, The American Gas Co. of Wisconsin, The City of Tipton and Wisconsin Southern Gas, submitted evidence and filed briefs and memoranda requesting approval of the proposed service to their own respective communities. The distributors for the original 71 communities have all executed service agreements reflecting their first, second and third year contract demands. All of the 7(a) applicants, including the

City of Tipton, have expressed a willingness on this record to execute similar service agreements reflecting the contract demands which Northern considers to be reasonable for each of their proposed communities.

The market estimate for the Bloomer lateral does not leave much margin for error. The potential industrial customers are expected to use 1,382,000 Mcf of gas annually. It appears that it would require at least one million Mcf of large volume industrial sales to enable the Bloomer line to show any revenue surplus. After giving due consideration to all the doubts raised by the Coal Interest, it is nevertheless found that Northern's estimates command much reliance. This record contains considerable data about Northern's experience in connecting some 170 similar communities in the last four years. This experience shows that communities connected in 1959 and 1960, after the first full year of natural gas service, attained a heating saturation of 27.4% based on dwelling units. The 71 communities proposed in this docket have an estimated residential heating saturation of 29.2% at the end of the first full year of gas service. After the second full year of service, the actual experience of comparable communities is 40.7% heating saturation, whereas the 71 new communities proposed in this docket estimate 37.1% saturation. That is, the estimated saturations are 9% less than the actual experienced saturations attained in comparable communities.

Northern's policy witness Sampson is definitely optimistic about these new communities:

> We feel we can make money on the new towns. In addition, though, you have to look at the well being of the area, and I am still on the financial well being. Our market territory is made up of hundreds of quite small agricultural communities. The financial well being of our metropolitan centers such as Omaha, Sioux City, Des Moines, et cetera, are highly—is highly dependent upon the agricultural economy of our territory.
>
> They draw very heavily for business from these small towns. [Tr. 2172.]
>
> * * * * * * * *
>
> As a marketing official of the company, I feel in the long run these communities will definitely contribute over the years to the financial well being of Northern and to the present customers, too.
>
> I think they will begin contributing. We build branchlines of such size, and are here proposing to build branchlines of sufficient size to take care of the requirements in the eighth or tenth year. We use a feasibility formula of the third year, so if these towns get six or seven years of growth under their belts, they would definitely present a better picture. [Tr. 2173.]

In general, interveners' proposal for signed contract for large volume industrials has merit as an expression of concern that projects which are substantially dependent upon such sales should not be certified without careful scrutiny of the revenue effect on feasibility. In this proceeding the distributors have adequately supported their estimated sales to anticipated industrial customers. On the basis of the previous experience of these distributors, particularly the experience of the Wisconsin distributors in dealing with particular industrial markets in Wisconsin, there is a basis in this record for anticipating that most of the estimated industrial sales will in fact be made. On the other hand, it is clear that if distributors are required to secure signed contracts with industrial customers prior to construction by Northern, they will be forced to negotiate at the most inopportune time which will place an undue hardship on the distributor. With the exception of the Peavy Paper Mills and the Burgess Cellulose Company instances, the voluminous evidence in this proceeding justifies Northern's optimism. It is in the public interest to avoid the cumbersome contract requirements

wherever possible. However, the requirement for firm contracts appears unavoidable with respect to the Peavy Paper Mills and the Burgess Cellulose Company. The estimates applicable to these two large industrial customers must be augmented with firm commitments. Otherwise, Northern has demonstrated by its evidence that it has satisfied the conventional elements of public convenience and necessity. It is able and willing to perform the service proposed herein. Section 7 of the Act warrants the grant of the certificates requested by applicant in the instant case, but subject to the above conditions, and that the 7(a) applications should be dismissed as moot.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record in these proceedings, it is specifically found and concluded, in addition to the findings and conclusions heretofore stated that:

1. Northern Natural Gas Company, a Delaware Corporation having its principal place of business at Omaha, Nebraska, is a "natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its Order of April 6, 1943, *In the Matter of Northern Natural Gas Company*, Docket No. G–280 (3 FPC 967).

2. At Docket No. CP62–85, Northern proposes to expand and extend its pipeline system and to initiate natural gas service to 76 communities located in the States of Iowa, Nebraska, Minnesota and Wisconsin. Northern proposes to supply these new communities with contract demand in the amount of 24,807 Mcf per day for the first year of service, 41,631 Mcf per day for the second year and 53,454 Mcf per day for the third year, which contract demand volumes will be supplied from Northern's Redfield, Iowa underground storage field. Upon completion of these facilities Northern will have a system salable capacity (unadjusted) of 1,876,973 Mcf per day.

3. To render the additional service proposed at Docket No. CP62–85, Northern proposes to construct and operate 14.1 miles of 26-inch mainline loop east of its Waterloo, Iowa compressor station and the necessary branchline and measuring stations. The total estimated cost of this construction is $17,883,500.

4. At Docket No. CP62–178 Northern proposes to construct and operate additional facilities required to provide certain of its existing utility customers 34,718 Mcf per day of increased contract demand for the 1962–63 heating season. These additional volumes of contract demand will be supplied from Northern's Redfield, Iowa underground storage field.

5. To supply the 34,718 Mcf per day of additional contract demand in Docket No. CP62–178, Northern proposes to construct and operate 3000 HP of compression at its Redfield, Iowa compressor station and to turbo-charge 2 existing 2000 HP units at the same station to 2700 HP each. In addition, Northern proposes to construct and operate 2.4 miles of 30-inch pipeline loop north of South Sioux City, Nebraska and 450 feet of 12–inch connecting line. The estimated cost of these additions is $1,853,400. Upon completion of these facilities, Northern will have a system salable capacity (unadjusted) of 1,911,691 Mcf per day, inclusive of the third-year contract demand for the 76 new communities.

6. Northern also proposes at Docket No. CP62–178 that the authorized maximum inventory for the St. Peter-Elgin Reservoir be increased from 40 billion cubic feet to 50 billion cubic feet and that the maximum authorized inventory for the Mt. Simon Reservoir be increased from 56 billion cubic feet to 70 billion cubic feet.

7. Northern's gas reserves are reasonably estimated to be 12.196 trillion cubic feet as of December 31, 1961, which will enable Northern to meet the combined peak day, average day and annual requirements of its presently certificated and

anticipated increased markets as proposed in Docket Nos. CP62–85 and CP62–178 for a period of 10 years. Northern's gas supply is adequate to meet the anticipated requirements of its expanded markets as here proposed.

8. With regard to Docket No. CP62–178, Northern has established an adequate market for the increase in contract demand for certain of its present customers, that its facilities are properly designed and adequate to render the service proposed, that the costs are reasonable, that its underground storage is fully capable of supplying the increased volumes, that the maximum inventories should be increased as requested, that it can be financed and that the project is feasible.

9. With regard to Docket No. CP62–85, Northern has proven that its facilities are properly designed and adequate to render the service, that the costs thereof are reasonable, that its underground storage is fully capable to supply the volumes of contract demand proposed and that the project can be financed.

10. Northern has an adequate market and the market estimates presented as to peak day and annual sales for the 76 new communities are generally found to be reasonable and attainable.

11. The issuance of a certificate to American Gas Co. shall be conditioned upon obtaining a firm commitment from the Peavy Paper Mills to purchase industrial gas. The issuance of a certificate to Wisconsin Southern Gas Company shall be conditioned upon obtaining a firm commitment from the Burgess Cellulose Company to purchase industrial gas. Otherwise, Northern has proven that its project in Docket No. CP62–85 is economically feasible without the need for contributions in aid of construction by any distributor.

12. Since Northern now proposes to initiate service to all communities proposed by the 7(a) applicants herein, all such applications filed pursuant to Section 7(a) of the Natural Gas Act should be dismissed; provided that service to the City of Tipton, Iowa shall be conditioned upon the City executing service agreements with Northern for the volumes of contract demand as proposed by Northern.

13. Northern is able and willing to render the service proposed at Docket Nos. CP62–85 and CP62–178.

14. The additional contract demand service Northern proposes to render to the 75 communities covered by its application as amended and the construction and operation of the necessary facilities as proposed at Docket No. CP62–85 are required by the public convenience and necessity and a certificate therefor should be issued.

15. The increased volumes of contract demand Northern proposes to supply to certain of its existing customers covered by its application as amended, the construction and operation of the facilities as proposed in Docket No. CP62–178 and the increase in maximum inventories for its storage reservoirs are required by the public convenience and necessity and a certificate therefor should be issued.

16. Northern is hereby authorized to acquire by purchase the branchline and measuring facilities constructed by North Central Public Service Corporation to serve the community of Monroe, Wisconsin in accordance with Docket No. CP62–292.

ORDER

Wherefore, *It is ordered*, Subject to review by the Commission, that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Northern Natural Gas Company to construct with reasonable dispatch the proposed facilities hereinbefore described, and as more fully described in the applications in Docket Nos. CP62–85, CP62–178, CP63–34, CP63–11 and CP63–54 in these consolidated proceedings and to operate such

facilities for the transportation and sale of natural gas in interstate commerce for resale, all as more fully described in said applications subject to the jurisdiction of the Commission and upon the terms and conditions of this Order. Such certification also includes: authorization to Northern to acquire, by purchase at original cost and subject to conditions hereinafter set forth, the branchline and measuring facilities constructed by North Central Public Service Corporation to serve the community of Monroe, Wisconsin in accordance with Docket No. CP62-292; permanent authority to sell an additional 34,718 Mcf of contract demand to existing utility customers and to construct and operate the facilities necessary therefor; and authority to increase the maximum inventory of natural gas in the St. Peter-Elgin Reservoir and the Mt. Simon Reservoir of its Redfield, Iowa Underground Storage Field to 50 billion cubic and 70 billion cubic feet, respectively, and to supply up to 280,000 Mcf per day of contract demand from such storage.

(B) The certificates issued by paragraph (A) above and the exercise of rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued to Northern in (A) above shall be further conditioned as follows:

(i) The issuance of a certificate to serve American Gas Co. is conditioned upon obtaining and filing with the Commission by January 1, 1964, a firm signed contract covering the sale of natural gas to Peavy Paper Mills, which contract shall be satisfactory to the Commission.

(ii) The issuance of a certificate to serve Wisconsin Southern Gas Company is conditioned upon obtaining and filing with the Commission by January 1, 1964, a firm signed contract covering the sale of natural gas to the Burgess Cellulose Company, which contract shall be satisfactory to the Commission.

(D) The certificate issued in paragraph (A) shall be deemed accepted and of full force and effect, unless refused in writing and under oath by Northern.

(E) Northern shall report to the Commission in writing, under oath, the date of commencement of service to be rendered to the various communities named herein.

ALLEN C. LANDE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PLACID OIL COMPANY, DOCKET NO. G-13183; OCEAN DRILLING & EXPLORATION COMPANY, DOCKET NO. G-17342; OCEAN DRILLING & EXPLORATION COMPANY (OPERATOR), ET AL., DOCKET NO. G-17343

ORDER DENYING STAY TO PROVIDE OPPORTUNITY FOR CONSIDERATION OF OFFER OF SETTLEMENT AND REJECTING OFFER OF SETTLEMENT

(Issued September 30, 1963)

On September 6, 1963, applicants in Docket Nos. G-17342 and G-17343 (ODECO) filed a motion to stay the effectiveness of Opinion No. 398, 30 FPC 283, particularly ordering paragraphs (B) and (D), to set a date for all interested parties to comment on an offer of settlement filed concurrently by ODECO, and to stay consideration of ODECO's previously-filed application for rehearing.

We have already considered and denied ODECO's application for rehearing, among others, in Opinion No. 398–A, issued September 11, 1963. Accordingly, ODECO's first and third requests are moot. Moreover, we have received comments on the ODECO offer of settlement in an answer filed on September 17, 1963, by the Pennsylvania Public Utility Commission and an outright opposition filed on September 18, 1963, by Consolidated Edison Company of New York, Inc. As Consolidated Edison points out, ODECO's proposal with respect to refunds would put it in a substantially better position than that of other parties to these proceedings who settled early in the litigation. (See *Texaco Inc.*, 28 FPC 247.) Further consideration of the offer of settlement filed by ODECO on September 6, 1963, would serve no useful purpose.

The Commission orders:

The motion to stay effectiveness of Opinion No. 398 filed by ODECO on September 6, 1963, is denied and the accompanying offer of settlement is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UTAH POWER & LIGHT COMPANY, DOCKET NO. E–7127

ORDER PROVIDING FOR HEARING AND SUSPENSION OF PROPOSED RATE SCHEDULE CHANGES

(Issued September 30, 1963)

Utah Power & Light Company (Utah Power), Salt Lake City, Utah, on September 3, 1963,[1] tendered for filing, pursuant to Section 205 of the Federal Power Act, proposed changes in its filed rate schedules purporting to increase, as of October 4, 1963, its present rates and charges for wholesale electric service to seventeen municipal and rural electric cooperative customers in the State of Utah: Kaysville City, Price City, Helper City, Strawberry Water Users Association, Brigham City, Logan City, Bountiful City, Heber Light & Power Board, Nephi City, Provo City, Monticello City, Hyrum City, Lehi City, Blanding City, Morgan City, Mexican Hat Association, and Murray City. The proffered rate schedules have been tentatively designated in the files of the Commission as follows:[2] Utah Power's Rate Schedule FPC No. 71, Rate Schedule FPC No. 72, Rate Schedule FPC No. 73, Supplement No. 3 to Rate Schedule FPC No. 37, Supplement No. 2 to Rate Schedule FPC No. 39, Supplement No. 2 to Rate Schedule FPC No. 40, Supplement No. 2 to Rate Schedule FPC No. 44, Supplement No. 3 to Rate Schedule FPC No. 45, Supplement No. 1 to Rate Schedule FPC No. 50, Supplement No. 2 to Rate Schedule FPC No. 51, Supplement No. 1 to Rate Schedule FPC No. 57, Supplement No. 1 to Rate Schedule FPC No. 59, Supplement No. 1 to Rate Schedule FPC No. 60, Supplement No. 1 to Rate Schedule FPC No. 61, Supplement No. 1 to Rate Schedule FPC No. 62, Supplement No. 1 to Rate Schedule FPC No. 66, and Supplement No. 1 to Rate Schedule FPC No. 70.

The proffered rates and charges would increase Utah Power's present rates to the aforesaid municipalities and rural electric cooperatives by approximately $136,657 per annum, or 7.1%, based upon deliveries of power and energy for the 12-month period ended June, 1963. For that 12-month period Utah Power's

[1] Although the revised rates were originally submitted on May 16, 1963, the filings were not completed until September 3, 1963, the date that the Company requested as the filing date.

[2] Applicable to the municipalities and rural electric cooperatives in the order as previously listed.

revenues from these customers aggregated $1,927,021. Applying the proffered supplemental rate schedules, Utah Power's operating revenues for service to those customers would be increased to $2,063,678. Utah Power is not proposing any other rate increases.

On March 15, 1963, Utah Power began serving the 15 former wholesale customers of Telluride Power Company (Telluride) at the rates proposed herein to Utah Power's heretofore designated 17 wholesale customers in Utah.[3] With respect to these customers Utah Power filed an aggregate of eight initial rate schedules, including newly negotiated contracts, five on May 16, 1963, two on July 25, and one on September 17, and then made seven initial filings containing rate schedules only on September 19, 1963, for the seven remaining former customers of Telluride. These initial filings embody rates identical to those proposed herein to Utah Power's 17 aforesaid wholesale customers in Utah. These initial rate filings have been designated in the files of the Commission as follows: Utah Power's Rate Schedule FPC No. 74, California-Pacific Utilities Co., Rate Schedule FPC No. 75, Kanosh City; Rate Schedule FPC No. 76, Levan City; Rate Schedule FPC No. 77, Manti City; Rate Schedule FPC No. 78, Spring City; Rate Schedule FPC No. 79, Oak City; Rate Schedule FPC No. 80, Monroe City; Rate Schedule FPC No. 81, Holden City; Rate Schedule FPC No. 82, Fillmore City; Rate Schedule FPC No. 83, Beaver City; Rate Schedule FPC No. 84, Meadow City; Rate Schedule FPC No. 85, Mount Pleasant City; Rate Schedule FPC No. 86, Flowell Electric Association, Inc., Rate Schedule FPC No. 87, Garkane Power Association; and Rate Schedule FPC No. 88, Ephraim City.

Protests have been received from seven of Utah's wholesale customers, namely, Lehi City, Morgan City, Logan City, Provo City, Monticello City, Heber Light & Power Board and Bountiful City, as well as Intermountain Consumer Power Association, representing 24 municipalities and four cooperatives. Protestants generally oppose the proposed rate increases, asserting *inter alia* that Utah Power's rates are second highest in the nation, that the rate increase is unwarranted in view of fuel costs available to Utah Power, and that Utah Power discriminates between wholesale customers with generating facilities and those without generating sources regarding terms and conditions of service. On September 19, 1963, Utah Power filed an answer to the aforementioned individual protests.

Utah's Power's aforementioned rate schedules as proposed to be changed have not been shown to be justified; may result in excessive rates or charges; may place an undue burden upon ultimate customers; and may be unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful within the meaning of the Federal Power Act. Unless suspended by order of the Commission, the proposed supplemental rate schedules would become effective as of October 4, 1963, to the extent and in the manner provided in Section 205 of the Federal Power Act and the Commission's Regulations under that Act.

Examination of the proposed supplemental rate schedules and other data currently before the Commission indicates that the rates and charges embodied therein, among other things, may produce an excessive return on Utah Power's net investment properly allocated as a rate base to its service to these 17 wholesale customers; may be based in part upon test year cost allocations that have not been shown to be reasonable or representative; and may reflect preferential

[3] By order issued January 21, 1963, *Utah Power & Light Company*, 29 FPC 128, the Commission authorized Utah Power's acquisition and merger of the facilities of Telluride with its own facilities pursuant to Section 203 of the Federal Power Act.

or discriminatory rates as to terms and conditions of service to wholesale customers with generating sources and those without generating facilities.

The Commission further finds:

In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act that the Commission, pursuant to the authority of that Act particularly Sections 205, 206, 308 and 309 thereof, enter upon a hearing concerning (1) the lawfulness of Utah Power's aforementioned filed rate schedules as proposed to be supplemented in the manner provided in its proffered Rate Schedule FPC No. 71. Rate Schedule FPC No. 72, Rate Schedule FPC No. 73, Supplement No. 3 to Rate Schedule FPC No. 37, Supplement No. 2 to Rate Schedule FPC No. 39, Supplement No. 2 to Rate Schedule FPC No. 40, Supplement No. 2 to Rate Schedule FPC No. 44, Supplement No. 3 to Rate Schedule FPC No. 45, Supplement No. 1 to Rate Schedule FPC No. 50, Supplement No. 2 to Rate Schedule FPC No. 51, Supplement No. 1 to Rate Schedule FPC No. 57, Supplement No. 1 to Rate Schedule FPC No. 59, Supplement No. 1 to Rate Schedule FPC No. 60, Supplement No. 1 to Rate Schedule FPC No. 61, Supplement No. 1 to Rate Schedule FPC No. 62, Supplement No. 1 to Rate Schedule FPC No. 66, and Supplement No. 1 to Rate Schedule FPC No. 70, and the objections thereto and the lawfulness of Utah Power's rate schedules for service to its other interstate wholesale customers; (2) that the Commission's staff undertake an examination of all Utah Power's interstate rates and charges, utility operations and system costs, and (3) that the operation or effectiveness of the seventeen proposed supplemental rate schedules set forth in (1) above under the Federal Power Act be suspended and the use thereof deferred, all as hereinafter provided.

The Commission orders:

(A) A public hearing be held concerning the lawfulness of Utah Power's seventeen proffered supplemental rate schedules, all as designated in finding paragraph (1) above, and the lawfulness of Utah Power's other interstate wholesale rate schedules on file with this Commission and the objections raised to the aforesaid proposed supplemental rate schedules, at a time and place to be specified by notice of the Secretary.

(B) Pending such hearing and decision thereon, the operation under the Federal Power Act of the proffered rate schedule supplements set forth in finding paragraph (1) above, hereby is suspended and the use thereof deferred until October 5, 1963. On that date the proffered rate schedule supplements shall take effect in the manner prescribed by the Federal Power Act, subject to further order of the Commission, unless this proceeding has been disposed of at a date previous thereto.

(C) During the period of suspension Utah Power's currently effective Rate Schedule FPC No. 21 and Supplements Nos. 1 and 2 thereto, Rate Schedule FPC No. 30 and Supplement No. 1 thereto, Rate Schedule FPC No. 31 and Supplement No. 1 thereto, Rate Schedule FPC No. 37 and Supplements Nos. 1 and 2 thereto, Rate Schedule FPC No. 39 and Supplement No. 1 thereto, Rate Schedule FPC No. 40 and Supplement No. 1 thereto, Rate Schedule FPC No. 44 and Supplement No. 1 thereto, Rate Schedule FPC No. 45 and Supplement No. 2 thereto, Rate Schedule FPC No. 50, Rate Schedule FPC No. 51 and Supplement No. 1 thereto,, Rate Schedule FPC No. 57, Rate Schedule No. 59, Rate Schedule FPC No. 60, Rate Schedule FPC No. 61, Rate Schedule FPC No. 62, Rate Schedule FPC No. 66, and Rate Schedule FPC No. 70 for service to the seventeen

aforesaid wholesale customers in Utah now on file with the Commission shall remain and continue in effect.

(D) Unless otherwise ordered by the Commission, Utah Power shall not change the terms or provisions of its seventeen proffered supplemental rate schedules referred to in paragraph (A) above or those of its currently effective rate schedules and supplements thereto on file with the Commission for service to those seventeen wholesale customers and referred to in paragraph (C) above, until this proceeding has been disposed of or until the period of suspension has expired.

(E) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37) on or before October 31, 1963.

Chairman Swidler and Commissioner Black *dissent* to limiting the suspension to one day, on the ground that the circumstances of this case warranted and in the exercise of reasonable discretion required suspension of the proposed increases in rates for the full statutory period of five months.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CALIFORNIA ELECTRIC POWER COMPANY AND SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NOS. 325, 344, 440, 474, 481, 532, 677, 711, 782, 830, 882, 1008, 1353, 1388, 1389, 1390, 1395, 1396, 1397, 1398 AND 1582.

ORDER APPROVING TRANSFER OF LICENSES OR INTEREST THEREIN AND DISMISSING APPLICATION FOR APPROVAL IN OTHER RESPECTS

(Issued October 1, 1963)

Joint application was filed on June 11, 1963, and supplemented on July 3, 1963, by California Electric Power Company, licensee for the following projects:

PROJECT NOS.

325	677	1353	1396
344	711	1388	1397
440	782	1389	1398
474	830	1390	1582
481	882	1394	
532	1008	1395	

and Southern California Edison Company, of Los Angeles, California, for Commission approval of transfer of the licenses for the above-designated projects from the former to the latter.

According to the application, the approval herein sought is part of a merger transaction between the proposed transferor and transferee. Application for authority to consummate the merger has been filed with the Commission in a proceeding designated as Docket No. E–7106. Joint Applicants herein request that Commission approval of the transfer of the licenses involved be made conditional upon consummation of the merger and be made effective as of the effective date of the merger.

The licenses for Project Nos. 481 and 677 waive Section 8 of the Federal Power Act, and consequently no Commission approval of the transfer is required.

The licenses for Project Nos. 325, 440, 474, 481, 711, 782, 830, 882, 1008, 1353, 1397, and 1582 are for transmission lines only which, according to a staff study of the function of each of such lines, are not primary lines or parts of a "project" as defined in Section 3(11) of the Federal Power Act. However, in view of the pending merger, we are approving the transfer of the licenses for these lines, subject to the requirement that the transferee obtain authority from the appropriate Government agency for the continued occupancy by the lines of the Government lands involved, and upon obtaining such authority to then apply for surrender of its licenses or interest therein for the lines.

Our records show that the licenses for transmission line Project Nos. 325 and 1397 are held jointly by California Electric Company and Imperial Irrigation District to the extent of their respective interests in the lines. Our

approval of the transfer of the licenses for these two lines is restricted to California Electric Company's interest only in the lines.

California Electric Company agrees to pay all annual charges accrued under its licenses to the effective date of the transfer of the licenses. Southern California Edison Company agrees to accept the licenses and all the terms and conditions therein and of the Federal Power Act, and agrees to be bound thereby to the same extent as though it were the original licensee of the projects herein involved.

The Commission finds:

(1) The proposed transferee is a corporation organized under the laws of the State of California.

(2) Transmission line Project Nos. 325, 440, 474, 481, 711, 782, 830, 882, 1008, 1353, 1397 and 1582 are not parts of a "project" as defined in Section 3(11) of the Federal Power Act.

(3) Approval of transfer, upon the conditions hereinafter set forth, of the licenses for Project Nos. 344, 440, 474, 532, 711, 782, 830, 882, 1008, 1353, 1388, 1389, 1390, 1394, 1395, 1396, 1398, and 1582, and of the tranferor's interest in the licenses for Project Nos. 325 and 1397 to the proposed transferee will not be inconsistent with the public interest.

(4) The joint application should be dismissed to the extent that it seeks Commission approval of the transfer of the licenses for Project Nos. 481 and 677.

The Commission orders:

(A) The transfer of the licenses or interest therein for the projects designated in finding (3) above from California Electric Company to Southern California Edison Company is hereby approved, effective as of the effective date of the merger referred to above, subject to Section 9.3 of the Commission's rules and regulations, and subject to the further condition that the net investment in the projects will not be increased on account of the transfer; provided that the transferee shall be subject to the conditions and obligations of the licenses and to all the provisions of the Act to the same extent as though it were the original licensee for the projects. Our approval respecting the licenses for Project Nos. 325, 440, 474, 481, 711, 782, 830, 882 1008, 1353, 1397 and 1582 is subject to the requirement that the transferee obtain authority for the continued occupancy by the lines of the Government lands involved, and upon obtaining such authority to then apply for surrender of its licenses for those lines.

(B) The application is dismissed to the extent that it seeks Commission approval of transfer of the licenses for Project Nos. 481 and 677.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the licenses or interests therein for the projects designated in finding (3) above by Southern California Edison Company. In acknowledgement of the acceptance of such licenses, this instrument shall be signed for Southern California Edison Company, the new licensee, and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 405

CONTINENTAL OIL COMPANY, DOCKET NO. G–16966; CONTINENTAL OIL COMPANY, DOCKET NOS. G–11337, G–13608, G–14264, G–14599, G–15236, G–15409; CONTINENTAL OIL COMPANY (OPERATOR), ET AL., DOCKET NO. G–15417

OPINION AND ORDER AFFIRMING EXAMINER'S ORDERS

(Issued October 1, 1963)*

Syllabus

1. Record here will not justify reduction of Producer's existing rates since evidence presented showed cost of service exceeded comparable revenues in years as to which evidence was presented. P. 892.
2. Present area price levels cannot be used as base for reducing rates filed prior to Statement of General Policy. P. 892.
3. Commission *rejects* suggestion that Section 5(a) proceeding be held in abeyance; no useful purpose will be served thereby since record is stale and new record would have to be made. PP. 892–893.
4. Commisson *dismisses* investigation; *terminates* certain suspension proceedings and *disallows* proposed increased rate, in proceedings arising under Section 5(a) and 4(e) of the Natural Gas Act. PP. 894; 929–930.

Daniel C. Arnold, Bruce R. Merrill, Robert E. Morse, Jr., Gene M. Woodfin, David T. Searls, Robert C. Hawley, and *Lloyd F. Thanhouser* for *Continental Oil Company.*

William R. Duff, Edward M. Barrett, and *David K. Kadane* for Long Island Lighting Company.

William R. Duff, Fred Broadfoot, Edward S. Kirby, James R. Lacey, John F. McDonald, and *J. Harry Mulhern* for Public Service Electric and Gas Company.

Henry P. Sullivan for Philadelphia Electric Company.

J. David Mann, Jr. and *John E. Holtzinger, Jr.,* for *The United Gas Improvement Company.*

Edwin F. Russell for Brooklyn Union Gas Company.

William R. Joyce, Jr., John A. Lodge, and *James O'Malley, Jr.,* for Consolidated Edison Company of New York, Inc.

Patrick G. Sullivan, Allen R. Grambling, George D. Horning, Jr., and *George J. Meiburger* for El Paso Natural Gas Company.

Harry L. Bristol for New York State Electric & Gas Corporation.

Christopher T. Boland, Thomas F. Brosnan, William E. Feldhaus and *Thomas F. Ryan, Jr.,* for Texas Gas Transmission Corporation.

Norman A. Flaningham, C. William Cooper, and *George C. Williams* for The East Ohio Gas Company, Hope Natural Gas Company, The Peoples Natural Gas Company, Lake Shore Pipe Line Company and New York State Natural Gas Corporation.

Kent H. Brown and *Barbara M. Suchow* for Public Service Commission of New York.

Harry L. Albrecht, Luke R. Lamb, William J. LeBuhn, and *W. Russell Gorman* for the Staff of the Federal Power Commission.

*Initial decision appears on p. 894.

Before Commissioners: Joseph C. Swidler, Chairman: L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

On January 26, 1956, the Commission instituted an investigation under Section 5(a) of the Natural Gas Act of the rates charged by Continental Oil Company (Continental) and by Stanolind Oil and Gas Company, predecessor of Pan American Petroleum Corporation. On November 18, 1958, the investigation of Continental was severed and consolidated with 10 other proceedings under Section 4(e) of the Act to review 12 rate increases proposed by Continental and suspended by the Commission. Three of these Section 4(e) proceedings were later severed and terminated.

The examiner's decision, issued June 13, 1963, ordered that the Section 5(a) proceeding be dismissed. It further ordered that six of the seven remaining proceedings under Section 4(e) be terminated. With respect to the seventh, involving Continental's Rate Schedule No. 107, Supplement No. 10 (Docket No. G–13608), the examiner found the proposed rate increase in excess of 14 cents per Mcf to be unjust and unreasonable. He therefore disallowed the increase and ordered it refunded with interest.

No exceptions to the examiner's orders were taken by any party insofar as the 4(e) proceedings were concerned, and we will adopt his conclusions.

Four intervenors (Long Island Lighting Company, Philadelphia Electric Company, Public Service Electric and Gas Company, and The United Gas Improvement Company) filed an exception to the examiner's dismissal of the Section 5(a) proceeding. They state that the record would justify this Commission in directing Continental to reduce all rates now on file to the applicable area price levels previously established. In the alternative they suggest that the Section 5(a) proceeding should be held in abeyance as was done in *Hunt Oil Co.*, 28 FPC 623, urging that this is necessary to protect the ultimate consumer during the interim period while awaiting final decision in the various proceedings to determine area rates for independent producers.

We do not feel that the evidence in this case would justify an order to Continental to reduce its existing rates. Under the evidence presented, Continental's cost of service exceeded comparable revenues in the years as to which evidence was presented. While the intervenors point out that Continental's revenues increased so that in 1961 it realized more per unit of gas sold than the 1957 cost of service, there are no figures in the record for cost of service in 1961. Hence this is not a sufficient showing on which to base a finding that revenue exceeded cost of service in 1961.

Neither do we feel that the present area price levels can be used as a basis for reducing rates filed prior to the Statement of General Policy (S.G.P. 61–1), which first promulgated area price levels. As noted in *Wisconsin, et al.* v. *Federal Power Commission, et al.*, 373 U.S. 294, 299, n.7, 10 L. Ed. 2d 357, 83 Sup. Ct. 1266, 1269, the statement provides area price levels which were fixed without notice or hearing "for the purpose of guidance and initial action by the Commission and their use will not deprive any party of substantive rights or fix the ultimate justness and reasonableness of any rate level."

We have given serious consideration to the suggestion that the Section 5(a) proceedings be held in abeyance rather than dismissed. This issue was commented on by the Supreme Court in *Wisconsin* v. *F.P.C.*, *supra* at 83 S. Ct. 1277:

> * * * the fact that the commission in this case terminated the § 5(a) proceedings, rather than merely holding them in abeyance as it did in *Hunt Oil Co.*, Docket No. G–9065, *et al.*, Opinion No. 365 (Oct. 17, 1962), is a circumstance of no significance . . . the Commission remains free to reactivate the investigation of Phillips' individual rates if the area proceedings are unduly delayed or if circumstances should otherwise warrant. The distinction between termination and suspension of the § 5(a) proceedings is thus one of form and not of substance * * *

After considering the state of the record in this case, it appears that no useful purpose would be served by holding this case open. The record in this case is stale, and a new record would have to be made. This record would be in addition to those being made in our area rate proceedings where 5(a) determinations of Continental's rates in each area are also to be decided (AR61–1, AR61–2). This duplication of effort is not justified. If the situation should change a new 5(a) proceeding could be initiated as readily as this one could be reactivated.

The intervenors have also excepted to various determinations of the examiner incident to his determination of the jurisdictional cost of service. At the hearing evidence was presented by the Staff, by Continental, and by the intervenors with respect to Continental's cost of service in previous years. It is undisputed that no matter which test year is used, and no matter whose evidence is accepted, and no matter how the exceptions are decided, Continental's jurisdictional cost of service exceeded corresponding revenues for any given year. None of the exceptions taken by the intervenors, if such exceptions were allowed, would cause any change in these conclusions. It appears unnecessary, therefore, to pass on them; and we neither adopt nor disapprove the examiner's decision on these points.

The Commission staff has excepted to the allowance by the examiner of a 14 percent return on common equity in computing jurisdictional cost of service. Continental argues that its particular circumstances call for this rate of return, although it is higher than that allowed by the Commission in *Phillips Petroleum Company*. 24 FPC 537. A determination of this question by the Commission would also have no effect on the outcome of this case. In such circumstances, it seems to be neither necessary nor desirable to analyze at length the conflicting testimony and arguments of the parties. This question, therefore, we do not decide, but leave open for future consideration should the need arise.

The Commission finds:

(1) Continental is a natural-gas company subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of the order, hereinafter included as a part of this decision, are sales of natural gas in interstate commerce subject to the jurisdiction of the Commission.

(2) The proposed increased rates and charges filed by Continental in Docket Nos. G–11337, G–14264, G–15236, G–15409, and G–15417 are just and reasonable, and the proceedings in these dockets should be terminated.

(3) The proposed increased rate filed by Continental in Docket No. G–13608, insofar as it exceeds the rate of 14.0 cents per Mcf, is unjust and unreasonable and should, to that extent, be disallowed and ordered refunded as hereinafter provided.

(4) On motion of Continental, and upon all the evidence submitted in this case, the proceedings in Docket No. G–16966 should be terminated and dismissed.

The Commission orders:

(A) The orders of the examiner, issued June 13, 1963, in the above-entitled proceeding, are hereby adopted as the orders of the Commission.

(B) For the reasons stated above, the exceptions to the examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON PROCEEDINGS PURSUANT TO SECTION 5(a) AND SECTION 4(e) OF THE NATURAL GAS ACT INVOLVING THE RATES AND CHARGES OF A PRODUCER

(Issued June 13, 1963)

SIMPSON, *Presiding Examiner:* The proceedings commenced as an investigation under Section 5(a) of the Natural Gas Act (Act) of the jurisdictional gas rates and charges of Continental Oil Company (Continental) and another.[1] That part of the investigation concerning Continental, having been carried on separately, was severed by order of the Commission issued November 18, 1958, and, under the designation Docket No. G–16966, therewith consolidated for purposes of hearing with ten other proceedings pending under Section 4(e) of the Act with respect to certain proposed and suspended increases in Continental's jurisdictional gas rates pertaining to sales of natural gas to Montana-Dakota Utilities Company, (Montana-Dakota), Texas Eastern Transmission Corporation (Texas Eastern), El Paso Natural Gas Company (El Paso), Lone Star Gas Company (Lone Star), Mississippi River Fuel Corporation (Mississippi), and Consolidated Gas Utilities Corporation (Consolidated).[2]

In accordance with the terms of the Commission's order issued November 18, 1958, *supra*, the matters involved and the issues presented in these consolidated proceedings came on for hearing and were heard commencing on December 9, 1958, and concluding, after requisite interim recesses, on June 8, 1960. Fifteen parties became interveners, four actively participating in the introduction of evidence.[3] Continental presented 11, Interveners 3, and

[1] Stanolind Oil and Gas Company, now Pan American Petroleum Corporation, Docket No. G–9279. Order issued January 27, 1956.

[2] Since reduced to seven such proceedings by the filing of a superseding rate schedule in Docket No. G–11640 (Continental's FPC Gas Rate Schedule No. 2, applicable to sales to Montana-Dakota), and the acceptance by the Commission of a settlement offer in Docket Nos. G–15170 and G–15171, (Continental's FPC Gas Rate Schedules Nos. 84, 114 and 125, applicable to sales to Texas Eastern). Remaining are the proceedings in Docket Nos. G–14264, G–15409, and G–15417, (Continental's FPC Gas Rate Schedules Nos. 146, 109, 85, and 92, applicable to sales to El Paso), Docket No. G–15236, (Continental's FPC Gas Rate Schedule No. 89, applicable to sales to Lone Star), Docket Nos. G–11337 and G–13608, (Continental's FPC Gas Rate Schedule Nos. 113 and 107, applicable to sales to Mississippi), and Docket No. G–14599 (Continental's FPC Gas Rate Schedule No. 147, applicable to sales to Consolidated).

[3] In most instances an earlier intervention in Docket No. G–9279 was transferred by the Commission's general order on interventions issued November 26, 1958, in these proceedings, otherwise status as an intervener was obtained by petition and subsequent orders of the Commission issued December 9, 1958 (El Paso; G–14264, G–15409, G–15417; United Gas Improvement Company; G–16966) and January 29, 1960 (El Paso; G–16966), or as Mississippi's in G–11337 by order issued June 3, 1957. The four interveners participating actively in the hearing were: Long Island Lighting Company, Philadelphia Electric Company, Public Service Electric and Gas Company of New Jersey, and The United Gas Improvement Company.

Staff 7 witnesses. Simultaneous initial and reply briefs have been filed on behalf of Continental, four Interveners (jointly) and Staff, and a final memorandum on behalf of Continental.[4]

The record consists of 4526 pages of transcript taken during 29 session days, 67 of 69 exhibits offered in evidence, and 4 items incorporated by reference embracing the testimony of 12 witnesses taken in the so-called *Omnibus* proceeding in Docket No. G–9277.

On January 14, 1959, at the conclusion of Staff's case-in-chief, Continenal, as respondent in the general investigation (G–16966), filed a formal motion to dismiss on the grounds that the Staff had failed to maintain its burden of proof. The motion was opposed by answers filed jointly by Public Service Electric and Gas Company (Public Service) and Long Island Lighting Company (Long Island) and separately by the United Gas Improvement Company (United Gas)[5], the New York Public Service Commission (New York Commission), and Commission Staff counsel. By order issued February 24, 1959, the Commission deferred ruling.

Thereafter, on March 9, 1959, after cross-examination of Staff's witnesses and the call upon interveners', Continental filed its renewal of motion to dismiss, which was opposed by interveners and Commission Staff counsel; and, on February 29, 1960, filed its request for ruling on its renewal of motion to dismiss to which opposition was again entered.

The foregoing several motions remain pending, to be disposed of by the findings and conclusions of this decision.

The Issues

Section 5(a) of the Act provides, in effect, that whenever the Commission shall find, after hearing, that a jurisdictional rate or charge is unjust or unreasonable, it shall determine the just and reasonable rate or charge to be thereafter in force and order a decrease where the rate is unjust or otherwise unlawful, or not the lowest reasonable rate.[6]

Section 4(e) of the Act provides, in part, that whenever a new rate schedule is filed the Commission may enter upon a hearing concerning the lawfulness of the rate or charge, suspend the operation of the schedule for a period not to exceed five months, and make such orders with reference to the rate as would be proper in a proceeding initiated after the schedule had become effective.

In the Section 5(a) proceeding (G–16966) the Commission by the aforesaid order of November 18, 1958, directed the Staff to precede, while the Act specifically provides that in a Section 4(e) proceeding the burden of proof shall be upon the natural-gas company.

Subject to further consideration of the specific issues raised by the contentions of participants, or inherent in the evidence, the ultimate issues in these consolidated proceedings are:

(1) Whether, the rates and charges contained in Continental's established rate schedules are, within the meaning of the Act, unjust, unreasonable, unduly discriminatory, or preferential or not the lowest reasonable rates; and, if unlawful, what rates or charges shall be determined in the premises to be just and reasonable;

---

[4] El Paso also filed an initial but not a reply brief.

[5] The later answer was adopted by Philadelphia Electric Company.

[6] Section 5(a) provides, however, that the Commission shall have no power to order an increase in a rate contained in a currently effective schedule unless the increase be in accord with a new schedule filed by the natural gas company.

(2) Whether, or to what extent, Continental has discharged its burden of proof to show that proposed increased rates or charges are just and reasonable; and, with respect to those which have already gone into effect, to what extent, if any, amounts received by Continental shall be refunded.

Contentions

Staff

Staff contends that the rates of a natural-gas company must relate to its revenue (cost) requirements, and, that in order to more closely relate joint costs and revenues, cost of service should be determined by homogeneous cost districts and not on a company-wide basis.

Staff also contends that combination lease joint production and company-wide exploration costs should be allocated at the lease and to the area respectively, by a relative value (realization) method; that general and administrative expenses should be allocated in the ratio of departmental operating expense; and that regulatory expenses, which allegedly cannot be verified in this case as related to regulatory matters, should be treated simply as if a part of production department and headquarters general expenses.

Staff further contends that an average test-year net investment rate base is appropriate for the determination of rates in this proceeding; that a cost of capital rate of return of 10.8%–11.2% on Continental's common stock equity is fair and reasonable; and that an allowance for Federal income taxes should not be provided as impliedly such taxes are not actually paid with respect to the Company's oil and gas production functions.

Staff also contends that over the period 1955–1958 changes in unit costs have been compensating; that, accordingly, the use of 1955 as a test year, without adjustments for later changes, is reasonable and appropriate; and, that a reduction in rates as indicated in Staff's Exh. No. 16 should be ordered.[7]

Staff concedes that with due regard to limitations inherent in the evidence of these proceedings a 1955 cost of service computed in conformity with the principles of the *Phillips* case (24 FPC 537 (1960)) results in company-wide test year unit costs in excess of unit revenues.

Continental

The Respondent-Applicant contends, in substance, that application of a cost of service method to a producer of oil, liquids and gas involves allocations between these products of a substantial and arbitrary nature and is also unsuitable because of the geographical nature of exploration costs, indefiniteness of the gas reserves used to derive costs,[8] and ultimate resulting erratic variations in unit costs between producing areas. Continental contends that on the other hand such data as cost indicators and competitive market prices, as well as discounted cash flow analyses, should be used to test the lawfulness of a producer's rate.

Against the possible adoption of a conventional cost of services method, however, Continental contends that cost should be determined on a company-wide basis;[9] joint production costs of oil-gas leases, including development dry holes, should be allocated on the basis of a weighted relative cost

[7] No rates are recommended for CATC–MCN offshore transactions on the ground that production in that area had not become stabilized.

[8] Affecting depletion, amortization, and various unit costs.

[9] Continental does not seek a company-wide rate but reserves the right to seek rates which would equate to such an overall rate and be sufficient to make itself whole.

method, and of gas-condensate leases on the basis of the Btu of production sales; general and administrative expense should be allocated to departments on the basis of gross operating assets, and to leases and functions in the ratio of direct operating expenses; company-wide exploration costs should be allocated directly to gas according to the Btu of the test-year's production; and gasoline plant processing cost should be allocated between gas and liquids according to functions, with adjustment for volumetric and Btu losses resulting from removal of liquids.

In its initial brief Continental also contends for the inclusion of regulatory expense ($200,000); use of 1957 as the test year, with allowance for later trends; use of a year-end investment rate base; and a rate of return of 14% with Federal income tax allowances based on a 52% rate adjusted for interest charges.

In its reply and final briefs, Continental objects to both 1955 and 1957 as test years as too remote but oppose reopening of the proceedings for taking of evidence related to a new test year as a "wasteful procedure."

Continental, concluding that its existing and proposed rates are supported by the market price standard and are, cost-wise below a just and reasonable level, requests dismissal of the Section 5(a) proceedings[10] and approval of the rates involved in the Section 4(e) proceedings.

Interveners

The distributor interveners (Distributors)[11] contend that the record contains no evidence justifying a departure from traditional cost evidence or, inferentially reliance upon indices of increased costs or market prices for gas; Staff's area (district) cost of service, including company-wide exploration costs, creates impractical price extremes which would disturb existing purchase patterns; and Staff should be required to propose appropriate rate ranges for each major price area and Continental appropriate competitive and non-disruptive rates within such ranges to yield total jurisdictional revenue equal to the jurisdictional cost of service.

Distributors further contend that the reserve-added-realization (RAR) method of allocating joint exploration expense and investment costs to gas would reflect the results of Continental's exploratory efforts and its motivation in adding reserves; the Btu method of allocation of joint costs is unsupported on either engineering or economic grounds; the relative cost method of allocating on-lease direct and indirect[12] production investment costs and expense to joint products is reasonable,[13] and that compression costs are properly assignable entirely to plant liquids.

Distributors also contend that Continental has not established a need for working capital over and above cash available from normal operations; rate of return should be determined on the basis of Continental's entire business;

---

[10] The 1957 wellhead unit cost of service computed by Continental in its main brief totalled $0.4089, the unit revenue deficiency $0.3206 per Mcf. Corresponding results obtained by Continental's use of what it refers to as the *Phillips'* procedures are $0.1942 and $0.1059 per Mcf, respectively. However, Continental here disagrees with the economic factor used in the allocation of exploration costs, the return, and the computation of Federal income taxes.

[11] Long Island Lighting Company, Philadelphia Electric Company, Public Service Electric and Gas Company, and The United Gas Improvement Company.

[12] Except special facility expenses and investment.

[13] Excluding four offshore gas leases in determining unit relative costs on the ground production from these leases had not reached a representative stage.

and, citing *El Paso Natural Gas Company* v. *F.P.C.*, 281 F. 2d 567 (5th Cir., 1960), a computed allowance for Federal income taxes in lieu of actual taxes would be improper.

On the basis of 1957 company-wide costs, exclusive of the Western Region,[14] Distributors obtain an average cost of jurisdictional gas of 13.44¢ per Mcf, or, upon the basis of their concept of the procedures used by the Commission in Opinion No. 338 in the *Phillips* case (*supra*), 12.34¢ per Mcf,[15] i.e., in either instance in excess of corresponding revenues for the year.

El Paso contends that with respect to sales to it Continental's cost of service fails to justify rates higher than those provided by its contracts.

The Evidence

Company Operations

Continental and subsidiaries constitute a large integrated oil and gas enterprise engaged in the exploration for, and production of, crude oil and natural gas, the refining of crude oil, and the transportation and marketing of petroleum and its products.[16]

In 1955 production of some 47,500,000 barrels of crude oil and condensate from working interest and oil payment leases yielded revenues in excess of $128,000,000,[17] while delivery of some 127,000,000 Mcf of natural gas yielded revenues in excess of $10,722,000.[18]

During the same year it owned a working interest in 2150 domestic producing leases, located in 194 counties of 15 states. Gas was sold from 960 of these leases, of which 715 were operated by Continental. At the end of the year domestic holdings consisted of 379,435 producing and 8,440,133 undeveloped acres.[19]

As of this same time Continental had an interest equivalent to 8,268 net

---

[14] *I.e.*, California—non-jurisdictional.

[15] Noting that the Btu content of gas sold in the field is unknown.

[16] Continental, the eighth largest producer of crude in the U.S., was originally organized in 1875 as a marketing organization operating in Iowa, Utah, and Wyoming, remaining so until 1924 when, merged with Mutual Oil Company, it became a fully integrated operation. After a 1929 merger with Marland Oil Company Continental was owner of 2,966 oil wells. Sudsidiaries include Continental Oil Company (Texas, Ky.) Continental Petrochemical Company, Continental Pipe Line Company, Richardson Lubricating Company, and Westcott Oil Corporation. The Company's marketing area includes the Midwestern, Southwestern and Rocky Mountain states, and part of the Southern United States.

[17] Oil production includes that of subsidiaries and by major states was: Texas, 31%; Wyoming, 28%; Kansas, 9%; California, 8%; Oklahoma, 7% and Louisiana 6%. Since 1946 its crude production has increased some 150%. In 1957 Continental produced a daily average of 133,652 barrels of crude and 11,906 barrels of natural gas liquids.

[18] From sales of wellhead gas, lease share of liquids extracted from gas in processing plants, and residue gas after extraction. Gas sales by volumes were: Texas, 40%; Lousiana, 28%; California, 11%; New Mexico, 11%; and offshore, 0.8%. Miscellaneous revenues from the sale of carbon dioxide, iodine, and sulphur amounted to but $45,000. Since 1947 deliveries of natural gas have increased some 140%. In 1957 Continental delivered 136,086,000 Mcf of natural gas.

[19] At the end of 1957 comparable figures were 437,000 producing and 7,377,000 undeveloped net acres including 140,000 in the offshore area. Producing properties are located in the Mid-Continent, Rocky Mountain, Gulf Coast, and Pacific Coast areas.

wells,[20] including 7692 oil wells,[21] 200 gas wells,[22] and 376 input wells,[23] and during the year participated in drilling 557 net exploratory and development wells of which 105 exploratory wells resulted in 8 gas and distillate wells, 21 oil wells, and 76 (72%) dry holes, and 452 development wells resulted in 12 gas or distillate wells, 390 oil wells, and 50 (11%) dry holes. The number of exploratory wells drilled was greater than that in any of the prior nine years, except 1951 and 1952, while the number of development wells drilled was not in any year exceeded.

Continental owns eight oil refineries,[24] varying interests in twenty gasoline processing plants, interests in natural gas field facilities,[25] a liquids pipeline, a natural gas pipeline (Louisiana), and certain interests in five producing companies, three crude oil pipeline companies, a refining company, four refined products pipelines, and two petroleum products marketing firms. It also owns or has interest in three petro-chemical plants,[26] four carbon black plants, a butadiene plant, an ammonia plant, a tanker steamship company, and a liquid methane company.

The Company reported to the Securities and Exchange Commission in October 1954 to the effect that then current reserves of natural gas exceeded 2.2 trillion cubic feet. As of the end of 1956 net proven reserves were unoffically estimated at 900,000,000 barrels of crude and 2.8 trillion of natural gas.

In the year 1955 approximately 47% of the gas sold by Continental represented jurisdictional sales of natural gas, of which 91.3% occurred in the Company's Southwestern and Southern-Onshore regions.[27]

As of December 31, 1957, capitalization totalled $513,949,587.

Records and Accounts

Continental is organized in a number of departments of which three, production, exploration and gasoline, are concerned with the production and sale of natural gas.

The production department's accounting reports are prepared on a district and regional basis[28] each department having its separate fixed asset, income and expense accounts, wherein property, plant and equipment are stated at cost. Independent audits certify that the Company's accounting system follows recognized accounting principles and methods, Staff's examination of the producing property accounts disclosed no apparent excess over cost, and its adjustments of book amounts are non-controversial.

---

[20] *I.e.*, 18,362 gross wells. Of the total of net wells 39 were on the offshore leases and were, generally, temporarily shutdown oil wells.

[21] Of which 1121 were flowing, 4290 pumping, 285 gas lifted, 437 temporarily shut down, 330 permanently shut down, and 1229 plugged.

[22] Of these 121 were flowing, 42 temporarily shut down, 17 permanently shut down, and 20 plugged.

[23] Including 64 gas input, 175 water flood input, and 137 salt water input wells.

[24] In 1957 six operating refineries had a combined capacity in excess of 150,000 bb. per day.

[25] Including fuel gas systems, gathering systems, repressure systems, gas lift systems, and compressor stations.

[26] Manufacturing a range of products derived principally from petroleum source materials.

[27] With respect to the twenty gas processing plants jurisdictional sales are made from five only.

[28] The regions are: Central (Kansas, Oklahoma and Illinois districts); Southwestern (Texas and New Mexico districts); Rocky Mountain (Colorado, New Mexico, Montana and Wyoming districts); Southern-Onshore (Texas and Louisiana districts); Southern Offshore (Offshore Louisiana districts); and Western (California districts).

Staff's Cost of Service Operating Expenses

Staff's accounting witness computes combined production and exploration expenses before return in the amount of $105,775,228, as follows:

	Central	Southwestern	Rocky Mountain	Western	Southern [1]	Total
Lease expense [2]	$4,256,083	$5,394,176	$3,349,172	$2,263,028	$4,039,593	$19,302,052
General expense [3]	1,101,951	1,580,418	941,020	586,601	994,577	5,204,567
Production taxes [4]	501,194	1,915,506	1,168,347	(3)	1,400,188	4,985,232
Ad valorem taxes	341,466	703,943	90,250	957,138	585,999	2,678,796
Depreciation, etc. [5]	4,977,457	7,563,598	6,837,876	1,554,964	6,460,295	28,394,190
Retirements, etc. [6]	55,934	109,315	1,092,681		1,192,595	2,450,525
Misc. intangible	27,193	39,545	99,194	986	18,235	185,153
Dry hole expense [7]	248,462	755,797	393,625	(408)	1,875,121	3,272,597
Exploration, etc. [8]	6,764,209	10,769,448	10,738,556	4,023,869	7,006,034	39,302,116
Total	18,273,949	28,831,746	24,710,721	10,386,175	23,572,637	105,775,228

[1] Embracing Continental's two operating regions: "Southern-Onshore" and "Southern-Offshore".
[2] Direct and district lease operating expenses combined.
[3] Headquarters and regional general, and production general, expenses—allocated.
[4] Oil and gas production taxes.
[5] Depreciation and depletion from Continental's accounts; amortization by multiplying the net balance of capitalized intangible development costs by the percent depletion occurring in the test year (1955).
[6] Retirements and abandonments, redetermined in connection with staff's proposed capitalization of a substantial portion of the intangible costs wholly reserved by Continental.
[7] That portion of Continental's expense not capitalized by Staff.
[8] Exploration and development expense per books, less minor assignments to uranium, agricultural, and foreign operations, less $6,732,543 which Staff capitalizes, plus $566,707 transferred by Staff from production operations, and $1,456,332 of allocated general expense. The resulting expense (company-wide) is allocated on the basis of lease revenues.

Continental's lifting cost statements identify direct lease and district lease operating expenses by leases, and likewise as to production and ad valorem taxes. The Company also records depreciation and depletion by leases but at Staff's request computed a lease amortization and related retirement and abandonment expense (1955) to be used by Staff in connection with the latter's proposal to capitalize some $6,732,543 of oil and gas intangible development costs. Miscellaneous intangible expense is taken directly per books,[29] while production department lease dry hole costs are developed from an annual study.

The magnitude of the allocations involved are reflected in the fact that to compute lease costs some $44,506,683 of the total ($105,775,228) are indirect costs which must be assigned[30] which in turn became a part of the $53,100,137 computed as joint product costs associated with condensate-gas and oil-gas leases.

Staff's Expense Allocations

Staff allocates company headquarters and regional general expense ($8,555,034) between 17 operating activities in the ratio of adjusted direct operating expenses, and splits the portion allocated to production ($1,683,819) among the six regions in the ratio of some 10 stated expenses regionalized by Continental.[31] It adjusts Continental's regionalized production department general expense ($3,416,259) to eliminate overriding and offset royalties in a relatively minor amount ($37,030) and adds regionalized production and drilling social security taxes ($141,519).[32] Total general expense ($5,204,567)

[29] Less $5,866 which Staff considered not to be identified with leases.
[30] Production headquarters and regional general ($1,683,819), production general ($3,520,748), exploration and development expense ($37,845,784), and $1,456,332 of headquarters and regional general expense allocable to exploration.
[31] These latter totalling $26,149,740 are from the Company's overhead and operating statement after Staff adjusts in certain limited respects.
[32] Resulting production general expenses: $3,520,748.

is allocated within regions to districts in the ratio of direct and district operating expenses to the sum of such expenses for the region.

Staff adds to exploration expenses per books ($44,237,269), less amounts applicable to non-related operations ($225,649), and capitalized intangible drilling costs ($6,732,543), amounts transferred from production operations ($566,707), and the allocated part of headquarters and regional general expense ($1,456,332). The resulting $39,302,116 is allocated to lease categories within districts in the ratio of lease revenues to total production department lease revenues without regard to the geographic areas within which such costs were actually incurred.

Lease and district costs for gas (before return), obtained by the additional allocation of lease joint costs in the ratio of the lease category gas revenues to total production revenues, summarize by regions as follows:

Gas	Central	South Western	Rocky Mountain	Western	Southern	Total
Lease operating expense	$46,272	$175,062	$35,460	$427,209	$736,177	$1,420,180
General expense	11,980	51,289	9,963	110,738	179,445	363,415
Production taxes	19,880	128,945	12,783		390,872	552,480
Ad valorem taxes	166	22,364	1,862	184,619	137,702	346,713
Depreciation, etc	94,954	311,739	107,564	508,444	1,398,914	2,421,615
Retirements, etc	1,968	4,357			165,902	172,227
Miscellaneous intangible expense	2,718	6,920	801	3,395	16,955	30,789
Dry hole expense	1,999	4,075	(119)	(119)	55,043	60,998
Exploration, etc	107,316	491,265	100,087	784,112	1,545,751	3,028,531
Total	287,253	1,196,016	268,520	2,013,398	4,626,761	[1] 8,396,948

[1] Staff's method distributes this total by lease categories, as follows: gas-leases—$956,342; condensate-gas leases—$3,201,172; oil-gas leases—$4,239,083; oil leases—$351.

Production Plant Net Investment

Staff's test year average net investment rate base is challenged by Continental on the ground that the average fails to accord with an upward trend in investment costs. With respect to the gas and combination leases Staff's result is less than that obtained by use of year-end figures by some $2,878,362.[33]

The evidence supports Continental's contentions as to increasing costs. Therefore, and in accord with the Commission's holding in its opinion in the *Phillips'* case (24 FPC at 565), a year-end rate base is found to be appropriate for the purpose of this proceeding.

Gross investment as of December 31, 1955, in lease and well equipment ($147,127,475) as computed by Staff, includes book amounts totalling ($137,963,176) plus transfers of constructed items from producing and exploration authorization accounts.[34]

Similarly the year-end gross investment in oil and gas intangibles ($255,061,098) includes the book amount of $242,830,470 and completed construction.[35]

The 1955 year-end gross investment in producing leaseholds ($39,292,928) represents lease totals per books.

[33] With respect to the gas and combination leases included in the 23 districts of the Central, Southwestern, Rocky Mountain, and Southern regions, it may be observed that in most instances the average, provides the larger total. However, in the Southern-Offshore region year-end investment ($12,833,093) exceeds the year's average ($9,762,620) by some 31.5%.

[34] Of the gross investment a substantial portion ($119,491,774) is taken directly from individual lease investment records, the remainder by assignment ($19,970,533) or allocation ($7,665,168).

[35] Of the total, $254,430,189 is obtained directly from individual lease investment records, the remainder by assignment ($477,250) or allocation ($153,709).

The depreciation reserves for lease and well equipment ($74,249,474), follows the assignment and allocation of these facilities;[36] the reserve for intangibles ($143,754,382) has been redetermined;[37] and the reserve for depletion of leaseholds ($22,798,551) is that recorded, less a minor net reduction ($46,680) representing adjustment of tabulating machine records.

The total year-end net investment by regions becomes as follows:

Region	Gross investment	Less reserves	Net investment
Central	$80,827,651	$50,086,222	$30,741,429
Southwestern	105,400,401	60,878,933	44,521,468
Rocky Mountain	88,992,906	43,233,250	45,759,656
Western	53,244,159	35,528,810	17,715,349
Southern	113,016,384	51,075,192	61,941,198
Total	441,481,501	240,802,407	200,679,094

The addition of 1955 net investment in other assets and offshore drilling tools results in a total year-end net investment in production plant by regions, as follows:

Region	Net plant	"Other assets"[1]	Net tools[2]	Total net plant
Central	$30,741,429	$1,630,963		$32,372,392
Southwestern	44,521,468	2,126,799		46,648,267
Rocky Mountain	45,759,656	1,795,721		47,555,377
Western	17,715,349	1,074,370		18,789,719
Southern	61,941,192	2,280,467	$3,244,904	67,466,563
Total	200,679,094	8,908,320	3,244,904	212,832,318

[1] A company total of $14,362,962, as of Dec. 31, 1955, allocated to functions in the ratio of yearend gross investment per books as adjusted by Staff, thence to leases (districts) in the ratio of the respective gross production investment.

[2] Drill tool items (offshore) are booked by districts. Inland investment applicable to the offshore districts and drill tool "other assets" are allocated between districts in the ratio of drill tool gross investment. District totals are allocated to lease categories in the ratio of lease intangible gross investment.

Exploration Net Investment

Staff's year-end exploration net investment consists of investment in incomplete construction, non-producing leaseholds, other exploration investments, and other assets (allocated), and totals $60,536,340.

The allocation of exploration net investment to lease categories, in proportion to production department 1955 lease revenues summarizes by regions as follows:

	Incomplete construction	Nonproducing leases	Other exploration investments	Other assets	Total
Central	$1,036,685	$9,072,027	$98,875	$211,201	$10,418,788
Southwestern	1,650,530	14,443,777	157,421	336,259	16,587,986
Rocky Mountain	1,645,796	14,402,346	156,969	335,294	16,540,405
Western	616,700	5,396,735	58,818	125,639	6,197,892
Southern:					
Onshore	963,229	8,429,213	91,869	196,236	9,680,548
Offshore	110,518	967,146	10,541	22,516	1,110,721
Total	6,023,458	52,711,244	574,493	1,227,145	[1] 60,536,340

[1] Staff's realization method results in an overall distribution of this total to lease categories, as follows: Gas leases—$522,308; condensate and gas leases—$3,054,543; oil and gas leases—$30,346,929; and oil leases—$26,612,560.

[36] Of the total, some $62,464,103 is recorded by specific leases, the remainder being assigned ($8,106,720) or allocated ($3,678,651), as in the instance of the gross investment.

[37] The book amount of the reserve ($267,630,121) reflects a reserve of 100% of gross investment. The redetermination seeks to reflect depletion in terms of the remaining productivity of the wells.

Combined Production and Exploration 1955 Year-end Net Investment

Omitting the combined production and exploration net investment of oil only leases ($117,062,940) the remaining combined year-end net investment totals by lease categories as follows:

Lease category	Central	Southwestern	Rocky Mountain
Gas	$167,298	$1,820,884	$1,272,273
Condensate	2,073,909	978,880	
Oil-gas	11,705,039	36,107,062	24,498,435
Total	13,946,246	38,906,826	22,770,708
	Western	Southern	Total
Gas	$8,578	$4,538,988	$7,808,021
Condensate		24,602,337	27,655,126
Oil-gas	24,763,589	26,768,446	120,842,571
Total	24,772,167	55,909,771	156,305,718

Applying Staff's realization ratios a production and exploration year-end net investment is obtained for gas as follows:

Central	Southwestern	Rocky Mountain	Western	Southern	Total
$945,894	$3,928,958	$1,578,672	$5,156,482	$18,534,906	$30,144,912

Working Capital — Production and Exploration

Staff computes production working capital on the basis of cash required for 45 days operations ($3,472,402),[38] average materials and supplies ($7,459,751), and average prepaid expenses (insurance, $403,096), for a total of $11,335,249.

Average materials and supplies are obtained from warehouse accounts where a portion of the investment is identified by districts ($3,490,607) and the remainder ($3,969,144) is allocated thereto in the ratio of average net investment.

Average prepaid insurance (total company, $853,027) is allocated to operating functions in the ratio of the recorded amortization thereof for the last three months of the test year, and to district lease categories on the basis of average net investment.

Exploration working capital, consisting also of a 45 day's operating cash requirement ($3,681,747),[39] and an average of materials and supplies ($75,721), totalling $3,757,468,[40] is allocated by Staff to district lease cate-

[38] By lease categories: direct lease operating expense, $15,917,425; district lease operating expense, $3,384,627; headquarters, regional and department general expense, allocated, $5,204,567; and, production dry hole costs, $3,272,597—totalling $27,779,216, of which 1/8th is $3,472,402.

[39] Offset royalty expense, $15,753; dry hole costs, $8,399,653; departmental expense, $6,577,407; dry hole payments, $431,243; lease rental expense, $5,187,060, non-producing leaseholds and other tax, expense, $57,844; lands and exploratory social security tax, $102,821; geophysical operations, $6,840,404; core drill operation, $472,251; miscellaneous (net), $322; headquarters and regional general expense, allocated, $1,369,219—total $29,453,977, of which 1/8th is $3,681,747.

[40] In this instance a small amount of prepaid expenses ($9,417) was inadvertently omitted.

gories in the ratio of lease category revenues to total district production revenues.

Adjusting as required, and so far as the evidence permits, to convert averages of materials and supplies and prepaid expenses to equivalent year-end amounts, production and exploration working capital allocated to gas summarizes as follows;[41]

Region	Production [1]	Exploration [2]	Total
Central	$33,495	$10,260	$43,755
Southwestern	128,333	46,966	175,299
Rocky Mountain	65,887	9,568	75,455
Western	217,772	74,965	292,737
Southern:			
Onshore	689,140	146,370	835,510
Offshore	188,691	1,409	190,100
Total	1,323,318	289,538	1,612,856

[1] Average material and supplies and prepayments converted to equivalent yearend quantities in the ratio of total yearend to total average net plant, and distributed to lease categories in the ratio of category yearend to total yearend net plant.

[2] Exploration average net materials and supplies, too small in amount to have practical effect, were not adjusted to equivalent yearend amounts.

The Rate Base

The gas rate base, consisting of the combined production and exploration net investment and working capital allowances, as above determined, becomes, by regions:

Gas region	Year end net investment	Working capital	Rate base
Central	$945,894	$43,755	$989,649
Southwestern	3,928,958	175,299	4,104,257
Rocky Mountain	1,578,672	75,455	1,654,127
Western	5,156,482	292,737	5,499,219
Southern:			
Onshore	15,180,880	835,510	16,016,390
Offshore	3,354,026	190,100	3,544,126
Total	30,144,912	1,612,856	31,757,768

Rate of Return

Adopting the cost of capital approach, Staff's rate of return witness testified to historical average yields on generally long-term issues of United States Treasury bonds, representative industrial, rail and public utility bonds, and grades of industrial bonds, including those of oil and gas companies; and to comparative consolidated price indices pertaining to stocks of 425 industrial and four selected producers of oil and gas, respectively.

He submitted financial data for 39 independent producers of natural gas (including Continental),[42] chosen from among those selling annually 2,000,000 or more Mcf of natural gas to pipeline companies, having common stock actively traded and quoted, and publishing earnings statements at regular intervals. These data include a general description of company operating capitalization and finances, including monthly earnings-price ratios

[41] On the aforesaid revenue basis.

[42] Classified according to operations, thus, Class A: fifteen producers of oil and gas; Class B: three producers engaged in petroleum refining; Class C: twenty integrated companies, producers of oil and gas engaged in refining and marketing petroleum products; and Class D: one company, engaged in production and marketing, but not refining.

and rates earned on book values (1949–1957),[43] and certain information as to offerings of producer debt and common stock securities.

Staff witness hypothesizes that earnings-price ratios indicate a market capitalization rate on earnings paid, and that producers finance their ventures partly on the basis of debt capital, and concludes that Staff's test year illustrative return of 9% would represent a fair return on Continental's overall net investment.[44]

While the resulting component of return applicable to the common stock (11.2%) is in excess of the 1949–1957 earnings-price ratios on Continental's common[45] the ratio of its earnings to book value of assets has varied during the period from 18.4% (1950) to 13.0% (1957).[46]

The risks which relate to Continental's integrated operations are on the whole less than those which relate to its exploration and production activities, and Staff witness substantially acknowledged that Continental is entitled to earn on the value of its property, used and useful, a return equal to that earned by enterprises which have risks similar to those which characterize its natural gas operations. However, he denies that it is possible to segregate the risks of Continental's regulated producer and non-producer business, although this premise serves to obliterate jurisdictional limits and obscure the fact that debt financing is not available for exploration and development activities.

With respect to the foregoing proposed use of earnings-price ratios it is observed that those for Staff's Class A higher risk producer group, which would be expected to be higher as a reflection of this characteristic, in fact have been substantially lower than those for the diversified, integrated, and less risky sections of the industry, viz., Class C, and relatively close to those for larger and comparatively stable utilities and even to 1955–1957 average yields on taxable United States Treasury bonds, though oil and gas reserves are becoming more difficult to find and costs related thereto have increased.

Continental rejects the ratio as a measure of the required return as failing to account for dividend and capital appreciation expectations, as evidenced by the fact that in the period 1947–1956 Continental's earnings-price ratio averaged 9.7% while the total of cash dividends and appreciation averaged 23.1% per annum.[47] On the basis of the fact that the greater the future

---

[43] Also book value of common stock, earnings per share, range of market prices, dividend payments and pay-out ratios.

[44] Or 11.2% on the common stock, after taxes. Although the earnings-price ratio is based upon the market value of the stock, Staff would apply it to net investment. Continental's capitalization at December 31, 1957, which, adjusted for refinancing, totals $513,949,587 consists of 28.0% long term debt and 72.0% capital stock and surplus. The long term debt embraces $100,000,000 of 3% sinking fund debentures, $37,800,000 in 4-1/4% notes, and $6,150,000 in a subsidiary's 3.35% notes. Common stock and surplus includes $98,137,510 of $5 par common stock, $60,724,930 of capital surplus, and $211,137,147 of earned surplus. Deferred Federal income taxes in the amount of $8,000,000 are not included.

[45] During this period Continental's average of 12 monthly earnings-price ratios ranged from 10.6% in 1950 to 4.3% in 1956, standing at 4.7% in 1957.

[46] Standing at 14.8% and 15.5% beginning 1955 and 1956, respectively. For Staff's Class A, B, and C producers, the corresponding 1956 (beginning of year) ratios of earnings to share book value were 14.1%, 15.1% and 14.2%, respectively.

[47] Similarly, for 10 well known growth companies in several different industries having a range in earnings-price ratios of from 5.4% to 10.9%, combined earnings and appreciation varied from 20.2% to 35% per annum.

expectation of investors, the higher the market price of the stock, and the lower the ratio, Continental claims that the latter becomes substantially an inverse-measure of what investors anticipate in the nature of earnings and dividend-paying capacity.

The data of record indicates that speculative elements attend investments in producer common stocks, and, in similar circumstances the Commission has held that the ratio is not controlling in determining the rate of return.[48]

It is therefore concluded that earnings-price ratios fail to justify Staff's proposed allowance of 11.2% as an appropriate return on Continental's investment in exploration and production functions.

Assuming cost of service be required as a so-called "point of departure", Continental's position is that the return should be determined, substantially, by reference to earnings on book investment; and its return witness testified, in part, that the combined 1956 return[49] on book net assets[50] of ten petroleum companies engaged in exploration and production only[51] which averaged some 15.5%,[52] as compared with 14.6% for 25 fully integrated major companies,[53] represented that level of return which directly reflected the degree of uncertainty associated with the investment in exploration and development, and would compensate investors for the risks related thereto and thus permit the industry to competitively attract the capital required for its expanding needs.

Continental's witness further testified that although the risk of finding and lifting natural gas approximated that for oil the more rapidly increasing demand for natural gas required a rate of return in the upper portion of the ranges of the foregoing Class A petroleum companies; instancing Continental's offshore (Louisiana and Texas) activities, and testifying with respect thereto that the Company's participation in the drilling of 383 wells in the area[54] involved the exposure of substantial cash outlays to risks peculiar to an unsheltered and remote location[55] over a period of some 15 to 30 years.

On the basis of its evidence, briefly summarized above, Continental claims a rate of return after actual taxes of not less than 20% or 12%-14% if allowed statutory tax benefits derived from cost depletion and the amortization of intangible drilling costs.

The Company's witness also submitted a so-called discount cash flow study which purports to demonstrate the return (discount rate) which would equate investment and revenues over an assumed future period,[56] as well as to establish that oil and gas prices must rise if Continental is to attract the capital required for new enterprise.

---

[48] *Phillips Petroleum Company* (Docket No. G–1148, etc.), 24 FPC 537, 570 (1960).

[49] Net income after interest and taxes.

[50] *I.c.*, common and preferred equities plus allowance for working capital.

[51] Basically Staff's Class A producers.

[52] The low for the period 1947–1956. This result becomes 17.75% using an utility type net income, after deductions, and the net investment rate base; with an average for the 10 years of 22.6%.

[53] Basically Staff's Class B and Class C type producers.

[54] Of which 209 were completed as oil and 86 as gas wells.

[55] As of the end of 1958 Continental was a part owner of 32 offshore oil and gas fields, representing over one-third of all offshore productive fields found to date.

[56] Called by him the "true return".

Trending by a moving average Continental's finding and development costs[57] in terms of the Btu of oil and gas reserves added over the period 1944–1958[58] he obtains an average cost for three years ended December 31, 1958 of 17¢ per million Btu[59] and an average annual rate of increase in such costs of about 12%. Assuming average finding and development costs of 17¢ per million Btu for the near-term future[60] as applied to a possible program of finding and developing a thousand trillion Btu of crude oil and natural gas, he obtains a required gross investment of $170,000,000 or a net investment cost of $107,200,000 after approximate tax savings of $62,800,000.

Further assuming the continuation of existing oil and gas prices,[61] certain rates of production,[62] the maintenance generally of the Company's past ratio of oil reserves to gas reserves found, etc.,[63] the witness obtains a life time (40 years plus) realization after lifting costs and severance and income taxes totalling $187,200,000 which, along with the assumed new costs,[64] balance on the basis of a discount rate, or so-called "true return" of 6.6% per annum. The witness thus concludes that both oil and gas prices must rise to enable Continental to obtain overall revenues approximating the recommended rate of return.

However, the assumption involved in such a discounted cash flow study yields results which, constituting little more than a speculative forecast, has no practical application in determining a fair rate of return on the basis of a test year's cost of service.

The Commission's holdings in the *Phillips* decision, *supra*., require conclusions adverse to the contentions of Continental with respect to both the allowance of tax benefits and the use of an all equity capitalization.

In *Phillips* (Opinion No. 338, *supra*) the Commission held that tax incentatives should not be included as a component of return where the return allowed exceeds the amount of tax benefits,[65] and that the cost of capital

---

[57] An aggregate of some $995,900,000 (1944–1958) composed of finding costs (lease bonuses; land; geological, and geophysical expenses; lease rentals; exploratory well costs; and allocated overheads) and development costs (well intangibles; lease and well equipment; and allocated overheads). These costs rose from a total of $30,400,000 in 1944, to $86,600,000 in 1958 ($112,500,000 in 1957) on a "current cost" basis or from $27,200,000 in 1944 to $88,300,000 in 1958 ($106,000,000 in 1957) if adjusted to reflect a so-called 5-year lag between three items of expense and actual discovery by drilling.

[58] Converting to Btu the new reserves added both by drilling and revision of earlier estimates, using U. S. Bureau of Mines values of 5,800,000 Btu/bbl of oil and 1,075 Btu/cf of natural gas. Gross additions to reserves have not increased at the same rate as expenditures for finding and development activities.

[59] Before severance taxes, lifting costs, income taxes, and return. The 17¢ represents a general average of the "Current" (18¢) and "Five Year Lag" (16.4¢) costs.

[60] The witness offsets against possible improvements in drilling techniques, discovery of large fields, and improved recovery, such things as a trend toward deeper drilling, decline of exploratory prospects, and inflation.

[61] The average price received by Continental for crude at the well-head (U.S., 1958): $2.92 bbl; the average life-of-contract price on new gas contracts negotiated in 1957 and 1958 by the gas producers generally: 17.2¢/Mcf.

[62] Oil 9% and gas 6% of declining reserve balances.

[63] "Etc": certain assumptions as to severance taxes, lifting costs, depreciation and depletion rates, and income taxes; no allowance being made, however, for a continuation of the aforesaid 12% up-trend in finding and development costs.

[64] Relating to investment but without allowance for working capital. The average rate base type of return, allowing for working capital, would fluctuate from an estimated low of 4.0% to a high of 11.5% (average 7.3%).

[65] 24 FPC, at 569; the *Phillips* tax saving amounted to 6.6% on well-mouth properties.

should be determined with respect to the Company's business as a whole.[66] With respect to the latter proposition the evidence in the immediate proceeding appears not unlike that available in the *Phillips* case as disclosed in Opinion No. 338 and, accordingly, on the basis of the *Phillips* holding the rate of return in this proceeding will also be determined for Continental as an entirety, albeit, giving some weight, as in *Phillips*, to the producer phase of Continental's integrated functions.[67]

The Commission has also held (*Phillips*) that the allowance for the producer's common should be comparable to or greater than that for a pipeline or electric company, with due consideration of the lower risk arising from high equity ratios characterizing producer capitalizations.[68] Notice is accordingly taken of returns allowed by the Commission at various times in gas and electric cases which range from 8.2% to 14.4% and the general proportion of equity comprised in the capitalization.[69]

While the Commission further holds that the relation of book earnings to book value is relevant as revealing what comparable companies are earning on book value of assets, in determining the rate of return for an integrated producer (*Phillips*) it has refused to resort to such data when it pertains to a class of companies whose operations are limited to production only.[70]

However, in this latter connection it is observed that Continental's earnings-price ratios more nearly approximate those of Staff's 15 Class A producers of gas and oil, than those of the larger group of 20 Class C integrated companies, in that for a 9-year period (1949–1957) Continental's ratios averaged 7.9% as compared with the corresponding Class A and Class C ratios of 7.0% and 11.3%, respectively, and for a five year period (1953–1957) averaged 5.6%, as compared with a corresponding 5.2% for the Class A group, and 9.1% for the Class C group.[71]

For the same periods Continental's rate earned on book value more nearly approximated that of the integrated Class C group so that the ratio of the

(1957)—13.7%, test year 1954, both of which involve a low ratio of equity to total capitalization; *Panhandle Eastern Pipe Line Company*, 13 FPC 53, 100 (1954)—11.4%, test year 1952. Compare: *South Carolina Generating Company*, 16 FPC 52, 64 (1956)—10.5%, test year 1956, also with a low percentage of equity capitalization. *Michigan Wisconsin Pipe Line Company*, 13 FPC 326, 343 (1954)—10.3% test year 12 months to April 30, 1954; *Texas Illinois Natural Gas Pipe Line Company*, 13 FPC 708, 721 (1954)—10.2%, test year 12 months to October 31, 1953; *United Fuel Gas Company*, 12 FPC 251, 271, (1953)—10.1%, test year 12 months to June 30, 1952. See, *Home Gas Company*, 13 FPC 241, 247 (1954)—9.7%, test year 12 months to October 31, 1953; *Hope Natural Gas Company*, 13 FPC 685, 695 (1954)—8.2%, test year 1953; *Natural Gas Pipeline Company*, 14 FPC 212, 223 (1955)—9%, test year 1953. Also the table in *Phillips*, 24 FPC at 572.

[70] *Phillips*, 24 FPC at 571.

[71] All ratios declined over each period but Continental's declined more consistently with those of the Class A group.

price of Continental's common stock to its book value averaged some 2.3 times.[12] If the same allowance for the cost of equity financing (0.75%) and the same adjustment over "bare bones" cost (0.75%) used in the *Phillips* decision (24 FPC at 572) be applied to the Class A group's 5-year earnings-price ratio of 5.2% there is obtained an equivalent earnings value ratio of 15.4%. While subject to the objection stated in *Phillips* that such a result is statistical and mechanical, it does, however, lend support to the conclusion that the equity return in this proceeding cannot be limited to the same 12% arrived at in the former case (*Phillips*).

The 1950–1957 average rate earned by Class A producers was 15.5% and for Class C producers 13.7%. The relative position of Continental with respect to the average of the 1949–1957 and 1953–1957 averages of price to book value indicating a status for the Company in this connection between the two types, the return, or earnings on equity, would thus be somewhat in excess of 14%. However, Continental's more recent ratio has been somewhat lower (13.0%) and the long-term trend thereof has been generally downward both with respect to Continental and each of the three classes of producers.

On the basis of all of the foregoing it is therefore concluded that 14%, after actual taxes paid, represents the required return allowance on Continental's common equity. With cost of long term debt of 3.34%, and capitalization as of December 31, 1957, the overall return becomes:

	Capitalization	Cost	Return
	Percent	*Percent*	*Percent*
Debt	28	3.34	0.9352
Common	72	14.0	10.0800
Overall cost rate [1]			11.02

[1] Data contained in the rate of return exhibits in this proceeding and in Continental's 1958 Annual Report, of which latter limited notice is here taken, indicates that the 1955 overall cost rate would be at least equal to that here determined.

Return Gas

On the basis of the foregoing determination of 11.02% as the permitted rate of return in these proceedings the gas return allowance summarizes by regions as follows:

Region	Rate base	Return (11.02 percent)
Central	$989,649	$109,059
Southwestern	4,104,257	452,289
Rocky Mountain	1,654,127	182,285
Western	5,449,219	600,504
Southern:		
Onshore	16,016,390	1,765,006
Offshore	3,544,126	390,563
Total	31,757,768	3,499,706

[12] On the same basis the average of the 1949–1957 and the 1953–1957 averages for Phillips would be 1.4. See *Phillips*, 24 FPC at 572.

The cost of gas produced from gas-only, condensate-gas, and oil-gas leases, including production and exploration expenses and return, by regions becomes:

	Expenses	Return	Total
Central	$287,253	$109,059	$396,312
Southwestern	1,196,016	452,289	1,648,305
Rocky Mountain	268,520	182,285	450,805
Western	2,018,398	600,504	2,618,902
Southern:			
Onshore	4,351,933	1,765,006	6,116,939
Offshore	274,828	390,563	665,391
Total	8,396,948	3,499,706	11,896,654

Gas Cost Rate by Type of Sale

Staff obtains average gas rates by district lease categories by allocating operating expenses and return to gas sold at the lease (unprocessed) and for processing (process gas) in the ratio of revenues realized from each such type of sale.

The foregoing regional totals of gas operating expenses and return thus classify as follows:

	Unprocessed gas costs	Processing gas costs	Total
Central	$61,552	$334,760	$396,312
Southwestern	1,013,715	634,590	1,648,305
Rocky Mountain	325,697	125,108	450,805
Western [1]	1,328	2,617,574	2,618,902
Southern:			
On shore	2,350,682	3,766,257	6,116,939
Offshore	665,391		665,391
Total	4,418,365	7,478,289	11,896,654

[1] Sales in the Western Region, made in California, are nonjurisdictional.

Residue gas costs are derived by allocation of processing gas costs between residue gas sales and gas liquids in the ratio of revenue from residue gas sales to the total of revenues from such sales and sales of gas liquids.[73]

Indicated district rates are thence obtained by separately averaging unprocessed gas, residue gas, and/or processing gas costs by the respective Mcf volumes.

On the basis of such average rates, as well as an analysis of contract provisions as to both the source of gas sold (lease category) and the type of sale (viz., Exhs. 13 and 15), Staff obtains its so-called indicated rate for each jurisdictional sale. The excess or deficiency of actual revenues with respect to those obtained under the hereinabove adjusted indicated rate becomes, by regions and districts:

[73] Plant costs used in determining indicated rates for sale under six FPC gas rate schedules have not been adjusted for rate of return, the evidence indicating the addible amount to be insignificant (*e.g.*, Rincon plant: 0.048¢/Mcf., including income tax).

Region/District [1]	Excess (deficit) actual over indicated revenues	
Central Region:		
West Kansas	($16, 073)	
North Oklahoma	(31, 544)	
South Oklahoma	(2, 468)	
		($50, 085)
Southwestern Region:		
North Basin-West Texas	16, 429	
Panhandle	43, 393	
Eunice-Hobbs	64, 156	
		123, 978
Rocky Mountain Region: Montana, East and Central Wyoming	(38, 115)	
		(38, 115)
Southern-Onshore Region:		
McAllen	51, 655	
Alice	(299, 972)	
Houston	(8, 443)	
South Louisiana	(33, 187)	
North Louisiana	(453)	
East Texas	61, 536	
		(228, 864)
Southern-Offshore Region	[2]	[2]
Total, all regions		(193, 086)

[1] Eliminating the Western Region on the grounds stated in footnote 73 on the preceding page. Note that costs have not been allocated to gas returned to the lease for use in the production of liquids by maintaining pressure or providing lift as this gas is not sold.

[2] CATC Harvey and MCN Morgan City districts—no rates recommended as gas sales and revenues during test year were nominal.

In relation to these results it is observed that not only do the existing rates fail to provide overall revenues equal to computed costs by some $193,086, but also fail to provide the required revenues in all districts except those included in the Southwestern Region and two in the Southern-Onshore Region.

The three Southwestern districts are included in the Texas Railroad Commission's Districts Nos. 7–C, 8 and 10, and the Permian Basin in New Mexico. With one exception (Rate Schedule No. 16) the jurisdictional average unit revenue realized by Continental was less than the administrative rate established for the area by the Commission in its Statement of General Policy No. 61–1, issued September 28, 1960.[74]

The highest average unit revenue realized under Continental's rate schedules in the McAllen and East Texas Districts of the Southern-Onshore region, where revenues exceed the above computed cost of service rate, are less than those similarly set by the same Statement of General Policy, *supra*.[75]

[74] Several rate schedules relating to gas sold in the North Basin and West Texas Districts, as well as Rate Schedule No. 16 relating to gas sold in the Panhandle District, were among the number of those rejected by Commission's order issued November 12, 1958, as constituting, severally, a "percentage sale" within the terms of Section 154.91 of the Regulations under the Act. With respect to the remaining rate schedules the average unit revenue realized and the applicable administrative rate, *supra*, compare as follows:

Footnote continues on following page.

Unit Revenue Differences

The Act provides that with respect to jurisdictional sales no natural-gas company shall maintain unreasonable differences in rates or charges as between localities or classes of service. Aside from indicated rates based on Staff's sales realization determination of cost by area and type of service, no evidence was submitted in this proceeding going directly to the matter of individual rate differences.

The criticism of the sales realization method of cost allocation set forth in the decision in the *Phillips* case[76] necessarily imposes a limit upon the use of an indicated rate so derived in determining either the fact of an unlawful rate difference or the resulting adjustment to be applied to existing rates effective in the geographical areas proposed by Staff.

Furthermore, in a number of instances the indicated rate represents an average of at least two types of sales weighed by 1955 volumes and depends for the validity of its application as to future rates, upon whether the related test year sales are normal with reference to the combination of districts and types of sales used.[77]

Under the order of November 12, 1958, *supra*, the Commission rejected a total of some 41 rate filings by Continental on the ground that in each instance these involved a "percentage sale" which, under Section 154.91 of the Commission's Regulations,[78] must be covered by filings by the plant operator.[79]

With respect to the Central Region, nineteen of the rejected filings applied to sales totalling 1,307,706 Mcf, representing, 45.32% of 2,885,564 Mcf sold jurisdictionally. While the Regulations (Section 154.91) recognizes that even in "percentage sale" instances producer's rates are subject to the rate restrictions of the Act the evidence here does not go to the matter indicated rates for Continental's gas sold under rate schedules of another natural-gas company.

[76] 24 FPC at 558.

[77] In the Southern Region such composite sales total some 7,063,765 Mcf or 21.7% of a total of 32,562,904 Mcf sold under FPC gas rate schedules.

[78] *In the Matters of Continental Oil Company*, FPC Docket No. G–5766, *et al.*, issued November 12, 1958. Rate Schedule No. 120 was also rejected by letter dated January 29, 1958.

[79] So in the provisions of Order 174–B, issued December 17, 1954, and in the current provisions of the Regulations under the Act.

With respect to the twenty remaining rate schedules in the Central Region, eighteen provide average revenues ranging from 3.72¢ to 11¢ per Mcf, of which ten include revenues from residue gas at 6.02¢ per Mcf, five at 3.33¢, 3.98¢, 3.99¢, 5.21¢ and 5.7¢, respectively,[80] and three concern the sale of unprocessed gas from gas only or oil-gas leases in the instance of two relatively isolated fields.[81] Under the circumstances and in the light of the relatively small volumes involved, the evidence does not indicate the existence of unlawful differences or anything other than probable unfavorable opportunities of sale.[82]

In the Southwestern Region the Commission's order of November 12, 1958, *supra*, rejected 21 rate schedules covering the sale of 14,550,167 Mcf, or 68.4% of a total under filed rate schedules of 21,266,797 Mcf. The evidence which relates to two remaining schedules in Staff's North Basin and West Texas area district[83] and two in the Panhandle area district[84] provides no reliable indication of unlawful rate differences, and so in the Eunice-Hobbs area where the rate for residue gas sold from the Skaggs and Warren-McKee fields in Lea County, New Mexico, to the Warren Petroleum Company is as high as 8.79¢ per Mcf, for in the case of this buyer the overall result of the rates provided in the 17 jurisdictional contracts under which Continental sells its gas in the South Oklahoma and Eunice-Hobbs areas reflects a very small average excess (0.21¢ per Mcf) over the total costs found for these several areas and types of sale by the application of Staff's sales realization cost of service method.[85]

Too, in the instance of rate schedules covering sales to El Paso (Nos. 92 and 104, and Nos. 85 and 109), average revenues applicable to sales in the various fields on the evidence cannot be analyzed to obtain the price of gas by types of sales. In all, therefore, there is no showing of unlawful differences in rates in this region.

Of the four rates involved in the Rocky Mountain Region, comparison can be made only with respect to rates applicable to sales from the Elk Basin Field (Rate Schedules Nos. 103 and 111),[86] and, further no unlawful differences are found with respect to the jurisdictional rates in this region.

---

[80] The overall average revenue per Mcf includes revenues from gas liquids.

[81] Rate Schedules Nos. 89 and 90—South Oklahoma District, Katie Field (1953, 1952); and Rate Schedule No. 112—West Kansas District. Hugoton Field (1953)

[82] It may also be noted that the higher rates, one in the Katie Field (10¢) and one in the Hugoton Field (11.0¢), do not exceed the comparable rates contained in the Commission's Statement of General Policy No. 61-1, *supra*.

[83] One rate schedule, No. 87, involves unprocessed gas sold at the oil-gas lease (3.54¢ per Mcf), the other rate schedule, No. 88, involves such gas sold at the lease (3.64¢ per Mcf) and, additionally, unprocessed gas sold from a gas-only lease (3.64¢ per Mcf).

[84] These rate schedules (Nos. 46 and 134) involve residue gas unit revenues of 5.49¢ and 5.64¢ per Mcf, respectively, but different quantities and contract years.

[85] As adjusted for year-end net investment and rate of return, *supra*. The excess compares with Company overall average deficiency of (0.59¢) per Mcf applicable to sales to 24 companies of 58,104,199 Mcf.

[86] Rate Schedules Nos. 2 and 108 involve the sale of unprocessed gas from gas only leases. Rate Schedules Nos. 103 and 111 involve the sale of residue gas from combination oil and gas leases. The latter two schedules, dated in 1949 cover 1955 sales of like volume, have identical pressure and Btu conditions, and yielded the same unit revenue, viz., 5.60¢ per Mcf.

In the Southern Region, which includes six districts having significant diverse characteristics as to at least the geographical factors,[87] various ranges do appear with respect to unit revenues for a specific field, or group of fields in the same county or counties.[88] However, with respect to any given field or group of fields due consideration of the relative volumes of gas sold, type of sale, and implication of the date of the basic agreement necessarily leads to the conclusion that the evidence here available will not support a finding of prohibited rate differences.

Cost Trends and the Test Year

Staff introduced in evidence 1955–1958 annual averages of wellhead gas cost by regions,[89] computed as before on the basis of an average net investment, with an illustrative return of 9%,[90] but with all production and exploration costs treated as combined joint costs subject to allocation to gas on a relative value or realization basis,[91] simply by regions.[92]

While Continental questions a regional consolidation of costs, it seems generally agreed that company-wide data would provide at least a satisfactory basis for obtaining a trend of gas costs in relation to gas revenues. This latter approach indicates an increasing overall deficiency in Continental's gas revenues in the generally relative magnitude of $1,751,155 in 1958 compared with $453,050 in 1955, reflecting a significant overall increase in the computed average cost of gas produced.[93]

---

[87] The McAllen District is located in extreme southeastern Texas and the Northern Louisiana District embraces also Southern Arkansas. The four districts Alice, Houston, East Texas, and Southern Louisiana, taken together, embrace generally the intervening territory and correspond severally with the areas stated in the Commission's Policy Statement No. 61-1, *supra*, as follows: Texas Gulf Coast—District 4 (McAllen and part of Alice); District 1 and 2 (remainder of Alice); District 3 (Houston); District 5 and 6 (East Texas); and Louisiana—North and South (where Staff uses identical nomenclature). Furthermore, the testimony of Staff's supervising general engineer on the subject of the character of cost districts emphasizes, as consistently on cross as on direct, that generally the producing properties in one area are significantly dissimilar with respect to those of the others.

[88] Thus:

	Rate schedules (FPC Nos.)	Corresponding unit revenues (Cents/Mcf)
Texas—Field:		
South La Gloria	6, 76	7.63, 7.22
Meyersville, East Meyersville	84, 114	10.65, 10.71
Cabeza Creek	99, 100	6.60, 6.53
East Mayes and two others	94, 129, 130	9.23, 7.70, 6.37
Carthage	3, 81, 82, 83, 117	(12.64, 9.78, 9.82) (9.78, 10.68)
Woodlawn	107, 113	13.30, 13.11
North Louisiana—Bear Creek and two others	126, 131	9.68, 5.50

[89] The difference between 1955 total costs in this study and those given in the prior exhibit arise primarily from the later inclusion of relatively minor net balances in the automobile and aviation revenue and expense accounts.

[90] Without tax offset to working capital.

[91] Excluding the minor amounts of revenue subject to refund.

[92] As in its case in chief, Staff uses a production intangible development cost recomputed on a capitalized basis. However, here as contrasted with its case in chief it allocates dry development dry hole costs along with exploration expenses.

[93] Thus the average cost increased approximately 2.1¢ per Mcf, although production was not stabilized in the CATC Marine Region. Comparable revenues increased approximately 1.3¢ per Mcf. As volumes of gas include a substantial return free to the lease results cannot be converted to a wholly satisfactory unit cost trend.

As no radical change is indicated in the nature of Continental's production during the 4-year period (1955–1958) this leads to the conclusion that the trend in regional costs of gas production has also been upward.

Although the evidence does not validate Staff's use of 1955 as a test year for determination of future rates, and does not provide a basis for adjusting costs to a more satisfactory test base, it does serve to demonstrate the direction of cost developments and to validate conclusions reached in this decision as to the discharge of Staff's burden of proof.

Staff's Sales Realization and Relative Cost Allocations

Staff compares the result of a relative cost allocation which produces an overall production cost of 7.54¢,[94] with that found by use of a regional sales realization method (6.81¢), but the evidence is that in this instance the relative cost method rests upon such a significantly inadequate sample of regional single product leases as to lend no support, directly or indirectly, to the direct sales realization allocation results.

Section 4(e) Cases

The rates proposed by Continental in the 8 schedules subject to these Section 4(e) proceedings compare with the above sales realization results and the Commission's administrative rates (Policy Statement 61–1, amended), as follows:[95]

Region and district	Rate schedule and supplement	Proposed rate [1] (cent/Mcf)	Sales realization rate (cent/Mcf)	Administrative rate (cent/Mcf)
Central:				
North Oklahoma	[2] 147:1	11	10.2	11
South Oklahoma	[3] 89:1	11	9.1	11
Southwestern:				
North Basin-West Texas	[2] 146:3	10.6418	2.57	11
Eunice-Hobbes	[3] 109:7	[4] 10.5012	8.5	11
	[3] 85:10	[5] 10.5406	9.2	11
	[3] 92:7	[4] 10.5012	10.5	11
Southern—Onshore: East Texas	[3] 113:5	13.6296	10.48	[6] 14
	[3] 107:10	14.1344	12.0	[6] 14

[1] Including tax reimbursements where applicable.
[2] Favored nations increases, total volumes: 1955—3,722,695 Mcf; 1958—(approx.) 4,197,247 Mcf, including royalty.
[3] Periodic step increases, total volumes: 1955—1,462,733 Mcf; 1958—2,470,263 Mcf, including royalty.
[4] For deliveries below 600 psig the rate rounded to four decimals, becomes 10.0545 cents per Mcf.
[5] For deliveries below 600 psig the rate, rounded to four decimals, becomes 10.0922 cents per Mcf.
[6] There is no indication that Continental has proposed the elimination of favored-nation, price redetermination, or periodic escallation clauses of these Schedules basis for the application of rates provided in the Restatement of Mar. 27, 1963, of the Second Amendment to the Statement of general policy No. 61–1.

On the basis of anticipated 1957–1958 volumes Continental's eight above proposed rates would effect increases estimated in Exhibit 32 to range from a calculated annual amount of $20 in Docket No. G–11337 (RS No. 113:5) to some $100,700 in Docket No. G–15417 (RS No. 85:10).

Where costs of service is manifesting an upward trend a sales realization allocation will tend to produce an unduly low indicated allowable rate, however, the Commission's administrative rate, while by its nature indicating a ceiling, serves along with general cost evidence of record in this case to

[94] To which is to be added exploration and development expenses and production dry hole expense of 2.75¢ for a total cost service of 10.29¢ per Mcf as compared with the previous 10.28¢ per Mcf. Staff here allocates exploration and development dry hole expenses on the basis of the success of the total finding effort as expressed in the ratio of successful gas to total successful wells (1947–1957, 6.4%).

[95] Inclusive of taxes where applicable.

provide a useful standard by which to judge the discharge of the burden of proof.

Continental's cost of service evidence is not susceptible of direct application in determining the issue of reasonableness with respect to the above eight listed rate proposals, therefore, on the basis of all the foregoing, and considerations hereinafter indicated with respect to the other evidence in the case, the suspension proceedings with respect to the first seven of the above listed proposed rates will be terminated while the increase with respect to Rate Schedule No. 107:10 will be here limited to the Commission's administrative rate level of 14.0¢ taken as inclusive of tax.

Interveners' Cost of Service

Interveners' relative-cost allocation of production costs, and reserves-added-realization allocation of exploration costs, results in a 1957 test year jurisdictional cost of gas service, including return, of 13.44¢ per Mcf,[96] as follows:

Production—Direct Expense (Gas, $4,661,523)

Interveners' witness classifies on-leases expenses totalling $50,922,827 by lease categories,[97] and, using relative cost ratios derived from the application of direct production unit expenses of 89.14¢ per barrel for oil (760 pumping oil leases) and 2.67¢ per Mcf for gas (150 gas leases) to the production of casinghead and condensate leases, allocates joint production costs so that $4,661,523 of a three category total of $28,123,053 is assigned or allocated to gas.[98]

—Indirect Expense (Gas, $824,673)

Production department direct overhead ($4,299,740) and expenses of unassigned special facilities ($1,166,052) are allocated to gas ($500,120) in the ratio of the preceding allocation of direct production expense. Category indirect production expense exclusive of development dry hole costs ($273,707), is allocated to gas by the category's imputed production net investment ratio (infra), while special facility expense is directly developed,[99] and other indirect expense is allocated to gas in accordance with the overall allocation of indirect production net investment (20.54%, *infra*),[100] for a combined resultant cost to gas of $21,527. Gas special facility depreciation and ammortization expense in the amount of $303,026 is obtained from Continental's work papers.

— General Company Expense and Taxes (Gas, $1,204,173, and $556,749)

General company expense assigned to production ($5,862,577) is allocated to gas in the ratio of direct production net investment (20.54%, *infra*).

Exploration Expense (Gas, $5,254,318)

Exploration expense consisting of geological and geophysical expense, land department and accounting expense, and surrendered leases, as well as development dry holes ($44,013,883), and exploration general expense ($818,179), are allocated to gas ($5,158,427 and $95,891) in the ratio of a valuation of

[96] Cf., average revenues of jurisdictional gas sales: 8.27¢ per Mcf. Interveners' witness excludes all data pertaining to the non-jurisdictional Western Region.

[97] Oil-only, casinghead, condensate, and gas-only leases.

[98] Computing so-called theoretical liquids from "gas-only" leases and thus, in effect, applying allocation to this category also.

[99] Special facilities net ($48,311); oil, $15,914; gas, ($64,225).

[100] Other indirect expense: ($63,482).

the reserves of liquids and gas added and retained to those added (1953–1957, 11.72%).[101]

Gasoline Plant Expenses (Gas, $172,862)

Plant operating expenses totalling $1,193,743, and general and administrative expenses of $77,298, are allocated to gas ($162,349 and $10,513) in the ratio of functionally assigned and allocated plant and gathering system gross investment (13.6%, *infra*).

Expenses—Total

Expenses thus attributed to gas and, as indicated, to jurisdictional gas, total as follows:

	Gas	Jurisdictional gas
Production	$7,247,118	[1] $3,700,484
Exploration	5,254,318	[2] 3,052,375
Gasoline plant	172,862	[3] 128,385
Regulatory expense		[4] 200,000
Total	12,674,298	7,171,244

[1] Allocated on the basis of test year sales (52.3 percent).
[2] Allocated, exploration at 58.2 percent which reflects a CATC test year production adjustment (*infra*); and general and administrative at 52.3 percent which reflects actual volumes sold.
[3] Allocated in the ratio of plant jurisdictional to total volumes, the latter including gas used in injection and lift (74.27 percent).
[4] Continental's originally claimed amount.

The foregoing yield a unit jurisdictional gas cost, before return, of 9.94¢ per Mcf.[102]

Production—Direct Net Investment (Gas, $43,515,213)

The witness classifies on-lease net investment in producing leases, lease and well equipment, and intangible drilling costs, totalling $211,877,943, by lease categories, and allocates joint product category and "gas-only" costs in the ratio of an imputed net investment obtained from the application of the oil-only and gas-only direct production unit net investment of $2.496 per barrel,[103] and 13.17¢ per Mcf,[104] to the category's production of liquids and gas respectively. Net investment allocated to gas ($43,515,213) amounts to 20.54% of the total.

— Indirect and General Company Net Investment (Gas, $3,457,727 and $1,819,627)

Production department general net investment ($5,373,336), and general company net investment assigned to production ($8,858,944), is allocated on the basis of the above over-all relative investment ratio of 20.54% ($1,103,683 and $1,819,627); offshore drill tool net investment ($1,858,221) is allocated

[101] The valuation of reserves is based upon the average price realized by Continental in 1957 ($2.95 per bbl.) discounted at 9% for 10 years (to $1.89); and upon an escalated average price for 1958 deliveries of gas under contracts executed in 1957 by some 25 interstate pipelines, i.e., 15.31¢ per Mcf, escalated 1¢ every 4 years, discounted at 9% for 20 years (to 7.60¢ per Mcf).

[102] Exploration expense of $3,002,205 divided by a test year's normalized jurisdictional volume of 83,301,240 Mcf (3.60¢ per Mcf) and the remainder by test year actual volumes of 65,655,580 Mcf (6.34¢ per Mcf).

[103] Obtained from the 760 oil-only pumping leases used in the preceding relative-cost allocation of direct production expenses.

[104] Similarly, from the 150 gas-only leases used in the preceding relative-cost allocation of direct production expenses.

on the basis of the onshore unit investment of the preceding paragraph, as imputed to offshore test year production from CATC (West Delta) and MCN leases[105] (gas, $127,846); and net investment in gas special facilities ($2,226,198) is obtained from the papers of Continental's witness.

Exploration—Net Investment (Gas, $6,816,227)

Exploration net investment ($56,922,584), primarily in non-producing leases, consisting of both regional ($56,125,660) and non-regional ($796,924) totals, and general company net investment identified with exploration ($1,236,351), is allocated to gas ($6,671,327 and $144,900) in the same value-of-reserves ratio used in the preceding allocation of exploration expense (11.72%).

Gasoline Plant Net Investment (Gas, $69,841)

Gasoline plant gross investment[106] is assigned by functions to liquids ($2,963,587, or 93.87%) and gas ($193,484, or 6.13%), while other plant gross investment ($1,206,425) is allocated (gas, $73,954) in the resulting ratio of these functional assignments.[107] Plant gathering system gross investment is allocated (gas, $502,224) on the basis of a cost of production imputed to the volumes of gas and estimated liquids transported for processing and extraction, respectively.[108] The composite of these allocations yields an overall ratio (13.6%) by which net plant investment and general company net investment assigned to the five jurisdictional plants is allocated to gas ($53,955 and $15,886).

Return on Net Investment

The net investment allocated to gas and, as indicated, to jurisdictional gas, summarizes as follows:

	Gas	Jurisdictional gas
Production	$48,792,567	[1] $28,397,274
Exploration	6,816,227	[2] 3,967,044
Gasoline plant	69,841	[3] 51,871
Total	55,678,635	32,416,189

[1] In the aforementioned ratio of adjusted jurisdictional sales (83,301,240 Mcf) to adjusted total sales (143,129,698 Mcf), or 58.2 percent, computed on the basis of normalizing Continental's offshore production from CATC leases by adding, partly in error, 17,645,660 Mcf to test year jurisdictional and total sales of 65,655,580 Mcf and 125,484,038 Mcf, respectively.
[2] Using the ratio of the preceding footnote.
[3] In the ratio of jurisdictional sales of residue gas to total residue gas volumes, including gas used for injection and lifting, or 74.27 percent.

Application of the witness' assumed, but unsupported, 9% rate of return to jurisdictional net investment results in a return of $2,917,457 applicable to Continental's jurisdictional business.[109]

[105] *I.e.*, 1,949,925 barrels of liquids and 2,732,330 Mcf of gas.
[106] Related to the five plants making jurisdictional sales of residue gas.
[107] Liquids: extraction, compression, injection, and gas lift; gas; dehydration, residue sales, and gas treating.
[108] *I.e.*, 89.14¢ per bb. and 2.67¢ per Mcf. (above, "Production—Direct Expenses"). Liquid volumes estimated at 2 gallons per Mcf of the unput of 40,390,467 Mcf, or 1,923,000 bbl.
[109] Viz., 3.50¢ per Mcf. on the basis of the normalized volumes of $3,301,240 Mcf. but omitting provision for working capital.

Adjustments to Interveners' Allocations

Production Expense and Net Investment

Continental's proposal to include in the gas-only category the 29 Woodlawn field leases, inadvertently omitted by Interveners,[110] as well as costs related to the four offshore West Delta and MCN gas-only leases,[111] excluded because deemed too high, is appropriate.

Continental's claim that Interveners' allocation of costs to liquids produced from gas-only leases sold under a two-part rate does not give the required recognition to the fact that condensate is produced in a vapor phase, is compromised by its' witness' admission that physical separation at the lease would make the allocation appropriate. This justifies an offsetting of the adjustment against the equally questionable claim for inclusion of the Western Region in determining relative costs.[112] On this basis neither proposal is accepted.

Interveners' relative-cost method irrelevantly assumes that but for the presence of gas condensate would exist in the reservoir in the same state as non-associated oil.[113] As the low specific gravity liquid exists in the reservoir in a gas phase the hypothesis that the production of condensate entails costs comparable to those associated with the heavier crude is not supported.

Exploration Expenses and Net Investment [114]

Continental's proposal to exclude farm-out reserves, mainly oil, from the reserve valuation ratio fails to account for the fact that farm-out leases represent at least a part of the overall result of the exploratory effort. No proper basis is provided upon which to determine an appropriate cost adjustment in the premises.[115]

In determining the five year average of reserves-added Continental would eliminate 1953 as having an exceptionally low gas-oil finding ratio and add 1958 as having a ratio more consistent with that of the other years comprising the base period. No real exception is taken to this proposal.[116] In this same connection Continental would retain the Rayne field reserves sold in place in 1959. As exploration expenses are necessarily distributed over units of production and Interveners propose no test year adjustment with respect to Rayne production the value-of-reserves added allocation between liquids and gas should, consistently, include the Rayne reserves.[117]

---

[110] Involving $78,135 of expense and $747,859 of investment. The related production totalling 2,105,485 Mcf was included by Interveners.

[111] Involving $146,696 of expense and $1,102,412 of investment. Production, totaling 566,408 Mcf was at a substantially normal rate. Continental has been operating in offshore areas since 1944.

[112] The two adjustments are opposite in affect and approximately equal.

[113] Condensate consists largely of hexanes and heptanes, while oil consists largely of heptanes and heavier hydrocarbons. The specific gravity of oil is the greater.

[114] Including both general company expense and net investment assigned to exploration.

[115] The purpose, generally, is to allocate $44,013,883 of expense, including $14,407,194 of departmental and geophysical expenses and $5,415,169 of development dry hole costs. While none of the dry hole costs relate directly to farm-outs it would appear that some part of departmental and geophysical expenses would be allocable to such leases. However, the result of Interveners' treatment is not actually prejudicial to Continental.

[116] Indeed, the evidence is to the effect that an increasing incidence in the finding of gas is indicative of a trend to relatively higher gas-oil finding ratios. However, a breakdown between Western Region and other reserves is not provided.

[117] Rayne reserves were estimated at 291,900,000 Mcf, as compared with 1,009,700,000 Mcf of reserves added 1953–1957. This type of sale is unique with Continental.

In the valuation of reserves Continental also proposes use of a weighted average price of 17.27¢ per Mcf, derived from the most recent data available,[118] plus an escalation. While Interveners' witness merely assumes that an industry-wide average price would be representative of sales made by Continental, the latter's evidence fails to establish that a recent price would in fact constitute a more appropriate one for use in the premises, an omission negativing adoption of the adjustment. The further proposal to allocate exploration expense and investment on a net wellhead basis is, however, consistent with Interveners' value approach and, accordingly, there should be substituted for Interveners' valuation factors derived from the gross price (liquids $2.95, gas 15.31¢ plus escalation) discounted to $1.89 for liquids and 7.6¢ for gas, corresponding net prices of $1.53 and 8.3¢ plus escalation, discounted to valuations of 98.3¢ per barrel and 4.45¢ per Mcf.

Gathering System and Gasoline Plant Expense

Interveners' mere hypothesis that the gathering system functions as an extension of lease production facilities fails to factually justify the use of production expenses to allocate gathering system expense. Accordingly, the allocation of gasoline plant and general expense by means of Interveners' ratio, which depends upon the hypothesis, cannot be accepted.

Regulatory Expense

Continental computes test year regulatory expense to be $261,577, classified as recurring rate expense, $78,828; general rate investigations, $175,634; and certificate applications, $7,115. Accepting these computations for immediate purposes only[119] and viewing the allowance for the larger amount on the basis of an amortization period as short as 3 years as not supported in fact it appears Interveners' provisions requires no adjustment.

Miscellaneous Net Investment Production — Indirect

The allocation of offshore drill tool investment to gas involves both the application of onshore unit production net investment in oil-only ($2.496 per bb.) and gas-only (13.17¢ per Mcf) leases to offshore production, and the unsupported assumption that in the future CATC offshore production would maintain the same relative ratio of gas to liquids.[120] Interveners' allocation serves to reduce the amount of the investment properly allocable to gas and, accordingly, Continental's proposal to normalize the allocation by use of a

---

[118] As previously stated herein, Interveners' 15.31¢ per Mcf represents the weighted average price received by natural gas producers for gas sold to some 25 interstate pipelines in 1958 under contracts executed in 1957, the volumes used constituting 98% of all gas purchased by interstate pipeline companies reporting to the Commission. Continental's 17.27¢ per Mcf represents the weighted average initial base price of 735 long-term contracts dated July 1, 1958 through December 31, 1959, on file with the Commission as rate schedules, using estimated first month's deliveries for the weighting. The prices of the latter contracts relate to areas in which Continental makes jurisdictional sales. Total volumes are generally equal (Interveners' 437,889,473 Mcf, 1958; Continental 492,000,000 Mcf 1958–1959). A check of 189 rate filings indicates a close correlation between estimated and actual deliveries.

[119] However, it is to be observed that Continental's itemization does not directly answer Staff's objection that a considerable portion of the originally claimed amount of $200,000 appears to relate to expenses for various studies made by company personnel which should be charged tentatively to joint general expense.

[120] Note: 1957 actual production: gas—1,354,340 Mcf; liquids—441,979 bbl. (3.06:1); compare, 1959: gas—14,116,704 Mcf; liquids—1,802,634 bbl. (7.83:1)

combination of West Delta 1957 and CATC-Cameron 1959 actual production of gas (11,625,042 Mcf) and liquids (520,037 bbs.) should be adopted here as in the allocation of exploration costs to jurisdictional gas, *infra*.

Gasoline Plant

Continental's proposes to modify Interveners' allocation of gasoline plant net investment in compression facilities ($1,941,081) solely to liquids to effect a partial allocation to dehydration, residue sales, and gas treating functions, in part because a horsepower-hours engineering study of compressor operations indicates an assignment of 60% of this investment to gas. In the absence of specific support for Interveners' allocation of all of the investment to gas, the proposal to allocate compression as other gross plant, 16% to gas, should be adopted.

With respect to gathering facilities Interveners use a relative net investment ratio for allocating that portion of such facilities included in lease investment. Little, if any, support exists for the allocation of the off-lease portion on the basis of an imputed-cost-of-production ratio.

Allocations to Jurisdictional Gas

With respect to the allocation of exploration expense and production and exploration net investment (including general company net investment) to jurisdictional gas, Interveners' witness' normalization of offshore CATC test year deliveries rests upon the application of inoperative minimum take-or-pay provisions of the Tennessee Gas contract to estimates of initial reserves of 1,673,929,000 Mcf presented in the original CATC proceeding in Docket No. G–11024.[121] Accordingly, Continental's proposal to use the 10,270,702 Mcf actually produced from Cameron lease in 1959 should be accepted for the limited purpose of indicating the general effect of normalization, short of relying upon non-effective provisions of the Tennessee Gas contract.

Effect of Adjustments

The effect of the adjustments adopted in the foregoing is to increase the computed company-wide cost of service to approximately 20¢ per Mcf. However, in view of the defects inherent in the reserve-added-realization method of allocation of exploration expense and net investment,[122] the above result serves but to support the conclusion previously reached in relation to Staff's evidence, that in the instance of all but one rate schedule (No. 107) these consolidated proceedings should be dismissed.

Interveners' Rate Method

Denying that it is possible to pinpoint costs by individual contracts, fields, or other limited areas, Interveners propose a combined cost of service and field price approach for the determination of rates whereby the overall average cost of service would be correlated with price ranges in to-be-determined industry price area[123] after which Continental would be required to tender specific rates which, in total, would provide revenues equal to overall costs but which would not exceed, in any instance, either the median of the

---

[121] Interveners' computed additional 17,645,660 Mcf is after an incorrect allowance for the production of 1,354,340 Mcf from the unrelated West Delta Offshore area.

[122] As stated by the Commission in the *Phillips* case, 24 FPC at 557.

[123] Premised as the largest geographical district within which conditions of sale of gas would appear to be significantly different from other areas.

applicable areas' range plus 20%,[134] or the average cost of service plus 33⅓%.[135]

However, the witness concedes that at this time the proposal would achieve nothing more than "rough justice". Moreover, the development of areas and appropriate field-price-ranges lies beyond the scope of these proceedings and overlaps other current Commission proceedings concerned with the area price problem.

Continental's Cost of Service

Continental allocates production expenses and net investment related to gas condensate leases on the basis of the Btu of the gas and liquids produced, and those related to casinghead leases according to a modified relative cost method.[136] Exploration expenses and return are allocated to gas on the basis of the Btu equivalent of current production of gas, oil, and liquids. Accordingly, for 40,574,048 Mcf of jurisdictional wellhead and gathering sales volumes Continental derives a 1957 test year production cost of $10,006,612, and exploration cost of $6,583,503, for a combined total of $16,590,115, or 40.89¢ per Mcf.

Processing plant gas costs, which consist of the cost of gathering system deliveries of 25,081,532 Mcf,[137] purchases of 9,733,094 Mcf of unprocessed and 5,575,841 Mcf of processed gas for sale,[138] and gathering system and residue facilities expenses, return and tax allowances,[139] are adjusted in part for volumetric and Btu losses[140] and allocated to jurisdictional residue gas on a volumetric (Mcf) basis[141] in the amount of $6,952,140, or 26.15¢ per Mcf.

---

[134] Including only prices acted upon by the Commission. It is represented that this level would embrace some 83% of all 1957 interstate sales.

[135] The plus 20% ceiling together with a minus 20% floor would provide a zone, allegedly, which would include pricewise approximately 75% of all interstate sales, and those of all of the major producers. Interveners would accept a fixed periodic increase of 1¢ per Mcf each four or five years to meet a "seemingly inevitable, if gradual" inflation in costs.

[136] Production expenses of oil only leases and of gas condensate leases allocated to liquids are added to obtain unit expenses for oil; and of gas only leases and of gas condensate leases allocated to gas to obtain unit expenses for gas. The several units applied to oil and gas production from casinghead leases (24,788,681 bbls., and 77,080,876 Mcf), respectively, yield ratios used to allocate the six actual items of expense of such leases to oil and gas, severally. The method is applied, similarly, in deriving units of investment to obtain ratios for the allocation of the four actual items of production investment. Oil and liquid production from the oil only and condensate lease categories totals 22,245,495 bbls.; gas production from the gas only and condensate categories totals 60,034,341 Mcf. However, the production of gas from the gas only leases represents approximately but 1/7th of the total of gas produced from all leases.

[137] Production cost, $6,185,696; exploration cost, $4,069,665.

[138] Unprocessed gas, $731,652; processed gas, $221,998.

[139] Expenses, return (14%) and tax allowances, before losses:

	Expenses	*Return*	*Tax allowance*
Gathering system	$131,259	$4,928	$5,079
Residue facilities	366,193	12,717	13,106

[140] *I.e.*, gathering system deliveries, unprocessed gas purchases, and gathering system items for volumetric loss, 11.0735%; Btu loss, 11.6129%; combined, 21.4004%.

[141] *I.e.*, 26,588,421 Mcf of jurisdictional sales (74.2687%), of a total of 35,800,305 Mcf including 6,916,644 Mcf of non-jurisdictional sales and 2,295,240 Mcf for repressure, lift, and lease fuel use.

The latter cost, in combination with the foregoing production and exploration costs, and regulatory expense in the amount of $200,000, results in a computed 1957 jurisdictonal cost of service of $23,742,255 for total jurisdictional volumes of 67,162,469 Mcf, or 35.35¢ per Mcf.[133]

Continental assigns general company expenses and investment to departments on the basis of direct departmental gross assets,[133] and allocates total production department general expenses and investment to each of the four lease categories[134] on the basis of direct lease operating expenses,[135] and, further, allocates the corresponding amounts assigned to extraction plants to the three functions, gathering, extraction, and residue, on the basis of the function's portion of total direct expenses.

Special production facilities, other than drill tools, are either assigned to gas directly or allocated on a gross investment basis, while the latter (drill tools) are allocated to exploration and development on the basis of district (CATC, MCN) net footage drilled, and subsequently between liquids and gas on the basis of the Btu of the district's current production.

Lease, exploration department, geophysical, and core drilling expenses are severally adjusted for a 5% general wage increase effective January 16, 1959, and lease, retirement, depreciation, and amortization expenses, severally, to reflect an assignment of certain interests to Continental, effective December 1, 1950. Amortization has been determined after restatement of expensed intangibles on a capitalized basis.

Dry hole development costs are included in the production "indirect" expense item.[136]

Gasoline plant extraction expenses and investment are assigned to liquids.

The magnitude of the difference between Continental's computed cost of service (35.35¢ per Mcf) and the level of jurisdictional gas revenues (8.27¢ per Mcf) raises a question, which the evidence fails to satisfactorily answer, as to the practicality and acceptability of Continental's cost of service result.

However, the result obtained by application of the basis principles of the Phillips decision[137] indicates, as does the other evidence herein above considered, that average jurisdictional revenues fall short of meeting Continental's requirements.

Thus, allocation of joint production costs of casinghead and condensate leases by ratios obtained from the application of the several relative expense and investment cost units of the oil-only and gas-only lease categories to casinghead oil and condensate volumes, on the one hand, and casinghead and condensate gas volumes, on the other,[138] produces a jurisdictional cost of

---

[133] On the basis of an assumed 9% return and no provision for tax allowances the cost service reduces to 23.88% per Mcf.

[133] Production, 63.667%; extraction, 8.348%; and plants, 2.845% (other operations, 25.140%).

[134] Oil, oil and gas (casinghead), condensate and gas (condensate), and gas only categories.

[135] Production overhead expense includes certain items of so-called indirect expense, depreciation, and amortization (total, $2,741,921). Production overhead expense proper totals $10,992,976, general investment $15,242,883.

[136] These costs constitute the greatly predominant portion of indirect expense but the amount cannot here be separated by lease categories.

[137] 24 FPC 537, issued September 28, 1960.

[138] Omitting expenses and overheads classified by Continental as "indirect", because dominantly dry hole costs which latter were classified in the *Phillips* case as an exploration type cost; and also the investment in drill tools, analagously.

production of $4,636,207,[139] as compared with Continental's $10,006,612;[140] allocation of exploration expenses and return, including production "indirect" and related expenses and return on drill tools, previously excluded from production, by use of Continental's average Btu for oil and liquids as weighted in the latter instance by the *Phillips'* economic factor (*i.e.*, "4"), produces a jurisdictional exploration cost for wellhead and gathering system gas of $2,149,841, as compared with the Continental's $6,583,503;[141] and, finally, by giving effect to the changes in production and exploration cost for gathering system deliveries, as well as the hereinabove determined return (11.02%) and omission of tax allowances, there is obtained a plant jurisdictional cost of $3,399,029 as compared with Continental's $6,952,140.[142]

Jurisdictional cost of service thus becomes 15.46¢ per Mcf, as compared with Continental's 35.35¢ per Mcf, *supra*.[143]

---

[139] Return, 11.02%; production taxes included.

[140] Return 14% and tax allowances, production taxes included. The detailed comparison is as follows:

	Phillips' basis	*Continental*
Return	$8,173,736	$10,603,626
Tax allowance	----------	10,927,864
Expenses	6,937,141	11,728,163
Production taxes	556,749	556,749
Total	15,667,626	33,816,402
Jurisdictional (29.591 percent, Mcf)	4,636,207	10,006,612

Phillips, on the evidence in that case, provided a tax allowance. In this proceeding the evidence is to the effect that after statutory deductions Continental pays no Federal income tax related to its production business.

[141] In detail, as follows:

	Phillips' basis	*Continental*
Return (11.02 percent; 14.0 percent, respectively)	$905,561	$3,167,976
Tax allowances	----------	3,248,906
Expense	6,359,623	15,831,448
Total	7,265,184	22,248,330
Jurisdictional (29.591 percent, Mcf)	2,149,841	6,583,502

[142] Thus after losses (21.4004%, on items other than purchased processed and residue gas):

	Phillips' basis	*Continental*
Gathering:		
Expense	$103,169	$103,169
Return	3,049	3,873
Tax allowances	----------	3,993
Residue		
Expense	336,193	336,193
Return	10,010	12,717
Tax allowances	----------	13,106
Purchased gas	797,074	797,074
Production and exploration costs	3,297,167	8,060,669
Total	4,576,662	9,360,794
Jurisdictional (74.268 percent, Mcf)	3,399,029	6,952,140

[143] *In summary:*

Lease costs:	*Phillips' basis*	*Continental*
Production	$4,636,207	$10,006,612
Exploration	2,149,841	6,583,503
Processed gas	3,399,029	6,952,140
Regulatory expense	200,000	200,000
Total	10,385,077	23,742,255
Volume (Mcf)	67,162,469	67,162,469
Unit cost (cents/Mcf)	15.46	35.35

Although here, as in the instance of Interveners' cost of service presentation, a question exists concerning the representative character of gas-only unit costs in the development of the relative cost ratios the evidence justifies qualified acceptance of the foregoing results. The exclusion of Western Region costs is not clearly required by the evidence as, according to the testimony of one of Interveners' witnesses, exploration, and inferentially production, must be viewed in the light of total or national market requirements (T. 3759).

The foregoing results, in no instance, provide for working capital, or normalization of CATC–Cameron offshore production to adjust the allocation of exploration expense. The evidence does not provide a basis for determining a test year's allowance for materials and supplies or for effecting the expense adjustment. Suffice it to say that even so provision for cash working capital would appear to add to the unit cost of gas something less than 0.5¢ per Mcf.

Even as qualified, this portion of the evidence also supports the conclusion that the Section 5(a) proceedings herein should be dismissed.

Continental's Competitive Market Price Standard

Continental's rate witness, however, rejects cost of service, as failing to provide either a true cost, a measure of the producer's future revenue requirements, or results having a practicable relation to value,[144] and proposes instead that current market prices be used to test the reasonableness of rates.

The witness testified that discovery and production of gas no longer depends in the same degree upon the production of oil, and that with a rise in prices in the past 10 years and intensification of search in areas where probabilities favored the finding of gas, exploratory gas producing wells relative to the number of oil producers have increased;[145] and concludes in part that, as annual new supplies of gas, including revision, have increased (1947–1957) in about the same ratio as the adjusted average price paid by pipelines,[146] new supplies of natural gas in the interstate market are, and will be, substantially dependent upon price.

The witness testified that since 1945 demands for gas have increased at an average annual rate of 8.4%, that current additions are of minimal adequacy[147] and that if it be assumed future requirements increase an average of 5% per year, maintenance of a 20-year level of reserves will necessitate additions equal to twice the volume withdrawn, or as of 1965, in the amount of 29–32,000,000 Mcf per year.[148]

He testified that as pipelines purchase selectively over wide geographic areas, price tends to reflect supply available relative to demand, and, natur-

---

[144] Instancing the estimate of reserves, allocation, area of exploration, productivity or output, and complexity of ownership problems as defeating the practicability of relating cost to value or saleability; testifying that under Staff's cost of service method unit costs invertedly tend toward the high side for small volumes which have a lesser value and toward the low side for large volumes which have a higher value.

[145] During the years 1947–1948 gas discoveries averaged some 4.1 Mcf of gas for each barrel of oil discovered, while during 1957–1958, the ratio increased to 7.8 Mcf per barrel. The witness also observes that a price of 20¢ per Mcf gas in South Louisiana has a prospective realization as great as that of oil.

[146] Adjusted by use of the Wholesale Price Index.

[147] Known reserves as of December 1958 declined to 21.2 times the year's net production.

[148] As disclosed in the following text, the witness' opinion is that market prices constitute an indispensable element in determining what will be required as an incentive to future exploration.

ally rising in times of short supply, functions to stimulate the incurrence of the added costs of providing the market with additional supplies;[149] due to lack of concentration of ownership of production[150] large producers are unable to control supplies and effect price leadership,[151] and, on the contrary, pipelines, able to plan or defer purchases over a period of 2 to 3 years or more, have long maintained fixed rates over wide areas for reserves varying in value,[152] and may still do so if the new reserve is not of substantial size.[153]

He testified that the proportion of natural gas to total energy requirements is rising, having increased from about 12% during the war to 31% in 1958; industry consumes some 66% of the natural gas used, and as, in that area as well as in that of commercial and residential uses, gas, oil, coal, electricity, and other fuels may be substituted one for the other, the relationship between the price and use of natural gas is elastic, or self adjusting.[154]

However, it appears that between geographical areas preference for gas supports a considerable variation in the relation of the price of gas to that of other fuels,[155] and that consumer's response to the relative price of fuels is retarded by investment in gas appliances.

He also testified that following the low field prices of 1940,[156] the increase in average prices paid by pipelines under all contracts (107%)[157] have not kept pace with the increase in average wages of petroleum workers (196%), the wholesale price for finished steel (161%), or drilling costs which, due sub-

---

[149] The witness explains the fact that supply has consistently lagged behind demand by adverting to the time required to explore for, develop, and market a new supply.

[150] In 1957 the 4 largest Southwest sellers under contracts of all ages accounted for approximately 23% of deliveries to interstate pipelines, as compared with 40% of sales in the anthracite and 18% in the regional bituminous coal industries. The concentration is no greater with respect to large volume sales, now tending to decline in relative importance, than that of buyers, in-as-much-as the first 4 interstate pipeline buyers accounted for 33% of all Southwest gas purchases. The gas industry as estimated 12,000 producers.

[151] Omitting reference to vintage, the witness adds that in the Southwest prices received for deliveries by the 4 largest producers (11.4¢ per Mcf) average less than payments received by all other independent producers.

[152] The variation in value reflecting differences in location or size of reserve or both. At the time of bargaining for initial supplies the pipeline buyer has freedom to locate its line advantageously with respect to both known and prospective supplies of natural gas. However, this latter factor is not fully developed.

[153] In the Southwestern area the greater majority of some 2,500 sellers filing rate schedules with the Commission have small operations limited to a local area. Volumes are not stated.

[154] In the New England generally, New York and New Jersey, the average price paid for industrial gas ranges from 50¢ to $1.00 Mcf and consumption from some 3 to 8 Mcf per capita (urban), while in the Southwest and adjacent markets the average price ranges from 15¢ to 25¢ per Mcf and consumption 100 to 325 Mcf per capita (urban). The pattern is generally the same for the commercial market and the witness is of the opinion that residential consumers also weigh the comparable advantage of fuels price-wise.

[155] Coal and No. 6 oil are considerably cheaper than gas in the Northeastern area. Gas is nearing parity with oil in the South Atlantic area and is the cheaper fuel in the Southwestern area.

[156] Lowest of those annually reported by the Bureau of Mines.

[157] Average prices paid by residential customers for natural gas increased some 29%. Comparable increases in the retail price of natural gas (all customers), fuel oil, bituminous coal, and Pennsylvania anthracite were 55%, 134%, 127%, and 146%, respectively. Increases in general average at points of production were—gas, 150%; crude oil, 201%, bituminous coal, 167%, and Pensylvania anthracite, 125%. In terms of a stable dollar the average price per Mcf to the pipelines actually declined from 5.99% to 5.38%. However, the increase in the initial base price of gas in 7 Southwestern states, in terms of simple averages, came to 312%. Average unit revenues for natural gas increased 1939–1954, 130% as compared with 170% in the case of crude oil.

sequentially to the advent of deeper exploratory and development drilling, have increased (1939–1954) some 202%.[158] For all of the foregoing and on the ground that it is not possible to obtain a satisfactory base price to which to apply a cost index, or to derive from simple economic data a measure of the incentive price needed to assure future new supplies, the witness would test rates by reference to a range of current competitive market prices,[159] price patterns, and the character of contract terms and conditions. Accordingly, employing principally data obtained from formal rate filings,[160] and also that obtained from sales contracts entered as exhibits in certificate proceedings[161] and various non-jurisdictional or intrastate contracts,[162] he obtains for each of 13 selected geographic areas various ranges of the average base and initial base prices[163] and concludes, after allowance for differences in contract terms and conditions, that all but one of Continental's jurisdictional prices are within the given area's range of average base prices,[164] and all but 4 are within the range of initial base prices.[165]

The witness assumes the adequacy of industry cost and cost trend data, testifying that it is desirable to supplement the current market price standard with appropriate considerations of cost.

However, as the industry generally treats cost and results of exploration data as confidential, studies relating to post-war costs are necessarily inconclusive and limited, and will remain so until substantial effort by industry and agencies supplies the deficiency.

The foregoing limitations circumscribe the use to be made of the witness' price ranges and market price standard.

Accordingly, and except as indicated in the paragraph which next follows, Continental's rate evidence can be said to do no more than lend support to the conclusion already stated in relation to Staff's and Interveners' evidence that generally the proceedings herein should be dismissed.

However, it is observed that with respect to Rate Schedule No. 107, relating to the sale from the Woodlawn field, *supra*, the witness obtains for the North Louisiana-East Texas Area a range of initial base prices of 8.5¢ to 18.04¢

---

[158] In the last decade the new supply of all gas per foot of drilling appears to have so declined as to of itself require an increase in drilling effort by possibly as much as 43%. Continental's unit labor costs have increased somewhat more rapidly than the industry's general average, its costs of casing somewhat less rapidly.

[159] In the form of the initial price effective during the first price period of the contract; and in the form of the average base price as an average of the contractual price steps weighted by time. The former would be the same as the initial effective price less tax reimbursement and other adjustments.

[160] Embracing contracts dated during a period of 18 to 24 months through December 31, 1958, depending upon whether area contracts were available in number sufficient to provide statistical stability.

[161] Due to delays, particularly where construction is involved, contracts filed as rate schedules would understate current prices in a rising market, while contracts entered as exhibits in certificate proceedings, affected by shorter periods of lag, are more current. Except where filed as rate schedules, he includes contracts entered by producers as exhibits during the period November 1, 1957, through February 28, 1959, and by pipelines from the middle of 1956 through February 28, 1959.

[162] Dated since January 1, 1955, as submitted to the witness through April 1, 1959, a 60% sample. However, due to the smaller volumes involved these contracts are not strictly comparable to the interstate transactions.

[163] For sales not for processing, except in the West Texas-Southwest in New Mexico and Four Corners Areas where all sales are included.

[164] Viz., Goliad (Texas) Area, Rate Schedule No. 123, which is higher.

[165] Viz., Goliad (Texas) Area, Rate Schedule No. 123; Houston (Texas) Area, Rate Schedule No. 78: and South Louisiana Area, Rate Schedules Nos. 152 and 158, which are higher.

per Mcf, with a median of 13.3¢.[166] This result is insufficient to support in full the increase proposed (14.13¢ per Mcf).

Rate Schedule No. 107

Rate Schedule No. 107, which under date of April 3, 1951, committed Continental's interest in the Woodlawn Field, Harrison County, Texas to Mississippi River Fuel Corporation,[167] in the amount of some 1,853.000 Mcf per year (1957), in its provision as to heat (1000 Btu/cf), hydrogen sulphide (1.5 gr./100cf) and sulphur (30 gr./100cf) content, and minimum delivery pressure (100psig), affords no basis for accepting a price that is out-of-line in comparison with other contracts in the Area,[168] particularly in the apparent absence of other factors which would indicate to the contrary.[169]

With respect to some 56 of the 66 long-term interstate pipeline contracts upon which Continental relies in the formulation of the Area's price ranges, 53 impose a hydrogen sulphide limit as low as 1.0 gr./100cf, 51 a sulphur content limit as low as 20 gr./100cf or less, 41 dehydration down to 7 lbs. per MMcf,[170] and only one a delivery pressure limit as low as 400 psig.

Even though price data of the nature offered by Continental be accepted as appropriate for consideration in testing rates, it is obvious, nevertheless, that the range of initial base and average base prices [171] cannot be applied exclusively to resolve the issue. Indeed, complexities involved in the formulation of the average base price and generally inconsistent volume-price relationships seriously qualify the use of either in the derivation of ranges.

With respect to the 59 Area contracts identified with volumes,[172] it is observed that an overall weighted average price of 14.24¢ per Mcf, which is higher than the median,[173] is counterbalanced by a corresponding average for the constituent 19 East Texas contracts of but 13.11¢ per Mcf.[174]

Therefore, despite the indicated deficiency in Continental's jurisdictional revenues, the conclusion upon the whole evidence is that a price in excess of

---

[166] On the basis of 66 contracts on file as rate schedules and dated July 1, 1957 or later, including in East Texas eight contracts with Texas Eastern Transmission having initial prices of 13.3¢, 13.5¢ (3), 14.2¢ (3), and 14.4¢ per Mcf, and two with Mississippi River Fuel of 11.5¢ and 13.0¢ per Mcf, respectively.

full the increased proposed (14.13¢ per Mcf).

[167] The contracting parties were not affiliated.

[168] *I.e.*, North Louisiana and East Texas.

[169] Generally field delivery points, Continental's being at the well or separator.

[170] If dehydration is required the immediate schedule would provide Continental with additional compensation.

[171] The range is stated on the basis of the lowest and the highest prices, as well as on the basis of the lowest and highest 10% and the median both with respect to the number of contracts and estimated volumes to be delivered. With reference to contracts filed as rate schedules, medians are:

	Number of contracts (cents/Mcf)	*Volumes (cents/Mcf)*
Initial base prices	13.3	14.2
Average base prices	15.3	16.3

Data from contracts offered as exhibits in certificate proceedings and from intrastate or non-jurisdictional contracts are not sufficiently complete to use in the same manner as those from contracts filed as rate schedules.

[172] Estimated first month's deliveries; not given for seven other contracts.

[173] Viz., 13.3¢ Mcf and 14.2¢ Mcf, respectively.

[174] Of the total estimated first month's deliveries of 2,448.4 Mcf some 32.8% (802.7 MMcf) pertains to the East Texas contracts, of which 10 were filed in the 1957 portion of the period. Because of the deficiency in overall jurisdictional revenues, reference to an average in the case of Continental may be of no direct significance but it may be observed, nevertheless, that the corresponding weighted average for deliveries under Continental's 10 Area rate schedules amounts to 12.2¢ per Mcf.

the Commission's present administrative rate in the premises (14.0¢ per Mcf) is not justified.[178]

Accordingly, the 14.13¢ rate herein proposed is approved only as to that portion not in excess of 14.0¢ per Mcf.[179]

FURTHER FINDINGS AND CONCLUSIONS

Continental is a natural-gas company subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of the order, hereinafter included as a part of this decision, are sales of natural gas in interstate commerce subject to the jurisdiction of the Commission.

The proposed increased rates and charges filed by Continental in Docket Nos. G–11337, G–14264, G–14599, G–15236, G–15409, and G–15417 are just and reasonable and the proceedings in these dockets should be terminated.

The proposed increased rate and charge filed by Continental in Docket No. G–13608, insofar as it exceeds the rate of 14.0¢ per Mcf, is unjust and unreasonable and should, to that extent, be disallowed and ordered refunded as hereinafter provided.

On motion of Continental, and upon the findings and conclusions hereinabove set forth, the proceedings in Docket No. G–16966 should be terminated and dismissed.

ORDER

Upon consideration of the record herein, the contentions set forth in the proposed findings and in the briefs of respective counsel, and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this order is a part,

IT IS BY THESE PRESENTS ORDERED, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) The Section 5(a) proceedings in Docket G–16966 be and the same are hereby terminated and dismissed.

(B) The Section 4(e) proceedings in Docket Nos. G–11337, G–14264, G–14599, G–15236, G–15409, and G–15417 be and the same are hereby terminated.

(C) With respect to the proceedings in Docket No. G–13608, involving Continental's Rate Schedule No. 107, Supplement No. 10, that portion of the proposed rate which became effective pursuant to the terms and conditions of the Commission's order herein issued June 10, 1958, in excess of 14.0¢ per Mcf, is hereby disallowed.

(D) Continental shall, within forty-five days from the date this order becomes effective, refund to Mississippi River Fuel Corporation, with interest at the rate of 6 percent per annum, the difference between the amounts collected under Rate Schedule No. 107, Supplement No. 10, and what it would have collected at the rate of 14.0¢ per Mcf.

(E) Continental shall, within sixty (60) days of the date upon which this order becomes effective, report to the Commission in writing and under oath the details of its calculations resulting in refunds ordered pursuant to the preceding Paragraph (D), together with a copy of release from Mississippi River Fuel Corporation with respect to such refund.

---

[178] See, General Statement of Policy 61–1, *supra*.

[179] Both rates inclusive of tax reimbursement.

(F) Upon satisfactory compliance by Continental with the refund requirement of this order, the proceeding in Docket No. G–13608 shall be terminated, and its agreement and undertaking with respect thereto, as previously herein filed, shall be discharged.

EWING G. SIMPSON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–12372

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1963)

On July 23, 1963, El Paso Natural Gas Company (Applicant) filed a petition to amend the Commission's order issuing a certificate of public convenience and necessity, issued on September 23, 1958, in Docket No. G–12372, as hereinafter described, all as more fully described in the petition.

Applicant seeks to increase its maximum daily delivery to Apache Powder Company to 4,000 Mcf per day. The presently authorized maximum is 3,136 Mcf per day. It appears that the Apache Powder Company's estimated future requirements will make the increase necessary.

Due to notice of the subject petition to amend was published in the Federal Register on August 29, 1963 (28 F.R. 9486). No protests to the granting of the petition have been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued on September 23, 1958, in Docket No. G–12372 be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued September 23, 1958, in Docket No. G–12372 be and the same is hereby amended so as to authorize El Paso Natural Gas Company to increase the maximum daily delivery of natural gas to Apache Powder Company to 4,000 Mcf per day.

(B) In all other respects, the said order issued September 23, 1958, in Docket No. G–12372 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63–297

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1963)

On May 6, 1963, as supplemented on July 8, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63–297 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of certain existing facilities located

in the Aneth Field Area, San Juan County, Utah; the sale and delivery of natural gas to the Navajo Tribe for resale and distribution; and the transportation of natural gas for Texas-New Mexico Pipe Line Company (TNM), Texaco Inc. (Texaco) and Shell Oil Company (Shell), all as more fully set forth in the application.

The application states that Applicant has heretofore constructed a combination 2⅞-inch O.D. and 6⅝-inch O.D. pipeline and related facilities, extending from its Aneth Gasoline Plant a distance of 1.51 miles to the Montezuma School for the purpose of making Aneth residue gas available to the school. In the absence of an available distributor, Applicant initiated deliveries to the Montezuma School, without charge. At the time of initiation of such deliveries, this activity and the facilities used were of intrastate character. Subsequent to the initiation of said deliveries, Colorado-produced gas was for the first time introduced into Applicant's Aneth gathering system, transforming the character of the gas stream emanating from the Aneth Gasoline Plant from intrastate to interstate. The aforementioned facilities are therefore now utilized for the transportation of natural gas in interstate commerce. Applicant has now entered into a service agreement with the Navajo Tribe whereby the Navajo Tribe will provide natural gas service to the San Juan County, Utah, School Board for the Montezuma School.

Applicant proposes to transport, sell and deliver up to 1,000 Mcf of residue gas per day to Texaco for delivery to TNM for use as fuel in the operation of TNM's Aneth Pumping Station; up to 1,000 Mcf of residue gas per day to Texaco for its own use in the development and operation of its Aneth Area production properties; and up to 40 Mcf of residue gas per day to Shell for use by Four Corners Pipe Line Company (Four Corners) as fuel in the operation of Four Corners' Aneth Pumping Station.

In order to enable the transportation of Aneth residue gas for TNM, Texaco and Shell, Applicant constructed a 0.33-mile, 2⅞-inch O.D. pipeline extending from a point of connection with the above-described Aneth-Montezuma School pipeline to the Aneth Pumping Station of TNM, together with three measuring and regulating stations located at or near the terminus thereof. Due to the introduction of Colorado-produced gas into the Aneth gathering system, these facilities are likewise now utilized for the transportation of natural gas in interstate commerce.

The total cost of the above-described facilities, including a packaged dehydration unit located on the pipeline extending to the Montezuma School, is stated to have been $42,794.81, of which amount TNM contributed $4,106.20. Although the incremental cost of service will exceed revenues by about $5,000 in the third year, it is insignificant in relation to Applicant's overall cost of service.

Applicant filed a revised service agreement with the Navajo Tribe, the proposed distributor to the Montezuma School, on July 29, 1963. El Paso requests that the said service agreement be allowed to become effective as soon as possible. Applicant also filed revised tariff sheets which include First Revised Tariff Sheet Nos. 7, 61, and 62; Second Revised Tariff Sheet Nos. 38, 39, 40, 52, 60, and 64; Third Revised Tariff Sheet Nos. 58 and 63; Sixth Revised Tariff Sheet No. 11–A; Ninth Revised Tariff Sheet No. 6; Tenth Revised Tariff Sheet No. 19, in El Paso's FPC Gas Tariff, Original Volume No. 1.

Applicant proposes to provide resale natural gas service to the Navajo Tribe at rates contained in Applicant's Rate Schedule B–3, FPC Gas Tariff, Original Volume No. 1, as appropriately amended to make the availability

thereof applicable to San Juan County, Utah, and to provide transportation service for TNM, Texaco and Shell at rates contained in proposed special Rate Schedules T–1, T–2, and T–3 (formerly designated X–14, X–15, and X–16) respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 16, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware Corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the operation thereof by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The operation of the facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity require that the service agreement between Applicant and the Navajo Tribe filed July 29, 1963, should become effective on the date on which this order issues.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The service agreement between Applicant and the Navajo Tribe, filed July 29, 1963, and the revised tariff sheets hereinbefore described, shall become effective as of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64–25

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1963)

On July 24, 1963, Lone Star Gas Company (Applicant) filed in Docket No. CP64–25 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities to extend Applicant's existing transmission system to provide for the transportation of natural gas to the city gate of the City of Colleyville in Tarrant County, Texas, as hereinafter described, all as more fully described in the application.

The proposed transportation facilities include approximately 2.92 miles of 4-inch transmission Line C–10–5 extending from 4-inch Line C–10 in an easterly direction to a city gate measuring station to be installed near the City of Colleyville.

The said community does not now have the benefit of natural gas service. Applicant proposes to construct and operate a natural gas distribution system in the City of Colleyville. A franchise has been granted by said City authorizing Applicant to distribute natural gas to customers within the area. The requirements for the proposed natural gas distribution system (Mcf at 14.73 psia) are estimated to be as follows:

Year	Peak day	Annual
1	475	26,240
2	673	37,410
3	750	41,840

Applicant estimates the cost of natural gas pipeline transmission facilities at $28,300.00, the city gate measuring station at $4,600, and the local distribution system at $185,397.95, all of which will be financed from working capital.

Pursuant to due notice, a hearing was held on September 19, 1963, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The transportation facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed transportation facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by Staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lone Star Gas Company, to construct and operate facilities for the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 6 months from the date on which this order issues.

LYNCHBURG GAS COMPANY, v. ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP63-5

ORDER ADOPTING EXAMINER'S DECISION

(Issued October 1, 1963)*

Syllabus

1. Pipeline's limiting availability of AOS rate schedule to "unforeseen contingencies or emergencies" is an additional limitation to those set forth in filed tariff, constituting a change in service. PP. 935; 938.
2. Pipeline found in violation of section 4(d) of the Natural Gas Act in failing to give public notice of change. P. 938.

*Initial decision appears on p. 935.

3. In proceeding arising under section 5(a) of the Natural Gas Act, Commission *orders* pipeline to refrain from withholding consent for authorized overruns of gas. PP. 935; 942.

Phebe Eppes Gordon and ***Michael E. Shea*** for Lynchburg Gas Company.

Herbert W. Bryan, *Giles D. Snyder* and *William C. Hart* for Atlantic Seaboard Corporation.

W. E. Herron and *Julian de Bruyn Kops* for The Dayton Power and Light Company.

C. Oscar Berry and ***Karl Michelet*** for Washington Gas Light Company.

W. A. Dickinson for Roanoke Gas Company.

Milton J. Grossman for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

This proceeding involves the question whether the announced policy of Atlantic Seaboard Corporation (Seaboard) on rendering overrun service constitutes a departure from the terms of the filed overrun (AOS) tariff.

Initially, we commend all the parties and the examiner for their expedition in trying this case. The order setting this matter for hearing was issued May 3, 1963. The pre-hearing conference was held on the date specified by the Commission, and a stipulation of relevant facts permitted a one day hearing and transcript comprising only 117 pages. While this proceeding is obviously not as complex as some, it is nevertheless noteworthy that we were able to issue a final order in a contested case within about five months from the date it was instituted.

Only a narrow issue is involved in this case. That issue is whether Seaboard made a change in the practice of providing overrun service, which change is at variance with the terms of its filed tariff. There is no issue, and we are making no decision, regarding the propriety of Seaboard's amended overrun policy. This issue could arise only when embodied in a tariff supplement filed in accordance with the provisions of the Natural Gas Act and the applicable regulations of the Commission.

The presiding examiner concluded that Seaboard's current policy on overrun service constitutes a departure from the terms of its filed tariff. Seaboard and Dayton Power and Light were the only parties filing exceptions to his decision. We have carefully reviewed the record herein, the briefs before the examiner, the examiner's decision, the exceptions, and replies to exceptions. We conclude that the examiner reached the correct result based upon reasoning with which we agree. We find nothing in the exceptions which is not adequately answered in the examiner's decision and we will therefore adopt it as the Commission decision in this proceeding.

The Commission orders:

(A) The presiding examiner's decision issued herein on July 24, 1963 is hereby adopted as the decision of the Commission.

(B) The exceptions to the examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON COMPLAINT RESPECTING OPERATIONS OF PIPELINE COMPANY UNDER SERVICE TARIFF

(Issued July 24, 1963)

PURDUE, *Presiding Examiner:* This proceeding involves a complaint of Lynchburg Gas Co., a distributing company, against Atlantic Seaboard Corp.,

one of its two pipeline suppliers, regarding Seaboard's operations under the latter company's Rate Schedule AOS–1 for "Authorized Overrun Service (Maryland-Virginia)." Lynchburg alleges (1) that Seaboard has effected a change in the service which it renders under such rate schedule without having given the notice thereof to the Commisson and the public required by Section 4(d) of the Natural Gas Act; and (2) that Seaboard's present position regarding the rate schedule is an "unreasonable" "practice," in violation of Section 5(a). Seaboard denies these allegations.

The Commission directed that a prehearing conference be held. The matter came on for the prehearing conference on May 24 and part of May 25, 1963, the undersigned Examiner presiding at such portion of the conference as was transcribed.

At the conference, the Examiner prescribed the following procedure respecting the conduct of the proceeding:

> Initially the hearing shall be limited to the single issue whether the present policy of Seaboard respecting its Authorized Overrun Service schedule is a change in service within the meaning of Section 4(d) of the Act, without Seaboard having given notice thereof by filing a new schedule and keeping a new schedule open for public inspection as required by said section. In the event, after the conclusion of the initial hearing and the filing of briefs, the Examiner decides in favor of Seaboard on such issue, the Examiner shall reopen the hearing for the receipt of evidence respecting the second issue presented by the complaint, and shall determine that issue after the conclusion of the reopened hearing and the submission of briefs respecting such issue.

The participants arrived at a stipulation of facts respecting the single question thus presented initially.

Immediately following the conclusion of the conference, the hearing convened before the undersigned Examiner. At the hearing, the reported part of the prehearing conference, including the aforementioned stipulation, was made a part of the record; and certain documentary evidence was introduced pursuant to the stipulation. The hearing concluded the same day, May 25, 1963.

The following companies intervened in the proceeding: Washington Gas Light Co., Roanoke Gas Co., and The Dayton Power and Light Co. Washington and Roanoke are customer companies of Lynchburg. Dayton is a customer company of The Ohio Fuel Gas Co., an affiliate of Seaboard, which has an authorized overrun service tariff that is the same as Seaboard's Rate Schedule AOS–1, except for the rate.

The complainant, the defendant, each of said intervenors, and the Commission Staff filed briefs after the conclusion of the hearing; and the proceeding was submitted for consideration and decision.

Position of Staff and Intervenors

The Staff, Washington and Roanoke take the position that the adoption by Seaboard of its present policy regarding the Authorized Overrun Service schedule is a change in service thereunder, within the purview of Section 4(d).

It is not clear to the Examiner what Dayton's position is respecting such question. Dayton avers, "This would appear to be a case to determine what service Seaboard should render under its filed tariff," and bases an argument upon such premise. The question which Dayton poses is not within the single issue to which the Examiner limited the hearing initially.

Violation by Seaboard of Section 4(d)

The complaint of Lynchburg on the issue presented is justified. Seaboard's Rate Schedule AOS–1, "Authorized Overrun Service," provides as follows:

1. *Availability*

This Rate Schedule is available to any buyer (hereinafter called Buyer) for the purchase from Atlantic Seaboard Corporation (hereinafter called Seller) of natural gas for resale, including gas used by Buyer in its utility operations, when Buyer is purchasing gas under Seller's Rate Schedule CDS–1 or CDS–PR–1.[1]

This Rate Schedule is not available for the purchase from Seller of gas which, together with gas purchased under Seller's Rate Schedule CDS–1 or CDS–PR–1, is:

(a) to be used by Buyer as boiler fuel in an amount exceeding two thousand (2,000) Mcf on any one day, or

(b) for resale for consumption as boiler fuel in an amount exceeding two thousand (2,000) Mcf on any one day, by any one ultimate consumer.

2. *Applicability and Character of Service*

Gas delivered by Seller to Buyer under this Rate Schedule shall be the volume delivered on any day in excess of the then effective Contract Demand under Seller's Rate Schedule CDS–1 or CDS–PR–1, but not greater than the specified volume for which Seller (through its Load Dispatcher) shall have first given its express consent. Such consent of Seller is limited to one day, and separate consents shall be required with respect to each and every day in which gas is so taken.

If Seller shall receive requests from more than one Buyer for deliveries under this Rate Schedule on the same day and if in Seller's judgment the aggregate of such requests exceeds the gas available under this Rate Schedule, then if any consent is given, Seller shall consent to all such Buyers taking hereunder volumes in excess of their respective then effective Contract Demands proportionate there to, to the extent that Seller has adequate facilities available for delivering such additional volumes. If, however, a request for gas under this Rate Schedule results from an emergency it shall be given priority over other requests for gas hereunder. * * *

On September 26, 1962, Seaboard's management notified Lynchburg's management by telephone that, as a matter of "policy," AOS service would not be available during the winter of 1962–63 except under emergency conditions. On the same day and the day following, Seaboard gave the same notification, in the same manner, to Roanoke and to the following other customers of Seaboard: Commonwealth Natural Gas Corp., The City of Charlottesville, and Baltimore Gas and Electric Co.

Prior thereto, on August 3, 1962, Seaboard had adopted an "operational guide" respecting deliveries under the AOS rate schedule whereby it provided that "AOS gas is available for unforseen contingencies or emergencies, but not as a substitute for regular planned sources"; that "There must be real evidence of unforeseen contingency or emergency before a request for AOS gas is granted."

---

[1] Rate Schedule CDS–1—Contract Demand Service (Maryland-Virginia); Rate Schedule CDS–PR–1—Contract Demand Service—Partial Requirements (Maryland-Virginia).

Seaboard took these actions despite the fact that during the period commencing with the winter season 1958–59 and continuing through the winter season 1961–62, Seaboard had granted overrun gas service under such schedule to Lynchburg on numerous occasions, none of which involved an unforeseen contingency or emergency; and despite the further fact that during such winter seasons, or some of them, Seaboard had granted overrun gas service on numerous occasions to Roanoke, Commonwealth and Charlottesville; and to others of its customer companies; *viz.*, Virginia Gas Distribution Corp., Shenandoah Gas Co., Manufacturers Light and Heat Co., Cumberland and Allegheny Gas Co., and Amere Gas Utilities Co.—without there having been, so far as appears from the record, unforeseen contingency or emergency situations.

Seaboard's limiting the availability of its AOS rate schedule to "unforeseen contingencies or emergencies" is a limitation in addition to those set out in paragraphs (a) and (b) of the "Availability" section of the tariff; and therefore constitutes a change in service rendered under the tariff.

Concededly, before making such change Seaboard did not give and has never given the thirty days' notice to the Commission and the public required by Section 4(d) of the Natural Gas Act. Nor has the Commission, by order under Section 4(d), allowed the change to take effect without requiring the thirty days' notice.

It necessarily follows, and the Examiner finds and concludes, that Seaboard violated, and has continued to violate, the provisions of Section 4(d). *Michigan Wisconsin Pipe Line Co.*, 13 FPC 326, 348, and cases cited.

Question Raised by Examiner

It will be noted that under the subhead of the AOS rate schedule, "Applicability and Character of Service," the schedule provides that "Gas delivered by Seller to Buyer" under the rate schedule shall be "not greater than the specified volume for which Seller (through its Load Dispatcher) shall have first given its express consent." At the hearing, the Examiner raised the question whether, in view of this language, Seaboard has the option to withhold consent for the delivery of any AOS gas whatever, and therefore is empowered by the terms of the rate schedule to deliver gas only upon such conditions and for such purposes as it may specify—including limiting the availability of the gas to unforeseen contingencies and emergencies.

Some of the participants have treated this question in their briefs, and the Examiner is satisfied that the rate schedule is not open to such construction. The reasons for this conclusion are two. In the first place, the tariff can be so construed only if the clause which calls for the "express consent" of Seaboard to be given can be said to vest unfettered discretion in Seaboard to give or withhold consent to deliveries of gas. The clause should not be so interpreted, for the tariff would then violate the proscriptions of Section 4(b) of the Act against unduly preferential and prejudicial differences in services. As Seaboard, itself, points out, a tariff should be given such construction, if consistent with the terms thereof, as to prevent discriminatory practices.

In the second place, a public utility cannot "arbitrarily give or refuse to give service in accordance with [its] own judgment, whim or caprice." *Speaker* v. *Larkin Rural Tel. Co.* (Mich. Pub. Util. Comm.), 27 P.U.R.(N.S.), 185, 186; *cf. Filger* v. *Public Water Supply Dist.* (Kansas City Ct. App. Mo), 346 S.W. 2d 567, 573–74. In its brief, Seaboard "agrees . . . that its actions can never be arbitrary"; and that "The words 'express consent' contained in the AOS Schedule are naturally subject to this limitation."

Contentions of Seaboard

Seaboard urges that its operational guide constitutes no change in service for the reason that "it merely conforms AOS deliveries to those always intended by the tariff." We do not agree. We search the tariff in vain for any language either expressly or impliedly to the effect that AOS gas is available only for unforeseen contingencies or emergencies. The absence of any such language in the rate schedule compels the conclusion that when Seaboard filed the schedule it intended and contemplated that deliveries thereunder should be for purposes other than unforeseen contingencies and emergencies. Two other circumstances reinforce this conclusion; *viz.*, (1) the recital in the last sentence of the tariff that a request for gas resulting from an emergency is to be given priority over other requests for gas under the schedule; and (2) the fact, already noted, that Seaboard has for years made deliveries under the tariff to Lynchburg, and apparently to others of its customers also, for uses besides unforeseen contingencies and emergencies.

The participants have stipulated, and the Examiner finds, that

> Lynchburg, in carrying out its load development program, has relied and has developed a real dependence upon the availability of Seaboard's authorized overrun service as such service has been rendered in the past.

Seaboard contends that the AOS rate schedule cannot thus be used as a planned source of supply, and cites an order in *United Fuel Gas Co.*, 19 FPC 300. There the Commission, treating of a rate schedule of United Fuel like that here involved, said at page 303:

> . . . the AOS rate schedule cannot be construed to be applicable to sales of gas for summer storage in substantial volumes well in excess of contract demands, for at least the approximate quantities of such deliveries would necessarily be planned in advance. The AOS schedule is designed for emergencies that may occur suddenly and may be met on a day by day basis; it is not intended for a large seasonal movement of gas.

The Commission, at page 305, ordered that the United Fuel AOS rate schedule should apply to customers of United Fuel "only where Rate Schedule AOS is applicable to such deliveries within the meaning of this order."

That language and ruling are not binding here. In the first place, " . . . general expressions, in every opinion, are to be taken in connection with the case in which those expressions are used, . . ." *Wright* v. *United States*, 302 U.S. 583, 593. In the *United Fuel* proceeding, the situation presented was quite different from that here involved. There, United Fuel, the seller, entered into agreements with two of its affiliates, Ohio Fuel and Manufacturers, whereby the contract demands of the affiliates were reduced by 31,000 Mcf per day and 55,550 Mcf per day. The affiliates obtained the difference in volume—indeed, much more than the difference in volume—by United Fuel, in the summertime, making deliveries of quantities of gas above the new contract demands for deposit in their underground storage fields; United Fuel billing the affiliates at the lower rates of the AOS schedule. The Commission held that United Fuel's use of the AOS schedule in this manner was unlawful. The Commission was not there treating of the question whether a non-affiliated customer is entitled under such a schedule, not to "a large seasonal movement of gas," but to gas with which to meet a portion of its planned deliveries, on a day-to-day basis, if, as and when available.

In the second place, the language in the *United Fuel* order about the AOS schedule being "designed for emergencies" is dictum.

Finally, in any event, the *United Fuel* proceeding is of no avail to Seaboard because the order there issued did not effect a change limiting the applicability of Seaboard's AOS tariff to unforeseen contingencies or emergencies. The rate provisions of the Natural Gas Act were taken from the Interstate Commerce Act. *El Paso Natural Gas Co.*, 19 FPC 154, 158. It is settled law that "where provisions of one statute have been adopted by another, the interpretation which has been authoritatively placed upon the former applies to the latter also." *Hope Natural Gas Co.* v. *Federal Power Commission* (C.A. 4), 196 F. 2d 803, 807. In *American Sugar Refining Co.* v. *Delaware, L. & W. R. Co.* (C.C.A. 3), 207 Fed. 733, decided long prior to the adoption of the Natural Gas Act, the court held that the Interstate Commerce Commission has no power to change a rates established by a railroad company by its filed schedules, except by a formal order. There a tariff of the railroad company covering shipments of sugar provided for a specified reduction for the transfer of sugar by the shipper to the railroad station. The Interstate Commerce Commission, following an investigation, made a report in which it found that the reduction was an unlawful rebate, but entered no formal order annuling the allowance. The court held that the filed tariff continued to be binding, stating at page 741:

> The mere opinion of the Commission, as to the character of the deduction or allowance mentioned in the schedule, could not, ipso facto affect the validity of the same, in face of the positive rates which have been filed and published by a common carrier.

So here, the Federal Power Commission does not possess the power to change Seaboard's AOS tariff except by a formal order applicable to such tariff.

The Examiner has considered other arguments of Seaboard in its briefs, but none of them militates against the conclusion hereinbefore reached that Seaboard, by limiting the availability of its AOS schedule to unforeseen contingencies and emergencies, made a change in the service rendered thereunder.

One other point which Seaboard makes should, perhaps, be discussed. It will be considered under the subhead next following, inasmuch as Dayton makes an argument of similar nature.

Question of Discrimination

Seaboard argues that its contract demand rate form, to which the AOS schedule is an adjunct, can operate without undue discrimination only if the customers nominate contract quantities consonant with their peak-day requirements; ergo that the AOS schedule is unduly discriminatory unless its applicability be limited to unforeseen contingency and emergency situations. As proof of its contention, it points to the fact, shown by the evidence, that Seaboard's two largest customers, Washington Gas Light Co. and Baltimore Gas and Electric Co., have taken no AOS gas whatever during the winter season.

In similar vein, Dayton argues that "to permit the use of AOS gas as a planned supply discriminates against those customers who determine their contract demand requirements without reference to AOS gas." Dayton urges, however, that the schedule should permit the purchase of AOS gas, when available, for use in lieu of operating a buyer's peak-shaving equipment or curtailing interruptible customers.

Lynchburg and the Staff take the position that deliveries under the tariff made in the same manner as during the winter of 1958–59 through the winter of 1961-62, are not discriminatory. In relying on AOS gas, Lynchburg is tak-

ing a chance that such gas will not be available when it needs it. All of Seaboard's other contract demand customers have the same right as does Lynchburg to AOS gas; and if they choose, can take the same chance. The Staff recognize, however, that "the purpose of the CD form of rate schedule would be defeated to some extent if all the customers, relying on the probable availability of overrun gas, signed up for contract demands which totaled considerably less than the existing capacity of the pipeline."

Washington takes no position on the question of undue discrimination (possibly because the question is presented only to a limited extent, as hereinafter pointed out), but does say that AOS deliveries

> contribute to more intensive utilization of Seaboard's facilities to the ultimate benefit of the consuming public. Any unwarranted restriction of AOS deliveries would result in uneconomic idleness of the available capacity and would be contrary to the public interest.

The evidence is insufficient for the Examiner to make a determination upon the question of undue discrimination. Whether unjust discrimination exists in a particular case depends upon questions of fact. *Railroad Commission of Louisiana* v. *Aransas Harbor Terminal R. R. Co.*, 48 I.C.C. 312, 364 and cases cited. Without undertaking to specify the showing that should be made, it occurs to the Examiner that evidence concerning the following matters and questions, *inter alia*, may be pertinent in arriving at a conclusion respecting undue discrimination: (1) A specific showing as to the nature and character of the loads which Lynchburg has met, and plans to meet, with overrun gas service under the AOS schedule. (Lynchburg alleges in its complaint, and Seaboard in its answer does not deny, that as a result of Seaboard's "policy" adopted in 1962, Lynchburg has been caused to make "excessive curtailments in its industrial sales"; and that if the "policy" continues "Lynchburg will be required to produce large amounts of high cost peak shaving gas.") (2) Similar showings respecting the loads which Roanoke, Commonwealth, Charlottesville, Virginia Gas Distribution Corp., Shenandoah Gas Co., Manufacturers Light and Heat Co., Cumberland and Allegheny Gas Co., and Amere Gas Utilities Co. have met, and plan to meet, with AOS gas. (3) Why have not Washington and Baltimore (Seaboard's two largest customers) availed themselves of AOS gas during past winter seasons; and do they plan to make use of such gas in winter seasons in the near future? (4) What are the positions of Washington and Baltimore upon the question whether deliveries under the AOS schedule, as made from 1958 through the winter of 1961–62, result in undue discrimination; and the reasons for their positions? Certainly in order to determine whether undue discrimination exists more of a factual basis is needed than the record contains.

It is unnecessary, however, for the Examiner to call for further evidence. For even if the Examiner were to find that deliveries under the AOS schedule as heretofore made are unduly discriminatory, Seaboard's present policy respecting such schedule would still be a change in service.

The consideration of possible undue discrimination is relevant only as bearing on the interpretation to be accorded the rate schedule. Seaboard cites a rule to the effect that a tariff should be so construed as to prevent discrimination, if such construction be "consistent with the terms of the tariff." Here, consistently with the terms of the tariff, the instrument cannot be so construed as to limit its applicability to unforeseen contingencies and emergencies; hence whether the schedule, absent such limitation, is unduly discriminatory, makes no difference in what the holding in this case should be. *American Sugar Refining Co.* v. *Delaware, L. & W. R. Co.*, *supra*.

Request of Washington

Washington Gas Light Co. requests that the Examiner recommend that the Commission institute an investigation under Section 5(a) of the AOS schedules and practices thereunder of Seaboard and its affiliate, *United Fuel Gas Co.* In our opinion, there is no adequate basis or justification in the record for the Examiner's making such recommendation. Section 5(a), of course, authorizes a gas distributing company to file a complaint with the Commission looking to an investigation under such section.

Improper Arguments

In arguments in their briefs, Lynchburg and Seaboard both go outside the record. Lynchburg cites several exhibits in other proceedings, which have not been received in evidence in this proceeding. Lynchburg erroneously says that the Commission should "take judicial notice" of this material. Similarly, Seaboard refers to certain datum not received in evidence, but which purportedly is in "the Commission's files"; and erroneously says that the Examiner may "take official notice" of it. "Nothing can be treated as evidence which is not introduced as such." *United States* v. *Abilene & Southern Railway Co.*, 265 U.S. 274, 286–90; *Morgan* v. *United States*, 298 U.S. 468, 480. In several decisions the Examiner has pointed out that arguments such as those above adverted to are futile and improper. *St. Lawrence Gas Co.*, 26 FPC 265, 278–79 (adopted as part of the Commission's opinion therein); *El Paso Natural Gas Co.*, Docket No. G–16235 (decision issued December 18, 1962), p. 13; *Tennessee Gas Transmission Co.*, Docket No. CP61–106 (decision issued April 1, 1963), p. 11.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure,

That Atlantic Seaboard Corp. refrain from withholding its consent to deliveries of gas under its Rate Schedule AOS–1, Authorized Overrun Service, on either of the following grounds: (1) that such deliveries are not for unforeseen contingencies and/or emergencies; and (2) that such deliveries are a substitute for regular planned gas supplies—until and unless a change is effected in such tariff, in accordance with the Natural Gas Act and the Regulations under the Natural Gas Act, which permits Seaboard to withhold its consent on such grounds.

HOWELL PURDUE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY AND CALIFORNIA ELECTRIC POWER COMPANY, DOCKET NO. E–7106

ORDER AUTHORIZING MERGER OR CONSOLIDATION OF FACILITIES

(Issued October 1, 1963)

Southern California Edison Company (Edison) incorporated under the laws of the State of California, qualified to do business in the States of California, Arizona, and Nevada, with its principal place of business in Los Angeles,

California and California Electric Power Company (California Electric) incorporated under the laws of the State of Delaware, qualified to do business in the States of California, Nevada and Arizona, with its principal place of business in San Bernardino, California, filed a joint application on June 11, 1963, for an order authorizing California Electric to merge with Edison as the "Surviving Corporation". The merger would be accomplished by an exchange of shares of stock.

Edison is a public utility primarily engaged in the business of furnishing electric service in portions of Central and Southern California, including the counties of Fresno, Inyo, Kern, Kings, Los Angeles, Madera, Orange, Riverside, San Bernardino, Santa Barbara, Tulare and Ventura. The principal service area covers approximately 15,000 square miles and extends from the Pacific Coast near Los Angeles northward about 260 miles along the eastern part of the San Joaquin Valley. As of March 31, 1963, it had a net plant of $1,440,000,000, and its total operating revenue for the year ending March 31, 1963, was $366,000,000. The Company holds 39 project licenses under Part I of the Federal Power Act.

California Electric is a public utility principally engaged in the business of furnishing electric service in the counties of Mono, Inyo, Kern, San Bernardino, Riverside and Imperial in southern California, and in the counties of Nye and Esmeralda in Nevada, The Company holds 22 project licenses under Part I of the Federal Power Act. As of March 31, 1963, the Company had a net plant of $166,220,000, and the total operating revenues for the year ending March 31, 1963 was $39,000,000.

The proposed merger is to be carried out in accordance with the terms and conditions of an Agreement of Merger dated May 16, 1963, and a Collateral Agreement, also dated May 16, 1963, which supplements the Merger Agreement. Under that agreement, when the Merger Agreement becomes effective, the separate existence of California Electric will cease and, as provided by law, Edison will succeed to all rights, properties, and be responsible for all debts, liabilities and obligations of California Electric, including the latter company's outstanding First Mortgage Bonds and all short-term notes then outstanding.

As of March 31, 1963, the following is a statement of California Electric capitalization:

Proprietary capital:	
Common stock, $1 par, 3,800,000 shares	$3, 800, 000
Premium on common stock	33, 770, 757
Cumulative preferred stock, $50 par:	
$3.00 Series, 98,923 shares (noncallable)	4, 946, 150
$2.50 Series, 60,000 shares	[1] 3, 000, 000
6 percent Series, 140,000 shares	[1] 7, 000, 000
5.75 percent Series, 115,200 shares	[1] 5, 760, 000
Miscellaneous paid-in capital	51, 498
Unappropriated earned surplus	10, 992, 558
Total proprietary capital	69, 320, 963
First mortgage bonds	87, 500, 000
Short-term notes	8, 000, 000
Total	164, 820, 963

[1] To be redeemed prior to merger.

Among other things, the Merger Agreement provides that prior to the record date to be selected for determining the shareholders of California Electric who will be entitled to vote upon the adoption of the Merger Agreement, California Electric will have redeemed all of its outstanding shares of $2.50 Cumulative Preferred Stock. 6% Cumulative Preferred Stock and 5.75% Cumulative Preferred Stock, leaving the non-callable $3.00 Cumulative Preferred Stock as the only series of such stock outstanding.

Edison's Articles of Incorporation and By-Laws in effect just prior to the merger will also become the Articles and By-Laws of Southern California after the merger, except that the Articles will be amended as provided in the Merger Agreement to increase the authorized number of shares of Edison's Cumulative Preferred Stock, 4.78% Series from 1,00,000 to 1,296,769.

The Merger Agreement provides that Edison's shares of capital stock outstanding on the effective date of the merger shall not be changed as a result of the merger but shall continue to remain outstanding.

The Agreement provides for the following treatment for the $3.00 Cumulative Preferred Stock (non-callable) and for the Common Stock of California Electric:

(1) Each share of the $3.00 Cumulative Preferred Stock of the par value of $50 per share of California Electric Power which shall be issued and outstanding on the effective date of the merger shall be converted on such date into 3 shares of Cumulative Preferred Stock, 4.78% Series of the par value of $25 per share of Edison.

(2) Each share of Common Stock of the par value of $1 per share of California Electric which shall be issued and outstanding on the effective date of the merger shall be converted on such date into ninety-five one hundreths (.95) share of Common Stock of the par value of $8⅓ per share of Edison.

As set forth in the Merger Agreement, Edison will not issue any certificates for fractions of shares of its Common Stock as a result of the merger, but arrangements will be made pursuant to which each holder of California Electric's Common Stock who becomes entitled to a fraction of a share will be enabled either to sell his fraction or to purchase the additional fraction required to make one whole share.

According to the application, the bases upon which shares of the Preferred and Common Stock of California Electric are to be converted into shares of the Preferred and Common Stock of the Surviving Corporation, including the ratios of exchange, were arrived at as a result of arms-length negotiations between the managements of the respective companies.

Among the factors indicated in the application which were considered in determining an exchange ratio for California-Electric's non-callable Preferred Stock was the need to provide these shareholders with a fair equivalent for non-callable shares in shares of the surviving corporation which would be callable and which would not enjoy voting rights in arrears to the same degree as do the non-callable shares.

The following statement shows Edison's and California Electric's Proprietary Capital before the proposed merger and Edison's Proprietary Capital after the proposed merger:

	As of March 31, 1963			
	Before merger		Adjustments	After merger—Edison
	Edison	California Electric [1]		
Common stock, $8⅓ par	$268,130,655		(a) $30,083,333	$298,222,988
Common stock, $1 par		$3,800,000	(a) (3,800,000)	
Original preferred stock	4,000,000			4,000,000
Cumulative preferred stock:				
4.08 percent series, $25 par	25,000,000			25,000,000
4.24 percent series, $25 par	30,000,000			30,000,000
4.52 percent series, $25 par	41,335,725			41,335,725
4.78 percent series, $25 par	25,000,000		(b) 7,419,225	32,419,225
$3.00 series, $50 par		4,946,150	(b) (4,946,150)	
Premium on capital stock and miscellaneous paid-in capital	117,567,234	[2] 33,822,255	(a) (26,283,333) (b) (2,473,075)	122,633,081
Capital stock expense	(3,577,156)			(3,577,156)
Unappropriated earned surplus	128,507,344	9,706,558		138,213,902
Total	635,972,802	52,274,963		688,247,765

Adjustments: (a) for common stock and (b) for preferred stock.

[1] After adjustments for redemptions of California Electric's $2.50 series, 6 percent series and 5.75 percent series preferred stocks.

[2] On books of California Electric: Premium on capital stock, $33,770,757; and Miscellaneous Paid-in capital, $51,498.

As indicated in the above statement, California Electric's Earned Surplus, $9,706,558 as of March 31, 1963, will be added to Edison's Earned Surplus.

California Electric has 3,800,000 shares of Common Stock, $1 par. In the recording of this stock, $3,800,000 has been credited to Common Stock account and $33,770,757 has been credited to Premium on Capital Stock account. In the exchange of Common Stock, Edison will issue 3,610,000 shares (95% of California Electric's 3,800,000 shares), $8⅓ par, and record the issuance by a credit of $30,083,333 to Common Stock account. The difference, $26,283,333, between the par value of Edison's additional shares of Common Stock and the par value of California Electric's Common Stock will be debited to Premium on Capital Stock and Miscellaneous Paid-in Capital.

California Electric has 98,923 shares of $3.00 Series Preferred Stock, $50 par. In the recording of this stock, $4,946,150 has been credited to Cumulative Preferred Stock account. In the exchange of Preferred Stocks, Edison will issue 296,769 shares (3 for 1 basis), $25 par, and record the issuance by a credit of $7,419,225 to Cumulative Preferred Stock, $25 par, 4.78% Series, the difference. $2,473,075 between the par value of Edison's additional shares of Preferred Stock and the par value of California Electric's Preferred Stock will be debited to Premium on Capital Stock and Miscellaneous Paid-in Capital.

As set forth in the preceding statement of Proprietary Capital, California Electric has Premium on Capital Stock and Miscellaneous Paid-in Capital of $33,822,255. As may be noted above, in the exchange of Edison's Common Stock for California Electric's Common Stock, $26,283,333 will be debited to Premium on Capital Stock and Miscellaneous Paid-in Capital; and in the exchange of Edison's 4.78% Preferred Stock for California Edison's $3.00 Preferred Stock, $2,473,075 will be debited to Premium on Capital Stock and Miscellaneous Paid-in Capital. Therefore, it may be said that of California

Electric's Premium on Capital Stock and Miscellaneous Paid-in Capital of $33,822,255, the total amount of $28,756,408 ($26,283,333 + $2,473,075) will be used in connection with the exchanges of Common and Preferred Stock, and the balance, $5,065,847, will be added to Edison's Premium on Capital Stock and Miscellaneous Paid-in Capital.

The merger of California Electric into Edison will not result in the creation of an acquisition adjustment.

We note that the Public Utilities Code of California grants to the California Commission authority to issue certificates of public convenience and necessity, as well as broad powers with respect to construction and extension, interference between utilities and the exercise of franchise rights. In this connection it may make such orders and prescribe such terms and conditions for the location of lines, plants or systems affected, as it may seem just and reasonable.

We are informed by the Applicants that the California Commission has interpreted its mandate as prohibiting competitive service to customers and, to this end, it has established service territory boundaries for many years. It has been the policy of the California Commission to establish or confirm boundary lines in those cases where the systems of two utilities subject to its jurisdiction are in proximity of each other, and such action is necessary to avoid confusion or misunderstanding. In those cases where it may be neither feasible nor desirable to establish boundary lines, the California Commission has either conditioned the authority to exercise franchise rights so as to preclude a utility from supplying electricity within those portions of the certificated area being served with electricity by any other public utility, or has reserved the right to pass upon each application for authority to construct new facilities as the need for service develops.

Edison and California Electric have operated in this statutory framework. Thus the applicants are not in competition for the same customers or territory and competition would not be affected by the proposed merger.

Applicants state that the proposed merger would provide many benefits and economies: Integration of the operations of the two systems will eventually make possible the installation of larger generating units with reduced costs and improved efficiency. The diversity between the loads of the two systems will improve the utilization of existing and future generating plants. Elimination of some reserve generating capacity would also result from the merger. Consolidation of six separated service areas of the two systems into one continuous service area could result in better placement of service personnel and better service to the public in time of emergency. In the regions where the service areas now interlace, costly duplications of facilities and personnel can be eliminated. System expansion necessary to meet the needs of the rapidly expanding population in much of California Electric's territory can be more adequately handled by a larger utility system.

Applicants have prepared estimates of annual savings which would result from the merger. Net savings in 1967, after allowances for equipment costs to integrate the systems' operations, will range from $4,658,000 to $5,123,000 depending on the handling of depreciation expense. The year 1967 was chosen as it appears that all details resulting from the merger would not be settled until the end of 1966. The major reduction in expense would result from the smaller number of personnel required to operate the merged systems. Estimates by Applicants indicate that as of May 1963, reduction in number of employees would be about 417 out of a total of 9,414 required to operate the two systems separately. This indicated reduction is expected to carry

forward in the future even though personnel requirements would increase through system growth. The merger agreement objectives are to continue in Edison's service all California Electric employees upon the same basis as Edison employees. The normal annual employee attrition rate is large enough to rapidly absorb the surplus of employees resulting from the merger. Availability of trained employees to fill vacancies caused by attrition would benefit the surviving corporation. The annual reduction in expense resulting from lessened personnel requirements is estimated by Applicants at $4,146,000.

Applicants estimate that savings in reduced fuel expense would range from $451,000 in 1964 to $676,000 by 1967. This saving would result primarily from the use of Edison's larger, more efficient, generating plants to carry the California Electric load except perhaps at peak load times. Operating expenses other than fuel would also be reduced. The major reduction would be in elimination of duplicate offices and costs.

The facilities needed to completely integrate the two systems by 1967 have been estimated to cost $5,012,046. With this integration, generating capacity to be installed by Edison would replace a 150,000 kw unit expected to be needed on the California Electric system in 1967. Savings from the capacity substitution are estimated to be $35 per kw for a total of $5,250,000.

Applicants have set forth an impressive estimate of savings which would result over a 4-year period after the merger is completed. The public interest requires that the merged company shall reflect those savings in the wholesale rate schedules subject to the jurisdiction of this Commission, as well as in its retail rates. In order that the savings and economies that are expected to result from the merger be passed on to consumers at the earliest possible date. Edison represents that it will take the following action on the assumption that the schedule for the merger proceeding is met. First, within six months after the effective date of the merger a preliminary study of all rates and possible rate revisions is expected to be presented to the California Commission. Such a study shall also be filed with this Commission and shall set forth the company's plans to bring the wholesale rates of the two companies into line. Secondly, after the first full year of combined operations which would be the calendar year 1964, a cost of service study relating to both retail and wholesale rates is expected to be completed in the Spring of 1965. As a condition to this order we are requiring that such a study be filed with this Commission on or before May 1, 1965.

California Electric presently owns and operates 22 license projects. Two of these projects are licensed jointly to California Electric and the Imperial Water District. In a separate order issued concurrently herewith, the transfer of the licenses of California Electric (and its interest in the licenses of the two projects jointly licensed) to Edison, is approved.

Written notice of the application has been given to the California Public Utilities Commission, the Nevada Public Service Commission, and to the Governor of these States. Notice of the application was also published in the Federal Register on June 26, 1963 (28 F.R. 6604), stating that any person desiring to be heard or to make any protest with reference to said application should on or before the 15th day of July, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The California Public Utilities Commission, by order issued August 6, 1963, and the Nevada Public Service Commission on August 30, 1963 approved the proposed merger.

The Commission finds:

(1) Applicants, Southern California Edison Company and California Electric Company, corporations, are public utilities within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Federal Power Commission as heretofore described and set forth in the Commission's order issued July 31, 1961, entitled *City of Colton, California* v. *Southern California Edison Company*, Docket No. E–6821, 26 FPC 223, and in the Commission's order issued August 30, 1957, *California Electric Power Company*, Docket No. E–6770 (18 FPC 239).

(2) By the proposed transaction, as described above, Edison will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Federal Power Commission all of the facilities of California Electric, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act, and California Electric will dispose of all of its facilities to Edison, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of California Electric's facilities by Edison, as described above, upon the terms and conditions specified in the application and subject to the provisions of this order, will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of California Electric by Edison, and the proposed disposition of all of its facilities by California Electric to Edison, referred to above and as described in the application, is hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Edison shall record the transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) Edison shall file, on or before May 1, 1965, cost and revenue data showing Company's costs of rendering service to each of its wholesale for resale customers the rates to which are subject to this Commission's jurisdiction, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the calendar year 1964 showing both historical revenues and *pro forma* adjustments thereto, a prudent net investment rate base and a fair rate of return thereon.

(D) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(E) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-353

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1963)

On June 24, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-353 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas for resale. The proposed facilities consisting of less than 100 feet of 2-inch pipeline, a sales meter and appurtenant facilities will be used to sell natural gas from Applicant's transmission system to the town of Bullard, Smith County, Texas.

The estimated sales volume is 22,681 Mcf of gas for the third year.

The estimated third year peak-day requirements are 314 Mcf (@ 14.73 psia).

The estimated cost of the proposed construction by Applicant is $10,294, which is to be financed from current working capital.

The estimated cost of construction of the proposed distribution system of the town of Bullard is $325,000. Adequate financial arrangements for installing the facilities have been made.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 16, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene and oppose or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, is a natural-gas company within the meaning of the Natural Gas Act as found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant and the proposed transportation, sale for resale of natural gas by Applicant to Bullard are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant to the town of Bullard, Smith County, Texas, for distribution and sale to the inhabitants thereof are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having denied by the Commission, is granted pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and is hereby issued authorizing Applicant to construct and operate the proposed facilities and to transport and sell natural gas to the town of Bullard for resale and distribution, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ROBERT R. ESTES AND EDWARD R. ESTES, DOING BUSINESS AS ESTES BROTHERS, INC., PROJECT NO. 1196

ORDER ISSUING NEW LICENSE (MINOR)

(Issued October 2, 1963)

Application was filed on February 18, 1963 by Robert R. Estes and Edward R. Estes, doing business as Estes Brothers, Inc., of Moose Pass, Alaska (Applicants), for a new license under the Federal Power Act (Act) for constructed minor Project No. 1196, located on an unnamed creek, tributary to Upper Trail Lake, in Seward Recording District, Third Judicial Division, Alaska, and affecting lands of the United States.

The third and last license for the project was issued to Applicants for a period of 10 years, effective as of October 13, 1952, and expired on October 12, 1962.

The Department of the Interior has advised that the project does not affect fishery problems and offers no objection to renewal of a license for the project.

The Department of Health, Education, and Welfare has advised that the project will not have any adverse effect on matters affecting the Department.

The Department of Fish and Game of the State of Alaska has advised that no wildlife or fishery resources are involved or endangered by the project.

The Commission finds:

(1) Applicants are citizens of the United States and have submitted satisfactory evidence of compliance with the requirements of all applicable State

laws insofar as necessary to effect the purposes of a new license for the project.

(2) No conflicting application is before the Commission.

(3) The project does not affect any Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a new license for the project as hereinafter provided will not interfere or be inconsistent with any reservation or withdrawal of public lands.

(5) The installed capacity of the project is 28 horsepower and the energy generated thereby is used in Applicants' store and for domestic purposes.

(6) The amount of annual charges to be paid by the licensees under the new license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy, and enjoyment of its lands is reasonable as hereinafter fixed and specified.

(7) The exhibit described in paragraph (B) below conforms to the Commission's rules and regulations and should be approved as part of the new license for the project.

(8) It will be in the public interest to waive the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions the Act which are hereinafter waived; 10(a); 10(c), insofar as it relates to depreciation reserves; 10(d), 10(f); 11; 12; 14 except insofar as the power of condemnation is reserved; 15; 18, except insofar as it relates to fishways; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This new license is hereby issued to Robert R. and Edward R. Estes, doing business as Estes Brothers, Inc., of Moose Pass, Alaska, under Sections 4(e) and 15 of the Federal Power Act, for a period of 10 years, effective as of October 13, 1962, for the operation and maintenance of minor Project No. 1196, located on lands of the United States in Seward Recording District, Third Judicial Division, Alaska, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this new license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project consists of:

(i) All lands constituting the project area, the limits of which are 50 feet outside the highwater line of the reservoir and 50 feet on each side of pipeline and tailrace.

(ii) Project structures comprising a diversion dam, a reservoir about 250 feet wide and 350 feet long, a steel pipeline about 330 feet long, a powerhouse having an installed capacity of 28 horsepower, and a tailrace.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project

area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project:
the lands and project works being more specifically shown and described by a certain exhibit forming part by reference of the application for new license and which is designated and described as follows:

Exhibit D: (FPC No. 1196–1) entitled:
"Leora Roycroft Power Project, Alaska, Chugach National Forest," signed on August 6, 1931, by Leora Roycroft, revised by the Commission on January 11, 1954; and redesignated as Exhibit K (FPC No. 1196–1).

(C) This new license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, 17 FPC 486, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States", which terms and conditions are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 15. The Licensees shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $5.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $5.00.

(D) The terms and conditions contained in the sections of Part I of the Act set forth in finding (8) above are hereby waived.

(E) The exhibit described in paragraph (B) above is hereby approved as part of this new license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensees and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

H. R. GOODRICH, DOCKET NO. G–15086; R. H. GOODRICH, DOCKET NOS. G–15069 AND G–15085

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING THE FILING OF NOTICES OF CHANGE, AND TERMINATING PROCEEDINGS

(Issued October 2, 1963)

H. R. Goodrich and Mrs. Ester F. Goodrich, Executrix of the Estate of R. H. Goodrich (hereinafter collectively referred to as Goodrich) on August 7, 1963, as amended on August 9, 1963, submitted an offer of settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in the above-entitled suspension proceedings covering four jurisdictional sales to Texas Eastern Corporation (Texas Eastern) from Victoria and Dewitt

Counties in Texas Railroad Commission District No. 2. The details pertinent to the sales are as follows:

Rate schedule and supplement No.	Docket No.	Suspended rate cents/ Mcf [2]	Effective date	Proposed rate	Settlement rate
H. R. Goodrich:				*Cents*	*Cents*
1-9	G-15086	[1] 13.8733	10-29-58	[1] 14.3733	[1] 14.1
R. H. Goodrich:					
2-8	G-15069	[1] 13.8733	10-27-58	[1] 14.3733	[1] 14.1
3-9	G-15085	[1] 13.8733	10-22-58	[1] 14.3733	[1] 14.1
4-9	G-15085	[1] 13.8733	10-22-58	[1] 14.3733	[1] 14.1

[1] Plus 0.5 cents for gathering and dehydration.
[2] At 14.65 psia pressure base.

Goodrich submitted with the offer of settlement executed contract amendments eliminating the favored nation and price redetermination provisions from the contracts comprising the rate schedules involved here and substituting a revised schedule of prices escalating 0.5¢ per Mcf each five years from a base of 13.8733¢ per Mcf (plus 0.5¢ per Mcf allowance for gathering and dehydration).[1] The first periodic increase to 14.3733¢ per Mcf (plus 0.5¢ per Mcf allowance for gathering and dehydration), contractually due on February 5, 1963, constituted the basis for the original proposed settlement rate of 14.3733¢ per Mcf (plus 0.5¢ per Mcf allowance for gathering and dehydration). With respect thereto, Goodrich also tendered notices of change providing for the 14.8733¢ per Mcf rate. In the alternative, as set forth in their amendment to the offer of settlement filed on August 9, 1963, Goodrich indicated that they would be willing to settle at a total rate of 14.6¢ per Mcf, inclusive of the 0.5¢ per Mcf gathering and dehydration allowance. In connection therewith, Goodrich also submitted a letter waiving their right to file for a rate increase above the settlement rate of 14.6¢, inclusive of the 0.5¢ gathering and dehydration allowance, under the periodic escalations until February 5, 1968, the next escalation date. No refunds would be required under either of the above proposals. The buyer has concurred in Goodrich's offer.

The originally proposed settlement rate of 14.8733 per Mcf (14.3733¢ plus 0.5¢ per Mcf allowance for gathering and dehydration) is unacceptable because such rate is in excess of the applicable 14.6¢ per Mcf rate ceiling under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, 24 FPC 1107, as amended by Commission Order No. 264, issued March 27, 1963 in Docket No. R-234. Accordingly, we shall reject the notices of change tendered with the offer proposing to make the 14.8733¢ per Mcf rates effective. However, the alternate proposed settlement rate of 14.6¢ per Mcf (14.1¢ per Mcf plus 0.5¢ per Mcf allowance for gathering and dehydration) is acceptable under the provisions of the Second Amendment. The *public* interest will therefore best be served by accepting the alternate proposal in Goodrich's offer of settlement.

[1] The contract amendments are designated os Supplement No. 10 to H.R. Goodrich's FPC Gas Rate Schedule No. 1 and Supplement Nos. 9, 10 and 10 to R.H. Goodrich's FPC Gas Rate Schedule Nos. 2, 3, and 4, respectively.

However, we desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Goodrich.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Goodrich with the Commission, as amended, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Goodrich with the Commission as amended, is hereby approved in accordance with the provisions of this order.

(B) Goodrich shall file, within 30 days from the date of issuance of this order, notices of change in H. R. Goodrich's FPC Gas Rate Schedule No. 1 and R. H. Goodrich's FPC Gas Rate Schedule Nos. 2, 3, and 4, respectively providing for the 14.6¢ per Mcf rate, inclusive of the 0.5¢ per Mcf allowance for dehydration and gathering and including present tax reimbursement, specified in its Offer of Settlement as amended. The notices of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The notices of change tendered with Goodrich's offer of settlement proposing 14.8733¢ per Mcf (14.3733¢ per Mcf plus 0.5¢ per Mcf allowance for gathering and dehydration) are hereby rejected.

(D) Upon notification by the Secretary of the Commission that Goodrich has complied with the terms and conditions of this order, the rates and charges of 14.6¢ per Mcf, inclusive of the 0.5¢ per Mcf allowance for gathering and dehydration and including present tax reimbursement, specified in the Offer of Settlement, as amended, shall be effective as of the date of issuance of this order, the contract amendments, designated herein as Supplement No. 10 to H. R. Goodrich's FPC Gas Rate Schedule No. 1 and Supplement Nos. 9, 10, and 10 to R. H. Goodrich's FPC Gas Rate Schedule Nos. 2, 3, and 4, respectively, shall be effective as of the date of issuance of this order, the proceedings in Docket Nos. G–15086, G–15069, and G–15085 shall be deemed terminated, and Goodrich's refund obligation with respect to these proceedings shall be deemed to be discharged.

(E) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are presently being heard, or in any proceedings now pending, or hereafter instituted by or against Goodrich.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HARPER OIL COMPANY (OPERATOR), ET AL., DOCKET NO. RI62–111

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDING

(Issued October 2, 1963)

On May 10, 1963, Harper Oil Company (Operator), *et al.* (Harper) submitted, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, an offer of settlement in the above-designated rate suspension

proceeding, which relates to the jurisdictional sale of natural gas by Harper under its FPC Gas Rate Schedule No. 1 to Cities Service Gas Company (Cities Service) in Oklahoma County, Oklahoma (Oklahoma—Other Area).

The original contract negotiated in 1953 covered sales of residue gas at the outlet of Harper's gasoline extraction plant, and gas produced in the immediate vicinity but not processed through the plant. The contract dedicated merchantable gas in its "natural state of production" but reserved to Harper the right to use gas from the dedicated leases for the development and operation of such leases.

The term of the contract expired on January 1, 1958. Harper requested permission under Section 7(b) of the Natural Gas Act to abandon the sale on the grounds that the contract had expired and that Harper had entered into contract with another purchaser. The Commission's denial of permission to abandon was upheld by the Tenth Circuit Court of Appeals.[1] Harper then tendered for filing a proposal unilateral rate increase from 10.0¢ per Mcf to 15.0¢ per Mcf, at 14.65 psia. The proposed increased rate, protested by Cities Service, was suspended and became effective subject to refund on March 22, 1962, in Docket No. RI62–111.

On July 5, 1961, Harper commenced a suit in the District Court of Oklahoma County, Oklahoma, to settle its dispute as to whether, as claimed by Cities Service, re-injected gas in connection with Harper's field operations was included under the sales contract with Cities Service. The District Court held[2] on February 13, 1963, that the re-injected gas was not subject to any sales contract between Harper and Cities Service and further that the gas produced subsequent to the Court decision, up to 12,492,537 Mcf at 16.4 psia is deemed "not native gas," that it is owned by Harper, and that it is not covered under any contract. On the basis of the District Court's decision, and at the rate Harper sold gas to Cities Service in 1962, it would take almost twenty years to produce this volume of gas, and the remaining recoverable reserves in the field would be practically exhausted.

In an effort to settle their controversy, Harper and Cities Service entered into a new contract providing for a 12¢ per Mcf rate which supersedes and terminates the earlier contract. Without making a distinction as to "native natural gas", new gas or re-injected gas, the new contract simply dedicates at least one-half of all gas produced as residue gas at the plant outlet and one-half of all gas produced from dedicated leases not processed at the plant. The balance of the daily production is reserved for Harper's use for its plant operation and as lease fuel. By letter order issued September 5, 1963, in Docket No. G–6124, Harper was granted temporary authorization to make sales to Cities Service under the renegotiated contract.

In the offer of settlement, Harper proposes a settlement rate of 12.0¢ per Mcf and a schedule of 1.0¢ per Mcf escalations at five-year intervals. In addition, Harper agrees to make appropriate refund of all amounts collected in excess of 12.0¢ per Mcf in Docket No. RI62–111. The total amount of refund will be approximately $26,268, with interest, for the period up to August 22, 1963, plus the refund for the period subsequent thereto. It is also estimated that the settlement rate will result in a future annual reduction approximately $27,000.

The settlement rate is 1.0¢ per Mcf in excess of the increased rate ceiling but 2.0¢ per Mcf below the level for initial sales announced in the Commis-

---

[1] *Harper Oil Co.* v. *F.P.C.*, 284 F. 2d 137.

[2] *Harper Oil Co.* v. *Cities Service Gas Co.*, District Court of Oklahoma County, Oklahoma, No. 153,708, February 13, 1963.

sion's Statement of General Policy No. 61–1[3] for jurisdictional sales of natural gas in the applicable area. However, neither of the area ceilings is applicable to all of the gas sold under the new contract, since that contract covers both old and new gas.

Under the special circumstances involved here, we believe that the public interest will best be served by accepting Harper's offer of settlement as hereinafter set forth. However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rates proposed by Harper.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed by Harper with the Commission on May 10, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed by Harper with the Commission on May 10, 1963, is hereby approved in accordance with the provisions of this order.

(B) Within 30 days from the date of issuance of this order, Harper shall refund to Cities Service all amounts collected in Docket No. RI62–111 in excess of the settlement rate of 12.0¢ per Mcf at 14.65 psia, together with simple interest at the rate of 7% per annum, from March 22, 1962, to the date of refund. Harper shall bear all costs incidental to the making of such refunds.

(C) Within 45 days from the date of issuance of this order, Harper shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (B) above, together with a copy of a release from Cities Service with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Harper has complied with the terms and conditions of this order, the settlement rate of 12.0¢ per Mcf at 14.65 psia, shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and Harper's refund obligations with respect to the above-designated proceeding shall be deemed terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP62–215

ORDER AMENDING OPINION NO. 389.

(Issued October 2, 1963)

On July 5, 1963 Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska), filed a "Motion to Amend Opinion And Order" requesting amendment to Opinion No. 389, *Kansas-Nebraska Natural Gas Co., Inc.*, Docket No. CP62–215, issued May 27, 1963, 29 FPC 1058. Kansas-Nebraska requests permission (1) to connect to its system two new alfalfa dehydration plants to be located at Winside, Nebraska and Sargent, Nebraska and (2) to construct 10.0 miles

[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

of 3-inch pipeline and 2.0 miles of 2-inch pipeline to serve Winside rather than the 12.0 miles of 2-inch pipeline authorized by Opinion No. 389. Further, Kansas-Nebraska asks us to provide that the revenues to be derived from the alfalfa plant sales are to be excluded from the calculation of the investment to be made by Kansas-Nebraska for lateral construction.

In Opinion No. 389 we granted a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act to Kansas-Nebraska to construct and operate transportation facilities to provide natural gas service at retail to the Nebraska towns of Polk, Winside, Sargent and Comstock and at wholesale to the Natural Gas Distributing Company of Nebraska which will operate a distribution system in Grant, Nebraska. In that Opinion we required Kansas-Nebraska, for each community to be served, "to construct a lateral at a cost which bears the same proportion to estimated revenues from sales in the third year of operation of the lateral as does the pipeline's existing system net plant in the most recent year to its existing system revenues for that year." (29 FPC 1063). Kansas-Nebraska is to receive contributions in aid of construction from customers for the additional expense necessary to extend the laterals to the city gates.

After we granted the certificate of public convenience and necessity to Kansas-Nebraska, that company received inquiries concerning the conditions under which it would be willing to provide service to the two new alfalfa dehydration plants proposed to be constructed. Kansas-Nebraska indicates a willingness to provide service to these plants if that service can be provided on the same terms as it serves other such plants in Nebraska. These terms include payment to Kansas-Nebraska by the plants of the cost of any transmission lateral line required to serve it and sales on an interruptible basis at the standard rate of 28 cents per Mcf.

Kansas-Nebraska points out that, under Opinion No. 389, the sales to the dehydration plants apparently are to be treated the same as industrial sales to power plants which are included as sales in the formula for calculating the investment in lateral construction required of Kansas-Nebraska. Kansas-Nebraska argues that, if service is required on this basis, it would be unwise financially to provide service to the alfalfa plants because of the differences in character of the demand by alfalfa plants and the demand of power plants.

As Kansas-Nebraska points out, the possibility of service to alfalfa dehydration plants was not brought out in the record in the proceeding and the only type of industrial service we contemplated in our calculations of investment required by the pipeline was the power plant sales discussed in our opinion. We agree with Kansas-Nebraska that the different character of the two types of industrial demand warrants different treatment in calculating pipeline investment and contributions in aid of construction. Alfalfa dehydration plants provide good loads for pipelines during favorable hay-growing seasons but have undependable loads during periods of adverse weather. Also, dehydration plant equipment is constructed so that it can be moved easily and this allows plants to seek new locations if they have experienced adverse weather conditions. On the other hand, the likelihood of making power plant sales was not questioned and this was a determinative factor in our decision to include those sales in our calculation. Moreover, the power plant customers had agreed that, if their use of gas terminated or was substantially diminished, they would continue contributions in aid of construction until Kansas-Nebraska was made whole for the facilities proposed in the proceeding.

Consequently, these differences outlined above warrant different treatment of these industrial sales and we will permit Kansas-Nebraska to receive from

sion's Statement of General Policy No. 61–1[3] for jurisdictional sales of natural gas in the applicable area. However, neither of the area ceilings is applicable to all of the gas sold under the new contract, since that contract covers both old and new gas.

Under the special circumstances involved here, we believe that the public interest will best be served by accepting Harper's offer of settlement as hereinafter set forth. However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rates proposed by Harper.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed by Harper with the Commission on May 10, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed by Harper with the Commission on May 10, 1963, is hereby approved in accordance with the provisions of this order.

(B) Within 30 days from the date of issuance of this order, Harper shall refund to Cities Service all amounts collected in Docket No. RI62–111 in excess of the settlement rate of 12.0¢ per Mcf at 14.65 psia, together with simple interest at the rate of 7% per annum, from March 22, 1962, to the date of refund. Harper shall bear all costs incidental to the making of such refunds.

(C) Within 45 days from the date of issuance of this order, Harper shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (B) above, together with a copy of a release from Cities Service with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Harper has complied with the terms and conditions of this order, the settlement rate of 12.0¢ per Mcf at 14.65 psia, shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and Harper's refund obligations with respect to the above-designated proceeding shall be deemed terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP62–215

ORDER AMENDING OPINION NO. 389.

(Issued October 2, 1963)

On July 5, 1963 Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska), filed a "Motion to Amend Opinion And Order" requesting amendment to Opinion No. 389, *Kansas-Nebraska Natural Gas Co., Inc.*, Docket No. CP62–215, issued May 27, 1963, 29 FPC 1058. Kansas-Nebraska requests permission (1) to connect to its system two new alfalfa dehydration plants to be located at Winside, Nebraska and Sargent, Nebraska and (2) to construct 10.0 miles

[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

of 3-inch pipeline and 2.0 miles of 2-inch pipeline to serve Winside rather than the 12.0 miles of 2-inch pipeline authorized by Opinion No. 389. Further, Kansas-Nebraska asks us to provide that the revenues to be derived from the alfalfa plant sales are to be excluded from the calculation of the investment to be made by Kansas-Nebraska for lateral construction.

In Opinion No. 389 we granted a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act to Kansas-Nebraska to construct and operate transportation facilities to provide natural gas service at retail to the Nebraska towns of Polk, Winside, Sargent and Comstock and at wholesale to the Natural Gas Distributing Company of Nebraska which will operate a distribution system in Grant, Nebraska. In that Opinion we required Kansas-Nebraska, for each community to be served, "to construct a lateral at a cost which bears the same proportion to estimated revenues from sales in the third year of operation of the lateral as does the pipeline's existing system net plant in the most recent year to its existing system revenues for that year." (29 FPC 1063). Kansas-Nebraska is to receive contributions in aid of construction from customers for the additional expense necessary to extend the laterals to the city gates.

After we granted the certificate of public convenience and necessity to Kansas-Nebraska, that company received inquiries concerning the conditions under which it would be willing to provide service to the two new alfalfa dehydration plants proposed to be constructed. Kansas-Nebraska indicates a willingness to provide service to these plants if that service can be provided on the same terms as it serves other such plants in Nebraska. These terms include payment to Kansas-Nebraska by the plants of the cost of any transmission lateral line required to serve it and sales on an interruptible basis at the standard rate of 28 cents per Mcf.

Kansas-Nebraska points out that, under Opinion No. 389, the sales to the dehydration plants apparently are to be treated the same as industrial sales to power plants which are included as sales in the formula for calculating the investment in lateral construction required of Kansas-Nebraska. Kansas-Nebraska argues that, if service is required on this basis, it would be unwise financially to provide service to the alfalfa plants because of the differences in character of the demand by alfalfa plants and the demand of power plants.

As Kansas-Nebraska points out, the possibility of service to alfalfa dehydration plants was not brought out in the record in the proceeding and the only type of industrial service we contemplated in our calculations of investment required by the pipeline was the power plant sales discussed in our opinion. We agree with Kansas-Nebraska that the different character of the two types of industrial demand warrants different treatment in calculating pipeline investment and contributions in aid of construction. Alfalfa dehydration plants provide good loads for pipelines during favorable hay-growing seasons but have undependable loads during periods of adverse weather. Also, dehydration plant equipment is constructed so that it can be moved easily and this allows plants to seek new locations if they have experienced adverse weather conditions. On the other hand, the likelihood of making power plant sales was not questioned and this was a determinative factor in our decision to include those sales in our calculation. Moreover, the power plant customers had agreed that, if their use of gas terminated or was substantially diminished, they would continue contributions in aid of construction until Kansas-Nebraska was made whole for the facilities proposed in the proceeding.

Consequently, these differences outlined above warrant different treatment of these industrial sales and we will permit Kansas-Nebraska to receive from

the alfalfa dehydration plants the contributions in aid of construction provided for contractually. In order to serve 60,000 Mcf of interruptible natural gas per year to the dehydration plant to be built in Winside, the lateral serving that town will be increased in size to 10.0 miles of 3-inch pipe and 2.0 miles of 2-inch pipe. The owners of that proposed plant have agreed to pay the increase in cost associated with the increased size which is estimated to be approximately $20,000. No additional investment, other than meters and regulators, is needed to serve interruptible natural gas to the dehydration plant to be built in Sargent. That customer has agreed to make a contribution in aid of construction of $10,000. This contribution in aid of construction will be deducted from the amount of contribution to be collected by Kansas-Nebraska from the other customers in Sargent and Comstock.

If natural gas service is available to these proposed alfalfa dehydration plants, the owners will be induced to locate in the towns of Winside and Sargent to which they will bring new industry and job opportunities and provide a ready market for local agricultural products. Public convenience and necessity requires that we permit these sales to be made on the basis of contributions in aid of construction as provided above.

Due notice of the filing of the subject motion to amend has been given by the publication thereof in the Federal Register on September 5, 1963 (28 F.R. 9707). No protests or petitions to intervene have been received in this docket with regard to the subject motion.

The Commission orders:

(A) The authorization granted in Opinion No. 389 to construct a 12.0 mile 2-inch lateral to serve Winside, is amended to permit the construction of a lateral consisting of 10.0 miles of 3-inch pipe and 2.0 miles of 2-inch pipe at an additional cost of $20,000.

(B) Ordering paragraph (B)(i) of Opinion No. 389 is amended to provide as follows:

(i) Applicant shall receive, as contributions in aid of construction, $15,655 from the customers in Polk, $33,897 from the customers in Winside, $81,736 from the customers in Sargent and Comstock, $58,494 from the Natural Gas Distributing Company of Nebraska, $20,000 from the owner of the alfalfa dehydration plant to be built in Winside, and $10,000 from the owner of the alfalfa dehydration plant to be built in Sargent.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP63-355

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 2, 1963)

On June 28, 1963, Lone Star Gas Company (Applicant) filed in Docket No. CP63-355 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities for the transportation of natural gas in order to extend Applicant's existing transmission system to the city gate of the City of Tom Bean, Grayson County, Texas, all as more fully set forth in the application.

Applicant proposes the construction and operation of the following transportation facilities:

(1) Approximately 11.29 miles of 4-inch Line 2nd E–10 to loop that 4-inch portion of existing Line E-10 between approximately station 552 + 29 at the Whitewrigth tap, and station 1147 + 93 at the Howe tap;

(2) Approximately 4.06 miles of 3-inch transmission Line E–10–8 extending from Line E–10 and proposed Line 2nd E–10 in a northwesterly direction to a city gate measuring station to be installed near the City of Tom Bean.

The City does not now have the benefit of natural gas service.

The proposed looping is stated to be necessary to meet the continued growth requirements of Applicant's existing customers and to initiate service to the City of Tom Bean at this time.

Applicant also proposes to construct and operate a non-jurisdictional natural gas distribution system in the City of Tom Bean. A franchise for that purpose has been granted to Applicant by the City of Tom Bean. The requirements for the proposed natural gas distribution system (at 14.73 psia) are estimated to be as follows:

Year	Peak day	Annual
1	266	12,430
2	275	12,940
3	285	13,530

Applicant estimates the cost of the proposed facilities at $141,100, to be financed from working capital.

Pursuant to due notice, a hearing was held on September 16, 1963, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The transportation facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed transportation facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under

the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lone Star Gas Company, to construct and operate the transportation facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificated issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

YADKIN, INC., PROJECT NO. 2197

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued October 3, 1963)

Application was filed on December 3, 1962 by Yadkin, Inc., licensee for major Project No. 2197, for further amendment of its license for the project located on the Lower Yadkin stretch of the Yadkin-Pee Dee River in Stanly, Montgomery, Davidson and Rowan Counties, North Carolina.

The application seeks Commission authorization to replace the turbines and generators of Units Nos. 1 and 2, the last 36-cycle units in the Narrows Development, and to install therein new circuit breakers, generator voltage regulators and other modern equipment. The application proposes also abandonment and removal of a 2,300-volt distribution line between Narrows Powerhouse and the Badin Water Filter Plant, as no longer useful or necessary for the project.

The present 27,000-horsepower turbines would be replaced by 36,000-horsepower turbines and the present 17,100-kilowatt generators by 24,750 kilowatt generators. The new generators will be 60-cycle, thereby eliminating the last 36-cycle equipment in the project, since modernization of the Baldwin Smelting Works has eliminated the need for 36-cycle generating equipment.

The proposed replacement of Units Nos. 1 and 2 with new and larger units will improve the water balance between the Narrows Development and the reconstructed Falls Development. The change to 60-cycle generation would result in increased flexibility of operation of the licensee's power system and the possibility of a more complete coordination of the power system operations

with the operations of the systems of connecting utilities. Two auxiliary transformers will be provided at Narrows thereby eliminating the necessity of maintaining the afore-mentioned 2,300-volt line to the Badin Water Filter Plant which is to be removed, as recited above. The distribution line was used occasionally as an auxiliary power supply to the Narrows Development. The line is among the appurtenant project facilities included in the license and is not otherwise specifically described in the license.

The Narrows Development is one of four under license to Yadkin, Inc. as Project No. 2197 which together develop the first 39 miles of the Yadkin River above the mouth of the Uwharie River. Downstream from Project No. 2197 are two additional hydroelectric developments under license to the Carolina Power & Light Company as Project No. 2206. The two licenses were issued simultaneously in a joint order dated May 19, 1958 (19 FPC 704). The installed generating capacity of the currently authorized units at the six developments totals 294,300 kilowatts.

The High Rock Development of Yadkin, Inc. is the furthest upstream of the six developments and is their primary storage reservoir. In length it covers about 19 river miles but its shore line is greatly extended by four long arms, each with several miles of shore line. Approximately 1500 houses have been built around the reservoir and a large number of the owners of these properties recently have communicated with the Commission regarding the water level of reservoir, with particular regard to the summer recreational season. Some have expressed concern that, if the Commission authorizes an increase in the installed capacity of the units at the Narrows Development, the company will increase its drawdowns of High Rock Lake to utilize the new capacity. Others simply ask that the company be required to limit its drawdown of the reservoir to a maximum of 3 to 5 feet.

A very large number of individuals have also communicated with the Commission requesting that it approve the amendment of license for the Narrows Development and permit drawdown of the High Rock Reservoir as required for economic operation of the project. These communications were received from people employed by Yadkin, Inc., from citizens in the vicinity, from officials of towns in the area, and others.

Issues concerning the comprehensive development of this section of the Yadkin and Pee Dee Rivers for all purposes were explored by the presiding examiner in a proceeding in which he issued his initial decision on February 11, 1958, recommending the issuance of licenses. A formal hearing had been held and reports by interested State and Federal agencies had been received prior to his decision. Use of the water resources involved for recreation, sanitation, fish and wildlife, water quality control, consumptive use, and navigation were all considered by him in addition to coordinated operation of the developments for maximum power production and the projects' additional importance to the economy of the area in that it would support reconstruction of the Badin Aluminum Works twice in the ensuing 50 years. Balancing all of the proposed uses, the presiding examiner ruled, in pertinent part that (1) High Rock Lake as the primary reservoir for the power developments should be operated for power purposes with only the general direction in Article 28 that the licensee:

> make every reasonable effort to maintain the water surface of High Rock Reservoir at the highest level practicable from June 1 to September 1 of each year, *as is consistent with the primary purpose of the reservoir to provide a large reservoir which may be drawn down as necessary to main-*

tain continuity of operation of the Badin smelting works at the highest possible minimum level.

(2) that Tuckerton Reservoir, which was to be constructed below High Rock, be limited to a three-foot drawdown in the interests of recreation, and (3) that minimum discharges be maintained at the Tillery Development, where he authorized increased generating capacity, and Blewett Falls Development for stream sanitation and fish and wildlife conservation, with a possible future increase in the minimum for water quality control.

The examiner had been requested to limit the drawdown of High Rock Lake in the interests of recreation. A ten-foot limit was specifically mentioned. His analysis of the facts then available indicated that "Such a limitation would largely defeat the purpose of Aluminum in constructing the reservoir and would greatly reduce the benefits to downstream plants resulting from the operation as it has been conducted in the past." In addition it is apparent from his decision that such a limit would have affected the construction of the Tuckertown Reservoir and the installation of new generating capacity at the Tillery Development which he recommended be authorized. The Commission adopted the examiner's decision.

Because the optimum method of operation for power purposes of a hydroelectric project is not a static matter and because it can affect reservoir water levels, the Commission has re-examined the past and proposed operations of Project Nos. 2197 and 2206 and their coordination with the operations of neighboring utility systems. Both licenses contain a reservation of authority to the Commission to order changes in coordination of operations "* * * as it finds to be economically feasible and in the public interest * * *." Article 24 in the license for Project No. 2197 contains the added proviso:

> provided that such coordination of operations or changes therein shall not impair the Licensee's ability to supply the necessary power for operation of its Badin smelting facilities * * *

We understand the proviso to apply to the economics of the power supply for the Badin smelting facilities and not to suggest that the licensee must be able at all times to supply all of such power needs directly from Project No. 2197.

The 1958 decision of the presiding examiner summarizes the existing coordination of Project No. 2197 and neighboring systems at 17 FPC 716. The licensee at that time was able to exchange some peaking power for off-peak energy usually on a one-for-two basis. Operations between January 1, 1943, and May 18, 1958, when the license was issued, resulted in a drawdown of High Rock Rerservoir more than 10 feet on 17 occasions in the months of June, July, August and September. Such drawdowns coincided with periods of below average rainfall. Since the issuance of the license for the project, it has been similarly drawn down in September of 1958 and 1961, while operating under similar coordination.

Operation of the High Rock Reservoir solely for peaking power in the neighboring utility loads might possibly result in the licensee being able to maintain a higher water level in the reservoir. It would, of course, require similar operation of the five downstream developments, all of which have considerably less storage capacity. Consequently, a study was made by the staff of area needs for peaking capacity which would result in operating Yadkin plants at the lower load factor and with a higher water level of High Rock Reservoir. It was determined that as presently forecast the need for such peaking capacity in the area will not be required at least until 1967. Such

operation currently would result in a large financial loss to Yadkin. For this reason we find we cannot justify currently imposing the capacity limit on the drawdown of High Rock Reservoir which the recreational interests request.

By letter of September 24, 1963, the licensee supplied the Commission with "Preliminary Operating Guides For Operation of Badin Works" to take effect upon completion of the construction for which authorization is requested at the Narrows Development. These guides are more detailed and confirm the proposed "System Reservoirs Operating Guide, GP 4/17/63." We had caused studies to be made on the earlier guides simulating the operation of Yadkin, Inc. resources, coordinated with the neighboring utilities, assuming a repetition of the historical stream flows which occurred between January 1, 1919, and December 31, 1960. These studies indicate that under the new rule curve the drawdown will be somewhat decreased throughout the recreation season over that of present operations. They show, however, that under adverse water conditions the reservoir will continue to be draw down more than 3–5 foot maximum now requested by the recreation interests and under certain conditions more than 10 feet.

By special condition, therefore, we are requiring the licensee to operate Project No. 2197 in accordance with its "Preliminary Operating Guides For Operation of Badin Works." We are extending the specified length of the season in Article 28 of the license to May 15 to September 15 of each year. In addition we are making it clear that the Commission has continuing authority to order changes in methods of operation in the interests of recreation as well as power at any time, after notice and hearing, that it finds conditions permit such changes without adversely affecting the economics of the project upon which the licensee has based its construction of the Tuckertown Development, replacement of units No. 2 and 3 in the Falls Development and indeed is reconstructing the Badin Smelting Works. Further, upon complaint supporting a claim that the operation of High Rock Reservoir under the new operating guides is unreasonable, we shall hold a full hearing to determine the matter.

We can find no factual justification at the present time to change materially the balance between recreation and power created by the Commission when the license for Project 2197 was initially issued in 1958. The operation of the project which we are now requiring for the benefit of recreation interests is an improvement over the situation as it existed when the license was issued, and our continuing jurisdiction will enable us to order further improvements which may be possible. Toward that end, we are directing our staff to prepare a detailed study of possible future coordinated operation of Project No. 2197 with the utility systems in the area.

We are hereinafter fixing the completion date of the replacement of project works at the Narrows Development at not later than April 1, 1965.

The Commission further finds:

(1) The license, further amended as hereinafter ordered, is in the public interest.

(2) Public notice has been given of the filing of the application.

(3) The authorized installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 268,000 horsepower and the annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided, is reasonable.

(4) The following described revised exhibits filed as part of the application conform to the Commission's rules and regulations and should be approved

as part of the license, and the exhibits described herein as being superseded and which are now part of the license should be eliminated therefrom:

Exhibit J (Third Revision) (FPC No. 2197–81) superseding Exhibit J (Second Revision) (FPC No. 2197–77);

Exhibit K, Sheet 4 (Second Revision) (FPC No. 2197–82) superseding Exhibit K, (First Revision) (FPC No. 2197–79);

Exhibit L–4 (Revised) (FPC No. 2197–83) superseding Exhibit L (FPC No. 2197–5); and

Exhibit M, Page 6, filed in the Commission December 3, 1962, superseding Exhibit M, Page 6, filed in the Commission February 6, 1956.

The Commission orders:

(A) The revised exhibits described in finding (4) above as conforming to the Commission's rules and regulations are hereby approved as part of the license for the project and the superseded exhibits specified therein are hereby eliminated from the license for the project.

(B) The license for Project No. 2197, is hereby further amended, effective as of September 1, 1963, as follows:

Paragraph I. Subparagraph (b)(3) of the license, insofar as it describes the Narrows Development, is hereby revised to read as follows:

(3) The constructed Narrows Development located about 2 miles from Badin, North Carolina. A concrete dam composed of a gated spillway section, a non-overflow section and an intake section; a concrete by-pass spillway section separate from the main dam composed of a gated section and a non-overflow section; a concrete by-pass spillway channel about 1,300 feet long on the left bank around the powerhouse; a reservoir, about 7-1/2 miles long extending to the proposed Tuckertown dam, with normal pool elevation 541.1 feet, an area of 5,355 acres and a usable storage of 128,937 acre-feet at a drawdown of 31.1 feet; four steel penstocks about 340 feet long; a separate powerhouse containing two 27,000-horsepower turbines and two 36,000-horsepower turbines direct-connected to generators having a total capacity of 96,500 kilowatts (Units 1 and 2, 24,750 kw; Unit 3, 25,000 kw and Unit 4, 22,000 kw); four transmission circuits operating at generator voltage (13,200 volts) connecting with the Badin substation; and appurtenant electrical and mechanical equipment; and

Paragraph II. Article 30 of the license is hereby amended to read as follows:

Article 30. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Federal Power Act, one (1) cent per horsepower on the authorized installed capacity (268,000 HP) plus two and one-half (2-1/2) cents per 1,000 kilowatt-hours of gross energy generated by the project during the calendar year for which the charge is made.

Paragraph III. Article 28 of the license is hereby amended to read as follows:

Article 28. The License shall, in order to secure maximum recreational benefits, make every reasonable effort to maintain the water surface of High Rock Reservoir at the highest level practicable from May 15 to September 15 of each year, as is consistent with the primary purpose of the reservoir to provide a large reservoir which may be drawn as necessary to maintain continuity of operation of the Badin smelting works at the highest possible minimum level.

Paragraph IV. The license for the project is hereby amended to include therein the following additional articles, designated as Articles 32 and 33, respectively:

Article 32. The Licensee shall complete replacements of Units 1 and 2 in the Narrows powerhouse with associated facilities on or before April 1, 1965.

Article 33. Until further order of the Commission, the Licensee shall, in the interests of power development, recreation and other beneficial purposes, operate the High Rock Reservoir generally in accordance with the rule curve designated "Preliminary Operating Guides For Operation of Badin Works". Upon complaint or upon its own motion, after notice and opportunity for hearing, the Commission may order the Licensee to operate the project works of Project No. 2197 in such other manner as the Commission may find to be necessary and desirable for power, recreational and other purposes and consistent with the primary purpose and economics of the project.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross *concurs* in the grant of the subject license amendment but, in view of the numerous complaints to the application, would immediately *initiate* a hearing to adduce evidence with respect to the power, recreational and other public beneficial uses incident to this project. Only in this way would the Commission have a basis for determining, with assurance, the proper operation of this project, having due regard to those public uses we are bound to protect and to promote.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

GULF STATES UTILITIES COMPANY, DOCKET NO. E-7124

ORDER AUTHORIZING THE ISSUANCE OF PREFERRED STOCK

(Issued October 4, 1963)

Gulf States Utilities Company (Applicant), incorporated under the laws of the State of Texas and qualified to do business in the State of Louisianna, with its principal place of business at Beaumont, Texas, filed an application on August 27, 1963, as amended on September 18, 1963, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding 100,000 shares of Preferred Stock, par value $100 per share.

Applicant proposes, on or about October 8, 1963, to invite sealed, written bids for the purchase of the 100,000 shares of $— Dividend Preferred Stock, by newspaper publication and by distribution of a Public Invitation containing a statement of terms and conditions relating to bids for the proposed issuance, together with an individual Form of Bid and purchase contract for the issuance here proposed.

Each bid, whether from a single bidder or a group of bidders, must be in duplicate on the appropriate Form of Bid provided by Applicant, with each counterpart signed by the bidder, or by the Representative, in the case of a group of bidders; and all bids must be for the purchase of all the Preferred Stock. No bidder may participate in more than one bid. Each bid shall specify; (1) the fixed dividend rate of Preferred Stock, which rate shall be a multiple of $0.04; and (2) the price per share, exclusive of accrued dividends, to be paid to the Applicant for the Preferred Stock, which price shall not be less than $100 per share and not more than $101.50 per share, and that accrued dividends from September 15, 1963, to the date of payment therefor and delivery thereof will be paid to the Applicant by the purchaser or purchasers.

Unless postponed, all bids for the purchase of the proposed issuance of Preferred Stock must be presented before 12:00 Noon, New York Time, on October 21, 1963, to Applicant at Irving Trust Company, One Wall Street, 47th Floor, New York, N.Y. Each bid must be accompanied by a certified or official bank check or checks in the aggregate amount of $300,000. Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Invitation, it will accept the bid which provides for the lowest cost of money.

The Applicant will use the net proceeds from the new Preferred Stock together with cash on hand if required, to discharge short-term notes due December 31, 1963, of which it is estimated $10,000,000 will be outstanding immediately prior to the sale of the new Preferred Stock. The short-term notes have been used in providing funds for the interim financing of part of Applicant's construction program covering facilities constructed in 1963.[1] The construction program for the year 1963 is estimated to amount to $32,000,000, of which, approximately $15,757,000 will be expended toward completion of projects begun prior to 1963. During the first six months of 1963, $16,468,000 was expended on this program. The principle items of expenditure in 1963 are: $752,000 for the completion of two 230 mw generating units in the Sabine Station, $11,141,000 toward the construction of the 220 mw generating unit #2 in the Willow Glen Station, $8,140,000 for electric transmission lines and substations and $9,700,000 for extension and improvement of electric distribution facilities.

Written notice of the application has been given to the Louisiana Public Service Commission and the Texas Railroad Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on September 10, 1963 (28 F.R. 9851), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before September 25, 1963, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting to the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order is-

[1] The Commission, in an order issued on December 20, 1962, (Docket No. E-7074, 28 FPC 1077), authorized the Applicant to issue up to $20,000,000 short-term notes. The notes were to be issued between December 31, 1962, and December 31, 1963, they were to mature on December 31, 1963, and bear interest at the prime rate.

sued December 20, 1962, *Gulf States Utilities Company*, Docket No. E-7074 (28 FPC 1077).

(2) The proposed issuance and sale of Preferred Stock, as described above, will constitute an issuance of a security within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Preferred Stock is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Preferred Stock as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Preferred Stock, as described above, upon the terms and conditions, and for the purposes specified in the application, is authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive biding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further orders, shall have approved the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER OVERRULING EXAMINER'S DENIAL OF TWO STAFF MOTIONS FOR PRODUCTION OF RELEVANT AND MATERIAL DATA, AND ORDERING SUBPOENAS TO ISSUE FORTHWITH

(Issued October 4, 1963)

On September 27, 1963, the Presiding Examiner certified to the Commission an appeal by the staff from the Examiner's rulings of September 4, 1963,

denying two Staff motions which requested the Examiner to order and direct the production of certain relevant and material data from Indiana & Michigan Electric company (I&M), American Electric Power, Inc. (AEP) and Ohio Valley Electric Corporation (OVEC) which Staff stated it needs for preparation of its presentation in this proceeding.

The data sought are of the same general type and character as the engineering and system operations data which the Commission heretofore ordered to be made available.[1] The only differences are that the earlier data covered different time periods in the years 1962 and 1963 and did not include operations data of OVEC, which is interconnected with the AEP system. Staff had examined OVEC data during its field examination of August 4 through 16, 1963.

In denying the Staff's motions, the Examiner was of the opinion that only the Commission could order the data to be produced from persons who were not parties, such as AEP and OVEC, and that the Commission's order of July 23, 1963 somehow limited his right to subpoena or order additional information to be made available. The Examiner erred in this view.

The Commission's authority under the Federal Power Act to obtain data is plenary.[2] It may require that data be produced by order of the Commission (Sections 301 (b) and (c)), by Commission rule, regulation or order (Section 304 (a)), and by direction of any member of the Commission or designated officer (Section 307(b)). Subpoenas are but one of the legal processes through which the Commission and its designated officers may act. Under § 1.27 of the Commission's Rules of Practice and Procedure the Examiner exercises delegated authority of the Commission. Considering the determination which we make herein as to the relevance and materiality of the documentary data which the staff seeks, the Examiner possesses all necessary authority to compel the production thereof whether by order or ruling of the Examiner or pursuant to subpeona issued by him.

This proceeding commenced on April 16, 1963, by the issuance of an "Order to Show Cause and Providing for Hearing". The hearing was to determine in part whether I&M was violating the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder. The order contemplated that the Staff, pursuant to Section 307(a) of the Act, would make a full investigation of all facts, conditions, practices, or matters which it might find necessary or proper in order (1) to determine whether I&M has been violating or was continuing to violate the provisions of the Act and the Regulations, or (2) to aid in the enforcement of the Act. That order further contemplated that Staff would have full access to and the right, pursuant to Section 301 (b), to inspect, examine and obtain or make copies of all necessary accounts, records, memoranda, maps, contracts, engineering reports, and other data and papers.

The facts which will determine the issues in this case are by their very nature in the possession or knowledge of the respondent or of any person who controls the respondent or of any other company controlled by such person. In addition, facts may be in the possession of other, interconnected public utilities or persons and companies outside the Commission. A full knowledge

[1] By orders of July 23, 1963, and August 7, 1963. Counsel for Indiana & Michigan Electric Company, also Counsel for OVEC and AEP, agreed that the data requested was similar to the earlier data, which the Commission had found relevant and material.

[2] Section 301(b) makes it the *duty* of licensees and public utilities to furnish required data. Section 304(b) makes it unlawful for any person to willfully hinder, delay or obstruct the filing of required data. And Section 307(g) removes the defense of self-incrimination by reason of furnishing required data.

of all of the facts is essential to intelligent decision making by the Examiner and the Commission. To that end the Presiding Examiner shall issue all subpoenas or orders as are necessary to enable Staff to make a thorough and complete investigation and obtain all necessary data.

Once a hearing has commenced, the Presiding Examiner has full authority to issue necessary subpoenas for data and witnesses and to issue orders for the production of data. Orderly procedure requires that parties should not have to seek these orders or subpoenas from the Commission once the hearing has commenced. Hereafter the Examiner, pursuant to the Rules and Regulations of this Commission and the Federal Power Act, should issue such subpoenas or orders.

In El Paso Natural Gas Company, 27 FPC 321–322 (1962), we said:

> Although we have passed upon the application for a subpoena upon the Examiner's reference, we note that it is our opinion that the power to issue subpoenas is within the authority of the Examiner. See Section 7 (b) of the Administrative Procedure Act (60 Stat. 241; 5 U.S.C. 1006); Federal Power Commission Rules of Practice and Procedure, Sections 1.23(a) and 1.27(b); *Lee* v. *F.M.B.*, 284 F. 2d 577 (CA 9, 1960); *Penfield Co.* v. *S.E.C.* 143 F. 2d 746 (CA 9), cert. denied 323 U.S. 768 (1944). Cf. *N.L.R.B.* v. *Gunaca*, 135 F. Supp. 790 (E.D. Wisc.), aff'd 230 F. 2d 542 (CA 7, 1956).

We note that there was no opposition to the production of the data requested by Staff in its motions, upon issuance of subpoenas, by any party to the proceeding or by counsel for AEP and OVEC. In view of the tentative schedule for the presentation of evidence in this case, proposed by staff on October 2, 1963, the requested subpoenas shall be issued forthwith by the Commission's Secretary for the prompt production of the requested data. This is not to say that the Examiner could not have issued these subpoenas in the first instance, but, since the matter is before us, we will dispose of it.

The Commission finds:

(1) The data requested in Staff's two motions relate to transactions with and the business of I & M and are subject to examination, inspection and copying by Staff under the provisions of the Federal Power Act either upon the issuance of an order or subpoena by the Commission or by the Presiding Examiner. The data is within the custody of American Electric Power Inc., and Ohio Valley Electric Corporation.

(2) The data requested in Staff's two motions is relevant and material to the issues herein raised.

(3) It is appropriate to carry out the provisions of the Federal Power Act, particularly Sections 201, 205, 206, 301, 307, and 309 thereof that American Electric Power, Inc., its President, Donald C. Cook; and Ohio Valley Electric Corporation, and its President Philip Sporn, be required, pursuant to subpoena duces tecum issued by the Commission Secretary, to produce copies of the aforesaid data before the Presiding Examiner and supply Staff with said copies on Monday, October 14, 1963, at 10:00 a.m.

The Commission orders:

(A) The Presiding Examiner's denial of Staff's motions is hereby overruled and said motions are hereby granted.

(B) The Secretary of this Commission shall issue forthwith to American Electric Power Company, Inc. and to Donald C. Cook, its President, a subpoena duces tecum requiring the production before the Presiding Examiner

at 441 G. St., Washington D.C., on Monday, October 14, 1963 at 10:00 a.m. of the data (or copies thereof) set forth at page 155 of the transcript (which page is attached hereto as Exhibit A).* At that time, Staff shall have full opportunity to inspect and make copies of any or all of such data.

(C) The Secretary of this Commission shall issue forthwith to Ohio Valley Electric Corporation and to Philip Sporn, its President, a subpoena duces tecum requiring the production before the Presiding Examiner at 441 G. St., Washington D.C., on Monday October 14, 1963 at 10:00 a.m. of the data (or copies thereof) set forth at page 159 of the transcript (which page is attached hereto as Exhibit B).* At that time, Staff shall have full opportunity to inspect and make copies of any or all of such data as Staff deems necessary.

(D) This order is without prejudice to the issuance of any further orders or subpoenas by the Presiding Examiner for the production of other data or for the testimony of any witnesses in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

OTTER TAIL POWER COMPANY, DOCKET NO. E-7126

ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued October 4, 1963)

Otter Tail Power Company (Applicant), incorporated under the laws of the State of Minnesota, and doing business as a qualified foreign corporation in the States of North Dakota and South Dakota, with its principal place of business at Fergus Falls, Minnesota, filed an application on September 3, 1963, for authorization pursuant ot Section 204 of the Federal Power Act to issue and sell at competitive bidding $7,000,000 principal amount First Mortgage Bonds, —% Series due 1993.

The proposed Bonds will be issued under Applicant's Indenture of Mortgage dated July 1, 1936, to First Trust Company of Saint Paul and Louis S. Headley, Trustees, (Russell M. Collins successor Individual Trustee) as heretofore supplemented and as to be further supplemented by a proposed Twenty-sixth Supplemental Indenture to be dated as of October 23, 1963.

Applicant proposes on or about October 11, 1963, to invite sealed written bids for the purchase of the proposed issuance of Bonds.

All bids, whether from a single bidder or group of bidders, must be for the purchase of all of the proposed issuance of Bonds. Each bid must specify (1) the price to be received by Applicant for the Bonds, exclusive of accrued interest, which price shall be not less than 99% of principal amount if a public offering is to be made and not less than 100% of principal amount if no such public offering is to be made by the purchaser; (2) the interest rate to be borne by the proposed Bonds, which rate shall be expressed as a multiple of ⅛ of 1%; (3) that the accrued interest on the Bonds from November 1, 1963 to the date of payment and delivery shall be paid to Applicant. In addition, each bid must be accompanied by a certified or bank cashier's check or checks in the aggregate amount of $175,000.

All bids must be presented to Applicant at 11 South LaSalle Street (20th Floor), Chicago, Illinois, at or before 10:00 a.m. Chicago Time, on October

* Omitted in printing.

23, 1963, unless postponed. Unless Applicant shall reject all bids, which it reserves the privilege to do, or shall exclude a bid or bids for reasons specified in the statement of terms and conditions relating to the form of bid for the proposed Bonds, it will accept the bid for the Bonds which provides the lowest annual cost of money to it.

The proceeds to be obtained from the proposed Bonds will be applied to Applicant's current construction program, directly or through the discharge of interim financing heretofore undertaken by Applicant.[1] Total estimated expenditure for 1963 is $12,470,000.

Major items include a 66,000 kw generating unit as an addition to the Company's Hoot Lake Plant, the extension of the Company's 115 kv transmission grid by the addition of 25 miles of transmission line from Donaldson, Minnesota to Warsaw, N. D., conversion of a portion of its 41.6 kv system to 115 kv operation, construction of 48 miles of 115 kv transmission lines to tie with Montana-Dakota Utilities, and other short extensions of its 115 kv system and the extension and rebuilding of distribution plant, all to meet the expanding load requirements of its system.

Written notice of the application has been given to the Railroad and Warehouse Commission of Minnesota, the Public Service Commission of North Dakota, the Public Utilities Commission of South Dakota, and to the Governor of each of those States. Notice of the application has also been given by publication in the Federal Register on September 14, 1963 (28 F.R. 10005), stating that any person desiring to be heard or to make any protest with reference to the application should on or before September 25, 1963, file a petition or protest with the Federal Power Commission, Washington 25, D.C. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued October 25, 1957, *Otter Tail Power Company* Docket No. E-6776 (18 FPC 538).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a state under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

[1] By order issued December 20, 1962, *Otter Tail Power Company,* Docket No. 7076 (28 FPC 1087), applicant was authorized to issue up to a maximum of $10,000,000 principal amount of short term, unsecured promissory notes outstanding at any one time; the notes to be issued in varying principal amounts from time to time prior to December 31, 1965, as interim financing for Applicant's construction program. As of August 28, 1963 $4,162,250 was outstanding.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purpose specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Secton 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements and Section 34.3(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–17625; CONTINENTAL OIL COMPANY, DOCKET NO. G–17649; NEWMONT OIL COMPANY, DOCKET NO. G–17765; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. RP64–4.

ORDER GRANTING REHEARING FOR THE PURPOSE OF RECONSIDERATION

(Issued October 4, 1963)

On September 5, 1963, Tennessee Gas Transmission Company (Tennessee) filed an application for rehearing of our order of August 7, 1963, conditionally approving proposed settlement, conditionally issuing certificates of public convenience and necessity and imposing reporting requirements in the above-captioned proceedings.

The settlement agreement and the Commission's order provide in part that the price to be paid to the MCN producers is 19¢ per Mcf at 15.025 psia; and in addition, Tennessee shall pay 1.5¢ per Mcf to an escrow agent as tax reimbursement to provide for the contingency of the producing acreage being finally adjudicated as lying within the taxing jurisdiction of the State of Louisiana. The order further requires Tennessee to make special reports to the Commission in Docket No. RP64–4, concerning the status of the escrow account.

Tennessee states in its application for rehearing that recent investigation by Tennessee disclosed that the Block 62 Field which contains the acreage covered by the certificate applications in these proceedings is not within

the area which is the subject of dispute between the State of Louisiana and the United States and further, that this acreage is approximately 22 miles from the shoreline of the State of Louisiana and is unquestionably all Federally owned lands.

Tennessee therefore requests that the Commission:

(1) Eliminate the requirement by Tennessee to place 1.5¢ per Mcf in an escrow account.

(2) Amend said order to provide that the 1.5¢ per Mcf collected by MCN on the 160 acre tract to be paid to Tennessee from initial delivery to date of said order be refunded to Tennessee without any requirement that it be placed in an escrow account.

(3) Amend ordering Paragraph (I) to eliminate the requirement by Tennessee of filing an escrow agreement and special report of Block 62 Field, East Cameron Area, offshore Louisiana.

The Commission finds:

In order to afford further time for consideration of these matters, it is appropriate and proper in the administration of the Natural Gas Act that rehearing be granted for the purpose specified herein.

The Commission orders:

The application for rehearing filed by Tennesee in the above-captioned matters on September 5, 1963, is granted for the purpose of further consideration of the issues raised therein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HUGOTON PLAINS GAS AND OIL COMPANY, DOCKET NO. RI60-102

ORDER APPROVING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE, REQUIRING REFUNDS, AND TERMINATING PROCEEDING

(Issued October 8, 1963)

Hugoton Plains Gas and Oil Company (Hugoton Plains) on September 25, 1963, submitted an Offer of Settlement in the above-designated proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The proceeding concerns the lawfulness of an increased rate of 20.1626¢ per Mcf at 14.65 psia, designated as Supplement No. 12 to Hugoton Plains' FPC Gas Rate Schedule No. 1, for the sale of gas by Hugoton Plains to Northern Natural Gas Company (Northern) from the Hugoton gas field in the States of Kansas and Oklahoma. The proposed rate was suspended by Commission order issued February 4, 1960, and became effective subject to refund as of April 7, 1960. Upon completion of hearings in this matter, the presiding examiner on March 12, 1962, issued his initial decision disallowing Hugoton Plains' increased rate. The matter is now pending before the Commission on exceptions filed by Hugoton Plains and Northern.

Under the terms of the offer, Hugoton Plains proposes, *inter alia*, a 15.75¢ per Mcf settlement rate at 14.65 psia, and agrees to refund, with applicable interest, any revenues collected in Docket No. RI60-102 in excess of the settlement rate for the period from April 7, 1960, through August 31, 1963. The agreed upon settlement rate is to be effective from September 1, 1963 through Dcember 31, 1965. The refund, according to Hugoton Plains, will

consist of principal in the amount of $2,310,805, plus interest in the amount of $107,555.

In support of its proposal, Hugoton Plains states, *inter alia*, that (1) the proposal will fix the rate for the subject sale, thereby terminating the pending proceeding; (2) the proposal gives certainty and predictability to the cost of purchased gas by Northern; (3) the proposal provides for substantial refunds to Northern, which, in turn, will be passed on to its jurisdictional customers in accordance with the Commission's order issued December 21, 1961 in Docket No. G–19040 *et al.;* and (4) the proposal will result in a reduction in Northern's rates to its jurisdictional customers in accordance with the December 21, 1961, order.

All of the parties involved in this proceeding, with the exception of Minnesota Valley Natural Gas Company (Minnesota Valley) have agreed to the proposed settlement. Minnesota Valley has stated it interposes no objection to the settlement agreement.

At the hearing cost evidence was the sole evidence adduced. Staff contended on the basis of evidence presented by it that the just and reasonable rate was 15.06¢ per Mcf. Minnesota Valley contended that the suspended rate had not been justified and that the record did not establish definitive sales volumes to Northern for the future. The Northern Distribution Group[1] took the position that the traditional cost of service method is inappropriate in this case, and advocated as a just and reasonable rate a sliding-scale rate ranging from 11¢ to 20¢ per Mcf depending upon the annual volumes sold to Northern. Hugoton Plains contended on the basis of its evidence that the increased rate of 20.1626¢ per Mcf was justified.

Determination of the appropriate test year sales volumes to be utilized here is the most important issue in this case. It is, moreover, the primary cause of the wide divergence in the parties' contentions, as set forth above. Hugoton Plains does not have a minimum take-or-pay clause in its contract with Northern and Hugoton Plains' sales volumes dropped from 30.9 Mmmcf in 1951 to 13.7 Mmmcf in 1959, and then upward to 17.2 Mmmcf in 1960. Because of the foregoing situation, it is difficult to estimate with any reasonable degree of accuracy Hugoton Plains' sales volumes for the future. This, in turn, makes it difficult to determine the just and reasonable rate for Hugoton's sales.

In view of the problem mentioned above, and upon review of the cost evidence in the record, the proposed settlement rate appears to us to be reasonable and to strike a fair balance between the conflicting views of the various parties. We therefore conclude that the settlement proposal is in the public interest and should be approved as hereinafter provided.

However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rate proposed by Hugoton Plains, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Hugoton Plains' rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Hugoton Plains with the Commission on September 25, 1963, is in the public

---

[1] The group consists of Minneapolis Gas Company, Iowa Power and Light Company, Northern States Power Company (Minnesota), Northern States Power Company (Wisconsin), and North Central Public Service Company.

interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of Settlement filed by Hugoton Plains with the Commission on September 25, 1963, is hereby approved in accordance with the provisions of this order.

(B) Hugoton Plains shall file, within 30 days from the date of issuance of this order, a notice of change to its FPC Gas Rate Schedule No. 1 providing for the 15.75¢ per Mcf rate at 14.65 psai, specified in its offer of settlement. The notice of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Hugoton Plains shall refund to Northern all amounts collected under its rate schedule in Docket No. RI60–102 in excess of the settlement rate of 15.75¢ per Mcf, together with applicable interest, with respect to gas sales made during the period from April 7, 1960, to August 31, 1963. Hugoton Plains shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, Hugoton Plains shall report to the Commission in writing the details of their calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from Northern with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Hugoton Plains has complied wth the terms and conditions of this order, the rate and charge of 15.75¢ per Mcf at 14.65 psia, specified in the Offer of Settlement, shall be effective as of September 1, 1963, Docket No. RI60–102 shall be deemed terminated, and the refund obligation of Hugoton Plains with respect to Docket No. RI60–102 shall be deemed discharged.

(F) The oral argument in this proceeding heretofore scheduled for October 28, 1963, is cancelled.

(G) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Hugoton Plains, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Hugoton Plains or any other companies, persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LATERAL GAS PIPELINE COMPANY, DOCKET NO. CP63–338

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 8, 1963)

On June 7, 1963, Lateral Gas Pipeline Company (Applicant) filed in Docket No. CP63–338 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline and appurtenant facilities, all as more fully represented in the application.

The facilities proposed to be constructed consist of approximately 6.0 miles of 2-inch natural gas transmission line and appurtenant facilities located in Adair County, Iowa, extending from a point on Applicant's existing

line near Greenfield, Iowa, in a westerly direction to the Town of Fontanelle, Iowa. These facilities will be employed to transport, for the account of Iowa Electric Light and Power Company (Iowa Electric), natural gas purchased by it from Natural Gas Pipeline Company of America (Natural) for distribution in the Town of Fontanelle. The gas requirements of Fontanelle will be met from the volumes of gas Natural is authorized to deliver to Iowa Electric and will cause no present increase in contract demand.

The estimated peak-day requirements for the first year of operation will be 205 Mcf of natural gas increasing to 422 Mcf during the third year. The construction cost of the proposed facilities is estimated at $56,191, including engineering expenses. Applicant proposes to finance the project from funds on hand, sales of common stock to its parent, Iowa Electric, or through temporary advances.

Applicant was granted temporary authorization on September 5, 1963, to construct and operate the subject facilities as applied for herein.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 17, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lateral Gas Pipeline Company, an Iowa corporation having its principal place of business in Cedar Rapids, Iowa, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lateral Gas Pipeline Company, to construct and operate the proposed facilities as hereinbefore described, all as

more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 90 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-30

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 8, 1963)

On July 9, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-30 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Iowa Electric Light and Power Company (Iowa Electric) of additional 1,000 Mcf per day at 14.65 psia over and above the present contract demand of 29,776 Mcf per day.

The Applicant states that Iowa Electric has requested an additional daily contract quantity of 1,000 Mcf of gas commencing on November 1, 1963 for for resale by Iowa Electric to Monsanto Chemical Company. Monsanto now uses natural gas and will use the increased quantity as a raw material in the manufacture of agricultural fertilizers. The additional sale to Iowa Electric shall be made at rates set in Applicant's effective CD-1 rate schedule.

Applicant states that no new facilities will be necessary to render the proposed additional service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 25, 1963, respecting the matters involved in and the issues presented by the application herein. No petitions to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commissoin render a decision herein pursuant to Section 1.30(c)(1) of the Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942 in Docket No. G-235 (3 FPC 830).

(2) The sale and delivery of natural gas hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and said sale and delivery are subject to the jurisdiction of the Commission,

and said sale and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale and delivery of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, to sell and deliver natural gas as hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (c)(3), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. G–2067

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 9, 1963)

On July 25, 1963, Texas Gas Transmission Corporation (Applicant) filed in Docket No. G–2067 an application to amend the Commission's order effective May 1, 1953,[1] by extending the period of the certificate authorization for an additional 15 years commencing October 7, 1963, and ending October 6, 1978, all as more fully set forth in the application to amend.

The order effective May 1, 1953, authorized Applicant to construct and operate certain facilities and to transport and deliver, on an interruptible basis, maximum daily and annual volumes of natural gas of 30,000 Mcf and 6,959,000 Mcf, respectively, to Mississippi Power & Light Company (Mississippi Power) for use by the latter in its Delta Steam Electric Generating

[1] By notice of May 4, 1953, the Presiding Examiner's decision in Docket No. G–2067 was adopted by the Commission as its final decision and order to be effective May 1, 1953.

Plant near Cleveland, Mississippi. Such authorization was for a period of ten years from the date of first delivery to Mississippi Power (October 7, 1953) unless such period shall have subsequently been extended by order of the Commission.

Mississippi Power and Applicant have entered into an amendatory agreement dated June 12, 1963, providing for the proposed extended term and for a price of 26.2 cents per Mcf for natural gas sold during said extended term. The amendatory agreement makes no change in the maximum daily and annual volumes of natural gas to be sold to Mississippi Power.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 7, 1963 (28 F.R. 9831). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order effective May 1, 1953, in Docket No. G–2067 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order effective May 1, 1953, in Docket No. G–2067 be and the same is hereby amended to extend the period of the certificate authorization for an additional 15 years commencing October 7, 1963, and ending October 6, 1978, as hereinbefore described and as set forth in the subject application to amend.

(B) Applicant shall report to the Commission as of June 1 of each year the number of days on which the subject service was curtailed or interrupted during the preceding 12 months, together with the date and the amount of each such curtailment or interruption. This report shall be filed by June 30 of each year.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL., GULF OIL CORPORATION, DOCKET NOS. G–19062, G–19467, CI60–54, CI60–440, CI60–824, CI61–716, CI61–1562, CI61–1630, CI62–62, CI62–411, CI62–412, CI62–859, AND CI62–965; SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. CI60–310, CI60–311, CI60–392, CI61–290, CI61–659, CI61–674, CI61–1128, AND CI61–1640

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT AGREEMENTS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 9, 1963)

Gulf Oil Corporation (Gulf) on July 15, 1963, and Socony Mobil Oil Company (Socony) on July 18, 1963, filed settlement proposals and motions for severance of their respective dockets from the proceedings in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, (hereinafter referred to as the Union Texas Proceeding) for approval of their respective settlement proposals and for the issuance of certificates of public convenience and necessity.

The settlement proposals generally provide for the onshore sales involved herein (subject to the taxing jurisdiction of the State of Louisiana), the total amount to be paid to Gulf and Socony by the respective pipeline purchasers for gas delivered (or paid for but not taken)[1] shall be 20.625¢ per Mcf,[2] during the "moratorium period" of July 1, 1963, through June 30, 1968. Throughout the same period, the total amount to be paid to Gulf and Socony by the respective pipeline purchasers for gas delivered (or paid for but not taken) under offshore (in the Federal domain) contracts shall be 19.0¢ per Mcf.[3]

The proposals provide that rate increase filings may be made (1) prior to the end of moratorium periods to the extent that the maximum suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State and Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which the applicant is entitled by contract.

Full refunds of amounts collected above the settlement rates will be made by Gulf in Docket Nos. CI61–1562[4] and CI62–62[5] and by Socony in Docket Nos. CI61–674[6] and CI61–659.[7] Interest at a rate of 7% per annum will be paid on the amounts to be refunded. The temporary certificates heretofore issued in these four dockets contained refund conditions.

In Docket Nos. CI60–311 and CI61–1128, Socony proposed that certificates be issued in accordance with the applications at initial rates of 20.375¢ per Mcf and 20.25¢ per Mcf, respectively. The increased rate now in effect subject to refund and Commission determination in Docket No. RI61–441[8] may continue to be collected and the rate increase filed for but under suspension in Docket No. RI63–42[9] may be made effective, subject to the Commission's suspension order in that Docket and further proceedings in accordance therewith. The general terms of the settlement proposal shall otherwise apply to these sales.

Gulf and Socony propose to extend the make-up period for take-or-pay gas to four years in all cases where the contract provides for a lesser make-up period.

Generally, the terms of these proposals are similar to the provisions of the *Humble settlement* approved by the Commission recently.[10] The present proposals do differ from *Humble* in some respects, however.

The effective date of the rate reductions in the Humble settlement was April 1, 1963, while Socony and Gulf propose July 1, 1963, as the effective

---

[1] The term "delivered" is used in the proposals as in other proposals approved by us. In the context of the proposals we have interpreted the term to include gas required to be taken during the moratorium periods but paid for and not taken. Our approval of these settlements is also conditioned upon such interpretation.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for details as to rate schedules, rates and purchasers.

[7] Socony F.P.C. Gas Rate Schedule No. 302.

[8] Relates to Docket No. CI61–1128 and Rate Schedule No. 258.

[9] Relates to Docket No. CI60–311 and Rate Sechedule No. 229.

[10] See "Order Severing Proceedings, Conditionally Approving Proposal Settlement and Conditionally Issuing Certificates of Public Convenience and Necessity," *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, issued August 7, 1963, 30 FPC 456.

date of the reduction in rates. The Humble moratorium on rate increase filings ends on March 31, 1968; Socony and Gulf propose June 30, 1968, as the end of the moratorium. As we noted in our recent order conditionally approving other settlement proposals in these proceedings[11], those applicants with later effective dates would stand to gain an advantage over those producers who have, in good faith, filed earlier, because Area Rate Proceeding, Docket No. AR61–2 certainly will be completed before the five year moratoria proposed herein expire. Accordingly, we shall approve of these settlements upon condition that the effective dates for the rate reductions be April 1, 1963, and that the moratoria extend through March 31, 1968.

By our order approving Gulf's company-wide rate settlement we required Gulf to reduce its rates under its Rate Schedule Nos. 170, 175, 184, 199 and 208 to 21.25¢ per Mcf.[12] That order further provided that monies collected by Gulf for deliveries on and after April 25, 1963, under the aforementioned rate schedules and Rate Schedule No. 188 be collected subject to refund of all amounts over the rate determined to be required by the public convenience and necessity in the Union Texas Proceeding. Gulf therefore proposes to make refunds in accordance therewith for amounts collected above the settlement rates for deliveries made since April 25, 1963. However, since we shall require that April 1, 1963, be the effective date of the rate reductions herein proposed, this aspect of Gulf's offer has lost its effectiveness.

Transcontinental Gas Pipeline Corporation (Transco) filed letters with the Secretary on August 7, 1963, with respect to Gulf's settlement and on August 9, 1963, with respect to Socony's settlement. Transco points out that on July 25, 1963, it made prepayments of $1,413,493.77 to Gulf under the terms of its Rate Schedule No. 220 (Docket No. CI61–1630) and a like amount to Socony under the terms of its Rate Schedule No. 268 (Docket No. CI61–1640). Transco suggests that an adjustment in Transco's prepaid gas accounts with Gulf and Socony would be appropriate since it made its prepayments at the rate of 19.5¢ per Mcf and the settlement rates are 19¢ per Mcf. Transco advises that it would have no objection to receiving the adjustment in kind, i.e. gas over the life of the contract, as it has done in other settlements.[13] Transco states that it did not take part in the negotiations leading up to either settlement proposal. Hence, neither proposal specifically provides a solution to the prepayments problem. In previous settlement agreements in which refunds were paid for deliveries prior to the effective date of the reduced rates, the parties have agreed to refund the difference between the amounts paid under take-or-pay provisions and the amounts that would have been payable under the settlement rates. Since the effective date of the proposed rate reductions will be April 1, 1963, under the terms of this order, under the circumstances of these cases it is appropriate that our approval of these proposals be conditioned upon Gulf's and Socony's refunding to Transco the difference between the amounts paid for at a rate of 19.5¢ per Mcf by Transco for gas which it was obligated to take from April 1, 1963 on but not taken under the above mentioned rate schedules and the amounts that would have been paid at a rate of 19¢ per Mcf. We shall also give Gulf and

[12] *Gulf Oil Corporation*, Docket No. G–9520, *et al.*, issued April 25, 1963. 29 FPC 837.

[13] See *Texaco Inc.*, 28 FPC 247.

Socony the alternative which Transco suggests of making refunds in kind over the life of the contract.

Each pipeline purchaser (shown in the Appendix) who will receive refunds and future gas purchase cost reductions in substantial amounts as a result of these settlements, with the exceptions noted below, is under no obligation to pass on the refunds and rate reductions to its jurisdictional customers, subject to accumulation provisions in some cases. United Gas Pipeline Company's rate case in Docket No. RP63–1 is presently before the Commission, so refunds and adjustments in rates to reflect producer rate reductions can be effected in that proceeding.

On August 22, 1963, the Public Service Commission of New York (PSC) filed comments on both settlement proposals. The comments of PSC are directed to Docket Nos. CI61–1630 and CI61–1640. PSC states that, based on the estimated deliveries shown in the certificate applications, the rate reductions would result in an annual reduction in Transco's gas purchase cost of $182,500 but that Transco does *not* intend to pass on any of this reduction to its customers in the form of lower rates.

Transco, on September 9, 1963, filed a letter with the Secretary (and served copies to all parties) advising that the settlement agreement in Docket No. RP61–13 approved by the Commission by order of February 2, 1962,[14] does not provide for reductions in rates based upon the reductions in the producer rates in Docket Nos. CI61–1630 and CI61–1640 because Transco did not commence purchasing gas under the rate schedules related to the latter two dockets until July 1962. Transco states that even the reduced rates under these two rate schedules are more than 1¢ per Mcf higher than the average cost of gas for settlement purposes in Docket No. RP61–13. Transco concludes that any attempt to order a rate reduction based upon the Gulf and Socony settlements in Docket Nos. CI61–1630 and CI61–1640 would be inequitable and unjustfied since the flow through provisions in Transco's rate settlement in Docket No. RP61–13 do not specifically mention Docket Nos. CI61–1630 and CI61–1640. Transco's letter. *supra*, did not consider the effects of its reduced gas purchase costs resulting from the settlement in Docket No. CI61–659. Its letter was an answer to the comments of PSC concerning Docket Nos. CI61–1630 and CI61–1640 only. In view of the foregoing, we shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of the settlements in all of these dockets subject to further orders of the Commission. Transco will be required to report to the Commission its proposed disposition of the refunds and its proposed rate adjustments, if any, to reflect its reduced gas purchase costs.

Southern Natural Gas Company (Southern) whose purchased gas costs also will be substantially affected by these settlements should be subject to the same holding and reporting requirements as Transco since the flow through provisions of our opinion and order in Southern's rate case, decided on February 18, 1963,[15] do not specifically refer to the dockets settled herein.

Comments favoring the Gulf settlement proposal were filed on July 23, 1963, by the Long Island Lighting Company, Philadelphia Gas Works Division

---

[14] See *Transcontinental Gas Pipe Line Corporation*, 27 FPC 187.

[15] *Southern Natural Gas Company*, Docket No. G–20509, *et al.*, Opinion No. 379 and Opinion No. 379A, (1963), 29 FPC 323 and 779, respectively.

of the United Gas Improvement Company and the United Gas Improvement Company, and on July 31, 1963, by Public Service Electric and Gas Company.

We find these settlement proposals, as herein modified, to be in the public interest.

In keeping with our present policy we shall require that the applicants pay interest on the amounts to be refunded at 7 percent per annum, such interest to accrue through the last day of the month in which the respective settlement proposals were filed.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in the matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlements will be so conditioned.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets [16] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Gulf and Socony are "natural-gas companies" within the meaning of the Natural Gas Act, and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The applicants herein are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco and Southern be required to submit the reports and retain the refunds, interest and purchased gas cost reductions as ordered below.

---

[16] The hearing in the *Union Texas Petroleum, et al.* consolidated proceeding concluded July 25, 1963.

(6) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. G–19062, G–19467, CI60–54, CI60–440, CI60–824, CI61–716, CI61–1562, CI61–1630, CI62–62, CI62–411, CI62–412, CI62–859, CI62–965, CI60–310, CI60–311, CI60–392, CI61–290, CI61–659, CI61–674, CI61–1128, and CI61–1640 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.* Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein ot the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that the applicants comply fully with the terms of the settlement proposals which settlements are expressly approved, as modified by this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals, the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity to the settlements and the conditions of this order.

(F) The certificates issued by paragraph (C) above are issued upon express condition that the effective date for rate reductions proposed herein be April 1, 1963, and that Gulf and Socony refund to the respective pipeline purchasers all amounts above the settlement rates for gas delivered since April 1, 1963; and upon the further condition that Gulf and Socony refund to Transco the difference between the amount actually paid by Transco for gas not taken attributable to the months of April, May and June, 1963, and the amount that would have been paid had the payment for gas paid for but not taken attributable to the months of April, May and June 1963, been made at the settlement rates; *Provided, however,* that Gulf and Socony shall have the option of refunding as to such take-or-pay-for payments and over the life of the contracts, a volume of gas attributable to the difference between the settlement rate of 19¢ per Mcf and the price of 19.5¢ per Mcf for volumes paid for but not taken attributable to the months of April, May and June, 1963. The volume of such refund gas shall be calculated at the price or prices prevailing at the time delivered, and no interest shall be charged. Interest at 7% on all monies to be refunded will accrue through July 31, 1963. Gulf and Socony shall report to the Commission within 15 days of their acceptance or rejection of these conditions and their choices provided for herein.

(G) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and the proceedings in Docket Nos. G–19062, G–19467, CI60–54, CI60–440, CI60–824, CI61–716, CI61–1562, CI61–1630, CI62–62, CI62–411, CI62–412, CI62–859,

CI62-965, CI60-310, CI60-311, CI60-392, CI61-290, CI61-659, CI61-674, CI61-1128, and CI61-1640 shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and order of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94 (b) and the detailed submittal requirements of Part 154.94 (f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(J) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and Section 5(c) of the Outer Continental Shelf Lands Act, and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Transco and Southern shall each submit a report to the Commission and serve a copy on their respective jurisdictional customers, and the various State Utility Commissions wherein each pipeline does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to these rate reductions, their proposed disposition of such refunds and their proposed rate adjustments to reflect the reductions in gas purchase costs. Pending Commission action and further orders respecting such proposed dispositions, the aforementioned companies shall hold such refunds, interest and amounts equal to the reduction in purchased gas costs which accrue as a result of these settlements in a special fund (without further interest obligation).

(L) Gulf's FPC Gas Rate Schedule No. 229 is hereby accepted for filing effective as of the date of initial delivery.

Commissioner Woodward *dissenting*.

WESTERN GAS SERVICE COMPANY, DOCKET NO. CP63-308

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 9, 1963)

On May 16, 1963, as supplemented on June 17, 1963, Western Gas Service Company (Applicant) filed in Docket No. CP63-308 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of additional natural gas transmission facilities; the installation and operation of a new compressor station and appurtenant facilities; and also the certification of certain existing pipeline facilities, all as more fully set forth in the application.

More specifically, Applicant would construct and operate 3.5 miles of 6-inch pipeline beginning at a point 6.5 miles from the Town of Etter, Moore County, Texas, being the southeast corner of Section 364, thence 3 miles eastward along the south boundaries of Sections 363, 362 and 361, to the southeast corner of Section 361; thence northward along the east boundary of Section 361 for 0.5 miles, all in Block 44, H. and T. C. R. R. Survey, Moore County, Texas. Applicant would also construct and operate one 100 horsepower field compressor station and appurtenant facilities. Applicant now has approximately 21.22 miles of previously constructed 6-inch pipeline extending from a point near Stratford, Sherman County, Texas, to a point near Dumas, Moore County, Texas, which has not been heretofore certified and for which Applicant seeks authorization in this application.

Applicant requests authorization for the new existing facilities in order to take a new supply of natural gas. The facilities will form a continuous system with certain facilities authorized in Docket No. G-16390. The estimated

cost of the new facilities is $104,000. No additional financing will be required by Applicant for the construction.

Applicant was granted temporary authorization on July 11, 1963, to construct and to operate the subject facilities as applied for herein.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 26, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Western Gas Service Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the operation of the existing facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Western Gas Service Company, to construct and operate the proposed facilities, and to operate the existing facilities, as hereinbefore described, all as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CARNEGIE NATURAL GAS COMPANY, DOCKET NO. CP64-26

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 10, 1963)

On July 24, 1963, Carnegie Natural Gas Company (Applicant) filed in Docket No. CP64-26 an applicant pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon facilities devoted to delivering natural gas to The Manufacturers Light and Heat Company (Manufacturers) under an exchange agreement filed with the Federal Power Commission as part of Applicant's FPC Gas Tariff, Original Volume No. 2 and designated as Rate Schedule X-3.

More specifically, the facilities for which abandonment is sought include: 1,892 feet of 2-inch pipeline, 2,218 feet of 3-inch pipeline, and the necessary measuring and regulating appurtenances, all located in Fayette County Pennsylvania, used in delivering natural gas from two wells designated as wells No. 967 and No. 970 on Applicant's records.

It appears that production from the aforementioned gas wells has declined to a point where it is no longer economical to produce and deliver gas at those locations.

Concurrently with the abandonment application, Applicant filed Second Revised Sheet No. 47 to its FPC Gas Tariff, Original Volume No. 2, which reflects the elimination of the pertinent delivery point from its Rate Schedule X-3.

On July 22, 1963, Manufacturers filed Second Revised Sheet No. 16 to its FPC Gas Tariff Original Volume No. 2, which reflects the elimination of the point of receipt of gas by Manufacturers from Applicant, under Manufacturers Rate Schedule X-3.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 24, 1963 respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Carnegie Natural Gas Company, a Pennsylvania corporation with its principal place of business in Munhall, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities to be abandoned, as hereinbefore described are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order permitting and approving the same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Carnegie Natural Gas Company, of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of the subject abandonment within 10 days of the date thereof.

(C) The tariff sheets hereinbefore described shall become effective on the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G-1895, G-18337 AND G-18538

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 10, 1963)

On July 12, 1963, El Paso Natural Gas Company (Applicant) filed in Docket Nos. G-1895, G-18337 and G-18538 an application to amend the Commission's order issued April 4, 1962, as amended on January 14, 1963, in Docket No. G-1895 and the Commission's order issued June 12, 1963, in Docket Nos. G-18337 and G-18538, all as more fully set forth in the application to amend.

Applicant requests in Docket No. G-1895 that the order of April 4, 1952, as amended, be further amended by deleting the volumetric limitations on annual and daily deliveries of natural gas to Arizona Public Service Company (Public Service) for resale to Salt River Project Agricultural Improvement and Power District (Salt River) for use as fuel in the latter's Kyrene electric generating plant. In Docket Nos. G-18337 and G-18538 Applicant requests that the order of June 12, 1963, be amended by clarifying the volumetric limitations on deliveries of natural gas to Public Service and El Paso Electric Company (El Paso Electric) and by authorizing in Docket No. G-18538 an increase in delivery limitations on El Paso Electric.

The order of April 4, 1952, as amended, in Docket No. G-1895 authorized Applicant to construct and operate certain facilities necessary to sell and deliver gas to Public Service for resale to Salt River for use as fuel in the latter's Kyrene plant. Said order, as amended, limited daily and annual deliveries of natural gas to 25,000 Mcf and 3,502,000 Mcf, respectively.

The order of June 12, 1963, issued in Docket No. G-18337 and G-18538 authorized Applicant to construct and operate certain facilities necessary for the direct sale and delivery of natural gas to Public Service for use as fuel in the latter's Ocotillo Power Plant located near Phoenix, Arizona, and the direct sale and delivery of natural gas to El Paso Electric for use as fuel in the latter's Newman Power Plant located near El Paso, Texas. Ordering paragraph (C) of said order imposed the following condition:

(C) The facilities authorized in Docket No. G-18337 shall not be used to transport in excess of an annual net increase of 12,300,000 Mcf of

natural gas over the 1959 annual volumes transported and delivered by Applicant to Arizona Public Service Company. Likewise, the facilities authorized in Docket No. G–18538 shall not be used to transport in excess of an annual net increase of 2,500,000 Mcf of natural gas over the 1959 annual volumes transported and delivered by Applicant to El Paso Electric Company.

The application shows that electric energy requirements of the Phoenix, Arizona, area are supplied by an interconnected system of power plants owned by Public Service and Salt River. Applicant sells gas to Public Service for: (1) use as fuel in Public Service's Ocotillo, Phoenix and Saguaro plants, and (2) resale to Salt River for use as fuel in Salt River's Aqua Fria, Cross Cut and Kyrene plants. The above-quoted condition provides for an annual net increase in deliveries of 12,300,000 Mcf over deliveries to Public Service during the year 1959. Applicant states that such 1959 deliveries totaled 34,948,879 Mcf and that it, therefore, construes the volumetric limitation on deliveries to Public Service to be 47,248,879 Mcf per year. Applicant states that it is in doubt whether this limitation relates only to the deliveries of natural gas to Public Service for use by the latter in its own plants, or whether said limitation is to include, as Applicant has done in its determination, the resale volumes to Salt River for use in the latter's plants, including the Kyrene plant. Applicant requests, therefore, that the subject order be clarified to specify 47,248,879 Mcf as the annual volumetric limitation.

Further, Applicant states that the above limitation of 47,248,879 Mcf includes deliveries to Public Service for resale to Salt River for use at the Kyrene plant and, in order to allow freedom in load-shifting among Salt River's plants, Applicant requests that the daily and annual volumetric limitation imposed in Docket No. G–1895 be deleted.

The application further shows that electric energy requirements of the El Paso, Texas, area are supplied by El Paso Electric. The foregoing condition quoted from the order of June 12, 1963, provides, in Docket No. G–18538, for an annual net increase in deliveries of 2,500,000 Mcf over deliveries to El Paso Electric during the year 1959. Applicant states that such 1959 deliveries totaled 11,881,939 Mcf and that it, therefore, construes the volumetric limitation on deliveries to El Paso Electric to be 14,381,939 Mcf per year. The application indicates that deliveries to El Paso Electric during 1962 aggregated 14,379,930 Mcf and that the projected requirements for 1963 and 1967 are estimated at 15,608,457 Mcf and 21,363,892 Mcf, respectively. The existing contract between Applicant and El Paso Electric provides for a maximum annual volume of 25,793,250 Mcf by the year 1966, and Applicant states that annual deliveries to El Paso Electric will approach these contract levels.

Therefore, Applicant requests herein that the order of June 12, 1963, be amended to state specifically the annual delivery limitation to El Paso Electric and requests that such limitation be increased to the contract maximum for 25,793,250 Mcf.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 11, 1963 (28 F.R. 9890). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 4, 1952, as amended on January 14, 1963,

in Docket No. G–1895 and the Commission's order issued June 12, 1963, in Docket Nos. G–18337 and G–18538 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 4, 1952, as amended on January 14, 1963, in Docket No. G–1895 be and the same is hereby further amended by deleting therefrom the volumetric limitations upon deliveries of natural gas by Applicant to Arizona Public Service Company for resale to Salt River Project Agricultural Improvement and Power District for use as fuel in the latter's Kyrene electric generating plant, as hereinbefore described and as set forth in the application herein.

(B) Ordering paragraph (C) of the Commission's order issued June 12, 1963 in Docket Nos. G–18337 and G–18538 is hereby amended to read as follows:

(C) The facilities authorized in Docket No. G–18337 shall not be used to transport natural gas which, on an annual (calendar year) basis, when taken with the volumes of natural gas transported and delivered by Applicant to Arizona Public Service Company for use in its Phoenix and Saguaro Power Plants and transported and delivered by Applicant to Arizona Public Service Company for delivery to Salt River Project Agricultural Improvement and Power District for use in the latter's Kyrene, Cross Cut and Agua Fria Power Plants, under Applicant's Rate Schedule X-7, FPC Gas Tariff, Third Revised Volume No. 2, shall exceed the volume of 47,248,879 Mcf (at 14.73 psia). Likewise, the facilities authorized in Docket No. G–18538 shall not be used to transport natural gas which, on an annual (calendar year) basis, when taken with the volumes of natural gas transported and delivered by Applicant to El Paso Electric Company for use in its Rio Grande Power Plant, shall exceed the volume of 25,793,250 Mcf (at 14.73 psia).

(C) In all other respects said orders shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–7

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 10, 1963)

On July 10, 1963, El Paso Natural Gas Company (Applicant) filed an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas through those facilities to Wyoming Industrial Gas Company for resale and general distribution in Kemmerer, Wyoming, and its environs. The proposed facilities to consist of a measuring and regulating station located in Lincoln County, Wyoming adjacent to Applicant's 22-inch main line.

The estimated cost of Applicant's facilities is $8,400 and it is to be financed out of current working funds.

The proposed sales are for both firm and interruptible gas in accordance with effective Rate Schedules DS–1 and I–1, of Applicant's FPC Gas Tariff, Original Volume No. 3.

The estimated annual and peak-day requirements for the fifth year are 209,558 Mcf and 1,515 Mcf respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 24, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefore should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulation.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-13

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 10, 1963)

On July 16, 1963, Natural Gas Pipeline Company of America (Applicant) filed its so-called Amended Application for Certificate of Public Convenience and Necessity in Docket No. CP63-264. Ths filing in fact covers only a part of the original application in Docket No. CP63-264 and is being treated as a new application assigned the designation Docket No. CP64-13.

The authorization requested herein covers the acquisition of certain underground storage rights and the construction and operation of pipeline and well facilities for evaluation of the characteristics and capabilities for development of an underground natural gas storage reservoir described as the Keota Storage Area, located in Washington County, Iowa, all as more fully set forth in said application.

The facilities proposed include:

(1) 1.1 miles of 10-inch lateral pipeline extending from Applicant's main transmission system to the proposed Keota Storage Area;

(2) 1.2 miles of 6-inch gathering line in the same area;

(3) 6 injection-withdrawal and 8 observation wells; and other appurtenant facilities.

The estimated cost of the project including cushion gas and acquisition of storage rights is $1,086,550, to be financed from funds on hand. Applicant proposes to inject approximately 1,500,000 Mcf of natural gas into the St. Peter formation in the Keota Storage Area as the initial stage of its development program.

Applicant states that the proposed storage project, if successful, will provide an economical means of augmenting Applicant's ability to meet the increased peak-day requirements of its customers and that further authorization to so utilize the proposed storage will be requested upon completion of the initial testing and development program.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 26, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the acquisition, construction and operation thereof by Applicant are

subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed acquisition, construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of said Regulations.

(6) The time within which the facilities authorized hereinafter should be acquired, completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations should be fixed at one year from the date on which this order issues.

(7) The maximum inventory of natural gas stored in the Keota Storage Area should be limited to 1,500,000 Mcf at 14.65 psia.

(8) Applicant should be required to submit to the Commission quarterly reports containing information on the proposed testing operations as specified hereinafter.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to acquire, construct and operate the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of said Regulations.

(C) The time within which the facilities authorized by paragraph (A) above shall be acquired, completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at one year from the date on which this order issues.

(D) The maximum inventory of natural gas stored in the Keota Storage Area is hereby limited to 1,500,000 Mcf at 14.65 psia.

(E) Applicant shall submit to the Commission quarterly reports on proposed testing operations containing the following information:

(a) The volumes of natural gas injected into the St. Peter formation;

(b) The volumes of injected natural gas present in the St. Peter formation;

(c) The amount of leakage (if any) from the St. Peter formation;

(d) The maximum daily injection volume experienced during the reporting interval:

(e) The shut-in wellhead pressure for each well;
(f) The subsea elevation of the water level in each well;
(g) The location and extent of the gas bubble (or bubbles) plotted on a structure map of the storage reservoir; and
(h) A brief discussion of current operations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN INDIANA PUBLIC SERVICE COMPANY, DOCKET NO. CP63-325

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 10, 1963)

On May 27, 1963, as amended on July 12, 1963, Northern Indiana Public Service Company (Applicant) filed in Docket No. CP63-325 an application pursuant to Section 7 (a) of the Natural Gas Act for an order of the Commission directing American Louisiana Pipe Lines Company (American) to establish physical connection of its transmission facilities with the proposed facilities of and to sell and deliver gas to Applicant for distribution and resale to certain communities in the State of Indiana, and their environs, all as more fully set forth in the application, as amended.

Applicant requests the Commission to direct American to establish two new delivery points on existing transmission lines for the delivery of additional quantities of natural gas to provide initial service by Applicant to the communities and environs of Wolcottville, LaGrange County; Rome City, Noble County; Berne, Adams County; and Geneva, Adams County, all located in the State of Indiana. American presently maintains a delivery point at LaGrange County, Indiana, from which Applicant proposes delivery of additional gas for initial service to the community of Howe and its environs, located in LaGrange County. The proposed new delivery point to serve Wolcottville and Rome City would be located just east of the community of LaGrange, while the second delivery point would be located just south of Berne to provide gas for service to Berne and Geneva. Applicant estimates that it will need the following volumes of natural gas from American to meet peak-day and annual requirements in each of the indicated areas in the third year of operation: The above-estimated volumes of gas required to serve the

Area	Peak-day	Annual
Howe	511	60,693
Wilcottville-Rome City	786	91,471
Berne-Geneva	2,218	250,324
Totals	3,515	402,488

Howe area are in addition to the 1,495 Mcf Applicant now receives daily from American pursuant to existing Commission authority.

Applicant proposes to construct, own and operate all of the necessary transmission and distribution facilities for service to the above-named communities at an estimated cost of $1,059,726 to be financed from cash on hand. Upon the granting of the application, it will be necessary for American to

construct and establish the two new delivery points which are estimated to cost $20,000 each. The Howe and Wolcottville-Rome City systems will become part of Applicant's existing overall LaGrange System, while the Berne-Geneva systems will become part of Applicant's existing overall Fort Wayne Division.

On June 28, 1963, as supplemented on August 5, 1963, American filed an answer to the subject application stating that it did not object to furnishing the proposed service.

It appears that Applicant has received franchises from the incorporated communities of Geneva, Wolcottville and Berne. The Public Service Commission of Indiana has granted Applicant the necessary authority to render gas distribution to the unincorporated communities of Rome City and Howe in addition to the rural territory adjacent to the communities of Wolcottville, Berne, and Geneva.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 29, 1963, (28 F.R. 9489), as amended and published in the Federal Register on September 19, 1963, (28 F.R. 10282). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant, Northern Indiana Public Service Company, is an Indiana corporaton and is legally authorized to do business in the State of Indiana, the only state in which it operates.

(3) It is necessary and desirable in the public interest that American be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 3,515 Mcf of natural gas per day in the third full year of operation, as set forth in the application, as amended, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from American within one year from the date of issuance of this order, and in addition should execute a service agreement with American in accordance with the Commission's Regulations under the Natural Gas Act.

(5) American should provide the proposed service at a minimum inlet pressure of 150 psig, and should submit a statement showing the total cost of all its facilities installed.

(6) The requirement that American serve Applicant, as proposed, will not place any undue burden upon American nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) American Louisiana Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant, Northern Indiana Public Service Company, and to sell and deliver up to 3,515 Mcf of natural gas per day to the latter, its estimated third year peak-day requirement, all as hereinbefore described and as set forth in the application herein.

(B) Applicant shall be prepared to receive natural gas from American within one year from the date of issuance of this order, and in addition

execute a service agreement with American in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Applicant shall provide the proposed service at a minimum inlet pressure of 150 psig, and submit a statement showing the total cost of all its facilities installed.

(D) American shall report to the Commission in writing the date of commencement of service to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP63-290; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-291

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DISMISSING APPLICATION IN PART

(Issued October 10, 1963)

On April 25, 1963, and April 29, 1963, Transwestern Pipeline Company (Transwestern) in Docket No. CP63-290 and Northern Natural Gas Company (Northern) in Docket No. CP63-291, respectively, filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the exchange of quantities of natural gas, and the construction and operation of facilities enabling such exchange, all as more fully represented in the applications.

The Applicants state that pursuant to an agreement dated April 12, 1963, Transwestern agrees to deliver to Northern an average daily volume of 30,000 Mcf of natural gas for an initial period of one year with the parties exercising their best efforts to increase such average daily volume to 40,000 Mcf per day. Northern shall have the option to take like volumes for an additional year immediately following final delivery of the initial volumes. Beginning two years after date of first delivery by Transwestern, Northern would begin the redelivery of natural gas to Transwestern in the Permian Basin Area. The redelivery of gas would extend for as long a period as may be required for Northern to redeliver a total volume of gas equal to the volume delivered by Transwestern. The parties contemplate that the period of redelivery would approximate the length of the original delivery period from Transwestern to Northern. Delivery to Northern would be at a point where the parties' existing lines cross in Hutchinson County, Texas, and in Beaver County, Oklahoma, and at such other points as may be mutually desired by the parties.

Northern seeks authority at this time to construct a side tap on its existing 30-inch pipeline in Hutchinson County, Texas, and to construct and operate the necessary exchange facilities for redelivery to Transwestern approximately two years hence on the theory that operating characteristics of the two pipeline systems may be somewhat different then and it is not possible at this time to select the most advantageous point or points of redelivery. However, Northern has stated, subsequent to the filing of its application, that it has no objection to the Commission's not granting its blanket authority request for the future redelivery facilities in this order.

Such an exchange authorization will allow Northern to better balance the takes of natural gas from its various sources of supply during the exchange

period. It will not increase Northern's salable capacity. The deliveries by Transwestern will aid in alleviating the present oversupply of natural gas on its system and will assist Northern in balancing purchase requirements with market volumes.

Transwestern estimates that the installation of its necessary metering and related facilities will cost $33,780. Northern presently proposes to construct its side tap at an estimated cost of $1,800.

Temporary authorization for the construction and service requested in these dockets, as conditioned, was granted to Applicants by letters dated July 25, 1963.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 1, 1963, respecting the matters involved in and the issues presented by the applications consolidated herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicants, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, and Northern Natural Gas Company, likewise a Delaware corporation having its principal place of business in Omaha, Nebraska, are both "natural-gas companies" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities proposed to be constructed and put in operation, as more fully described in the applications in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the exchange and delivery of natural gas proposed by Applicants will likewise be in interstate commerce, subject to the jurisdiction of the Commission and both are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the exchange and delivery of natural gas by Applicants are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(6) That portion of Northern's application in Docket No. CP63-291 requesting authorization to construct and operate unspecified facilities for future redelivery of natural gas to Transwestern should be dismissed.

(7) Public convenience and necessity require that the certificates issued hereinafter authorizing the exchange and delivery of natural gas be limited to a one-year period.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of

record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicants, Transwestern Pipeline Company and Northern Natural Gas Company, to construct and operate certain proposed facilities, and to exchange and deliver natural gas, all as more fully described in the respective applications herein, upon the terms and conditions of this order.

(B) That portion of Northern Natural Gas Company's application in Docket No. CP63-291 seeking authorization to construct and operate unspecified facilities for future redelivery of natural gas to Transwestern Pipeline Company be and it is hereby dismissed.

(C) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The certificates issued by paragraph (A) above authorizing the exchange and delivery of natural gas shall be limited to a one-year period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP63-215

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 10, 1963)

On July 2, 1963, Trunkline Gas Company (Trunkline) filed a petition to amend the Commission's order issued on May 14, 1963, in Docket No. CP63-215. The order of May 14 authorized, among other things, the delivery of an additional 29,941 Mcf of natural gas per day to existing customers.

It appears that three of the customers originally included in the application who had underestimated their requirements, and eight customers who had not previously requested increases, now require increased contract demands to meet their peak day requirements during the coming winter. These increased contract demands are as follows:

Customer	*Mcf*
Somerville, Tenn	125
Hickman, Ky	250
Vienna, Ill	100
Northern Indiana Public Service Company	5,000
Colfax, La	100
Union Gas Company	172
Trimble, Tenn	45
Obion, Tenn	189
Troy, Tenn	38
Lake County Utility District	590
McLeansboro, Ill	350

The increases in contract demand for the eleven customers total 6,959 Mcf, which Trunkline proposes to serve with existing facilities.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 14, 1963, in Docket No. CP63-215 be amended as hereinafter ordered.

The Commission orders:

(A) Trunkline's total contract demand for the eleven customers as hereinbefore set forth and as more fully set forth in the subject application to amend, is hereby increased by the aggregate amount of 6,959 Mcf.

(B) In all other respects, said order issued May 14, 1963, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITY OF PHILIPSBURG, PROJECT NO. 1269

ORDER ACCEPTING SURRENDER OF LICENSE (TRANSMISSION LINE)

(Issued October 11, 1963)

Application was filed on July 30, 1962 by City of Philipsburg, Montana, licensee for transmission line Project No. 1269, for surrender of its license for the line affecting lands of the United States within the Deerlodge National Forest and other lands of the United tSates in Granite County, Montana. The application states that the line has been removed.

The Department of the Interior has advised that it has no objection to Commission acceptance of surrender of the license.

The Forest Service, Department of Agriculture has advised that the National Forest lands involved have been restored to a condition satisfactory to the Service.

Annual charges under the license have been paid through November 19, 1959.

The Commission finds:

Acceptance of surrender of the license for transmission line Project No. 1269 is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for transmission line Project No. 1269 is hereby accepted, effective as of November 19, 1959.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE STEVENS COUNTY OIL & GAS COMPANY, DOCKET NO. G-14824

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDING

(Issued October 11, 1963)

On June 26, 1963, The Stevens County Oil & Gas Company (Stevens County) filed a motion in the above-entitled proceeding containing an offer of settle-

ment. This proceeding relates to the jurisdictional sale of natural gas to Northern Natural Gas Company (Northern) by Stevens County, under its FPC Gas Rate Schedule No. 20, as a signatory co-owner of a one-quarter working interest in a 640 acre unit operated by Cities Service Production Company (Cities Service) in the Hugoton Field, Morton County, Kansas.

The offer of settlement by Stevens County to accept, among other things, a settlement rate of 11¢ per Mcf is similar to the one approved by the Commission in its order issued December 26, 1962 in *Cities Service Production Company*, Docket No. G–9510, *et al.*, 28 FPC 1114. At the time of the *Cities Service* settlement, Cities Service, like Stevens County, collected 12.0¢ per Mcf for its share of the gas subject to refund.

In support of its offer of settlement, Stevens County states that by letter of January 25, 1963, Cities Service advised it of the settlement covering Cities Service's interest in the said unit and inquired whether Stevens County desired to have its interest included under the settlement, to which Stevens County replied in the affirmative. Stevens County further states that it has refunded to Northern the sum of $187.70, plus interest of $13.28, representing in full Stevens County's obligation to refund under the terms of the said *Cities Service* rate settlement as evidenced by Stevens County's enclosure of Northern's letter of June 10, 1963.

Since the instant settlement proposal of Stevens County is identical to that accepted in *Cities Service*, we believe that Stevens County should be accorded the same treatment and should be allowed to settle under the same terms and conditions of the aforementioned *Cities Service* settlement. Our action herein should not be construed, nor may it be, as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Stevens County's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceeding on the basis described herein, as more fully set forth in Stevens County's motion filed June 26, 1963 in Docket No. G–14824, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be granted as hereinafter ordered.

The Commission orders:

(A) The settlement of this proceeding on the basis of the settlement proposal contained in Stevens County's motion filed June 26, 1963 in Docket No. G–14824 is hereby approved and made effective subject to the following terms and conditions.

(B) The settlement rate of 11.0¢ per Mcf for The Stevens County Oil & Gas Company's FPC Gas Rate Schedule No. 20 shall be effective as of October 1, 1962, which is the same effective date ordered for Cities Service Production Company's FPC Gas Rate Schedule No. 70 under the said *Cities Service* settlement order.

(C) Within 15 days from the date of the issuance of this order, Stevens County shall file its acceptance of this order, and within 90 days from the date of issuance of this order Stevens County shall make such filings under its rate schedule as are required to make effective the terms of the settlement proposal.

(D) The rate suspension proceeding in Docket No. G–14824 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DAIRYLAND POWER COOPERATIVE, MINNKOTA POWER COOPERATIVE, INC., SOUTH CENTRAL RURAL ELECTRIC COOPERATIVE, INC., DOCKET NO. E-7113

ORDER PERMITTING INTERVENTION AND PRESCRIBING REVISED PROCEDURE

(Issued October 14, 1963)

On August 2, 1963, the Public Service Commission of the State of North Dakota intervened in the above-entitled proceeding by filing a Notice of Intervention. On August 30, 1963, petitions seeking leave to intervene were filed by (1) Honorable Orville L. Freeman, Secretary of Agriculture (Secretary) and (2) a "Committee of Rural Electric Cooperatives" (Committee). The Committee lists as joint petitioners approximately 300 Statewide Associations of Electric Cooperatives and rural electric cooperatives. We shall treat the Committee, the listed Statewide Associations and cooperatives and all additional such associations and cooperatives as respond to the Committee's solicitation as a single petitioner upon whom service can be made at:

Special Committee on F.P.C. Jurisdiction
% National Rural Electric Cooperative Association
2000 Florida Avenue, N.W.
Washington 9, D.C.

and whose attorney of record is:

Wise and Potamkin
615 Perpetual Building
Washington 4, D.C.

On September 3, 1963, the 27 rural electric cooperative members of Dairyland Power Cooperative filed a joint petition to intervene. We shall likewise treat these joint petitioners as a single petitioner (Dairyland Member Cooperative) upon whom service can be made through its attorney:

Wheeler, Van Sickle, Day & Goodman
One West Main Street
Madison, Wisconsin

The Secretary of Agriculture has general direction and supervision of the administration of the Rural Electrification Act under which the three cooperatives involved in this proceeding are financed. The Committee represents associations which are interested, as is the Secretary of Agriculture, in the question whether a cooperative association is a "public utility" within the meaning of Part II of the Federal Power Act. Dairyland Member Cooperatives is also interested in this issue and further is made up of wholesale purchasers from a party to the proceeding. We believe the Secretary, the Committee and Dairyland Member Cooperatives have shown an interest of such nature that their participation in this proceeding may be in the public interest. It should be stressed, however, that this proceeding concerns the ownership or operation of facilities and consequent possible "public utility" status of only the three cooperatives named in the original order issued July 22, 1963, in this proceeding. It is contemplated that intervenors, who are similarly situated, will urge in support of respondents' position a number of considerations applicable in principle to themselves and respondents without relating such considerations to the various systems and operations of each intervenor through the development of detailed and specific facts con-

cerning its particular system and operation. As noted this proceeding will be dispositive of the jurisdictional status of respondents, only.

The requests for extension of time in the petitions to intervene were recognized by the Secretary of the Commission when on September 16, 1963, he granted a 45-day adjournment of the original hearing schedule. Since that time, Minnkota Power Cooperative, Inc. (Minnkota) has filed a motion requesting several alternative changes in the hearing schedule. Among other matters, Minnkota proposes that the Commission staff be required to present its direct case before any filing by other parties. Although the requirement of simultaneous filing of prepared testimony has demonstrated its merits in other proceedings, we shall adopt Minnkota's suggestion in this proceeding, in the interest of expediting the proceeding. We are therefore directing staff to proceed first and to file prepared testimony as an opening presentation and are fixing a new schedule for the testimony of respondents and intervenors. The oral hearing will commence on December 10 as presently scheduled.

In affording respondents and intervenors opportunity to present evidence subsequent to the staff's opening case, it is contemplated that the procedure herein adopted will enable respondents and intervenors to present prior to the commencement of the hearing all engineering, financial, socio-economic or other data upon which they propose to rely in support of their position. Examination of the pleadings herein indicates that respondents and intervenors wish to present such data. It is contemplated that further testimony by the staff in rebuttal to the evidence of respondents and intervenors may be proffered subsequent to cross-examination herein and that the Examiner will rule thereon within the authority delegated under the Rules of Practice and Procedure.

We have considered all of the material in the petitions to intervene and Minnkota's motion. Our action herein makes unnecessary, nor is it appropriate, to answer many of the claims and arguments contained in these papers. However, in light of the numerous comments stating that the Commission has not regulated cooperatives in the past, it is appropriate that we clarify the statement in our order of July 22, 1963 referring to our "finding in *Southwestern Power Administration*, Docket No. E-6975, 27 FPC 895, 898 (1962) that Associated Electric Cooperative, Inc. and several other cooperatives are 'public utilities.'"

The Commission was referring to the undisputed fact that in numerous proceedings we have made express findings that certain cooperatives were public utilities within the meaning of the Federal Power Act. See for example, 6 FPC 1037 (1947), 8 FPC 869 (1949), 9 FPC 1298 (1950), 10 FPC 864 (1951), 11 FPC 1543 (1952), 14 FPC 941 (1955), 15 FPC 1139 (1956), 17 FPC 578 (1957), 24 FPC 361 (1960) and 27 FPC 922 (1962).

We wish to make it clear that the purpose of this hearing is to re-examine this question of jurisdiction on the basis of the record in this proceeding and that we do not consider the cited cases as necessarily controlling our decision herein.

The Commission further finds:

The following revised schedule for the service of testimony, motions to strike prepared testimony and answers to motions to strike prepared testimony is reasonably necessary and appropriate to carry out the provisions of the Federal Power Act.

The Commission orders:

(A) The Secretary, the Committee, and Dairyland Member Cooperatives are hereby permitted to intervene as individual parties in this proceeding, subject to the rules and regulations of the Commission: *Provided, however,* That their partcipation shall be limited to matters affecting asserted rights and interests set forth in their petitions for leave to intervene insofar as they may relate to the "public utility" status of the three respondents named in the Commission's order of July 22, 1963, herein: and *Provided, further,* That the admission of such intervenors shall not be construed as recognition by the Commission that such petitioners might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(B) The following revised schedule for the service of testimony, motions to strike prepared testimony, and answers to motions to strike prepared testimony, is ordered:

November 8, 1963	Service of opening testimony by Commission Staff.
December 2, 1963	(1) Service of testimony by all other parties, including intervenors. (2) Service of motions to strike staff testimony by such parties, including intervenors.
December 6, 1963	(1) Service of answer by Commission Staff to motions to strike. (2) Service of motions to strike directed to testimony filed December 2, 1963, by all parties, including intervenors.
December 10, 1963	(1) Service of answers to motions to strike filed December 6, 1963. (2) Cross-examination to commence upon the Examiner's rulings on motions and answers

(C) Except as herein granted, all requests, prayers, and motions set forth in the petitions to intervene filed by the Secretary, the Committee, and Dairyland Member Cooperatives, and in the motion filed by Minnkota, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

DUKE POWER COMPANY, DOCKET NO. E-7121

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued October 14, 1963)

Duke Power Company (Duke), incorporated under the laws of the State of New Jersey and qualified to do business as a foreign corporation in the States of North Carolina and South Carolina, with its principal place of business in Charlotte, North Carolina, filed an application on August 9, 1963 as amended on September 23, 1963, for an order, pursuant to Section 203 of the Federal Power Act, authorizing it to acquire and merge or consolidate with its own facilities subject to the jurisdiction of the Commission, all of the facilities of the Belton Light and Power Company (Belton), incorporated under the laws of the State of South Carolina and doing business in that state with its principal place of business in Belton, South Carolina.

Duke is engaged principally in the business of generating, purchasing, transmitting, distributing and selling electric energy in the Piedmont section of North Carolina and South Carolina. The company is also engaged in the operation of local transportation systems and in water supply systems in portions of its electric service area. The company had net plant of $617,000,000 as of May 31, 1963, and it received total operating revenues of $197,900,000 in the twelve months ending May 31, 1963.

Belton is a small electric utility which operates in the eastern part of Anderson County, South Carolina, principally in the towns of Belton and Williamston. The company had net utility plant of $470,000 as of December 31, 1962, and it received total operating revenues of $622,000 in the year 1962.

Pursuant to an Agreement and Plan of Reorganization dated as of May 1, 1963 Duke will acquire all the outstanding shares of Belton common stock (2000 shares) in exchange for 26,000 shares of Duke common stock. Belton has no other outstanding securities. After the stock acquisition, Belton's property will be conveyed to Duke and Belton will be dissolved. The application indicates that the exchange basis was arrived at through negotiations between Duke and the stockholders of Belton.

The principal facilities to be transferred are (1) Belton's 3,600 kw Holiday Bridge hydroelectric plant on the Saluda River, (2) Belton's office building in Belton, South Carolina, (3) warehouses and garages used in connection with operations, (4) substation lots used in connection with transmission lines (5) approximately 9 miles of 22.5 kv transmission lines extending from the Holiday Bridge hydroelectric plant to Willimston, and (6) a distribution system in the towns of Belton and Williamston.

Duke proposes to apply for a license for the Holiday Bridge hydroelectric plant subsequent to the completion of the plan of reorganization.

The Belton service territory is entirely surrounded by Duke's service area, the two systems are interconnected and Duke has been supplying a major part of Belton's energy requirements. It appears that any further necessary integration of the two systems can be easily accomplished. The application states that Duke will continue existing rates in Belton's service area which are presently the same as Duke's rates and will expand the capacity of the system to meet future requirements in the Belton service area.

The 26,000 shares of Common Stock which Duke proposes to issue are recorded on Duke's books in Account 124 at a total acquisition cost of $1,576,250. For the acquisition of Belton's Common Stock, Duke proposes to debit Account 123, Investment in Associated Companies with $1,576,250 and credit Account 124 with the same amount. This amount is $973,646 in excess of Belton's net assets of $602,604 and, therefore an acquisition adjustment of $973,646 will be created on Duke's books whch it proposes to eliminate by a debit to Account 216, Unappropriated Earned Surplus.

Written notice of the application has been given to the North Carolina Utilities Commission and the South Carolina Public Service Commission and to the Governor of each of those States. Notice was also published in the Federal Register on August 23, 1963 (28 F.R. 9333), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before September 5, 1963, with the Federal Power Commission, Washington 25, D.C. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

By order of July 31, 1963 The South Carolina Public Service Commission approved Duke's acquisition of Belton's Common Stock and the merger of Belton into Duke.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued August 1, 1962, *Duke Power Company*, Docket No. E–7041. (28 FPC 255).

(2) By the proposed transaction, as described above, Duke will acquire the stock of Belton and merge or consolidate its facilities subject to Commission jurisdiction with those of Belton, another person, within the meaning and subject to the requirements of Section 203 of the Act.

(3) The proposed acquisition and merger or consolidation by Duke of the facilities of Belton with its own facilities will be consistent with the public interest as expressed in the Act, for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed stock acquisition and merger or consolidation by Duke of its facilities with the facilities of Belton, as described above, is authorized and approved upon the terms and conditions as specified in the application, as amended, subject to the provisions of this order.

(B) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(C) Duke shall submit an application for license for constructed project in accordance with the Regulations of this Commission under the Federal Power Act within 180 days from the consummation of the merger.

(D) Duke shall record the transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees. Duke shall dispose of the Electric Plant Acquisition Adjustment arising from the proposed transaction by a debit to Account 216, Unappropriated Earned Surplus.

(E) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E–7123

ORDER AUTHORIZING ASSUMPTION OF LIABILITY AS GUARANTOR OF INDEBTEDNESS

(Issued October 14, 1963)

Pacific Power & Light Company (Applicant), incorporated under the laws of the State of Maine and doing business as a qualified foreign corporation in the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal place of business at Portland, Oregon, filed an application on August 22, 1963, for an order pursuant to Section 204 of the Federal Power Act, authorizing the Applicant to assume liability as guarantor of promissory notes or other evidence of indebtedness or obligations issued to commercial banks by persons to finance costs of constructing and installing extensions of

electric or water service lines and costs of acquisition and installation by customers of the Applicant of wiring modernization or improvements and wired-in electrical equipment and appliances, the aggregate principal amount of all such obligations not to exceed $3,000,000, at any one time.

Applicant is engaged principally in the business of generating, purchasing, transmitting, distributing, and selling electric energy in California, Oregon, Washington, Wyoming, Montana and Idaho. Applicant also supplies water, steam-heating and telephone service in various communities in its service area.

According to the application, the Applicant proposes to assume liability as guarantor of promissory notes or other evidences of indebtedness where the purposes of such notes or obligations are as follows:

(1) To finance payment by property owners to the Applicant of part of the cost of constructing and installing extensions of the Applicant's electric or water service lines required in order to supply adequate electric or water utility service to the properties of such property owners under circumstances which are such that under applicable rules, regulations and tariffs the property owners or other customers to be furnished service by the line extension would be required, as a condition to obtaining the new service, to make an advance payment or payments to the Applicant.

(2) To finance payment by property owners of the cost of acquisition and installation in and about houses and other residential buildings, owned partly or wholly by such owners and being furnished electric service by the Applicant, of wiring modernization or improvements, or of equipment and appliances for the utilization of electricity (of such kind as to necessitate more or less permanent wiring-in to the structure or other attachment to the structure or land), along with any necessary wiring modification or changes for the installation and operation of such equipment and appliances.

(3) To finance payment by property owners or their tenants of the cost of acquisition and installation in and about buildings and structures used principally for a commercial purpose or purposes, and to which the Applicant at the time is furnishing electric utility service through one or more customer accounts, of wiring modernization or improvements, or of equipment and appliances for the utilization of electricity (of such kind as to necessitate more or less permanent wiring-in to the structure or other attachment to the structure or land), along with any necessary wiring modifications or changes for the installation and operation of such equipment and appliances.

Under the financing arrangements, the maximum liability to be assumed by the Applicant with respect to any such note, or other evidence of indebtedness or obligation for any of the above-described purposes, shall not exceed $5,000 with respect to the purpose numbered (1) above; $1,200 for the purpose numbered (2) above; and $2,500 for the purpose numbered (3) above. Each obligation made or entered into for the purpose numbered (1) above shall be payable in monthly installments within a period not exceeding ten years from the date it becomes effective. Each obligation made or entered into for the purposes numbered (2) and (3) above shall be payable in monthly installments within a term or period not exceeding 60 months from the date it becomes effective. The aggregate principal outstanding balance of all such obligations for purposes numbered (1) above to which the Applicant, at any one time shall assume liability, shall not exceed $2,000,000 and the aggregate principal outstanding balances of all such obligations for purposes numbered (2) and (3) above with respect to which the Applicant at any one time may assume liability, shall not exceed $1,000,000. The face amount of said obligations will generally

vary in each case and the total amount outstanding will vary from time to time, but the aggregate will not exceed $3,000,000 at any one time.

According to the Applicant, the guarantee by the Company of notes, and other evidences of indebtedness and obligations of property owners and customers in its service areas to commercial banks to finance costs of line extensions, wiring modifications and modernizations, and for installation of wired-in electrical equipment and appliances will enable such customers and property owners to obtain the benefits of electric and water use and increased electrical use and correspondingly will result in the Company increasing its load and revenues. Further, the Applicant believes the purchase and installation by the Company's customers of electric space heating equipment, water heaters, permanent lighting fixtures and wiring improvements will improve the Company's competitive position with gas, oil and other fuels.

The Applicant further states, the maximum limits to which the Company could become obligated as guarantor of such notes, or other evidences of indebtedness or obligations, within the limits imposed as set forth above, would be small in relation to its total assets and liabilities and the Company believes its losses would be small in relation to the maximum limit of its liability as such guarantor. Before the Company would assume liability as guarantor of any such obligations, a purchaser's credit statement would be obtained and a credit analysis made of the principal obligor in each instance. The Company would not be required to repurchase any such obligations until payments thereon become at least 60 days delinquent.

Most large electric systems, for a number of years, have been active in promoting new and increased uses for electric energy through various campaigns and programs. This proposed program should be attractive to Applicant's customers as one transaction could cover the financing and preliminary planning and engineering of each extension or improvement. This is the first such program, however, to come before this Commission for approval and we note it could result in the granting of favors and other abuses. For that reason we find it necessary and appropriate to limit our authorization for new assumptions of liability as guarantor to a period of two years from the date of this order and further to provide that at the end of one year, the applicant shall file a report of its experience under this authorization, setting forth, among other matters, the number of loans it has been requested to endorse as guarantor, their geographic distribution on Applicant's system and the number of such requests it has rejected, together with its reasons therefor. We are not, however, limiting the length of the loan period of loans which Applicant may endorse during the year.

Written notice of the application has been given to the California Public Utilities Commission, the Public Utility Commissioner of Oregon, the Washington Public Service Commission, the Public Service Commission of Wyoming, the Board of Railroad Commissioners of Montana, and the Idaho Public Utilities Commission, and to the Governor of each of those States. Notice of application has also been given by publication in the Federal Register on September 5, 1963 (28 F.R. 9709), stating that any person desiring to be heard or to make any protest with reference to the application should on or before September 25, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission further finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as

heretofore determined and set forth in the Commission's order issued March 28, 1963, *Pacific Power & Light Company*, in Docket No. E-7025.

(2) The proposed guarantee of promissory notes or other evidence of indebtedness by the Applicant will constitute an assumption of liability as guarantor in respect of a security of another person within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed assumption of liability as guarantor in respect of securities of other persons, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed assumption of liability as guarantor in respect of securities of other persons, as described above, is hereby authorized, subject to the provisions of this order, *Provided, that* new liabilities may be assumed hereunder only during the period of two years from the date of this order.

(B) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of costs, or any matter whatsoever which is now pending or which hereafter may come before this Commission.

(C) The Applicant, in connection with its recording the assumption of liabilities as guarantor of promissory notes or other evidences of indebtedness, shall be guided by the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, particularly General Instruction 15 thereof, Contingent Assets and Liabilities.

(D) Within 30 days from the first anniversary date of this order, the Applicant shall file with this Commission a report of its experience under this authorization, setting forth, among other matters, the number of loans it has been requested to endorse as guarantor, the geographic distribution of such requests, the number of such requests it has rejected, together with its reasons for such rejection.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SABINE RIVER AUTHORITY OF TEXAS AND SABINE RIVER AUTHORITY OF LOUISIANA, PROJECT NO. 2305

ORDER ISSUING LICENSE (MAJOR)

(Issued October 14, 1963)

Joint application was filed on January 29, 1962, and supplemented on February 14, 1963, by Sabine River Authority of Texas and Sabine River Author-

ity of Louisiana (Applicants) for a license under Section 4(e) of the Federal Power Act (Act) for proposed major Project No. 2305, known as the Toledo Bend Project, to be located on Sabine River in Newton, Sabine and Shelby Counties, Texas, and Sabine and DeSoto Parishes, Louisiana.

The proposed project is to be located some 156 river miles upstream from the mouth of the Sabine River at Sabine Lake on the Gulf of Mexico. The Sabine River has been used extensively in logging operations and for transportation by boats from its mouth to points upstream from the proposed project. The proposed project will also affect lands of the United States within the Sabine National Forest.

The Secretary of the Army and Chief of Engineers, in reporting on the application, have advised that the plans of the project structures were satisfactory insofar as the interests of navigation are concerned, and such plans were approved in accordance with the provisions of Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain special conditions in the interests of fish and wildlife and archeological survey and salvage work in the area involved.

The Department of Agriculture and the Forest Service, in reporting on the application, recommended for inclusion in any license for the project certain conditions for the protection and administration of the Sabine National Forest.

On July 6, 1961, Applicants filed a declaration of their intention to construct the proposed Toledo Bend Project. The Declaration of Intention, which was docketed as No. E-7003, shows that the proposed project would occupy several thousand acres of National Forest lands of the United States.

The purpose of a declaration of intention to construct a proposed project is to institute an investigation under the second sentence of Section 23(b) of the Federal Power Act to determine whether a license is required for the proposed construction. Since the aforesaid Declaration of Intention recites that hydroelectric project works are proposed to be constructed by Applicants on lands and reservations of the United States, it shows that the project comes within the first sentence of Section 23(b) of the Act which makes it unlawful to construct projects on such lands and reservations except under and in accordance with a license from the Commission. Accordingly, we are hereinafter dismissing the Declaration of Intention.

The Commission finds:

(1) The proposed project will affect lands and navigable waters of the United States.

(2) Applicants are municipal corporations organized under the laws of the States of Texas and Louisiana, respectively, and have submitted satisfactory evidence of compliance with the requirements of all applicable States' laws insofar as necessary to effect the purposes of a license for the project.

(3) No conflicting application is before the Commission. Public notice of the application has been given. No formal protests have been received.

(4) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) The issuance of a license as hereinafter provided will not interfere or be inconsistent with the purposes for which the Sabine National Forest was created or acquired.

(6) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or

foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(7) The installed horsepower capacity of the proposed project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 108,000 horsepower, and the energy to be generated by the proposed project will be sold to public utilities in the area.

(8) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act and for recompensing the United States for the use, occupancy and enjoyment of its lands as hereinafter fixed and specified.

(9) The step-up transformers and switchyard mentioned in paragraph (B) below, which were included in the joint application for license, are parts of the proposed project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(10) Applicants have submitted satisfactory evidence of their ability to finance construction of the project.

(11) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued jointly to Sabine River Authority of Texas and Sabine River Authority of Louisiana (Licensees) under Section 4(e) of the Act for a period of 50 years, effective as of October 1, 1963, for the construction, operation and maintenance of Project No. 2305 to be located on the Sabine River in Texas and Louisiana, and affecting navigable waters of the United States and lands of the United States within the Sabine National Forest, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has prescribed under the provisions of the Act.

(B) Project No. 2305 consists of:

(i) All lands constituting the project area and inclosed by the project boundary or the limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2305–7) General Vicinity Map; and

Exhibit K: Three Sheets (FPC No. 2305–18, –9 and –10) Reservoir Topography Maps.

(ii) Project works consisting of:

A rolled earth-fill dam with a maximum height of 112 feet; three earth dikes; a reservior with normal pool elevation of 172 feet, an area of 181,600 acres, and a total storage of 4,477,000 acre-feet of which 1,554,000 acre-feet will be active storage for power generation; a spillway comprised of a concrete, gravity type, gated weir with a concrete chute and stilling basin, and a discharge channel in the left abutment; a sluiceway; a powerhouse located in the right abutment containing two 55,750 horsepower turbines each connected to a 42,500 kva generator (40,375 kw @ 0.95 P.F.); step-up transformers; a switchyard; and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown by the exhibits

hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings

Sheet 1 (FPC No. 2305-19) Location Plan;
Sheet 2 (FPC No. 2305-20) Embankment-Plan & Profile;
Sheet 3 (FPC No. 2305-21) Embankment-Plan & Profile;
Sheet 4 (FPC No. 2305-22) Spillway – Elevation & Sections;
Sheet 5 (FPC No. 2305-23) Embankment-Typical Sections;
Sheet 13 (FPC No. 2305-31) Power Plant Area General Plan;
Sheet 14 (FPC No. 2305-32) Section Through Intake and Power House;
Sheet 15 (FPC No. 2305-33) Spillway — General Plan;

Supplemental Sheet A (FPC No. 2305-34) Spillway Low-Flow Pier Plan and Section; and

Supplemental Sheet B (FPC No. 2305-35) Spillway Left Non-Over Flow Section.

Exhibit M: Two typewritten pages entitled "Power Plan Equipment" filed in the Commission February 14, 1963.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-6, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Navigable Waters and Lands of the United States" (16 FPC 1121), which terms and conditions are attached hereto and made a part hereof, except for Articles 7, 14, 17, 23, 24 and 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensees shall commence construction of the proposed project works within two years of the effective date of this license, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete construction of such project works within six years from the effective date of this license.

Article 29. The Licensees shall within one year from the date of completion of the project, file with the Commission revised Exhibits F and K to define the final project boundary in accordance with the rules and regulations of the Commission. Licensees shall cooperate with the Forest Service in fixing the project boundary on Forest lands.

Article 30. The Licensees shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Louisiana Wild Life and Fisheries Commission or The Texas Game and Fish Commission, or the Forest Service, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 31. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its expense, the Licensees shall permit the United States or its designated agency to use, free of cost, such of Licensees' lands and interests in lands, reservoirs, waterways, and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensees shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensees of any obligation under the license.

Article 32. The Licensees shall cooperate with the University of Texas, Louisiana State University, Northwestern Louisiana State College, and the National Park Service in a program for the survey and salvage of historical and archeological data (including relics and specimens) in the project area.

Article 33. The Licensees shall do everything reasonably within their power and shall require their employees, contractors, and employees of contractors to do everything reasonably within their power both independently and upon the request of officers of the agency concerned to prevent, make advance preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensees shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 34. So far as is consistent with proper operation of the project, the Licensees shall allow the public free access to a reasonable extent, to project waters and adjacent lands owned by the Licensees for the purpose of full public utilization of such lands and water for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensees in a reasonable amount; Provided, that the Licensees may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health and property and provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensees may construct and maintain as required by the license.

Article 35. The Licensees shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or interested State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project. The Licensees shall, within one year from the date of issuance of the license, file with the Commission for approval their pro-

737-370—66——67

posed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensees plan to provide.

Article 36. The Licensees shall within six months of the date of issuance of this license submit for Commission approval a plan for clearing the reservoir area and upon approval the clearing shall be done to the satisfaction of the Commission's representative.

Article 37. The reservoir operation schedule shall be adjusted to accommodate the recreation use of the reservoir area as far as such adjustment is compatible with the primary purpose of the project and requirements of downstream releases.

Article 38. The Licensees shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensees to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 39. The operation of any navigation facilities, which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works, shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army. Such rules and regulations may include the construction, maintenance and operation by the Licensees at their own expense of necessary remedial works as may be required in the interests of navigation as directed by the Secretary of the Army.

Article 40. The Licensees shall for the protection of navigation construct, maintain and operate at its own expense such lights and other signals on fixed project structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 41. When and if an authorized navigation project is constructed through the Toledo Bend Dam and Reservoir, the Licensees shall permit the Federal Government to locate the navigation channel through the Toledo Bend Reservoir without restriction as to location; to deposit within that portion of the reservoir that inundates the valley lands and at a reasonable distance from the navigation channel all spoil materials resulting from construction and future maintenance dredging of the navigation channel; to construct a navigation lock with adjoining movable and overflow dams in the upper portion of the inundated reservoir lands as may be necessary to provide a navigation pool through the Toledo Bend Reservoir; the above rights to be reserved at no cost to the Federal Government.

Article 42. The Commission reserves the right to determine at a later date what transmission lines and appurtenant facilities, if any, shall be included in this license as part of the project works.

Article 43. The Licensees shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 44. The Licensees shall, after notice and opportunity for hearing, coordinate the operation of the project, hydraulically and electrically, with such other power systems and in such manner as the Commission may direct in

the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensees as the Commission may order.

Article 45. The Licensees shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part II of the Commission's regulations as in effect from time to time. The authorized installed capacity for such purpose is 108,000 horsepower; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of transmission line right-of-way, $84,000.

Article 46. The Licensees shall, prior to commencement of construction of the spillway structure, make hydraulic model tests of such structure, together with the approach and outlet channels under both flood flow and normal operating conditions.

Article 47. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) The aforementioned Declaration of Intention filed by Applicants on July 6, 1961, is hereby dismissed.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensees and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross will set forth his individual views in an order granting another license application shortly to be issued. While not stated at this time in order to allow the immediate issuance of this license, the views to be expressed are nevertheless applicable to this license. See 30 FPC 1338 at 1341.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WESTERN LEWIS-RECTORVILLE WATER DISTRICT, DOCKET NO. CP61-291

ORDER AMENDING ORDER UNDER SECTION 7(a) OF THE NATURAL GAS ACT

(Issued October 14, 1963)

On May 9, 1963, Western Lewis-Rectorville Water District filed a petition to amend the order issued August 24, 1961, in this proceeding. The order directed Kentucky Gas Transmission Corporation to establish physical connec-

tion with the facilities of Western and to provide service as described in the Application. The order limited the volumes of natural gas to be delivered and sold to 420 Mcf per day with no annual limitation. The petition requests that such volumetric limitation be removed.

Western states that, during the winter of 1962–63, it purchased volumes of natural gas up to 420 Mcf per day. However, it has naturally increased its customers since then while its present customers have increased their requirements. Western maintains that the volumetric limitation prevents the full and orderly development of its business while being placed in a less advantageous position from that enjoyed by other customers of Kentucky, who are not bound by such limitation.

On June 17, 1963, Kentucky Gas advised the Commission by letter that it had no objection to the relief requested by the Petitioner.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on August 13, 1963 (28 F.R. 8302). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate in Docket No. CP61–291 on August 24, 1961, in this matter, should be amended by deleting the provision limiting the peak-day delivery volume.

The Commision orders:

(A) The order in Docket No. CP–291, issued on August 24, 1961 is hereby amended by deleting therefrom the limitiation of the volume specified therein.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64–33

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 15, 1963)

On July 31, 1963, Lone Star Gas Company (Applicant) filed in Docket No. CP64–33 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon and remove the following described facilities located on its 10-inch line TB in the Golden Trend Field, Garvin County, Oklahoma:

A dehydration plant authorized by a certificate issued by the Commission on December 4, 1956, in Docket No. G–8763.

Applicant states that due to the drop in pressure in the reservoir of the Hart formation of the field supplying the gas to the dehydration plant described above, gas will no longer feed into it against the pressure maintained in the line in its T Line System. Since November 1961 the plant has not been operational and no further need for these facilities is anticipated.

The removal of the plant will not affect natural gas service to any community now being served. The facilities to be abandoned and removed will be salvaged.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 8, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing

that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a "natural-gas company" within the meaning of the Natural Gas Act and the facilities hereinabove described were authorized by the Commission on December 4, 1956, in Docket No. G–8763 and are subject to the jurisdiction of this Commission.

(2) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(4) A request made during the public hearing by Staff Counsel for omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon and remove the facilities heretofore described, as more fully described in the application.

(B) Applicant shall within ten days after removal of the said facilities from their emplacement advise the Commission thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP63–110

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 15, 1963)

On October 30, 1962, as supplemented on December 3, 1962, and June 13 and July 2, 1963, Montana-Dakota Utilities Company (Montana-Dakota) filed in Docket No. CP63–110 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities as hereinafter set forth and as more fully described in the application and supplements.

Montana-Dakota proposes to construct and operate the following facilities:

1. Approximately 98.5 miles of 12¾" O.D. gas transmission main from the Riverton Dome area in Fremont County, Wyoming, to Applicant's Worland compressor plant in Washakie County, Wyoming;

2. A gas measurement station at Riverton Dome area in Fremont County, Wyoming, for the purchase of gas from The Atlantic Refining Company;

3. A gas measurement check station at Applicant's Worland compressor plant in Washakie County, Wyoming, at the terminus of the proposed 12¾" O.D. transmission main from Riverton Dome area:

4. Additional piping, valves and modifications at Applicant's Worland, Wyoming compressor plant to connect the terminus of the propossed 98.5 miles of 12¾" tranmission main from Riverton Dome area with existing facilities;

5. Approximately 1.93 miles of 12¾" O.D. gas transmission main near Rairden in Big Horn County, Wyoming, for completing a loop on about a 4.8 mile section of Applicant's existing 12¾" O.D. transmission main extending north from the Worland compressor plant discharge;

6. A new compressor plant at Lovell, Wyoming, consisting of three 880 horsepower compressor units and related facilities for service on Applicant's Worland, Wyoming, to Cabin Creek, Montana, 12¾" O.D. transmission main;

7. Approximately 5.4 miles of 6⅝" O.D. lateral transmission main in Washakie County, Wyoming, to continue service to the city of Worland, Wyoming, by a connection to the proposed Riverton Dome area to Worland compressor plant 12¾" O.D. transmission main; and

8. A gas pressure reducing and regulating station on the proposed 6⅝" O.D. transmission lateral to the city of Worland, Wyoming.

The proposed facilities are for the purpose of transporting gas to be purchased from The Atlantic Refining Company in the Riverton Dome area, Fremont County, Wyoming, to increase system gas reserves and deliverability for service to Applicant's existing customers and to provide capacity for the future growth of system market requirements.

The Atlantic Refining Company has filed applications for authority to make the subject sales to Montana-Dakota in Docket Nos. G–3894 and CI63–576, which applications were included in the Notice of Applications, etc. in Docket No. G–3894, *et al.*, issued on June 26, 1963.

The estimated cost of the proposed facilities is $4,347,600 which will be financed through internally generated funds and short term bank loans.

Temporary certificate authorization for the construction and operation proposed under this application was issued to Applicant on September 5, 1963.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 8, 1963, respecting the matters involved in and the issues presented by the application herein. A protest by Northern Utilities, Inc. and a petition for leave to intervene by Kansas-Nebraska Natural Gas Company, Inc. were filed in this proceeding but were subsequently effectively withdrawn. No other petitions to intervene or protests to the granting of the application have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Company, a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G–220 and G–402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(6) The time within which Applicant shall have completed construction and commenced operation of the proposed facilities, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations should be fixed at one year from the date on which this order issues.

(7) The certificate authorization hereinafter issued to Applicant should be made contingent upon The Atlantic Refining Company receiving certificate authorization for the sale of natural gas pursuant to its applications in Docket Nos. G–3894 and CI63–576 hereinbefore referred to.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Company, to construct and operate the proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The time within which Applicant shall have completed construction and commenced operation of the proposed facilities as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations is hereby fixed at one year from the date on which this order issues.

(D) The certificate issued by paragraph (A) above and the rights granted thereunder are further conditioned upon The Atlantic Refining Company receiving certificate authorization for the sale of natural gas pursuant to its applications in Docket Nos. G–3894 and CI63–576.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE MONTANA POWER COMPANY, PROJECT NO. 2188

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued October 15, 1963)

On August 7, 1963, The Montana Power Company, licensee for Project No. 2188, filed for Commission approval revised sheets of Exhibit K which fix a new project boundary by deleting therefrom certain lands occupied by six resi-

dences formerly housing personnel required in the operation and maintenance of the Morony development of the project. The Morony development has been automated and the one operator remaining will continue to occupy a residence within the project boundary. The lands and six residences formerly occupied by personnel of the Licensee are no longer necessary or useful in the operations of the Morony development.

The Commission finds:

Revised Exhibit K, sheet one of three (FPC No. 2188–90) and sheet three of three (FPC No. 2188–91) conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K, sheet 1 of 3 (FPC No. 2188–11) and sheet 2 of 3 (FPC No. 2188–10) now part of the license, and which have been superseded, should be eliminated from the license.

The Commission orders:

The revised Exhibit K sheets described in the above finding are hereby approved as part of the license for Project No. 2188, and the Exhibit K sheets described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NO. 2060

ORDER APPROVING REVISED PROJECT EXHIBIT MAPS

(Issued October 15, 1963)

On May 28, 1963, Niagara Mohawk Power Corporation, licensee for Carry Falls Project No. 2060, filed for Commission approval revised Exhibit K maps fixing the new project boundary by including therein certain lands owned by the licensee which are presently within the project boundary of the licensee's downstream Racquette River Project No. 2084, and by deleting therefrom certain lands owned by the licensee which are proposed to be included within the Racquette River project boundary. The land adjustment is for accounting purposes.

By order of even date we are approving revised Exhibit K maps for Project No. 2084.

The Commission finds:

Revised Exhibit K maps, sheets 2A, 3A, 5A and 6B of 7 (FPC No. 2060–18, –19, –20, –21) conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K, sheets 2, 3, 5 and 6A of 7 (FPC Nos. 2060–3, –4, –6 and –7), now part of the license, and which have been superseded, should be eliminated from the license.

The Commission orders:

The revised Exhibit K maps described in the above finding are hereby approved as part of the license for Project No. 2060, and the Exhibit maps described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NO. 2084

ORDER APPROVING REVISED PROJECT EXHIBIT MAPS

(Issued October 15, 1963)

On May 28, 1963, Niagara Mohawk Power Corporation, licensee for the Racquette River Project No. 2084, filed for Commission approval revised Exhibit K maps fixing the new project boundary by including therein certain lands owned by the licensee which are presently within the project boundary of the licensee's upstream Carry Falls Project No. 2060, and by deleting therefrom certain lands owned by the licensee which are proposed to be included in the Carry Falls project boundary. The land adjustment is for accounting purposes.

By order of even date we are approving revised Exhibit K maps for Project No. 2060.

The Commission finds:

Revised Exhibit K maps, sheets 1B, 2A, 3C, 4C, 5B, 6B, 8B, 9B and 10A (FPC No. 2084–47 through –55) conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K, sheets 1A, 2, 3B, 4B, 5A, 6A, 8A, 9A and 10 (FPC No. 2084–41, –3, –42, –43, –30, –31, –32, –33 and –11), now part of the license, and which are being superseded, should be eliminated from the license.

The Commission orders:

The revised Exhibit K maps described in the above finding are hereby approved as part of the license for Project No. 2084, and the Exhibit K maps described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SUPERIOR OIL COMPANY, DOCKET NO. G–6067

ORDER REINSTATING INTERVENTION

(Issued October 15, 1963)

On October 7, 1963, the Public Service Commission of New York (Public Service Commission) filed a motion requesting that its previous notice of intervention in the above-entitled proceeding dated June 11, 1963, be reinstated.

The Public Service Commission originally became a party to this proceeding by filing a notice of intervention dated June 11, 1963. The Commission alleges that at the request of counsel for applicant, informal conferences were held among the parties — applicant, purchaser, interveners and staff, in which the Public Service Commission sought further details as to the nature of the proposed amendment to Applicant's certificate.[1]

The Public Service Commission further indicates that, based on certain information supplied by counsel for applicant and counsel for the purchaser, and

[1] The proposed amendment consists essentially of a proposal to substitute heretofore undedicated acreage for acreage presently dedicated to American Louisiana Pipeline company pursuant to a contract with the latter company dated July 17, 1953.

its then understanding of the issues raised by the proposed amendment, the Commission, by letter dated August 16, 1963, withdrew its intervention. However, the Commission points out that the subsequent order of this Commission (Federal Power Commission) issued September 18, 1963, more specifically indicated that the issue in the case would be the determination of the appropriate in-line price level for the gas to be sold from the substituted acreage. In view of that order and its specification of issues the Public Service Commission requests that its previous notice of intervention be reinstated.

The Commission finds:

It appears that the Public Service Commission of New York has a continuing interest in the issue specified in the Commission's order of September 18, 1963, i.e., the appropriate price level at which Superior may be authorized to make sales from the substituted off-shore properties as proposed in the amendment to its permanent certificate. Since the Public Service Commission has now been clearly apprised of the issue to be contested in this proceeding, it would not be in the public interest to preclude the Commission from reasserting a right of intervention which it had. Consequently, the participation of the Commission in this proceeding is in the public interest.

The Commission orders:

The original notice of intervention of the Public Service Commission of the State of New York dated June 11, 1963, is hereby reinstated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CENTRAL MAINE POWER COMPANY, PROJECT NO. 2194

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST; ACCRUED DEPRECIATION; NET INVESTMENT; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 16, 1963)

Central Maine Power Company, Licensee for Project No. 2194,[1] on February 18, 1957, filed its initial statement, pursuant to Sections 4.20 and 4.1 of the Commission's Regulations under the Federal Power Act, claiming (1) for the existing project as of July 1, 1955, the effective date of the license, and as of January 31, 1957 an actual legitimate original of $218,782.46 and an applicable reserve for accrued depreciation in the amount of $28,007.10, resulting in a claimed net investment as of July 1, 1955, of $190,775.36;[2] and (2) an actual legitimate original cost of the redeveloped project in the amount of $1,267,797.88 as of January 31, 1957. Licensee's afore-mentioned claimed and recorded project costs result in a total claimed actual legitimate original cost for Project No. 2194 as of January 31, 1957, of $1,486,580.34.

[1] The project is located on the Saco River in York County, Maine, and may be referred to as the Bar Mills project. The license, authorizing the construction, operation, and maintenance of the redeveloped project was issued (pursuant to Section 4(e) of the Federal Power Act) for a period of 50 years commencing July 1, 1955. Commercial operation of the project commenced February 21, 1956.

[2] Articles 22 and 23 of the license provide for Commission determination of the actual legitimate original cost of the portion of the project completed prior to the effective date of the license and the applicable reserve for depreciation thereon both as of the effective date of the license; the difference being the net investment of the Licensee in the project as of that date; and the actual legitimate original cost of the parts of the project to be completed after the effective date of the license, together with any additions to or betterments of the project.

The Commission's staff conducted a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the above claimed and recorded project costs, reserve for depreciation, and resulting net investment.

Following that examination an agreement, subject to Commission approval, was reached between the staff and representatives of the Licensee with respect to certain proposed adjustments involving: (1) the reclassification of a number of items totaling $298,052.09 within project plant accounts; (2) the elimination of a total amount of $20,778.08 from claimed and recorded project cost as of January 31, 1957, consisting of eliminations of $9,486.29 from the existing project's cost as of July 1, 1955, and January 31, 1957, and of $11,291.79 from the project redevelopment's cost as of January 31, 1957; (3) a decrease in the claimed and recorded project reserve for depreciation as of July 1, 1955, in the amount of $7,623.96; and (4) the accounting disposition of all amounts involved in the proposed adjustment.

The proposed reclassifications totaling $298,052.09 within project plant accounts consist of the following net amounts by accounts:

Account No.[1]		Amount
		Debit or ( ) credit
320	Land and land rights	($45,085.77)
322	Reservoirs, dams and waterways	45,085.77
72	Legal expense	(1,806.02)
302	Franchises and consents	1,806.02
321	Structures and improvements	(251,160.30)
322	Reservoirs, dams and waterways	251,160.30
		0

[1] Account references are to account numbers and titles prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees effective prior to Jan. 1, 1961. This reflects the fact that the project cost and project accrued depreciation herein determined are recorded in Licensee's accounts as of dates prior to Jan. 1, 1961.

The proposed eliminations from the claimed and recorded cost of the existing and redeveloped project as of January 31, 1957, consist of the following items:

	Constructed project
Removal costs and repairs erroneously capitalized—1936 flood	($6,517.07)
Underpriced retirement of temporary crest of the dam	(2,969.22)
	Project redevelopment
Excessive administrative and general expenses and related interest	(6,966.87)
Unsupported charges for engineering services	(4,324.92)
Total	(20,778.08)

The accounting disposition of all of the amounts involved in the proposed adjustments set forth above are shown by the following composite journal entry:

Account No.	Title	Debit	Credit
100.1	Electric Plant in service, project No. 2194		$20,788.08
250.1	Accumulated provision for depreciation:		
	Project No. 2194		20,383.14
	Nonproject	$21,861.19	
271	Unappropriated earned surplus	19,300.03	

By letters dated February 24 and July 25, 1961, Licensee confirmed its agreement with, and filed revised schedules giving effect to, the proposed adjustments, accounting dispositions, and resulting project costs, project depreciation reserve, and net investment.

The Maine Public Utilities Commission was advised by letter of this Commission dated August 24, 1961, of the proposed adjustments, including the accounting disposition, resulting project costs and resulting project depreciation reserves, all as recommended by this Commission's staff and agreed to by Licensee as set forth above. By letter dated December 19, 1961, that Commission indicated that it had no objection to the foregoing.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions, and resulting project costs, depreciation reserves, and resulting net investment, and its letters of February 24 and July 25, 1961, and the Main Public Utilities Commission, by its letter dated December 19, 1961, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4, 4.5, 4.22, and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) As of the effective date of the license, July 1, 1955, the actual legitimate original cost of the constructed portion of Project No. 2194 is $209,296.17; the accrued depreciation applicable to in-service project properties as of that date is $20,383.14; and the resulting net investment of Licensee therein is $188,913.03.

(4) The actual legitimate original cost of the redeveloped portion of Project No. 2194 as of January 31, 1957, is $1,256,506.09. The resulting total actual legitimate original cost of the project as of January 31, 1957, is $1,465,802.26.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by licensee.

(C) Licensee, to the extent that it has not already done so, shall (a) establish and maintain control and detailed plant accounts for the constructed portion of Project No. 2194, showing the debit balance of $209,296.17 as of July 1, 1955, and January 31, 1957; the debit balance of $1,256,506.09 for the redeveloped portion of Project No. 2194 as of January 31, 1957; and the resulting total debit balance of $1,465,802.26 for Project No. 2194 as of January 31, 1957; all as more specifically shown in the attached Schedules I and II classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961; and (b) establish and maintain a reserve account for accrued depreciation applicable to in-service project properties showing the credit balance of $20,383.14 as of July 1, 1955.

(D) Licensee shall file with the Commission, within 90 days from the issuance of this order, FPC Form No. 7 and three certified copies of its adjusting journal entries showing compliance with this order.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 175

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 16, 1963)

Pacific Gas and Electric Company, Licensee for Project No. 175,[1] from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from January 1, 1927 through December 31, 1954 a net increase, in the original cost of the project of $256,400.09, consisting of claimed and recorded project gross additions of $441,571.60, gross retirements of $191,204.24, debit adjustments of $6,235.05, and contributions in aid of construction in the credit amount of $202.32, resulting in a claimed and recorded total actual legitimate original cost of the project as of December 31, 1954, of $5,506,573.56.[2]

The Commission Staff made a field examination of Licensee's books and records and other data for the purpose of ascertaining the correctness of the above claimed and recorded project cost changes for the period from January 1, 1927 through December 31, 1954.

Following that examination, the staff proposed an adjustment, agreed to by representatives of Licensee, subject to Commission approval, consisting of the addition of the net amount of $57,970.09 to claimed and recorded changes in project cost for the period from January 1, 1927 through December 31, 1954, and the accounting disposition thereof, with the resulting total actual legitimate original cost of the project as of December 31, 1954, being $5,564,543.65, as shown in the attached schedule.

The proposed net addition of $57,970.09 to claimed and recorded project cost changes represents net overstated retirements. Staff and Licensee's representatives tentatively agree that the proposed net addition be disposed of by a debit of $57,970.09 to Account 101, Electric Plant in Service—Project No. 175, and a credit of a like amount to Account 108, Accumulated Provision for depreciation of Electric Plant in Service—Project No. 175.

---

[1] The project is located on the North Fork of Kings River in Fresno County, California, and may be described as the Balch Project. The license, issued pursuant to Section 4(d) of the Federal Water Power Act to San Joaquin Light and Power Corporation, authorizing the construction, operation, and maintenance of the project, is by its terms effective for a period of 50 years, commencing July 28, 1922. By order issued October 10, 1939 (2 FPC 622), the Commission approved the transfer of the license as amended, from San Joaquin Light and Power Corporation to Pacific Gas and Electric Company, effective November 22, 1939.

[2] By order issued March 14, 1946 (5 FPC 402), the Commission determined the actual legitimate original cost of the project as of December 31, 1930 (exclusive of additions and retirements from January 1, 1927 through December 31, 1930) to be $5,250,173.47, and by order issued May 3, 1946 (5 FPC 492), the Commission granted Licensee's application for rehearing with respect to the disposition requirements for items disallowed as project cost.

By order issued February 27, 1950 (9 FPC 524), on rehearing, the Commission among other things, affirmed the original cost of the project as of December 31, 1930 (exclusive of additions and retirements from January 1, 1927 through December 31, 1930) to be $5,250,173.47.

In Licensee's reclassification and original cost studies of its electric plant, as approved by Commission order issued February 27, 1950 (9 FPC 545), the total balance of $32,773.78 in Account 301, Organization, was reclassified to Account 322, Reservoirs, Dams and Waterways, as reflected in the attached schedule.

Staff analysis of Licensee's provisions for project depreciation has not been completed, and the Staff proposes that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to in-service project properties as of December 31, 1954.

By letter dated January 25, 1962, Licensee confirmed its agreement with respect to the proposed adjustment, accounting disposition, and resulting project costs.

The California Public Utilities Commission was advised by letter of this Commission dated June 12, 1962 of the proposed adjustment, including the accounting disposition, and resulting project costs, all as recommended by this Commission's Staff and agreed to by Licensee as set forth above. That Commission signified its concurrence in the foregoing by letter dated June 19, 1962.

The Commission finds:

(1) The acceptance of the Staff's recommendations by Licensee and by the California Public Utilities Commission, as set forth above, obviate the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustment, including the accounting disposition, as proposed by the Staff and agreed to by Licensee, is reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 175 for the period from January 1, 1927, through December 31, 1954 is $314,370.18, comprised of gross additions of $441,571.60, gross retirements of $133,234.15, net debit adjustments of $6,235.05, and contributions in aid of construction in the credit amount of $202.32; and the resulting actual legitimate original cost of the project as of December 31, 1954 is $5,564,543.65, classified by primary plant accounts as shown in the attached schedule.

(4) It is necessary and appropriate for the purposes of the Fedaral Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project No. 175 as of December 31, 1954 be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustment, including the accounting disposition as proposed by the Staff and agreed to by Licensee, is hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts, for Project No. 175 showing the debit amount of $314,370.18 as the net increase or change in the actual legitimate original cost of the project for the period from January 1, 1927 through December 31, 1954 and the total debit balance of $5,564,543.65 as the actual legitimate original cost of the project as of December 31, 1954, all as more specifically shown in the attached schedule classified by primary plant accounts.

(D) The matter of Commission determination of accrued depreciation applicable to in-service project properties of Project No. 175 as of December 31, 1954, is hereby expressly reserved for future Commission consideration and decision.

737-370—66——68

PACIFIC GAS AND ELECTRIC COMPANY, LICENSEE, PROJECT NO. 175 (BALCH)

ACTUAL LEGITIMATE ORIGINAL COST

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 1333

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 16, 1963)

Pacific Gas and Electric Company, License for Project No. 1333,[1] from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from May 2, 1939, through December 31, 1954 a net increase in the original cost of the project of $115,617.78,[2] consisting of claimed project gross additions of $181,252.19, gross retirements of $65,169.91, and contributions in aid of construction in the credit amount of $464.50, resulting in a claimed total actual legitimate original cost of the project as of December 31, 1954 of $957,000.28, as more specifically shown in the attached schedule.

The Staff made a field examination of the books and records of License and other data for the purpose of ascertaining the correctness of the above claimed and recorded project cost change for the period from May 2, 1939 through December 31, 1954. Following that examination, agreement, subject to Commission approval, was reached between the Staff and representatives of Licensee with respect to a proposed adjustment for the period from May 2, 1939 through December 31, 1954 consisting of a reduction of $2,367.91 in the claimed and recorded project cost change and the accounting disposition of that amount.

The proposed reduction of $2,367.91 in the claimed and recorded change in project cost represents the cost of an auxiliary diversion dam located outside the approved project boundary. The proposed accounting disposition of this amount is by a debit of $2,367.91 to Account 101, Electric Plant in Service-Nonproject, with a concurrent credit of $2,367.91 to Account 101, Electric Plant Service, Project No. 1333.

---

[1] The project is located on the North Fork of the Middle Fork (Doyle Branch) of the Tule River in Tulare County, California, and may be described as the Upper Tule Project. The license, issued pursuant to the Federal Power Act to San Joaquin Light and Power Corporation, authorizing the operation and maintenance of the project is by its terms effective for a period of 50 years, commencing May 1, 1939. By order issued October 10, 1939 (2 FPC 622), the Commission approved the transfer of the license from San Joaquin Light and Power Corporation to Pacific Gas and Electric Company, effective November 22, 1939.

[2] By order issued February 27, 1950 (9 FPC 534), the Commission determined the actual legitimate original cost of the project to be $841,382.50, the accrued depreciation applicable to project property to be $202,842.40, and the fair value of the project to be $638,540.10, all as of May 1, 1939, the effective date of the license. The fair value determination was in accordance with Article 17 of the license for the project as issued to the original licensee, San Joaquin Light and Power Corporation.

The claimed cost of the project at December 31, 1954 exceeds the recorded project cost in the amount of $6.47 as of that date. No adjustment is proposed by the Commission's Staff with respect to this excess amount, however, because a correction to the project plant ledger was recorded by Licensee in 1956, subsequent to the period covered in the Staff's field examination referred to above.

Staff analysis of Licensee's provisions for project depreciation as of December 31, 1954, has not been completed, and the Staff proposes that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to in-service project properties as of that date.

Based upon the proposed adjustment, the Staff recommends and Licensee concurs, that the Commission determine: (1) the net increase or change in project cost for the period from May 2, 1939 through December 31, 1954 to be $113,249.87 comprised of gross additions of $178,884.28 less gross retirements of $65,169.91 and contributions in aid of construction of $464.50; and (2) the actual legitimate original cost of the project as of December 31, 1954 to be $954,632.37, classified by primary plans accounts as shown in the attached schedule.

By letter dated January 25, 1962, Licensee confirmed its agreement with respect to the proposed adjustment, accounting disposition, and resulting project costs.

The California Public Utilities Commission was advised by letter of this Commission dated June 15, 1962 of the proposed adjustment, including the accounting disposition, and resulting project costs, all as recommended by this Commission's Staff and agreed to by Licensee as set forth above. By letter dated June 19, 1962, that Commission stated that "it has no exception to take to the proposals."

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustment, including the accounting dispositions, and the resulting project costs, and its letter dated January 25, 1962, and the California Public Utilities Commission, by its letter dated June 19, 1962, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The adjustment described above, including the accounting disposition, proposed by the Staff and agreed to by the Licensee, is reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 1333 for the period from May 2, 1939 through December 31, 1954 is $113,249.87 and the resulting actual legitimate original cost of the project as of December 31, 1954 is $954,632,37, classified by primary plant accounts as shown in the attached schedule.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project No. 1333 as of December 31, 1954 be reserved for future Commission consideration hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

[1] Account references are to account numbers and titles prescribed in the Commission's uniform system of accounts for public utilities and licensees effective prior to Jan. 1, 1961.

[2] See Commission order issued Feb. 27, 1950 (9 FPC 534).

(B) The foregoing adjustment, including the accounting disposition, proposed by the Staff and agreed to by the Licensee, is hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant account for Project No. 1333 showing the debit amount of $113,249.87 as the net increase or change in the project cost for the period from May 2, 1939 through December 31, 1954, and the total debit balance of $954,632.37 as the actual legitimate original cost of the project as of December 31, 1954, all as more specifically shown in the attached schedule classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961.

(D) The matter of Commision determination of the accrued depreciation applicable to in-service project properties of Project No. 1333 as of December 31, 1954, is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission certified copies of Licensee's adjusting journal entry as of December 31, 1954 showing compliance with this order; three copies of that journal entry to be submitted to the Secretary, Federal Power Commission, Washington, D. C., 20426, and two copies thereof to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-20

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 16, 1963)

On July 23, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-20 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon and remove the orifice meter station and appurtenant facilities serving Socony Mobil Oil Company, Inc., located on the Latex-Beaumont-Port Neches main line in Jefferson County, Texas.

Applicant states that for quite some time it has been selling gas to Socony Mobil Oil Company, Inc., for use in the operation of its Magpetco Terminal, Jefferson County, Texas. The customer requested that service be terminated in accordance with the terms of their contract on June 17, 1963, and since then no sales have been made. No other customer is being served by these facilities.

Applicant proposed to remove the facilities from the present site and use them elsewhere in its operations when required.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 26, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the above-described facilities are a part of Applicant's interstate pipeline system and subject to the jurisdiction of the Commission.

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by United Gas Pipe Line Company, of the facilities hereinbefore described, as more fully described in the application, in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of removal of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE HEFNER COMPANY (OPERATOR), ET AL., DOCKET NO. RI63-472

ORDER DENYING MOTION FOR RECONSIDERATION AND VACATION OF SUSPENSION ORDER AND TERMINATION OF PROCEEDING

(Issued October 17, 1963)

On July 1, 1963, The Hefner Company (Operator), *et al.* (Hefner) filed a motion for reconsideration of the order issued June 20, 1963, which suspended a periodic increased rate of 16.0¢ per Mcf proposed by Hefner for sales under Hefner's FPC Gas Rate Schedule No. 2 to Lone Star Gas Company (Lone Star) from the Fox-Graham and Cruce Fields, Carter and Stephens Counties, Oklahoma (Oklahoma-Other Area).

In support of its motion, Hefner states that the wells from which the gas is produced are capable of delivering gas in excess of 500 psig, but at the request of Lone Star the gas is delivered at pressures of 620 psig and 780 psig, at an additional cost to Hefner of approximately 3¢ per Mcf. Thus, Hefner contends the net rate received is 13¢ per Mcf, not 16c per Mcf. Hefner claims that the instant case is similar to the situation involved in *George S. Hammonds* and *Scott Hammonds*, Docket Nos. G-16520, and G-16521, which rate proceedings were terminated by order issued March 15, 1963, 29 FPC 495. Hefner contends that its "net rate" of 13¢ per Mcf is 2¢ per Mcf below the 15¢ per Mcf initial area rate established by the Commission's

Statement of General Policy No. 61–1,[1] and that Hefner could have received the 13¢ net rate as an initial rate if it had filed for such rate.

The *Hammonds* case is inapposite here. As pointed out in that order, there were special circumstances present in that case justifying the action taken. Conversely, Hefner has set forth no special circumstances which would justify similar treatment here.

Hefner's position in this case is based on the theory that the claimed cost of additional compression should properly be subtracted from the base rate provided for by contract in determining whether the proposed rate is in excess of the applicable area ceiling for "pipeline quality gas". In effect, Hefner is asserting that its gas, because of the claimed exceptionally high delivery pressure, is superior to "pipeline quality gas" as that term is used in the policy statement. Such an approach misconstrues the import of the area rate levels announced in the policy statement, which are considered to be a ceiling, not a floor as Hefner apparently construes them. And, in any event, no upward quality adjustment to the area ceiling based on delivery pressure differentials would appear to be appropriate or necessary. Accordingly, the 11.0¢ per Mcf ceiling rate is applicable to Hefner's 16.0¢ proposed rate, and the proposed rate was properly suspended. Actually, even the "net rate" of 13.0¢ per Mcf claimed by Hefner would be suspendible as in excess of the ceiling. Moreover, Hefner is incorrect in assuming that we would have certificated the sale involved at the claimed "net rate" of 13.0¢ without imposing a rate condition in view of the fact, as explained above, that such action would have permitted Hefner to obtain, in effect, a higher rate than the 15.0¢ initial rate level permitted in this area. We must, therefore, reject Hefner's position in this case.

The Commission finds:

For the foregoing reasons, the motion for reconsideration filed by Hefner on July 1, 1963, should be denied.

The Commission orders:

The motion for reconsideration filed by Hefner on July 1, 1963, is hereby denied.

Commissioner O'Connor *not participating.*

[1] Issued September 28, 1960, 24 FPC 818.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AMENDING REGULATIONS TO GOVERN THE FILING OF RATE SCHEDULES BY PUBLIC UTILITIES AND LICENSEES, DOCKET NO. R–227

ORDER AMENDING ORDER NO. 271 AMENDING REGULATIONS TO GOVERN THE FILING OF RATE SCHEDULES BY PUBLIC UTILITIES AND LICENSEES

(Issued October 17, 1963)[1]

Two paragraphs were inadvertently omitted from Order No. 271, Amending Regulations to Govern the Filing of Rate Schedules by Public Utilities and Licensees, issued September 26, 1963 (28 F.R. 10572). They are corrections of cross-references to Part 35 made in other parts of Chapter I of Title 18 of the Code of Federal Regulations. They are made necessary by the changes in the numbering of sections in Part 35.

[1] Published in the Federal Register on October 24, 1963 (28 F.R. 11404).

The Commission pursuant to the authority contained in Order No. 271, *orders:*

(A) Order No. 271 is hereby amended to add the following paragraphs:

(D) In section 32.38 of Part 32—Interconnection of Facilities; Emergencies; Transmission to Foreign Country, Chapter I, Title 18, of the Code of Federal Regulations, change "§§ 35.1 – 35.12" to "§§ 35.1 – 35.16." As so amended, the section reads as follows:

32.38 Filing rate schedules and annual reports

Persons authorized to transmit electric energy from the United States shall file all rate schedules, supplements, notices of succession in ownership or operation, notices of cancellation, and certificates of concurrence with respect to such energy in the form and manner specified in the provisions of §§ 35.1 to 35.16, inclusive, of this chapter.

(E) In section 131.51, 131.52 and 131.53 of Part 131—Forms, of Subchapter D — Approved Forms, Federal Power Act, Chapter I, Title 18, of the Code of Federal Regulations, change the material in parentheses at the head of sections from "(See §§ 35.1–35.12 of this chapter.)" to "See §§ 35.1–35.21 of this chapter.)".

(B) Order No. 271 is further amended to make the following corrections in the attachment:

Footnote 1, insert after "Part 154 of" the words "this chapter, *i.e.*". As corrected the footnote reads as follows:

1 The term "tariff" means a compilation, in book form, of rate schedules of a particular public utility, effective under the Federal Power Act, and a copy of each form of service agreement. In connection herewith, attention is invited to Part 154 of this chapter, i.e., the Commission's Regulations under the Natural Gas Act, as a guide to the form and composition of a tariff.

In § 35.12(b)(2)(ii), insert the words "filling and each" in the last sentence after "part of the". As corrected, the subdivision reads as follows:

(ii) A summary statement of all cost (whether fully distributed, incremental or other) computations involved in arriving at the derivation of the level of the rate, in sufficient detail to justify the rate, shall be submitted with the filing, except that if the filing includes nothing more than service to one or more added customers under an established rate of the utility for a particular class of service, such summary statement of cost computations is not required. In all cases, the Secretary is authorized to require the submission of the complete cost studies as part of the filing and each filing public utility shall submit the same upon request by the Secretary in such form as he shall direct.

In § 35.13(b)(4)(i), change "N" to "O". As corrected, the subdivision reads as follows:

(4)(i) Except as provided in subdivision (ii) below, if the rate schedule provides for an increased rate, then 60 days prior to the date that such changed rate is proposed to become effective the filing public utility shall submit a statement showing its cost of the service to be supplied under the new rate schedule according to supporting statements A through O as described below. Simultaneously, the public utility shall submit the material on sales and revenues described in (a) above and, unless the rate schedule containing the proposed increased rate is likewise simultaneously filed, a summary statement of such proposed increased rate: *Provided, however,* That the submittal of such summary statement of the rate schedule shall not be in lieu of the rate schedule as required to be filed with the Commission pursuant to these Regulations.

In § 35.13(b)(4)(ii), change "increase" to "increases", and insert after "incidental to" ",". As corrected, the subdivision reads as follows:

(ii) No cost of service data shall be required in cases where the application of the proposed change in rate schedule effects rate increases of less than $50,000 annually resulting from, but incidental to, changes such as a rate design, delivery points and delivery voltage. Specifically designed rate increases of less than $50,000 annually (as opposed to incidental increases), increases resulting from changes made in fuel clauses, and increases of rates comprising an integral part of coordination and interchange arrangements in the nature of power pooling transactions, shall be supported by cost data as identified in § 35.12(b)(2).

In § 35.13(b)(4)(iv), change "N" to "O". As corrected, the subdivision reads as follows:

(iv) The statement of cost of service shall include an attestation by the chief accounting officer or other authorized accounting representative of the filing public utility that the cost statements and supporting data submitted as a part of the filing which purport to reflect the books of the public utility do, in fact, set forth the results shown by such books. Following is a description of statements A through O required to be filed pursuant to this subparagraph.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-2, ET AL.

ORDER GRANTING STAY OF PRESIDING EXAMINER'S RULINGS

(Issued October 18, 1963)

Cities Service Oil Company, Continental Oil Company, Gulf Oil Corporation, Humble Oil & Refining Company, Marathon Oil Company, Pan American Petroleum Corporation, Phillips Petroleum Company, Skelly Oil Company, Socony-Mobil Oil Company, Inc., Sunray DX Oil Company, Texas Inc., Texaco-Seaboard, Inc., Union Oil Company of California and Union Texas Petroleum (Cities Service *et al.*), on October 11, 1963, tendered for filing an appeal from rulings by the presiding examiner made on October 2 and 3, 1963, at a prehearing conference in which the presiding examiner directed Cities Service, *et al.*, to provide Federal Income Tax data to the Municipal Distributor Group, interveners in these proceedings. The presiding examiner ordered that the data be furnished on or before October 21, 1963. Cities Service, *et al.*, requested the presiding examiner to certify his rulings to the Commission but the presiding examiner refused to so certify. The appeal filed by Cities Service, *et al.*, seeks Commission review of these rulings. Concurrently with the filing of the appeal, Cities, *et al.*, filed a motion for an order directing the withdrawal from the Public Reference Room of the Schedule Q forms contained in the Appendix B questionnaire data filed by the said Respondents in accordance with Commission order dated May 25, 1962. Cities Service, *et al.*, also filed a motion for a stay of the presiding examiner's rulings pending action on the aforesaid appeal and upon the motion to withdraw the Schedule Q data.

In order to give due consideration to a determination whether to accept the appeal, it is considered appropriate in the circumstances to grant a stay

of the presiding examiner's rulings pending action by the Commission. While the effect of this stay will be to relieve Cities Service, *et al.*, from the requirement to supply the data on or before October 21, 1963, as now required by the presiding examiner's order, Cities Service, *et al.*, are advised to be in a position to comply immediately with such order in the event the effect of the Commission's action herein is to permit the presiding examiner's rulings to remain in effect and the stay granted herein is terminated.

The Commission finds:

A stay of the effectiveness of the presiding examiner's rulings above referred to should be granted.

The Commission orders:

The effectiveness of the presiding examiner's rulings on October 2 and 3, 1963 in these proceedings directing that Cities Service, *et al.*, furnish certain Federal Income Tax data to the Municipal Distributors Group on or before October 21, 1963, is stayed pending action to be taken by the Commission with respect to the appeal from said ruling.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EKLUTNA PROJECT, ALASKA, DOCKET NO. E-6544

FINAL ALLOCATION OF COST

(Issued October 18, 1963)

The Congress, by the Act of July 31, 1950 (64 Stat. 382) as amended by the Act of August 13, 1953 (67 Stat. 574) authorized the Secretary of the Interior to construct, operate and maintain the Eklutna project in the vicinity of Anchorage, Alaska, ". . . in order to encourage and promote the economic development of the Territory of Alaska, to foster the establishment of essential industries in said Territory, and to further the self-sufficiency of national defense installations located therein, . . ." The project consists of a low dam at Lake Eklutna, a diversion tunnel and penstock, a power plant with an installed capacity of 30,000 kilowatts made up of two units rated at 15,000 kilowatts each, transmission lines to Anchorage and other load centers, and related works.

Section 1 of the enabling act referred to above provides in part as follows:

> . . . The capital investment properly allocable to each unit of said project, as determined by the Federal Power Commission, shall be amortized over a reasonable period of years, and interest shall be charged on the unamortized balance of the full capital investment in said project at a rate of 2-1/2 per centum per annum and shall be covered into the Treasury of the United States to the credit of miscellaneous receipts.

The reference to an allocation "to each unit of said project" appears to come from predecessor bills relating to this project in which a development including additional units and the use of water resources for several purposes was contemplated. However, such a development was not undertaken, and the Eklutna project as finally authorized is a single-purpose project for the development of hydroelectric power and all costs thereof are, accordingly, properly allocable to the power development.

Pursuant to Section 1 of the enabling act referred to above, the Commission made the following determination with respect to the allocation of Eklutna project costs to power:

> The allocation of the Eklutna project costs to power is $30,700,000 and this sum shall be used on an interim basis for amortization of the capital investment in the project, pending submission of final costs data and the Commission's final determination thereon of the capital investment allocable to power.

This interim determination of the allocation of Eklutna project costs to power was issued July 19, 1954, while the project was still under construction, in order that the results of such an allocation would be available in determining the rates at which power from the Eklutna project must be sold.

The Eklutna project consists of a low dam at Lake Eklutna, Alaska, a diversion tunnel and penstock, a 30,000-kilowatt power plant with two units of 15,000 kilowatts each, transmission lines, and related works. The project was constructed by the Bureau of Reclamation and has been operating since 1955. The annual generation averages about 157,000,000 kilowatt-hours.

The Bureau of Reclamation recently supplied the Commission with a statement of the actual investment costs for use by the Commission in making a final determination of Eklutna project costs to power and further states that the project is being operated for power purposes only.

The Commission's staff has analyzed all available data relating to the Eklutna project. On the basis of these studies the Commission's Bureau of Power has prepared and submitted a report, dated September 12, 1963 on "Final Allocation of Costs to Power Development, Eklutna Project, Alaska."

The Commission having considered the matters hereinabove recited and other pertinent data relating to the Eklutna project, together with the applicable statutes, *finds*:

All project costs are properly allocable to power and after taking into account interest during construction at the rate of 2-1/2 per annum, the capital investment of the Eklutna Project power development as of June 30, 1962 is $32,767,216.

Upon consideration of the above finding and the report of the Bureau of Power, dated September 12, 1963, a copy of which is attached hereto, and in the light of the provisions of the Act of July 13, 1950 as amended by the Act of August 13, 1953, referred to above the Commission makes the following final determination with respect to allocation of Eklutna project cost to power:

The final allocation of the Eklutna project cost to power is, 100% of project costs is allocated to power, such costs being $32,767,216 on June 30, 1962, and this allocation shall be used for the amortization of the capital investment in the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WARREN PETROLEUM CORPORATION, DOCKET NO. RI61-63

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUND, AND TERMINATING PROCEEDING

(Issued October 18, 1963)

On July 23, 1963, Warren Petroleum Corporation (Warren) submitted an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules

of Practice and Procedure, in the above-designated proceeding, which relates to the jurisdictional sale of natural gas by Warren, under its FPC Gas Rate Schedule No. 49, to Tennessee Gas Transmission Company (TGT), from the Heyser Plant, Calhoun County, Texas (Railroad Commission District No. 2). The increased rate of 15.3333¢ per Mcf at 14.65 psia became effective subject to refund on February 8, 1961.

Under the terms of the offer, Warren proposes to waive the right to file for any rate increases under the favored-nation, price redetermination, and periodic escalation provisions of the rate schedule involved, and to establish a settlement rate of 15.0¢ per Mcf, inclusive of present tax reimbursement, for the remaining term of the contract. Warren also proposes to make appropriate refunds to TGT, in the amount of approximately $4,800, plus interest.

The offer of settlement contains the following reservation:

> In addition to and notwithstanding other provisions of this Settlement Proposal Warren reserves the right to file for and put into effect price increases to the extent permitted by its contract or as such contract may be amended under the following circumstances:
>
> (a) If Congress enacts any law or amendment of the Natural Gas Act or otherwise which releases, removes or exempts from Commission jurisdiction the sale of natural gas of the type covered by this rate schedule or the price applicable thereto or if Congress enacts any law pursuant to which Warren would be entitled but for this settlement agreement to claim or receive a price or rate under the rate schedule involved in excess of the 15.0¢ per Mcf, Warren shall have the right to claim and receive such price or prices as Warren may presently be or hereinafter become entitled to under its contract and the Settlement Proposal shall in no way effect such rights of Warren. * * *

This is the first time that the above reservation has ever been submitted in connection with this type of settlement offer. Thus, if accepted, Warren would obtain a benefit that other producers in the same situation have not received. Further, such a reservation is basically inconsistent with the provision for "elimination of all price escalation clauses" in the Second Amendment to the Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107 as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, in Docket No. R–234. But this amendment gives a producer a higher price than he could otherwise secure without suspension if he agrees to eliminate all possible future increases by amending his contract to exclude the clauses therein giving him a *contractual* right to the increase. What petitioner seeks is to keep the *contractual* right to an increase in the event that Congress removes all possible regulatory bars thereto. Accordingly, we shall reject the proposed reservation.

In all other respects the proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, for jurisdictional sales of natural gas in Texas Railroad Commission District No. 2, and its acceptance would serve the public interest. As a condition of this order, consistent with our previous practice in this regard, we will require that Warren file an executed contract amendment deleting the favored-nation, price redetermination and periodic escalation provisions from its gas purchase contract with TGT.

However, we desire to make it clear that acceptance of the Offer of Settlement shall not be construed as approval of any future increased rate filed

in accordance with its reservation of the right to file increases to cover future tax increases.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Warren with the Commission on July 23, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Warren with the Commission on July 23, 1963, as herein conditioned, is hereby approved in accordance with the provisions of this order.

(B) Warren shall, over the signature of a responsible officer, file with the Commission, within 15 days from the date of issuance of this order, in writing an original and one copy of its acceptance or rejection of the terms and conditions of this order.

(C) Warren shall file, within 30 days from the date of issuance of this order, a notice of change providing for the 15.0¢ per Mcf rate, including present tax reimbursement, specified in its Offer of Settlement, and a contractual amendment to its FPC Gas Rate Schedule No. 49, unconditionally deleting the favored-nation, price redetermination and periodic escalation provisions therefrom. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(D) Within 30 days from the date of issuance of this order, Warren shall refund to TGT all amounts collected under its FPC Gas Rate Schedule No. 49, in Docket No. RI61–63, in excess of the settlement rate of 15.0¢ per Mcf, together with simple interest at the rate of 7% per annum, from the date of receipt of such excess amounts by Warren to the date of refund. Warren shall bear all costs incidental to the making of such refunds.

(E) Within 45 days from the date of issuance of this order, Warren shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (D) above, together with a copy of a release from TGT with respect to such refunds.

(F) Upon notification by the Secretary of the Commission that Warren has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf at 14.65 psia, including present tax reimbursement, specified in its Offer of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and Warren's refund obligation with respect to the above-designated proceeding shall be deemed discharged.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP63–174

ORDER DENYING MOTION TO STAY OR IN ALTERNATIVE TO CONSOLIDATE PROCEEDINGS

(Issued October 21, 1963)

On October 11, 1963, Fuels Research Council, Inc., National Coal Association, Mid-West Coal Producers, Inc., and United Mine Workers of America,

interveners in this case, filed a motion to stay further action on the application of Natural Gas Pipeline Company of America (Natural) in this case or, in the alternative, to consolidate the proceedings on said application for hearing and decision with the proceedings under Section 5 (a) of the Natural Gas Act regarding the rates, charges and classifications of Midwestern Gas Transmission Company (Midwestern) under docket Nos. RP61–19 and RP62–7 and of Natural Gas Pipeline Company of America under docket No. RP63–6, pursuant to Section 1.20 (b) of the Commission's rules.

Natural filed an answer opposing said motion.

In support of their motion to stay further action on Natural's application under docket CP63–174 the coal interveners stated that in that application Natural seeks authorization for an increase in daily flow gas capacity of 110,000 Mcf in order to meet the peak-day or space heating demands on its existing distributor-customers; that the daily contract quantities required to meet existing peak demands create valleys of off-peak gas because of the low annual load factor of space heating consumers; that the distributors claim they must sell vast quantities of off-peak gas as interruptible boiler fuel at prices barely above the sum of the existing commodity component of Natural's tariff plus certain incremental costs and that because of competitive conditions they will not be able to make such sales of boiler fuel if Natural and Midwestern do not provide a two-part rate with a low commodity component; that any increase in Natural's flow gas capacity to provide its distributors with additional flow gas for space heating demands will create an even larger off-peak gas supply to be disposed of by the distributors; that Natural's proposed expansion presupposes that the additional gas will be sold under present rate design, which the coal interveners challenge as unlawful in the rate investigation proceedings under docket No. RP61–19 *et al.*, that the principal purpose of Natural's present low commodity component is to enable its customers to peg prices for boiler fuel sales just below the comparable price for coal; that to allow Natural to expand its facilities as it requests will aggravate the economic hardship already inflicted causing further irreparable injury to the coal industry and to the public interest; and that the economic feasibility of Natural's proposed expansion depends upon the decision of the issues raised by them in the rate investigation.

In support of the alternative motion for the consolidation of Natural's application under Docket No. CP63–174 with the proceedings under Docket No. RP61–19, *et al.* for the purpose of hearing and decision, the coal interveners say that they and Natural are parties to the certificate and rate investigation proceedings and that, in the latter proceedings, the examiner excluded a portion of the coal interveners' rebuttal evidence relating to the conservation or end-use of natural gas, the plight of the coal industry and the effect of pipeline sales and rates upon the coal industry, but held that such evidence was proper in a certificate proceeding.

Upon careful consideration of the coal interveners' motion and of Natural's answer thereto, we find that good cause has not been shown for staying further action on Natural's pending application under Docket CP63–174. Natural's application and exhibits in this case were filed December 18, 1962, and amended applications and exhibits were filed April 11, 1963, together with prepared testimony. Notice of application date of hearing was issued July 2, 1963 (28 F.R. 7044) scheduling a hearing to commence August 5, 1963. Upon the intervention of the coal interests the hearing was postponed by notice issued July 29, 1963 (28 F.R. 7964). By notice issued September 30, 1963 (28 F.R. 10760) a hearing on the issues presented by this application was set to commence October 21, 1963. On October 11, 1963, the coal interveners filed a "Request for post-

ponement of hearing" which was denied by notice issued October 16, 1963.[1] We find that the proper administration of the Natural Gas Act and the public interest require that the hearing on Natural's application in this case commence on October 21 as presently scheduled.

The Commission finds further that good cause has not been shown for consolidating the proceedings on Natural's certificate application under Docket CP63–174 with the rate investigation proceedings under Dockets RP61–19, *et al.* The hearing on the rate investigations was concluded October 17, 1963. The coal interveners offered no explanation of their delay in filing the motion to consolidate proceedings.

As indicated in the coal interveners' motion certain evidence proffered by them in the rate proceedings was excluded by the presiding examiner as being irrelevant in those proceedings, with an indication that such evidence might be relevant in a certificate proceeding. On appeal to us from the examiner's ruling we denied the appeal without prejudice. Thus, after the initial decision of the presiding examiner has been rendered, the way will be open to the coal interveners, through exceptions, if necessary, to the examiner's decision to again raise the question of the propriety of the examiner's exclusion of the proffered testimony. Furthermore, in this certificate proceeding, to which the coal interests are parties, they will have ample opportunity to proffer such testimony as they consider proper to show how they might be adversely affected if Natural's application were granted. They will have ample opportunity to proffer the same testimony in the certificate proceeding as was rejected in the rate proceedings subject to the presiding examiner's ruling as to its admissibility. The coal interveners have not been precluded, in the certificate proceeding, from offering testimony concerning the economic feasibility of Natural's project at the rates which it proposes to charge by the examiner's ruling in the rate proceedings.

The Commission orders:

(A) The coal interveners "Motion to stay or in alternative to consolidate proceedings" is hereby denied.

(B) The hearing in this case shall proceed to conclusion without recess for preparation of evidence or for preparation to cross-examine witnesses on proposed evidence served prior to the hearing date. Not less than 30 days shall be allowed for filing initial briefs.

OPINION NO. 406

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. G–10000

OPINION AND ORDER

(Issued October 21, 1963)*

Syllabus

1. Commission is not foreclosed from passing upon merits of proposed reduction in gas allocation because new contract was accepted for filing. P. 1046.

---

[1] Natural's answer to the various motions indicates that copies of its application together with copies of its exhibits and testimony were supplied to counsel for the coal interveners more than six months ago.

*Initial decision appears on p. 1047.

2. New contract purporting to reduce gas allocation is not sufficient evidence that full reduction should be granted where there is opposition to such reduction. P. 1046.
3. Bare fact that distributor acquiesced in pipeline's reduced allocation does not establish that public interest is so well protected that no further inquiry need be made. P. 1046.
4. Where predictions of anticipated need have not proved to be accurate, it is not in the public interest to require pipeline to hold facilities available but unused absent showing that they will ever be required to serve distributor. P. 1046.
5. Commission *authorizes* amendment of certificate to provide for permanent and temporary reduction in gas allocation. P. 1047.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BLACK, *Commissioner.*

By order dated March 1, 1957, this Commission issued a certificate to Transcontinental Gas Pipe Line Corporation (Transco) to construct and operate certain facilities as part of its interstate pipeline system extending from Louisiana to New York [17 FPC 360]. The order contained a condition that Transco allocate natural gas on a firm basis to Carolina Pipe Line Company (Carolina). As amended by order of March 25, 1959 [21 FPC 384], the allocation was fixed at 25,219 Mcf per day.

A new contract between Transco and Carolina, dated March 1, 1962, was filed with the Commission on March 10, 1962. This contract purported to fix the amount of gas to be allocated to Carolina by Transco at 12,500 Mcf per day. Transco now petitions to amend the original certificate by formal reduction of the allocation from 25,219 Mcf to 12,500 Mcf per day in accordance with the newly filed contract. Carolina joins in this request. Two intervenors have protested: South Carolina Public Service Commission (PSC) and Peoples Natural Gas Company of South Carolina (Peoples).

By decision issued June 18, 1963, the presiding examiner reduced the allocation by 8,000 Mcf per day, but refused to allow the additional reduction of 4,719 Mcf. Transco, Carolina, and Commission staff have excepted to the refusal to allow the additional reduction of 4,719 Mcf per day. PSC and People's did not except to the reduction of 8,000 Mcf, but ask that the examiner be sustained in his refusal to grant the further reduction. PSC has also asked that the decision in this case be deferred until the conclusion of hearings now pending before PSC, stating that the determination here may have some effect on the rates to be determined in that proceeding. Transco, on the other hand, pressed for a prompt decision, contending that it would be prejudiced by any delay.

Transco, Carolina, and the Staff introduced no evidence other than the new contract which purported to reduce the allocation from 25,219 to 12,500 Mcf per day. It is their contention that no other evidence is needed. They urge that Carolina's self-interest would prevent it from agreeing to any reduction below the amount of gas it needs to serve the public, and the fact

737-370—66——69

of Carolina's agreement here is sufficient evidence that the public interest is protected. They further point out that, since this Commission has no jurisdiction over Carolina, Carolina cannot be compelled in these proceedings to take more than 12,500 Mcf per day. Under the circumstances, if Transco's allocation to Carolina is not reduced, Transco will be in the position of having to hold gas available for Carolina which Carolina is under no obligation to take and which Transco wishes to sell elsewhere. Finally, although not raised on exception, these parties argued before the examiner that the reduction of the allocation is an accomplished fact which the Commission is now precluded from questioning by reason of the Commission's acceptance of the March 1, 1962 contract for filing without a hearing.

We cannot agree that this Commission is foreclosed from passing upon the merits of the proposed reduction in allocation because the new contract was accepted for filing. The letter of March 8, 1962, from Transco's counsel to the Commission requesting the filing, stated expressly that Transco was not then seeking a reduction of Carolina's permanent allocation. The Commission order allowing the filing was made "without prejudice to any findings or orders which may have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted by or against Transco."

Neither can we agree that the new contract of March 1, 1962, is sufficient evidence that the full reduction should be granted. We might concede that this agreement with Carolina, standing alone, is persuasive that the public interest does not require a continuance of the allocation. But, the State Public Service Commission and Carolina's main customer for gas appear in opposition; the bare fact of Carolina's acquiescence does not establish that the public interest is so well protected that no further inquiry need be made.

We now proceed to consider the additional facts available. It does not appear that there is any present need by Carolina for the 4,719 Mcf which Transco seeks to have released. Carolina's maximum delivery obligations under its service contracts would apparently require that Carolina continue to take the additional 4,719 Mcf contemplated by the Examiner's decision. But the record establishes that Carolina, under the reduced allocation contemplated by the March 1, 1962 contract, will still have adequate supplies to meet the highest one-day demand which it has ever experienced. Three communities which were to have received gas from the original allocation are not yet connected for service. And an additional source of supply has been found for Carolina.

The original allocation to Carolina was made on the basis of predictions of anticipated need. These predictions have not proved to be accurate. We do not feel it is in the public interest to require Transco to hold facilities available but unused when there is no showing that they will ever be required to serve Carolina.

We are of the opinion that the public interest requires issuance of an order permanently reducing Transco's allocation in conformity with the Examiner's decision, and temporarily reducing that allocation in the additional amount sought by Transco and Carolina, with provision for making the additional reduction permanent. For these reasons, the hearing in this docket will be reopened upon application of any party wishing to submit additional evidence. If no such application is received within sixty days from the time final order is entered in the proceeding now pending before PSC,

or within nine months in any case, the temporary additional reduction will become final without further order of this Commission.

This procedure will allow Transco to release the full amount of gas requested by their petition on an interim basis, and will allow PSC the opportunity to complete its present hearings and request reopening of this proceeding, before final action in this matter is taken. This will in no way prejudice Transco, since the Executive Vice President of Transco has indicated his company's ability and willingness to supply additional gas in the future should the need become apparent. Any order restoring the 4,719 Mcf allocation will provide such time as is necessary for Transco to furnish any additional facilities needed.

The Commission finds:

(1) The present and future convenience and necessity permit and require a permanent reduction of Transco's allocation to Carolina by 8,000 Mcf daily, and an additional 4,719 Mcf daily reduction in that allocation on a temporary basis until November 30, 1964.

(2) The determination of whether the present and future public convenience and necessity permit and require the additional 4,719 reduction of Transco's allocation to Carolina on a permanent basis after November 30, 1964, shall be held in abeyance a reasonable time to permit the introduction of additional evidence by any party.

The Commission orders:

(A) The permanent allocation by Transco to Carolina shall be reduced to 17,219 Mcf daily.

(B) The allocation by Transco to Carolina shall be further reduced, temporarily, to 12,500 Mcf daily from the date of this order through November 30, 1964.

(C) This hearing will be reopened for the introduction of additional evidence upon application by any party within sixty days of the date of the final order in the proceeding previously referred to now pending before PSC with respect to Carolina, or within nine months from the date of this order, whichever period shall first elapse.

(D) In the event no application is received from any party pursuant to paragraph (C) of this order within the time specified therein, the temporary reduction in allocation by Transco to Carolina set forth in paragraph (B) shall become permanent, without further order of this Commission.

INITIAL DECISION

OF THE PRESIDING EXAMINER APPROVING IN PART AND DENYING IN PART AN APPLICATION FOR A CERTIFICATE AMENDMENT

(Issued June 18, 1963)

ELLIS, *Presiding Examiner:*

I — Nature Of The Case

Transcontinental Gas Pipe Line Corporation here seeks to reduce their natural gas firm service allocation to an important resale customer, the Carolina Pipeline Company serving numerous South Carolina communities, from the amount of 25,219 Mcf per day originally authorized in 1957 to the new figure of 12,500 Mcf which is the contract demand amount named in Carolina's service agreement the FPC accepted a year ago. The problem is that the only evidence the application produced was the new service agreement—Carolina wants, asks, and agrees to pay a demand charge for 12,500 Mcf only. Transcontinental says nothing more is needed to be shown or even known, and they seek immediate action because they now have other use for the unused capacity to be released represented by the 12,719 difference—or at least a use for part of it.

The present application was filed in February 1963, was the subject of a prehearing conference on April 22, formal hearing on that day and the next, and of briefs filed by the applicant, the FPC Staff, and two interveners, the last one received on May 22.

II — Issues

Transcontinental is quite forthright in its view that Commission's acceptance of the signed service agreement for 12,500 Mcf concludes the case, and justifies, indeed requires, the release of the entire unused capacity, saying that it is quite irrevelant to inquire or seek evidence of the Carolina company's requirements, or the needs of Carolina's many distributor customers. Their point is that they have urgent need for release of the unused (and unpaid for) capacity, in order to render a gas transportation service of 8,000 Mcf per day firm (and 16,000 interruptible) to a Texaco plant on the Delaware River, which is planned to begin in a few months. The certificate application therefore is pending under CP63–222, but has not yet been the subject of public notice by the Commission, or set for hearing. Carolina supported Transcontinental's request at the hearing, but has offered no evidence, nor has it filed a brief.

The FPC staff seems generally to be in agreement, pointing to a "pretty fair equilibrium" between Carolina's agreed supply and its apparent needs; also that the self-interest of the purchaser who seeks and signs up for 12,500 only is the best or at least enough index of the quantity really needed; finally that the Commission accepted Carolina's 12,500 Mcf service agreement with Transcontinental a year ago and is powerless now to require Carolina to buy any more, the purchaser itself being exempt from the Natural Gas Act (Section 1(c)).

A customer of Carolina, the Peoples Natural Gas Company of South Carolina, serving four communities in that state and evidently entirely dependent upon Carolina for its gas supply, has intervened and objected on many grounds. Their motive in so doing is claimed to be ulterior and suspect, and to be related in truth to a rate case now pending before the state utility commission. This motive, and the extent of their true interest in the present matter are reflected upon at great length in their opposition's briefs, but, whatever it is, the motivation is here regarded as irrelevant.

The substance of this customer company's point is that a proposal to amend an outstanding certificate is itself a certificate case, it must comply with the statutory requirements for a certificate, and the necessary findings cannot be

founded upon a mere scanning of the accepted service agreement, without some real reference to the true extent of the needs of the customers depending upon Carolina. What is suggested in effect is a dismissal of the application without prejudice to its proper and documented resubmission.

There was also full intervention and participation by counsel for the South Carolina Public Service Commission, whose brief "respectfully requests that the Federal Power Commission stay these proceedings until certain matters before the South Carolina Commission can be considered by it." These are (a) requests by several customer companies to reduce Carolina's demand schedules of service to them, and (b) a pending rate case of Carolina before the state commission. Some doubt is suggested about the adequacy of Carolina's supply but no accurate determination is said to be now available, nor does the state commission wish to be foreclosed upon "certain conclusions it might wish to make."

Thus the issue is whether a pipeline whose customer company will accept and pay for only half the peak day firm supply previously allocated to it may be permitted to cancel the unused allocation — so as to have the capacity available for use otherwise — without a new determination that the reduced allocation meets the statutory standards for its sanction by the FPC, i.e., whether the service under the new terms now proposed must be re-weighed upon the scale of the "present or future public convenience and necessity," the requisite standard specified in Section 7 of the Natural Gas Act.

So to put the question seems to answer it. The statute cannot be ignored merely because there are practical limits to what the Commission can accomplish by complying with it. Neither is to be supposed that the Commission's acceptance of the 12,500 Mcf service agreement a year ago (in an action without notice or hearing) now forecloses inquiry into whether the service now proposed — 12,500 Mcf *without* a reserve of capacity — will meet the requirements of the present or future public convenience and necessity. The Commission's action was, on its face, only an intermediate order, a mesne action without reference to the balance of capacity, and, as the Commission was careful to point out, did not constitute approval of the service and was "without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted by or against Transco." (Ex. 3–R)

Hence some inquiry is required before the new arrangement may receive the Commission's stamp of approval—which does not come, as was here suggested, by rubber stamp. On the other hand, it does not follow that the label "certificate case" requires it to be proved by all the detailed estimates and projections that came in with the original application, since at that time the issues were very much broader.

III — Carolina's Gas Supply From Transcontinental and From Southern Natural

Turning to the record, such as it is, it may be found possible to find that Carolina's needs are adequately to be provided for, even with the release of the unused capacity, or at least of a part of it. This requires some review of the steps heretofore taken to establish Carolina's supply from Transcontinental, also its other supply from the Southern Natural Gas Company. In general, it shows an original allocation of about 25,000 Mcf per day from Transcontinental, a later and supposedly suplementary allocation of 10,340

from Southern Natural, and now some plain indication that the latter is to be used in part to supplant the former. Meanwhile, total firm gas usage has yet to exceed 20,000, while three new communities whom the Southern Natural allocation was expected to supply have not yet been served. The various steps in this progression — or retrogression and intercession — are confusing unless taken in order, as set out on the page opposite:

Allocations and supply for Carolina from Transcontinental and Southern Natural (MCF/D)

	Action Taken		Supply from Transco		Supply from Sou. Nat.		Total	
Reference	Date	Nature	Allocation	Actual	Allocation	Actual	Allocation	Actual
1	Mar. 1, 1957	Original Transco certification.	25,219				25,219	
2	Effective June 1, 1960.	Highest demand charge paid.		19,918			25,219	19,918
3	Mar. 10, 1961	Southern Natural certificate.			10,340		35,559	19,918
4	Nov. 1, 1961	Revised Transco service agreement.		16,918			35,559	16,918
5		Sou. Nat. initial service agreement.				5,000	35,559	21,918
6	Apr. 13, 1962	Current Transco service agreement accepted by FPC.		12,500			35,559	17,500
7	Before Nov. 1, 1961.	Peak day experienced (firm purchases).						19,918
8	Dec. 12, 1962	Peak day experienced, 1962 (firm sales).						19,039
9	Feb. 1963	New Transco allocation here sought to be approved.	12,500				22,840	
10	Apr. 1963	Total current customer demands on Carolina (approx.).						23,942
11	Nov. 1963	New increased service agreement with Sou. Nat. to become effective.				10,340		22,840

Current related proceedings

Docket	Parties	Subject	Status
RP63–4	Carolina Pipe Line Co. and Southern Natural.	S. 5 complaint—Carolina seeks more surplus gas.	In hearing.
CP63–84	Transcontinental Pipe Line Corp.	Construction program certificate application, from which the present item was severed.	
CP63–222	Transcontinental Pipe Line Corp.	S. 7—To provide gas transportation for Texaco, using 8,000 Mcf of firm capacity to be released herein.	Not yet "noticed".

The net result as to Carolina's firm supply is recapitulated as follows:

	MCF/D	
Present allocation from Transcontinental	25,219	
Present allocation from Southern Natural	10,340	
Total allocation in effect		35,559
Present service agreement with Transcontinental	12,500	
Southern Natural service agreement to become effective in November	10,340	
Total firm supply for 1963–4 season		22,840
New allocation total *after* approval of Transco's present application (12,500+10,340)		22,840

The significant conclusions as to supply are (1) that the firm service contract demands, per service agreement with their suppliers, total 22,840, (2) there would no longer be available for call a reserved and set aside pipeline capacity for an additional amount (as now in effect), and (3) the newer Southern Natural service is being used to take the place of an equal amount of Transcontinental service, not to supplement it (as the Commission was originally given to believe—25 FPC 518, 520).

IV — The "Public Convenience and Necessity" Test Required

The petition of Transcontinental is for a further amendment of its certificate (17 FPC 360, 367 as amended 21 FPC 384) "by reducing the allocation therein granted" from 25,219 to 12,500. What appears at page 367 of 17 FPC is not in so many words an allocation, but a certificate "authorizing Transcontinental * * * to make the sales referred to * * *" Other language in the two orders makes it plain that the permission to sell is to be treated as an allocation, and this is taken to imply a commitment or reservation of so much firm capacity, a dedication to the uses stated if, as, and when required.[1] It is the implied reservation of the capacity to this customer that occasions Transcontinental's request for an amendment so the unused part of the capacity will become available for the new use that has now developed. But since the document to be amended is a "certificate of public convenience and necessity," and it was issued under Section 7 of the Natural Gas Act, it follows that the amendment can be made only under the standards of that section and only if and as it appears that the newly revised certificate does indeed reflect an arrangement that meets the test of public convenience and necessity.

The certificate referred to was issued on the basis of formal findings that the "service proposed by Carolina Pipeline * * * are found to be required by the public convenience and necessity" (p. 358), to enable the rendition of which the allocation "should be made" which now is sought to be changed (p. 365).

It is evident that a revision of the allocation so carefully made, without any new review of what service is and will be required to meet the test of public convenience and necessity, would be both illogical as well as legally erroneous under the commanding requirements ("if it is found" etc.) of Section 7(e) of the Natural Gas Act. That test is meaningless indeed if

[1] Note that the FPC order merely authorized the sales, which seems to modify to that extent the initial decision in that case which had undertaken to authorize and *require* Transco to make the sales. 17 FPC at 359.

it does not weigh the needs of the very "public" whom the "service" was supposed to provide for, and upon that basis it is concluded that the amendment requested cannot be granted without compliance with that statutory test, without some summarization of that public need, and without some appraisal of how the net resulting arrangement will satisfy the need.

It is the Staff brief's conclusion that since the Commission has already accepted the new 12,500 service agreement, any evidence presently necessary that the unused supply (really a reserve of capacity) is not in fact needed can be inferred out of the Carolina Company's willingness to sign up for the 12,500 figure and no more. Staff relies upon the "credibility of self interest which the law wisely recognizes as a fairly reliable motivating factor." Aside from the obvious and elementary point that the utility's self-interest is not the guide to the public interest that the public utility laws are designed to protect, there are two other weaknesses to this form of reliance: (a) it is not the Carolina Pipeline Company's needs that are of concern, but those of their many customers and of the public throughout the area[2]; (b) something quite other than self interest may motivate their 12,500 Mcf service agreement when it is recalled that Carolina must pay nearly $40 per year demand charge for each and every Mcf of contract demand called for by their agreement.[3]

The identical test is applicable if the proceeding be regarded as an abandonment case, which, in truth, at least the action on the service agreement seems to constitute. Section 7(b) of the Natural Gas Act forbids Transcontinental to abandon "any service rendered" by means of its jurisdictional facilities without the Commission's prior approval, after hearing, and a finding that either the supply is depleted or "that the present or future public convenience or necessity permit such abandonment." It is settled that a partial reduction in the quantity being delivered constitutes an abandonment and is governed by Section 7(b).[4] Actually, by the new service agreements of 1961 and 1962 the "service rendered" by means of Transcontinental's facilities (to use the law's terms) was reduced, that is, abandoned in part, from a delivery of 19,918 Mcf per day to 16,918 and finally to 12,500 (T134–137). The Commission's order of April 13, 1962, in so many words "allowed" that new arrangement to take effect, although it purported to say that this action did not constitute "approval" of the service, which is evidently why the Commission felt that no hearing was then required, or finding of public convenience or necessity. Be that as it may, and whatever occurred a year ago, a hearing now has been held, reasonably practical and satisfactory evidence has been adduced, and the test of the public interest can now be applied to this final step in the partial abandonment of the service now sought to be confirmed by the concellation of the excess allocation.

Whether the entire action be looked upon realistically as a partial abandonment — once *de facto* and now *de jure* — or whether it be regarded merely as a present amendment of the certificate allocation, the net result is to require the same public interest test, since the ultimate command of Sections 7(b) and 7(e) is practically the same[5] — the change effected requires

[2] Kansas Pipe Line & Gas Co. (1939), 2 FPC 29, 56.

[3] As Transcontinental's public tariff, rate schedule CD–2, is understood.

[4] *Panhandle Eastern Pipe Line Company* v. *Michigan Consolidated Gas Company* (CA6, 1949) 177 F. 2d 942, 945; *Panhandle Eastern Pipe Line Company*, 11 FPC 167, 173, vacated on other grounds (CA3, 1953) 204 F. 2d 925 (where the reduction was from 125,000 Mcf to 87,500); *idem* 236 F. 2d 289.

[5] *Michigan Consolidated Gas Company* v. *F.P.C.*, 283 F. 2d 204, 214 (CADC, 1960).

FPC approval and that approval requires a hearing and a finding that it is permitted or required by the present or future public convenience and (or) necessity.

V — The Public Convenience and Necessity Test Applied

Neither Transcontinental nor Carolina has deigned to enlighten the record as to what demands on Carolina may likely be expected, or how Carolina proposes to prepare itself to meet them. Instead, we are advised that such evidence "is not pertinent to the inquiry," it is "not germane to the issue."[6]

But the record has evidence that may suffice for the limited present purpose, and this was supplied by the help of the intervener (Peoples Natural) who recommend that the application be dismissed. Using various sources, including data supplied by Carolina, the witness for Peoples has furnished the following details from which Carolina's total program can at least be envisioned and its resources assayed, even if neither can be precisely calculated:

Demands upon Carolina (Mcf/D)[1]

1. Present contract demands of wholesale customers:		
York Authority	6,590	
Chester Authority	2,476	
Lancaster Authority	2,451	
Peoples Natural Gas Company	3,395	
Bennettsville	1,507	
Total		16,419
2. Present contract demands of direct industrial customers:		
Dupont	250	
Burlington	400	
Delta	2,550	
Oak River	100	
Dixiana	180	
Total		3,480
3. Maximum actual "take" by Carolina's retail service customers as a group		3,046
4. Actual delivery to the Abbeville system		997
Total apparent requirements of Carolina's customers		23,942

[1] Derived largely from exhibit 5-R and the sources there cited.

It is apparent that these sources would not be adequate authority on which to certificate a new pipeline, but for the present limited purposes the total may be accepted as satisfactory evidence of Carolina's apparent needs. Neither Carolina nor Transcontinental strongly disputes the figures — and in view of their declination to offer the slightest such information, even after being told it was regarded as essential (T105, 282-3), they are hardly in a position to complain if the forum has nothing more complete to rely upon. There was some suggestion that item (1) may soon be reduced by the state commission, but this may be off-set by the possibility of higher needs for item (3), the retail users whose calls may hopefully be expected to increase.

[6] Transcontinental brief, pp. 3, 5, 7, Reply Brief, p. 4. But the same briefs at p. 4 agree that the Commission may properly inquire into the effect of this action on Transco and on its customers. How this inquiry as to this customer could be made without evidence is blandly unexplained.

It is the near proximity of the two results spelled out above—a need for 23,942 Mcf compared with the proposed new total allocation of 22,840—that leads the Staff brief to refer to them as in "pretty fair equilibrium." The requirements figure of 23,942 Mcf is also cited by Transcontinental without too serious disagreement. But the fact remains that the applicant and the staff join in asking FPC knowingly to approve as in the public interest an arrangement where the proposed allocation is 1,102 Mcf/day, or 5%, less than the evident needs of the public who are relying upon Carolina Pipeline. Just how that "short position" can be in the public interest is not at all explained.

The full story is that Carolina's need is supposed even to be 3,000 Mcf greater. When its second pipeline supply — the 10,340 from Southern Natural — was established by the Commission's certificate in 1961, 25 FPC 518, it was asked for, agreed to, and granted on the plain and presumably good faith representation that about half, 5,000, was to be used for service to five new towns (T107), but only two of them have been served to date. The other three are Georgetown, Conway and Myrtle Beach, no line has been laid to them, and it seems to have been accepted at the hearing that 3,000 of the new allocation was attributable to that projected service (T239). If now it is Carolina's plan to use the new supply for something else—to replace so much Transcontinental supply — manifestly simple candor would call for some new showing of why the change should be approved and what is proposed to be done about the previous plan which was presented here and accepted in good faith. Has the former promise now been forgotten?

The Staff brief's concurrence in the present plan seems unduly to hang upon Carolina's exempt status from the Natural Gas Act (20 FPC 54). That exemption has to do with Carolina's own transportation and sales, but has nothing whatever to do with the present case pertaining to the sale by Transcontinental *to* Carolina, which is fully jurisdictional and must meet the test of the public interest.

To recapitulate—

	Mcf/Day	
(a) Carolina's supply allocations total:		
From Transcontinental	25,219	
From Southern Natural	10,340	
Total		35,559
(b) Carolina's apparent needs:		
For present customers	23,942	
For three new towns	3,000	
Total		26,942
(c) Net difference evidently available for reassignment		8,617

As it happens, the alternative use of their capacity — on account of which Transcontinental asks immediate action on their petition — calls for just 8,000 of firm capacity, a little less than that which seems with satisfactory clarity to be available. The reduction of Transcontinental's allocation in *that* amount only, 8,000 Mcf per day, is therefore concluded to comply with the test of public convenience and (or) necessity (as worded in Section 7(b) and 7(e) of the Gas Act) in that—

(1) the Commission has already at least tentatively permitted the reduced rate of service to go into effect;

(2) the pipeline has alleged that it now has other and economic use for the unused capacity;

(3) the purchasing company is satisfied with the plan, supports the petition, declines the excess firm supply and wants to avoid any obligation to pay demand charges on it;

(4) after hearing held, it is established satisfactorily on the record that the reduction by 8,000 Mcf will not deprive Carolina or its customers of any supply that is or will be needed in the reasonably forseeable future.

VI—South Carolina Commission Presentation

The Public Service Commission of the State of South Carolina has cooperated in this case, appearing by counsel and on brief. The brief was filed May 15, and concludes as follows:

> For the reasons set forth above, the intervener, The South Carolina Public Service Commission, respectfully requests that the Federal Power Commission defer its action in this case until those matters now pending before The South Carolina Public Service Commission can be considered.

Principally the Commission's apprehension seems to be that this case may result in reducing Carolina's supply below the level of possible need, and the extent of that need is even now before them in a pending matter. It is believed the disposition of the case as here made may relieve this apprehension entirely, since there is retained and remains available to Carolina a substantial capacity, large enough for the three new towns and for other possible increases in service up to their distributors' contract demands. Whenever Carolina shall present a service agreement offering to pay for this unused capacity there should be no difficulty in making it available, unless, at least, in the meantime some other economic use for the unused capacity shall develop. In fact, Transcontinental appears so to stipulate (T103, 132).

It is believed the retention for Carolina's call of the 8,000 here released would not be in the public interest in that there is no evident imminence of their need for it and the pipeline supplier cannot be expected to reserve such a substantial amount indefinitely, to let it lie fallow, so to speak. Especially so since — (a) they are not collecting a demand charge on it, which implies that the customers in other states are currently bearing the burden of its cost; (b) the program to use this 8,000 of capacity for the service to Texaco will be forced to include an investment of $785,000 for a compression unit, which can be avoided if the capacity here unused can be released (T126).

In any event the State Commission's request is for the Federal Commission to withhold its action — for how long is not clear. If the South Carolina Commission still feels so advised, in the light of the action which follows, it appropriately should address the Federal Power Commission directly, through the medium of a bill of exceptions to this initial decision (FPC Rules 1.31).

VII—Conclusion and Order

Accordingly, upon consideration of the record —

(A) It is *Found* that the reduction in Transcontinental's allocation to Carolina by 8,000 Mcf only is permitted and required by the present and future public convenience and necessity; and,

(B) Subject to review by the Commission, it is *Ordered* that Transcontinental's firm sales allocation to Carolina Pipeline Company, as set forth in 17 FPC 360 and 21 FPC 384, be hereby reduced from 25,219 Mcf of natural

gas per day to 17,219 Mcf per day. The further reduction to 12,500 herein requested is denied upon the present record.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER ACCEPTING OFFERS OF SETTLEMENT, REQUIRING FILING OF APPLICABLE CONTRACT AMENDMENTS, REQUIRING REFUNDS AND TERMINATING PROCEEDINGS

(Issued October 22, 1963)

Respondents in the above-entitled proceedings have severally filed offers of settlement, consistent with the Second Amendment to the Commission's Statement of General Policy No. 61–1, 24 FPC 1107 as amended by Order No. 264 issued March 27, 1963, 29 FPC 589, of their respective rate suspension proceedings involving their jurisdictional sales of natural gas to Tennessee Gas Transmission Company (TGT) from various leases in Texas Railroad District Nos. 2, 3 and 4.

The following table sets forth the data pertinent to the proceedings herein.

Docket Nos.	Rate schedule supply No.	Suspended rate cents	Effective date of suspended rate	Settlement rate cents/Mcf
G–16705	1–10	15.33333	----------	15.0
G–20010	12–1	17.24347	[1] 4– 2–60	15.0
G–17297	1–3	16.16947	----------	15.0
G–19582	4–3	15.0952	[1] 7–28–60	15.0
G–19582	3–4	[2] 15.0952	7–28–60	[2] 15.0
RI61–208	4–4	17.24347	4– 3–61	15.0
RI61–189	3–5	[1] 17.02416	3–31–61	15.0
G–17146	3–8	15.33333	7–27–59	15.0
RI60–378	2–(20–39)	17.24347	----------	14.6
G–17279	1–7	15.33333	[1] 7–28–59	15.0

[1] Suspended rate has not been made effective. No refunds are to be made.
[2] Includes TGT's system-wide dehydration charge of 0.21931¢.
[3] Does not include TGT's system-wide dehydration charge.

All of the producers involved here, with the exception of Ramsey, have agreed to eliminate all price escalation clauses except for provisions for future changes in tax reimbursement from their rate schedules. Ramsey has agreed to eliminate from its rate schedule all price escalation provisions except for periodic escalation provisions permitted under the Second Amendment, and provisions for future changes in tax reimbursement. The estimated total refund resulting from these settlement rates is approximately $19,000. The estimated annual decrease in rate from the suspended rates is approximately $14,350.

Since the proposed settlement rates involved in the various proceedings herein are acceptable under the provision of the aforementioned policy statement, it is believed that the public interest will best be served by accepting the respondents' offers of settlement as hereinafter set forth.

No protests have been received from any of the interveners in the respective proceedings. However, we desire to make it clear that the acceptance of these offers of settlement shall not be construed as approval of any future increased rate filed in accordance with the reservations of the respective respondents as indicated above of the right to file increases to cover future tax increases or periodic increases as the case may be.

The Commission finds:

The proposed settlements of the above-designated proceedings, on the basis described herein, as more fully set forth in the respective offers of settlement filed by the respondents herein, are in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed in the above-designated proceedings by the respondents herein are approved in accordance with the provisions of this order.

(B) Each respondent herein shall file, within 30 days from the date of issuance of its order, a contractual amendment to its FPC Gas Rate Schedule involved herein, which each respondent shall execute with TGT in conformity with its offer of settlement in all respects. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within thirty days from the date of issuance of this order, each respondent, as applicable, shall refund to TGT all amounts collected, under its FPC Gas Rate Schedule involved herein, in excess of its aforementioned settlement rate, together with simple interest at the rate heretofore prescribed by Commission order in the respective proceeding, from the date of receipt of such excess amounts by said respondent to the date of refund. Each respondent shall bear all costs incidental to the making of its separate refund.

(D) Within 45 days from the date of issuance of this order, each respondent, as applicable, shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from TGT with respect to such refunds.

(E) Upon notification by the Secretary of the Commission to each respondent that it has complied with the terms and conditions of this order, the respective settlement rate prescribed herein shall be effective as of the date of issuance of this order, the related rate suspension proceeding of such respondent shall be deemed terminated, and the said respondent's refund obligation with respect to its above-designated rate suspension proceeding shall be terminated.

(F) The acceptance of these offers of settlement is without prejudice to any findings or determinations that may be made in any proceedings now pending or hereafter instituted by or against the respondents herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

GULF STATES UTILITIES COMPANY, DOCKET NO. E-7124

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF PREFERRED STOCK

(Issued October 22, 1963)

By order issued October 4, 1963, in the above-entitled matter, the Commission authorized Gulf States Utilities Company (Applicant) to issue and sell at

competitive bidding 100,000 shares of Preferred Stock, par value $100 per share, subject to the provisions, among others, as set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further orders, shall have approved the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon.

Applicant, on October 21, 1963, filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states, among other things, that it proposes to accept as representing the lowest annual cost of money to it, the bid of Stone & Webster Securities Corporation to purchase the 100,000 shares of the proposed issuance of Preferred Stock for $100.43 per share, with a dividend rate of $4.52 per share.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements relative to the issuance and sale of Preferred Stock contained in Paragraph (B) of the Commission's order issued October 4, 1963, in the above-entitled docket; and under the bid it proposes to accept for the purchase of the proposed issuance of Preferred Stock, the price per share of Preferred Stock to be received by Applicant and the dividend rate to be paid thereon are reasonable.

(2) The proposed issuance and sale of Preferred Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price per share of Preferred Stock to be received by Applicant and the dividend rate to be paid thereon by Applicant under the bid referred to above are approved as reasonable.

The proposed issuance and sale of Preferred Stock referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of Paragraph (A) insofar as they relate to the issuance and sale of Preferred Stock, and of Parapraphs (C), (D), and (E) of the Commission's order issued October 4, 1963, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITY OF KETCHIKAN, ALASKA, PROJECT NO. 2328

ORDER ISSUING LICENSE (MAJOR)

(Issued October 22, 1963)

Application was filed on November 23, 1962, by the City of Ketchikan, Alaska (Applicant), for license under Secton 4(e) of the Federal Power Act

(Act) for proposed major Project No. 2328, known as the Lake Whitman Hydroelectric Project, to be located on Lake Whitman on Revillagigedo Island, near Ketchikan, Alaska, an affecting lands of the United States within the Tongass National Forest and other lands of the United States.

The project will utilize Lake Whitman as its reservoir and will involve rehabilitation of the existing dam, and the construction of other project works, including a powerhouse having an installed capacity of 5,400 horsepower. The energy produced will be used by Applicant. Available data indicate that the annual cost of generating power at this project will be substantially less than would be the cost of providing equivalent capacity and energy from the next cheapest alternative source, which was assumed to be a new diesel plant to be constructed by the applicant.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, did not recommend for inclusion in any license issued for the project, special conditions in the interest of flood control and navigation.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license issued for the project, special conditions in the interest of fish and wildlife resources.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Tongass National Forest, recommended for inclusion in any license issued for the project, special conditions in the interest of the National Forest.

The Commission further finds:

(1) Applicant is a municipal corporation organized under the laws of the State of Alaska, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purpose of a license for the project.

(2) The project affects and will affect lands of the United States within the Tongass National Forest and other lands of the United States.

(3) Public notice of the application has been given. No protests have been received. There is no conflicting application before the Commission.

(4) The project does not affect a Government dam.

(5) The issuance of a license for the project will not interfere or be inconsistent with any reservation or with the purposes for which the Tongass National Forest was created or acquired.

(6) The issuance of a license for the project will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(7) The project will be best adopted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(8) The installed horsepower capacity of the project for the purpose of computing the capacity of the administrative annual charge is 5,400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The amount of annual charges to be paid under the license for the use, occupancy and enjoyment of United States lands by the project should be determined at a later date as hereinafter provided.

(10) The transmission facilities described in paragraph (B) below, which were included in the application for license, are parts of the project within

the meaning of Section 3(11) of the Act and should be included in the license for the project.

(11) The exhibits designated and described in paragraph (B) below which were filed as part of the application for license, conform to the Commission's rules and regulations, and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to City of Ketchikan, Alaska, (Licensee) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of August 1, 1963, for construction, operation and maintenance of Lake Whitman Hydroelectric Project No. 2328, located on Revillagigedo Island, near the City of Ketchikan, Alaska, and affecting lands of the United States within the Tongass National Forest and other lands of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2328 consists of:

(a) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J & K: Sheet 1 (FPC No. 2328–1) General map of project area.

Exhibit J & K: Sheets 2 and 3 (FPC No. 2328–2 and –3) Project area.

(b) a rehabilitated existing concrete arch dam about 35 feet high located at the outlet of Lake Whitman into Case Creek; a new intake will tap the lake under water about 1,500 feet west of the dam; a reservoir with usable storage of 6,500 acre-feet at 60-foot drawdown; a 1,690-foot power tunnel; 950 feet of steel penstock; a surge tank; a powerhouse containing a 6,500 horsepower turbin connected to a generator rated at 4,500 kva, 0.90 p.f. operating under a head of 275 feet; a switchyard; a 34.5 kv transmission line about 6.3 miles long extending from the switchyard to Ketchikan; and appurtenant mechanical and electrical facilities, the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings

Sheet 1 (FPC No. 2328–4) Powerhouse — Plan and Longitudinal Section

Sheet 2 (FPC No. 2328–5) One Line Diagram and Powerhouse Section

Sheet 3 (FPC No. 2328–6) Dam — Plan, Elevation, and Discharge Curve

Sheet 4 (FPC No. 2328–7) Intakes, Tunnel and Penstock-Plan and Profile, insofar as it shows the general layout

Exhibit M: Two typewritten pages entitled "General Description and General Specifications of Equipment".

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project

area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–2, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States" (17 FPC 62), which terms and conditions, designated as Articles 1 through 24, are attached hereto and made a part hereof, except for Articles 12, 13, 17, 20, 21 and 22 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 25. The Licensee shall pay to the United States the following annual charges:

(a) For the purpose of reimbursing the United States for the administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's Regulations. The authorized installed capacity for such purpose is 5,400 horsepower.

(b) The Commission reserves the right to determine at a later date annual charges for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, including transmission line right-of-way.

Article 26. The Licensee shall file within one year after completion of construction of the project, Exhibits F and K in accordance with the rules and regulations of the Commission.

Article 27. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Alaska Department of Fish and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 28. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 29. The Licensee shall commence the construction of the Lake Whitman Project No. 2328 within one year of the effective date of this license, shall thereafter and in good faith and with due diligence prosecute such construction, shall complete construction of such project works within two years

from the effective date of this license, and shall prosecute such construction so as to include the following:

1. Construction of the new facilities of the Lake Whitman project as described herein.

2. Repairs and modifications to the existing concrete arch dam in order to provide a safe and adequate structure for the life of the project.

3. Removal of the debris in the reservoir and general area of Lake Whitman.

4. Removal of the abandoned pipeline, powerhouse, and other related facilities.

5. Restoration of the public lands occupied by the abandoned facilities to a condition deemed satisfactory to the agency having supervision over the lands.

Article 30. The Licensee shall install additional capacity or make other economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 31. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 32. Timber on lands of the United States, cut, used, or destroyed in the construction and maintenance of the project works, or in the clearing of said lands, shall be paid for and the resulting slash and debris disposed of in accordance with the requirement of the agency of the United States having jurisdiction over said lands. Payment for merchantable timber will be at current stumpage rates, and payment for young growth timber below merchantable size will be at current damage appraisal value. However, the agency of the United States having jurisdiction may sell or dispose of the merchantable timber to others than the Licensee, with the provision that timber so sold or disposed of will be cut and removed from the area prior to or without undue interference with clearing operations of the Licensee and in coordination with his project construction schedules. Such sale or disposal to others will not relieve the Licensee of the responsibility for the clearing and disposing of all slash and debris from project lands.

Article 33. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon the request of officers of the agency concerned to prevent, make advance preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensee shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 34. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 35. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 36. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or interested State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 37. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross will set forth his individual views in an order granting another license application shortly to be issued. While not stated at this time in order to allow the immediate issuance of this license, the views to be expressed are nevertheless applicable to this license. See 30 FPC 1338 at 1341.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

A. J. INDUSTRIES, INC., PROJECT NO. 2307

ORDER ISSUING LICENSE (MAJOR)

(Issued October 24, 1963)

Application was filed on February 19, 1962, and supplemented on May 20, 1963, by A. J. Industries, Inc. (Applicant) of Los Angeles, California, for a license under the Federal Power Act (Act), for constructed Project No. 2307, located on Salmon and Annex Creeks, First Judicial Division, Alaska, and affecting lands of the United States within the Tongass National Forest and other lands of the United States.

Applicant has paid charges through the year 1963 for use of lands of the United States utilized by the project pursuant to the provisions of a Joint Final Power Permit (02879) issued January 24, 1918 by the Secretary of Agriculture and the Secretary of the Interior, as amended. In this proceeding, Applicant claims no rights with respect to the Permit, which was issued to a prior owner of the project works, and we do not pass on its validity. (See 32 Ops. Att'y Gen. 525.)

Applicant estimates the original cost of the existing facilities of the project, exclusive of the transmission lines, as being $1,699,039.39, and the cost of the two transmission lines as $7,635.73 and $7,034.47, respectively.

Inspection of the Salmon Creek and Annex Creek dam structures by Commission staff and a consultant engaged by Applicant disclosed that the structures are in need of considerable repairs and modifications. Applicant estimates that repairs and modifications of the structures can be accomplished at a cost of about $339,000, of which structural repairs will require about $236,000. We are hereinafter including as a special article a rehabilitation schedule for completion of such repairs and modifications.

Applicants requests a 50-year license to authorize the continued operation of the project comprising the Salmon Creek and Annex Creek developments totalling 15,000 installed horsepower capacity. Although the licensee will be required to make substantial repairs and modifications to the project, it appears that a 25-year license will be ample for this project which, as shown above, has been in operation for many years.

The Secretary of the Army and the Chief of Engineers, in reporting on the Application, advised that special terms and conditions in the interest of navigation are not necessary.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license issued for the project, special conditions in the interest of fish and wildlife resources.

The Department of Agriculture, in reporting on the application advised that the project, if licensed, will not interfere or be inconsistent with the purposes for which the Tongass National Forest was created or acquired, provided any such license include, among other things, certain conditions for the protection of the Tongass National Forest.

The State of Alaska Department of Fish and Game, in reporting on the application, advised that the project has not been injurious to the fish and game resources of the area affected, and, therefore, had no recommendations to make concerning the project.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of West Virginia, is duly qualified to do business in the State of Alaska, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(2) The project affects lands of the United States within the Tongass National Forest and other lands of the United States.

(3) Public notices of the application has been given. No protests have been received. There is no conflicting application before the Commission.

(4) The project does not affect a Government dam.

(5) The issuance of a license for the project will not interfere or be inconsistent with any reservation or with the purposes for which the Tongass National Forest was created or acquired.

(6) The issuance of a license for the project will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(7) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(8) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 12,100 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The amount of annual charges to be paid under the license for the use, occupancy and enjoyment of lands of the United States by the project should be determined at a later date as hereinafter provided.

(10) The transmission facilities described in paragraph (B) below, which were included in the application for license, are parts of the project within the meaning of Section 3 (11) of the Act and should be included in the license for the project.

(11) The exhibits designated and described in paragraph (B) below, which were filed as part of the application for license, conform to the Commission's rules and regulations to the extent that they show location and overall construction of the project, and should to that extent be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to A. J. Industries, Inc. (Licensee) under Section 4 (e) of the Act for a period of 25 years, effective as of September 1, 1963, for the continued operation and maintenance of Project No. 2307, affecting lands of the United States within the Tongass National Forest and other lands of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2307 consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether

such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2307–1) Hydro-Electric Facilities, Primary Transmission System;

Exhibit K: (FPC No. 2307–2) Salmon Creek, Conduit & Power House Sites;

(FPC No. 2307–3) Salmon Creek, Reservoir and Capacity—Area Curves;

(FPC No. 2307–4) Salmon Creek, Reservoir;

(FPC No. 2307–5) Salmon Creek, Transmission Line;

(FPC No. 2307–6) Tramway;

(FPC No. 2307–7) Salmon Creek—Annex Creek Transmission Line, Salmon Creek to Juneau;

(FPC No. 2308–8) Salmon Creek—Annex Creek, Transmission Line Inside Juneau City Limits;

(FPC No. 2307–9) Salmon Creek—Annex Creek, Transmission Line, Juneau to Thane;

(FPC No. 2307–10) Annex Creek Transmission Line, Thane to Annex Creek;

(FPC No. 2307–11) Annex Creek, Conduit & Power House Site;

(FPC No. 2307–12) Annex Creek, Power House Site;

(FPC No. 2307–13) Annex Creek Reservoir; and

(FPC No. 2307–14) Annex Creek Reservoir and Dam.

(b) Project works consisting of:

Salmon Creek No. 2—A concrete arch dam 170 feet high with a 648-foot crest including the spillway, creating a reservoir of 19,000 acre-feet capacity and having a surface area of 210 acres at maximum elevation of 1,177 feet; a steel pipe conduit 4477 feet long to Powerhouse No. 2, containing 2–1400 kw generators and other appurtenances.

Salmon Creek No. 1—A wood flume 9,876 feet long from the tailrace of Powerhouse No. 2 to a timber forebay; two riveted steel penstocks 1,625 feet long from the forebay to Powerhouse No. 1, containing 2–1400 kv generators; a 12,500-foot tramway (between Powerhouses No. 1 and No. 2; a 4,500-foot aerial tramway between Powerhouse No. 2 and the dam; and other appurtenances.

Annex Creek—A wood frame buttress dam 25 feet high and 115 feet long on Upper Annex Creek creating a reservoir of 23,400 acre-feet capacity with surface area of 264 acres; a tunnel 1,418 feet long, the lower 250 feet of which is lined; 7,112 feet of steel pipe to a powerhouse containing 2–1,750 kw generators and other appurtenances; and

Transmission Facilities—The 23 kv transmission lines from the three powerhouses described above are all interconnected at a common switchyard located near the old steam generating plant of A. J. Industries, Inc., and consists of: (1) the 1.89 mile line between Powerhouse No. 2 and Powerhouse No. 1; (2) the 4.17-mile line between Powerhouse No. 1 and "A" millsite and old steam plant regulating station, together with the spare line between Powerhouse No. 1, along the shore line of Gastineau Channel to Juneau thence across millsite "A" and old steam plant regulating station; (3) the 16-mile line from the Annex Creek powerhouse to millsite "A" via Thane together with the spare line; (4) the transmission facilities at "A" millsite; and (5) the step-up transformers at each of the project plants and appurtenant facilities.

The location, nature and character of the above described developments together with all other appurtenant facilities not specifically mentioned herein are more specfically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: (FPC No. 2307–15) Annex Creek Power House, General Arrangement;

(FPC No. 207–16) Annex Creek Water Conduits;

(FPC No. 2307–17) Salmon Creek Power House No. 1, General Arrangement;

(FPC No. 2307–18) Salmon Creek Power House No. 1, General Assembly—Unit No. 2;

(FPC No. 2307–19) Salmon Creek Power House No. 2, General Arrangement;

(FPC No. 2307–20) Salmon Creek Arch Dam;

(FPC No. 2307–21) Salmon Creek Arch Dam, Spillway & Intake Details; and

Exhibit M: Five typewritten sheets entitled, "General Description of Equipment" filed in the Commission February 19, 1962.

(c) All other structures, fixtures, equipment, or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–1, December 15, 1953, entitled "Terms and Conditions of License for Constructed Major Project Affiecting lands of the United States" (14 FPC 562), which terms and conditions designated as Articles 1 through 23, are attached hereto and made a part hereof, except for Articles 11, 12, 16 and 21 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 24. The Licensee shall pay for all timber on lands of the United States cut, used or destroyed in the construction and maintenance of the project works, and in the clearing of such lands, the resulting slash and debris shall be disposed of in accordance with the requirements of the agency of the United States having jurisdiction over such lands. Payments for merchantable timber will be at current stumpage rates, and payment for young growth timber below merchantable size will be at current damage appraisal value. However, the agency of the United States having jurisdiction may sell or dispose of the merchantable timber to others than the licensee, with the provision that timber so sold or disposed of will be cut and removed from the area prior to or without undue interference with clearing operations of the licensee and in coordination with the project construction schedules. Such sale or disposal to others will not relieve the licensee of the responsibility for the clearing and disposing of all slash and debris from project lands.

Article 25. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon request of officers of the agency concerned to prevent, make advance prepara-

tions for suppression, and suppress fires on the lands to be occupied or used under the license. The licensee shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 26. The Licensee shall consult with Forest Service representatives and within one year from the effective date of this license, submit revised Exhibits F, J and K to define the final project boundary and area in accordance with the rules and regulations of the Commission.

Article 27. The Licensee shall consult with Forest Service representatives and shall within one year from the date of issuance of this license submit for Commission approval, a plan for relocating the existing transmission line now located on the north side of Glacier Highway in the vicinity of the Forest Service Juneau Administration Site.

Article 28. The Licensee shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operations, as may be ordered by the Commission upon its own motion or upon recommendations of the Secretary of the Interior or the Alaska Department of Fish and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project and consistent with the provisions of the Act.

Article 29. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall notify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 30. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 31. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 32. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and

utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or interested State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 33. So far as is consistent with proper operation of the project the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 34. The Licensee shall pay to the United States the following annual charges, effective as of January 1, 1964:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent on the authorized installed capacity (12,100 horsepower) plus two and one-half (2-1/2) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission line right-of-way an amount to be hereafter determined by the Commission.

(iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission line right-of-way purposes only, an amount to be hereafter determined by the Commission.

Article 35. Licensee shall repair and modify the Salmon Creek and Annex Creek developments to make the structures safe and adequate and restore the following schedule, the period to begin as of the effective date of the license:

First Year

1. Installation of air vent in blowoff line at outlet of Annex Creek Dam.

2. Initiation of a program for the repair and modification of the generating equipment and appurtenant facilities of the Salmon Creek and Annex Creek developments.

3. Completion of the repairs and modifications to the generating equipment and appurtenant facilities of the project.

Second Year

1. General cleanup around Salmon Creek dam and in and around Salmon Creek Reservoir.
2. Scale downstream face of Salmon Creek dam.
3. Replacement of supports for Salmon Creek penstock No. 1.
4. Initiation of the rehabilitation of the Salmon Creek flume.
5. Continuation of the program for the repair and modification of generating equipment.

Third Year

1. Drill and grout Salmon Creek dam.
2. Repair saddle dams at Upper Annex Creek Lake.
3. Replacement of supports for Salmon Creek penstock No. 1.
4. Continuation of the rehabilitation of the Salmon Creek flume.
5. Clean and paint valves of outlet at Annex Creek dam.
6. Continuation of the program for the repair and modification of generating equipment.

Fourth Year

1. Gunite and waterproof upstream face of Salmon Creek dam.
2. Continuation of the rehabilitation of the Salmon Creek flume.
3. Check the plate thickness of all penstocks.

Fifth Year

1. Repair tailrace concrete at Annex Creek power plant.
2. Completion of the rehabilitation of the Salmon Creek flume.

Article 36. Licensee shall maintain the Salmon Creek reservoir at a level not greater than elevation 1,140 feet until such time as the repairs and modifications to the Salmon Creek Arch dam are completed and approved by the Commission.

Article 37. Licensee shall submit a semi-annual report showing the progress of construction performed pursuant to Article 35.

Article 38. Licensee shall prior to commencement of concrete repairs and grouting of the Salmon Creek dam as outlined in *Article 35* above, submit detailed plans and specifications for these repairs, together with plans for lowering the reservoir level during grouting operations.

Article 39. The Licensee shall make provisions at the Salmon Creek dam for measurement of the deflection of the crown of the dam at its crest; and make monthly readings of the measurements together with simultaneous readings of the water surface elevation and water and air temperatures. The Licensee shall also submit an annual report of such measurements and readwith respect to the condition of the repairs as prescribed in *Article 35.*

Article 40. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project works, or any part ings together with a report on the overall condition of the dam, particularly thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 41. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from con-

struction and operation of the project. The Commission upon request, or upon its own motion, may order the licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license to the extent that they show the location and overall construction of the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross *not participating.*

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP64-28

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 24, 1963)

On July 26, 1963, American Louisiana Pipe Line Company filed in Docket No. CP64-28 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval of the Commission to abandon a gas purchase measuring station constructed in the Creole Field, Cameron Parish, Louisiana, formerly used for the purchase of gas from Hope Natural Gas Company (Hope) and Mississippi River Fuel Corporation (MRF), all as more fully set forth in the application.

Applicant no longer has any use for the subject facilities inasmuch as the single well of Hope and MRF in the Creole Field proved commercially unproductive in December, 1962, and was shut-in, and the gas purchase contract between Applicant and Hope and MRF was cancelled by an agreement dated March 22, 1963.

The subject facilities were constructed pursuant to "budget-type" certificate authorization issued March 12, 1962, in Docket No. CP62-141 at a cost of $7,730.

Hope and MRF have received permission and approval to abandon the sale of gas on October 11, 1963, in Docket Nos. CP63-336 and CP63-298, respectively, in the consolidated proceeding in Docket No. G-2668, *et al.*

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 15, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore

found by the Commission in its order of October 1, 1954, in Docket No. G-2306, *et al.* (13 FPC 380).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, American Louisiana Pipe Line Company, of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

OTTER TAIL POWER COMPANY, DOCKET NO. E-7126

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued October 23, 1963)

By order issued October 4, 1963, in the above-entitled matter, the Commission authorized Otter Tail Power Company (Applicant) to issue and sell at competitive bidding $7,000,000 principal amount of First Mortgage Bonds, subject to the provisions, among others set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on October 23, 1963, filed an amendment, pursuant to the requirements of the aforementioned order, in which it states, among other things, that it proposes to accept, as representing the lowest annual cost of money to it, the bid of Halsey, Stuart & Co., Inc. to purchase the proposed issuance of

$7,000,000 principal amount of bonds, at the price of 100.65 of principal amount, with an interest rate of 4⅝% per annum.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in Paragraph (B) of the Commission's order issued October 4, 1963, in the above-entitled docket; and under the bid it proposes to accept for the issuance of Bonds, the price to be received by Applicant for the Bonds and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of Paragraph (C), (D) and (E) of the Commission's order issued October 4, 1963 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-161

ORDER GRANTING APPLICATIONS FOR REHEARING

(Issued October 24, 1963)

On August 26, 1963, the Commission issued Opinion No. 401 in the above-entitled proceeding, 30 FPC 560. That Opinion determined that the Commission had jurisdiction over the transportation and sale for resale of natural gas by United Gas Pipeline Company (United) by means of and from its interstate facilities within that part of United's Jackson District located within the Florida Parishes of Louisiana. On September 24 and 25, Applications for Rehearing were filed by various parties to this proceeding.[1] The Applicants contend that various errors of law and fact underlie the Opinion's findings and request rehearing of the issues involved.

In order to consider fully the issues raised, we will grant the Applications for Rehearing for the purpose of further reconsideration on the basis of said applications and such responses as may be filed thereto.

The Commission orders:

The applications for rehearing referred to above are hereby granted for purposes of future consideration.

---

[1] Applications were filed on September 24, by Louisiana Gas Service Co., on September 25, by United, the Louisiana Public Service Commission, and Hammond-Baton Rouge Brick Co., *et al.* On September 24, the State of Louisiana advised by letter that it was adopting the application for rehearing filed by the Louisiana Public Service Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-31

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 24, 1963)

On July 29, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-31 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing transmission facilities, at a total cost not to exceed a maximum of $1,600,000, with no single project to exceed a cost of $400,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in producing areas generally coextensive with said system.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 10, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, pursuant to Section 2.58 (c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and

(f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,600,000, with no single project to exceed a cost of $400,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit pursuant to Section 2.58 (c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,600,000, with no single project to exceed a cost of $400,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-40

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 24, 1963)

On August 14, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-40 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 0.0076 mile of 2-inch pipeline and a meter station with appurtenant facilities near Milepost 55.37 on Applicant's 4-inch Amite lateral in Section 23, Township 5 South, Range 7 East, Tangipahoa Parish, Louisiana, all as more fully set forth in the application.

The proposed facilities will be used for the sale and delivery of natural gas to the Board of Commissioners of Gas Utility District No. 1 of Livingston Parish, Louisiana, for resale and distribution through the customer's proposed distribution system in Tangipahoa Parish.

Natural gas is not presently available to residents in the area.

Applicant estimates the cost of the facilities to be $8,214.00 and that during the first three years of operation Applicant will deliver natural gas to the said Board in the following amounts (Mcf at 14.9 psia):

Year	*Annual*
1	16,648
2	18,182
3	20,340

Pursuant to due notice, a hearing was held on October 15, 1963 respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware Corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The above finding with respect to jurisdiction is subject to our final determination on the petition for rehearing now pending in United Gas Pipe Line Company Docket No. CP62–161.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of

record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 90 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-41

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 24, 1963)

On August 14, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-41 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon and remove the following described facilities: Positive meter and regulating station, formerly serving Leggett Lumber Company, located at Milepost 224.7 on the Refugia-Sterlington 30" main line in the Elisha Stephens Survey, Polk County, Texas.

Applicant states that for some time it has been serving the customer, above named, natural gas for use in the dry kiln located in Polk County, Texas and that on August 1, 1963, the purchase contract for gas service terminated thereby ending the usefulness of the facilities.

Applicant proposed to remove the said facilities and to use them elsewhere on its system when required.

The removal of this metering and regulating station will not affect natural gas service to any customer being served by Applicant.

Pursuant to due notice, a public hearing was held in Washington D.C., on October 15, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) United Gas Pipe Line Company is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863) and the facilities

above described are a part of its interstate pipeline system, subject to the Commission's jurisdiction.

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon, dismantle and remove the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission of the date of removal of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP63-254; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64-2

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 25, 1963)

On March 11, 1963, Alabama-Tennessee Natural Gas Company (Alabama-Tennessee) filed in Docket No. CP63-254 an application, and on September 18, 1963, an amendment thereto, pursuant to Section 7(c) of the Natural Gas Act, for a certificate of public convenience and necessity authorizing Alabama-Tennessee to construct and operate certain natural gas facilities for the transportation and sale of natural gas in interstate commerce.

The facilities to be constructed and operated by Alabama-Tennessee as proposed in its original application consist of approximately 21.4 miles of 12¾ inch main line and approximately 3 miles of 10¾ inch main line to be constructed parallel to its main line facilities in Colbert, Lawrence, and Madison Counties, Alabama.

The facilities to be constructed and operated by Alabama-Tennessee, as proposed in the amendment to its application, consist of 1.65 miles of additional 10¾ inch main line extending from the end of the 3 miles of 10¾ inch line already constructed under temporary authorization granted in said Docket No. CP63-254 to the city gate of Huntsville, Alabama.

Alabama-Tennessee shows that the additional facilities proposed in its original application are required in order to provide additional capacity needed for estimated growth in requirements of the several communities presently served by it. It estimates that 4,650 additional space heating users will be attached by the distribution systems prior to the commencement of the

1963–64 heating season. Its estimated peak day and annual requirements as shown by its original application are as follows:

Year	Peak-day (Mcf)	Annual (Mcf)
1963	87, 354	17, 955, 500
1964	92, 980	18, 973, 900
1965	98, 660	19, 217, 700
1966	102, 785	19, 464, 900

These requirements include 27,350 Mcf per day for the City of Huntsville.

Following the issuance by the Commission of notice of application and date of hearing herein, the City of Huntsville, which purchases its entire natural gas requirements under a Gas Sales Contract dated June 14, 1962, from Alabama-Tennessee, filed a petition for leave to intervene claiming that it needs an estimated 33,450 Mcf per day based on a degree day deficiency of 55 degrees, whereas Alabama-Tennessee has included only 27,350 Mcf per day for it in its application herein. Huntsville states that it has advised Alabama-Tennessee of its willingness to execute a service agreement for a maximum daily quantity of 33,450 Mcf.

Huntsville further states in its petition that the authorization granted in Docket No. CP63–247 to Tennessee Gas Transmission Company, Alabama-Tennessee's sole supplier of natural gas, to increase its natural gas service to Alabama-Tennessee was insufficient to meet the estimated maximum day requirements of Huntsville of 33,450 Mcf. This was due, Huntsville claims, to Alabama-Tennessee's failure to seek the required supply from Tennessee for Huntsville, and in minor part due to the fact that Tennessee's request in Docket No. CP63–247 for gas service to Alabama-Tennessee was based on a 50 degree day deficiency instead of the 55 degree day deficiency Alabama-Tennessee and its customers now employ because of their experience of the winter of 1962–63.

Huntsville also points out that the application [1] of Tennessee in Docket No. CP64–2 makes no provision for the supply by Tennessee of an additional 6100 Mcf per day for Huntsville, although said application makes up the variance in estimates [2] due to temperature adjustment.

In addition, Huntsville states that it needs an assured minimum delivery pressure of 100 pounds, for which Alabama-Tennessee's application fails to provide. Huntsville recites in its petition that it and Alabama-Tennessee have attempted to reach a mutual agreement on the provisions of a new Gas Sales Contract to give effect to Huntsville's request for additional volumes of natural gas over and above those proposed to be provided by Alabama-Tennessee in its original application herein. Although Alabama-Tennessee has been willing to agree to a delivery pressure of 100 pounds, Huntsville states, Alabama-Tennessee has insisted on qualifying that assurance in a manner that fails to provide assurance of deliveries at a minimum pressure of 100 lbs.

After the filing of said petition of the City of Huntsville to intervene, Alabama-Tennessee filed an amendment to its application requesting authority to construct and operate the necessary additional facilities and deliver to Huntsville the total volume of 33,450 Mcf of natural gas per day which it requests, provided Huntsville executes a service agreement in standard form for a period extending to November 1, 1982, which is the termination date of Alabama-Tennessee's service agreement with its supplier and the Commission authorizes such deliveries and sales. In the alternative, Alabama-

[1] Before amendment.
[2] Over that applied for in Docket No. CP63–247.

Tennessee requests the Commission to authorize the delivery and sale of 27,350 Mcf per day to Huntsville as proposed in its original application.

On July 3, 1963, Tennessee Gas Transmission Company (Tennessee) filed in Docket No. CP64–2 an application, pursuant to Section 7 of the Natural Gas Act, for a certificate of public convenience and necessity authorizing Tennessee to sell and deliver an additional 5,720 Mcf of natural gas per day to Alabama-Tennessee, in order to enable Alabama-Tennessee to meet its estimated natural gas requirements, commencing with the 1963–64 winter heating season. Tennessee alleges that Alabama-Tennessee has advised it that it desires to increase its maximum daily contract quantity from 87,860 Mcf to 93,580 Mcf. The required annual average day delivery capacity associated with this increase in maximum daily contract would be 329 Mcf.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 26, 1963, respecting the matters involved in and the issues presented by the applications herein. No petition to intervene or protest to the granting of the application has been received other than the petition of the City of Huntsville, Alabama, for leave to intervene, described above.

After convening the hearing, the presiding examiner recessed the hearing to permit the parties to confer in an effort to settle some of the issues.

Following the recess, Tennessee amended its application to conform to the amendment filed by Alabama-Tennessee to state that Alabama-Tennessee has advised Tennessee that it desires to increase its maximum daily contract quantity from 87,860 Mcf to 99,680 Mcf. Tennessee's amendment included the changing of its Exhibit XI to its application to show in column (3), Proposed Additional Maximum Contract Quantity, the figure 11,820[3] instead of 5,720. Similarly in column (4) of said exhibit, Proposed Long-Term Maximum Contract Quantity, the figure, 93,580 was changed to 99,680.

Tennessee presented testimony showing that Tennessee will have available sufficient unallocated annual average day capacity in its pipeline system to provide these increased volumes of gas requested by Alabama-Tennessee.

Tennessee shows that in Docket No. CP63–247, Tennessee was authorized to increase its annual average day delivery capacity to 2,840,000 Mcf at 14.73 psia. This volume included 11,536 Mcf per day of unallocated capacity. Subsequent to this authorization, the Commission authorized additional service in Docket No. CP63–328, requiring 4,963 Mcf per day of annual average day capacity and in Docket No. CP62–196, requiring 1,339 Mcf per day of annual average day capacity, thereby reducing Tennessee's unallocated capacity by 6,302 Mcf per day from 11,536 Mcf per day to 5,234 Mcf per day. This volume of unallocated capacity is more than sufficient to provide the 329 Mcf per day additional annual average day capacity required to provide the increased requirements requested by Alabama-Tennessee.

Tennessee further shows that it is willing to provide this increased service and that it will not impair in any way Tennessee's ability to render adequate service to its existing customers.

During the recess granted by the presiding examiner, Alabama-Tennessee and the City of Huntsville arrived at an agreement and settlement of the issues in this proceeding. It was agreed between them that the following changes be made in the language of the Geneva Service Gas Sales Contract, Exhibit XI, attached to Alabama-Tennessee's amendment to its application. Article I, paragraph 3, will be amended to read as follows:

[3] Pressure base, 14.73 psia.

3. (a) Whenever it shall become apparent to Seller that, notwithstanding the exercise of due diligence it will be unable to provide for Buyer's increased requirements for each of the next two heating seasons, Seller immediately shall notify Buyer to that effect. In such event, Buyer shall have the right to purchase additional natural gas from any other source, or to install and use storage, propane-air equipment or other manufacturing devices to provide additional gas in sufficient quantities to meet the estimated additional maximum demand, provided that the Buyer shall have the right at any time to use propane-air or manufactured gas of any kind (except natural gas) to supply volumes of gas on any day in excess of the maximum volumes of gas specified in Paragraph 2 of this Article I without giving the notice provided for by Paragraph 4 of this Article I.

3. (b) Notwithstanding the limitation imposed by Seller on Buyer in Paragraph 3(a) of this Article I with respect to operation of propane-air equipment, Buyer may use its propane-air facilities, on any day during which this gas sales contract may be in effect, to provide all volumes required by its distribution system on an hourly basis in excess of 4.5 percent of the contract maximum demand obligation specified in Paragraph 2 of this Article I; provided, however, it is understood and agreed that as a result of the operation of said propane-air facilities Buyer will not reduce its total purchases from Seller in any one day below 95 percent of the said contract maximum demand obligation.

Article IV will be amended by inserting an Arabic No. 1, at the beginning of Article IV, which now consists of one paragraph, the language of which will remain the same. In addition, it was agreed that a paragraph to be numbered "2" be added, which will read as follows:

2. As long as Seller's supplier maintains a delivery pressure of at least 600 pounds per square inch gauge at supplier's Delta-Portland line delivery point to Seller and the volume of gas delivered to Buyer during the most recent twenty-four (24) hour period does not exceed Seller's maximum daily obligation to Buyer, Seller will maintain delivery pressure to Buyer of not less than 100 pounds per square inch gauge.

Mr. Morton D. Prouty, Jr., Vice President and Secretary of Alabama-Tennessee, testified that in his official capacity he was authorized to state the position of the Company with respect to the use of the above language in its gas sale contracts generally. He said Alabama-Tennessee would be able to make these provisions available to any of its other customers who are buying gas from it under general service gas sales contracts, provided those customers desire and request such provisions be made available to them.

Mr. Karl A. Woltersdorf, general manager of utilities, testified upon behalf of the City of Huntsville, which owns and operates electric, gas, and water utilities systems. Mr. Woltersdorf explained that Huntsville's requested increase in gas supply from 19,500 Mcf to 33,450 Mcf maximum daily delivery, plus an assurance that delivery of that supply would be at a minimum pressure of 100 pounds per square inch gauge, was necessary for two reasons. One reason was the modification of design temperature on the Alabama-Tennessee system from 50 degree day deficiency to 55 degree day deficiency; the other reason was because of the extremely rapid growth of Huntsville's operations, due chiefly to the continuing expansion of operations at the Redstone Arsenal, which is adjacent to the city limits of Huntsville.

The estimated requirements of 33,450 Mcf are based on a design temperature of 55 degree day deficiency and do not contemplate the use of propane-air plants. Huntsville has at present one propane-air plant capable of pro-

ducing 4500 Mcf per day of 1400 Btu gas, and it is constructing a second plant which will be capable of producing about 3000 Mcf per day of 1400 Btu gas. Huntsville plans to use its propane-air plants if its load exceeds its maximum daily contract quantities or because the temperature drops below the design temperature, or in the event their operation is necessary to maintain pressures on Huntsville's distribution system.

Huntsville's evidence shows that the present assured minimum delivery pressure of 50 psig is inadequate to enable Huntsville to meet the requirements of its customers and 100 psig is needed.

Huntsville's witness stated that with the addition of the proposed amendments to the service agreement which were agreed to by the parties as hereinabove set forth, he would recommend to the city council the execution of a new agreement.

Huntsville also showed that in order to improve its own distribution system it had expended approximately $150,000 in constructing parallel mains and looping mains. In addition, it has a new propane-air plant under construction which will cost approximately $275,000.

At the close of the evidence, counsel for Alabama-Tennessee moved orally at the hearing that the intermediate decision procedure be omitted, and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Alabama-Tennessee Natural Gas Company, a Delaware corporation having its principal place of business in Florence, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 2, 1948, in Docket No. G–585 (7 FPC 251).

(2) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued August 1, 1947 (6 FPC 122).

(3) The facilities hereinbefore described, and as more fully described in the application and amendment thereto in Docket Nos. CP63–254, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Alabama-Tennessee and the transportation and sale of natural gas by Tennessee Gas Transmission Company, as proposed in Docket No. CP64–2, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provision of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Alabama-Tennessee Natural Gas Company and the proposed transportation and sale of natural gas by Tennessee Gas Transmission Company are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of said Regulations.

(7) A request having been made by counsel for Alabama-Tennessee for omission of the intermediate decision procedure, and all requirements of the provisions of Sections 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Alabama-Tennessee Natural Gas Company to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application in Docket No. CP63–254, as amended, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Tennessee Gas Transmission Company to sell and deliver an additional 11,820 Mcf of natural gas per day to Alabama-Tennessee Natural Gas Company, thereby increasing Alabama-Tennessee's maximum daily contract quantity from 87,860 Mcf to 99,680 Mcf, as hereinbefore described, all as more fully described in the application in Docket No. CP64–2, as amended, upon the terms and conditions of this order.

(C) The certificates issued by paragraphs (A) and (B) above and the rights granted thereunder are conditioned upon applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of said Regulations. In addition, said certificates are conditioned upon the filing by Alabama-Tennessee Natural Gas Company within 15 days of the date of this order of four revised tariff sheets to its filed FPC Gas Tariff, Original Volume No. 1. Sheet No. 23, 8. Pressures shall be revised to read as follows:

Seller shall deliver natural gas to Buyer at Seller's line pressure at the Point of Delivery designated in the executed Service Agreement between Seller and Buyer, but the minimum pressure shall be as agreed upon by Buyer and Seller in the executed Service Agreement. The pressure shall not be less than 50 pounds per square inch, as long as the volume of gas delivered during the most recent 24 hour period does not exceed Seller's maximum daily obligation to deliver to Buyer; provided that as long as Seller's supplier maintains a delivery pressure of at least 600 pounds per square inch gauge at supplier's Delta-Portland line delivery-point to Seller, and the volume of gas delivered to Buyer during the most recent twenty-four (24) hour period does not exceed Seller's maximum daily obligation to Buyer, Seller shall maintain delivery pressure to Buyer of not less than 100-pounds per square inch gauge, unless buyer shall agree to delivery at a lower pressure.

Sheet No. 32, General Service Gas Sales Contract, Article IV, Pressure shall be revised to read as follows:

The gas to be delivered hereunder shall be delivered by Seller into the pipe line of Buyer at the pressure in Seller's main line, but not less than _____ pounds per square inch gauge as long as the volume of gas delivered during the most recent twenty-four hour period does not exceed Seller's maximum daily obligation to deliver to Buyer; provided that as long as Seller's supplier maintains a delivery pressure of at least 600 pounds per square inch gauge at supplier's Delta-Portland line delivery point to Seller and the volume of gas delivered to Buyer during the most recent twenty-four (24) hour period does not exceed Seller's maximum daily obligation to Buyer, Seller shall

maintain delivery pressure to Buyer of not less than ——pounds per square inch gauge.

Sheets No. 30 and 31, General Service Gas Sales Contract, Quantity of Gas, Article I, 3. shall be revised to read as follows:

3. (a) Whenever it shall become apparent to Seller that, notwithstanding the exercise of due diligence it will be unable to provide for Buyer's increased requirements for each of the next two heating seasons, Seller immediately shall notify Buyer to that effect. In such event, Buyer shall have the right to purchase additional natural gas from any other source, or to install and use storage, propane-air equipment or other manufacturing devices to provide additional gas in sufficient quantities to meet the estimated additional maximum demand, provided that the Buyer shall have the right at any time to use propane-air or manufactured gas of any kind (except natural gas) to supply volumes of gas on any day in excess of the maximum volumes of gas specified in Paragraph 2. of this Article I without giving the notice provided for by Paragraph 4 of this Article I.

3. (b) Notwithstanding the limitation imposed by Seller on Buyer in Paragraph 3(a) of this Article I with respect to operation of propane-air equipment, Buyer may use its propane-air facilities, on any day during which this gas sales contract may be in effect, to provide all volumes required by its distribution system on an hourly basis in excess of 4.5 percent of the contract maximum demand obligation specified in paragraph 2 of this Article I; provided, however, it is understood and agreed that as a result of the operation of said propane-air facilities Buyer will not reduce its total purchases from Seller in any one day below 95 percent of the said contract maximum demand obligation.

Said certificates are further conditioned upon the filing by Alabama-Tennessee Natural Gas Company within 30 days of the date of this order of a superseding service agreement with the City of Huntsville, Alabama, in accordance with said revised FPC Gas Tariff and acceptable to the Commission for the sale and delivery to Huntsville of a maximum of 33,450 Mcf of natural gas per day, and also of superseding, service agreements with any of its other customers desiring to avail themselves of the new pressure and storage and propane-air provisions described herein.

(D) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; CABOT CORPORATION, DOCKET NOS. CI60–414 AND CI60–499; MICHEL T. HALBOUTY, DOCKET NO. CI60–700; MAGNA OIL CORPORATION, DOCKET NO. CI61–44; FALCON SEABOARD DRILLING COMPANY, (OPERATOR), ET AL., DOCKET NO. CI61–433; STATE EXPLORATION COMPANY, DOCKET NO. CI62–326; HUMBLE GAS TRANSMISSION COMPANY, DOCKET NOS. CP61–290 AND CP62–27

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT AGREEMENT AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 25, 1963)

Motions for severance, for approval of settlement proposals and issuance of certificates of public convenience and necessity in their respective dockets were

filed in the above-captioned proceedings on August 5, 1963, by Cabot Corporation (Cabot); August 19, 1963, by Falson Seaboard Drilling Company (Operator), *et al.*, (Falcon Seaboard); August 29, 1963, by Magna Oil Corporation (Magna); September 9, 1963, by Michel T. Halbouty (Halbouty), State Exploration Company (State) and Humble Gas Transmission Company (Humble).

The settlement proposals are similar to those previously approved by the Commission [1] and provide for the following: [2]

(1) The issuance of certificates at the reduced rate of 20.625¢ per Mcf [3] for the sales [4] under Cabot's Rate Schedule No. 55, Halbouty's Rate Schedule No. 8, Magna's Rate Schedule No. 8, Falcon Seaboard's Rate Schedule No. 8, State's Rate Schedule No. 1, and Humble's Rate Schedule No. F–11. The proposed effective date of the rate reductions is April 1, 1963, in all cases except Cabot's and Falcon Seaboard's. The latter two applicants propose August 1, 1963, as the effective date.

(2) The issuance of certificates for the sales under Humble's Rate Schedule No. F–10 at the initial rate of 19.5¢ per Mcf and under Cabot's Rate Schedule No. 51 at the initial rate of 20.0¢ per Mcf.

(3) Continuation of the collection of the increased rate now effective subject to refund in Docket No. RI61–208.[5]

(4) Withdrawal of the rate increase filing presently suspended in Docket No. RI61–509.[6]

(5) A five-year moratorium on rate increase filings (except as provided in paragraph (8) below) from April 1, 1963 through March 31, 1968, inclusive, in the proposals of Halbouty, Magna, State and Humble; and from August 1, 1963 through July 31, 1968, inclusive, in the proposals of Cabot and Falcon Seaboard.

(6) Extention of make-up periods for take-or-pay gas to 4 years in all contracts with lesser make-up periods.

(7) Refunds of all amounts above the amounts that would have been paid under the settlement proposals collected since the effective dates of the rate reduction.

(8) The applicants may make rate increase filings (1) prior to the end of the moratorium periods to the extent that the maximum suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount increased State or Federal taxes or payments in lieu thereof, provided that such increase does not exceed the reimbursement to which the applicant is entitled by contract.

None of the temporary certificates under which the sales are presently being made contain refund conditions and applicants do not propose to make refunds except as noted above.

As noted above, the proposed effective date of the rate reductions and the beginning of the moratorium periods under Cabot's and Falcon Seaboard's pro-

[1] See *e.g.*, orders issued August 7, 1963, and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979 respectively.

[2] See Appendix for further details.

[3] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[4] The provisions apply to gas "delivered" under the respective rate schedules as do the provisions under other settlements approved by the Commission. In the context of the proposals we have interpreted the term to include gas required to be taken but paid for and not taken. Our approval of these proposals is also conditioned upon such interpretation.

[5] Related to Cabot's Rate Schedule No. 51 (CI60–414).

[6] Related to Falcon Seaboard's Rate Schedule No. 8 (CI61–433).

posals is August 1, 1963. In other settlement orders emanating from the Union consolidated proceeding[7] we have required that the effective date be April 1, 1963, in order to eliminate any possible advantage accruing to applicants who file their proposals later than others. In accordance with such announced policy, we shall approve these settlements upon condition that the effective dates for the rate reductions in Cabot's and Falcon Seaboard's proposals be April 1, 1963, and that the moratoria extend through March 31, 1968.

In keeping with our present policy we shall require that the applicants pay interest on the amounts to be refunded at 7 percent per annum, such interest to accrue through the last day of the month in which the respective motions and offers of settlement were filed.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposals also provide that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commision to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlements will be so conditioned.

No party has filed an answer to any of these motions, and we find these settlement proposals, as herein modified, in the public interest.

In accordance with the above we shall sever these individual dockets for the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[8] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

With the exception noted below, the pipeline purchasers (shown in the Appendix) which will receive refunds and whose overall purchased gas costs will be affected substantially by these settlements will pass on the refunds and adjust their rates in accordance with the requirements of the Commission's latest rate orders concerning such purchasers.

The flow through provisions of our orders in the recent Southern Natural Gas Company rate case[9] do not refer specifically to Docket No. CI60–449. Therefore, in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Southern to report to the Commission the amount of refund and interest that it receives as a result of this settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Southern to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of the settlement of Docket No. CI60–499 in a special account subject to further orders of the Commission.

---

[7] See orders issued August 23, 1963 and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979 respectively.

[8] The hearings in the Union Texas Petroleum, *et al.* consolidated proceeding concluded July 25, 1963.

[9] *Southern Natural Gas Company*, Docket No. G–20509, *et al.*, Opinion No. 379, issued February 18, 1963, 29 FPC 323, Opinion No. 379–A, issued April 19, 1963, 29 FPC 779.

The Commission finds:

(1) Each of the applicants herein is a "natural-gas company" within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

(7) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Southern be required to submit the reports and to account for the refunds, interest and purchased gas cost reductions as ordered below.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. CI60–414, CI60–499, CI60–700, CI61–44, CI61–433, CI62–326, CP61–290 and CP62–27 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that the applicants comply fully with the terms of the settlement proposals which settlements are expressly approved, as modified by this order and upon the express condition that applicants make refunds of all amounts above the amounts that would have been paid under the settlements proposals as approved, collected since the effective dates of the rate reductions. Interest on all amounts to be refunded shall accrue through the last day of the month in which the respective proposals were fixed, August 31 in the cases of Cabot, Magna and Seaboard, and September 30, 1963 in the cases of Halbouty, State and Humble.

(E) The certificates issued to Cabot and Falcon Seaboard are issued upon the express condition that the effective date of the rate reductions and commencement of the moratorium periods under their respective rate schedules covered thereby shall be April 1, 1963.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity to the settlements and the conditions of this order.

(G) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificate herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* That the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(J) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Southern shall submit a report to the Commission and serve a copy on its jurisdictional customers, and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, and the estimated annual reduction in purchased gas costs due to the rate reductions herein, and the proposed disposition of such refunds and interest and the propsed rate adjustments to reflect the reductions in gas purchase costs. Pending Commission action and further orders respecting such proposed dispositions and adjustments, Southern shall hold such refunds, interest and amounts equal to the reduction in purchased gas costs which accrue as a result of the settlement in Docket No. CI60–499 in a special account (without interest obligation).

APPENDIX

Applicant	Rate schedule No.	Docket No.	Purchaser	Present rate (cents/Mcf)	Settlement rate (cents/Mcf)
Michel T. Halbouty	8	CI60–700	Am. La. Pipe Line Co	21.5	20.625
State Exploration Co	1	CI62–326	Trunkline Gas Co	21.25	20.625
Humble Gas Trans. Co	F–10	CP61–290	United Fuel Gas Co	19.5	19.5
Humble Gas Trans. Co	F–11	CP62–27	Florida Gas Trans Co	21.5	20.625
Magna Oil Corp	8	CI61–44	Texas Gas Trans. Corp	20.75	20.625

Cabot Corp	55	CI60–499	Southern Natural Gas Co	23.25	20.625

[1] Falcon Seaboard proposes to withdraw the rate increase filing now suspended in docket No. RI61–509.
[2] This rate now in effect subject to refund in docket No. RI62–208, and according to Cabot's settlement proposal; this rate will continue in effect subject to refund.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL., TEXACO INC., DOCKET NOS. G-16994, G-17779, G-20251, CI60-518, CI61-60, CI61-955, CI61-962, CI61-969, CI61-1416, CI61-1420, CI61-1438, CI61-1463, CI61-1713, CI62-16, CI62-407, CI63-449, AND CI63-756

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT AGREEMENT AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 25, 1963)

Texaco Inc. (Texaco) and certain interested interveners,[1] submitted on April 26, 1963, a settlement agreement and a motion for severance of the seventeen Texaco dockets listed above from the consolidated certificate proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* The motion also requested the expeditious issuance of permanent certificates of public convenience and necessity according to the applications as modified by the settlement agreement in agreement in twelve of the dockets. The agreement proposed that the sales in Docket Nos. CI61-1416, CI61-1420, CI61-1438, CI63-449, and CI63-756 continue under temporary authorization.

Answers in opposition to this motion were filed on May 6, 1963, by the Pennsylvania Public Utility Commission (Pennsylvania), and the Memphis Gas, Light and Water Division of the City of Memphis, Tennessee (Memphis). The Public Service Commission of New York (PSC) on May 14, 1963, filed a response in opposition to the motion. Because of the opposition by parties and without passing on the merits of the settlement proposal, on May 21, 1963, we issued an order denying the motion.[2]

On May 31, 1963, Memphis filed a withdrawal of objection and on July 31, 1963, Pennsylvania filed an "Amended Answer" to the Texaco, *et al.*, motion withdrawing its objection.

On July 23, 1963, Texaco filed a motion for reconsideration of our order of May 21, 1963, denying the Texaco, *et al.*, motion for severance and a "Notice of Modification of Settlement Agreement." This modification resulted in the elimination of all objections.[3] On August 2, 1963, the interveners listed in footnote 1 *supra* filed a response urging approval.

The settlement agreement as now modified is similar to the settlement approved for Humble Oil & Refining Company[4] and provides the following:[5]

(1) In respect to the Texaco Rate Schedules listed in paragraphs (2), (3) and (4) below, a moratorium on rate increase filings from April 1, 1963, through March 31, 1968; except that such filings may be made (1) prior to

[1] The Brooklyn Union Gas Company, Consolidated Edison Company of New York, Inc., Philadelphia Gas Works Division of the United Gas Improvement Company, Public Service Electric and Gas Company, South Jersey Gas Company, The United Gas Improvement Company, the New England distributors group (consisting of 41 distributors), the East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Company, New York State Natural Gas Corporation, The Peoples Natural Gas Company, and The River Gas Company.

[2] *Texaco Inc., et al.*, Docket No. G-14967, *et al.*, "Order Denying Motion for Severance, for Approval of Settlement Agreement and for Issuance of Permanent Certificates and Request for Prompt Determination."

[3] PSC did not formally withdraw its objections but the modification eliminated the bases for them.

[4] See order issued August 7, 1963, in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 30 FPC 456.

[5] See Appendix attached hereto for further details.

April 1, 1968, to the extent that the maximum statutory suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State or Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which Texaco is entitled by contract.

(2) Permanent certification at settlement rates of 20.625¢ per Mcf[6] inclusive of applicable tax reimbursement, for gas delivered[7] pursuant to Texaco's Rate Schedules Nos. 209 (G–20251), 217 (CI60–518), 221 (CI61–60), 223 (CI61–962), 236 (CI61–1420), 237 (CI61–1463), 238 (CI61–1438), 239 (CI61–1416), 240 (CI61–1713), 243 (CI62–16), 250 (CI62–407), 295 (CI61–969), 306 (CI63–449 and 308 (CI63–756).[8]

(3) Permanent certification at the contractual initial rate of 19.05¢ per Mcf inclusive of tax reimbursement for gas delivered pursuant to Texaco's Rate Schedule No. 278 (G–17779).

(4) Permanent certification at contractual initial rates of 20.25¢ per Mcf, inclusive of tax reimbursement, for gas delivered pursuant to Texaco's Rate Schedules Nos. (G–16994) and 231 (CI61–955).

(5) Prospective upward or downward adjustment of settlement rates according to any applicable area rate or rates determined in Area Rate Proceeding, Docket No. AR61–2.

(6) Collection of the increased rates now in effect subject to refund in Docket Nos. RI62–309,[9] and RI61–419,[10] to be continued, subject to further orders of the Commission in those suspension dockets.

(7) Extension of the make-up period for gas paid for but not taken to 4 years in any case where the contract provides a lesser make-up period.

(8) Full refunds with interest at 7% per annum accruing through March 31, 1963, to be paid on all amounts collected by Texaco in excess of the proposed settlement rate of 20.625¢ per Mcf for gas purchased under Texaco's Rate Schedules Nos. 233 (CI62–962), 237 (CI61–1463) and 240 (CI61–1713). In each instance the sales are being made under temporary authorizations subject to refund of amounts above the rate required by public convenience and necessity.

(9) Full refunds of all amounts above the settlement rates collected by Texaco since April 1, 1963, the effective date of the rate reductions.

In keeping with our present policy we shall require that Texaco pay interest on all amounts to be refunded, including those amounts collected for gas delivered since April 1, 1963, above the settlement rates. Such interest shall accrue through July 31, 1963, the last day of the month in which the revised settlement agreement was filed.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments

---

[6] All volumes expressed at 15.025 psia.

[7] The term "delivered" is used in the proposals as in other proposals approved by us. In the context of the proposals we interpreted the term to include gas required to be taken during the moratorium periods but paid for and not taken. Our approval of these settlements is also conditioned upon such interpretation.

[8] As amended on July 15, 1963 (to add acreage).

[9] Related to Supplement No. 4 to Texaco's F.P.C. Gas Rate Schedule No. 189.

[10] Related to Supplement No. 1 to Texaco's F.P.C. Gas Rate Schedule No. 231.

in price growing out of the Areat Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

We find the settlement proposal as modified to be in the public interest. Accordingly, we shall sever the above-captioned Texaco dockets from the consolidated proceedings in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decisions in regard to these dockets[11] and conditionally issue certificates of public convenience and necessity.

The Commission finds:

(1) Texaco Inc. is a "natural-gas company" within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Texaco is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party opposes the waiver of the intermediate decision in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

(B) The matters in the Texaco dockets listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Texaco Inc. for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefore, as more fully described in Texaco's applications and settlement agreement as modified herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Texaco comply fully with the terms of the settlement agreement as modified which settlement is expressly approved under the conditions of this order.

[11] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Texaco shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of the principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity to the settlement as approved.

(F) Upon full compliance of Texaco with all the terms of this order and of the settlement proposal as modified, Texaco shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as Texaco continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Texaco, particularly any proceeding under Section 5 of the Natural Gas Act, and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(J) Interest on amounts to be refunded to the pipeline purchasers shall accrue through the last day of the month in which the final settlement agreement was filed, July 31, 1963.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-2, ET AL.

ORDER UPON APPEALS, AFFIRMING PRESIDING EXAMINER'S RULING IN PART, TERMINATING STAY, FIXING DATE FOR FURNISHING DATA, GRANTING IN PART MOTION REQUESTING WITHDRAWAL OF DOCUMENTS, AND OTHER RELIEF

(Issued October 28, 1963)

On October 11, 1963, Cities Service Oil Company, Continental Oil Company, Gulf Oil Corporation, Humble Oil & Refining Company, Marathon Oil Company, Pan American Petroleum Corporation, Phillips Petroleum Company, Skelly Oil Company, Socony-Mobil Oil Company, Inc., Sunray DX Oil Company, Texaco Inc., Texaco-Seaboard, Inc., Union Oil Company of California, and Union Texas Petroleum (Cities Service, *et al.*) tendered for filing herein a pleading entitled "Appeal From Rulings of Presiding Examiner Directing Disclosure of Confidential Federal Income Tax Data." Cities Service, *et al.*, allege that the appeal, filed pursuant to Section 1.28 of the Rules of Practice and Procedure, is from rulings by the presiding examiner at the prehearing conference herein on October 2 and 3, 1963. These rulings dealt with the granting of requests made by the Municipal Distributors Group, a group of municipality interveners in the proceedings, for certain Federal Income Tax data. While the presiding examiner ordered the producer respondents involved to furnish the requested data, he denied the requests of Respondents Hunt Oil Company, Sun Oil Company and Superior Oil Company (Hunt, *et al.*) that they be given copies of the data furnished to the Municipal Distributors Group. On October 14, 1963, Hunt, *et al.*, filed a pleading entitled "Joint Appeal From Rulings of Presiding Examiner", in which they support the appeal of Cities Service, *et al.*, but, in addition, request a reversal of the presiding examiner's rulings denying the requests of Hunt, *et al.*, for copies of the data.

Section 1.28(a) of the Commission's Rules of Practice and Procedure provides that rulings of presiding officers may not be appealed from during the course of hearings except in extraordinary circumstances where prompt decision by the Commission is necessary to prevent detriment to the public interest and in such instance the matter shall be referred forthwith by the presiding officer to the Commission for determination. Responding to requests by Cities Service, *et al.*, and Hunt, *et al.*, to do so, the presiding examiner refused to certify this matter to the Commission.

Cities Service, *et al.*, among other things, urge that compliance with the Presiding Examiner's ruling would make confidential tax data available for public examination. They claim that no showing of relevance or materiality of the data has been made. Irreparable injury allegedly would flow from the examiner's rulings resulting from the public disclosure and availability of the data for use under circumstances unrelated to the proceeding and beyond the control of the presiding examiner or the Commission.

On numerous occasions the Commission has held that appeals from interlocutory rulings by a presiding examiner would not be entertained by the Commission. However, in this instance it would appear from the allegations made by Cities Service, *et al.*, that extraordinary circumstances may exist which call for a prompt decision by the Commission. If, as Cities Service, *et al.*, allege, the presiding examiner was in error in his rulings, the damage, if any,

resulting from the public disclosure of the data would not be cured if, some time later, when a final decision is rendered by the Commission, it is found that the presiding examiner acted erroneously. Accordingly, we are ruling on these appeals at this time.

The Commission's experience in numerous rate proceedings involving pipelines and independent producers has shown that income tax information is essential in considering individual company costs in connection with a determination of the justness and reasonableness of rates in existence or proposed. In fact, with respect to pipelines, Section 154.63 of the Regulations issued under the Natural Gas Act calls for such income tax data as a part of any rate filing. Although in area rate proceedings individual company cost of service presentations may not be made, some of the parties or interveners may wish to present a composite cost of service in which a position would necessarily have to be taken on Federal Income Taxes. If in the development of such a position, relevant data in the possession of certain parties are required, such data should be made available for examination and possible use. The Municipal Distributors Group's request apparently seeks such data and it has not been demonstrated that the data requested would be irrelevant or immaterial.

Urged as support of the claim that the material in question is of a confidential nature, Cities Service, *et al.*, contend that the Natural Gas Act and the Internal Revenue Code so provide. Examination of these Acts in the light of the instant factual situation and the nature of the pending proceedings fails to show any provisions thereof which would be breached or would sustain the contention of Cities Service, *et. al.*

It may be noted, as stated by Cities Service, *et al.*, that during the prehearing conference at which the ruling in question was made, it was proposed that a stipulation be entered into by all parties which would have had the effect of eliminating Federal Income Taxes as an issue in the proceeding. The stipulation was agreed to by all parties, including the Municipal Distributors Group and the Commission's staff, with the exception of Hunt, *et al.*, who indicated that they were unable to enter into such a a stipulation at that time. While such a stipulation, entered into by all parties, would be dispositive of this matter, the failure of Hunt, *et al.*, to agree thereto leaves the Commission no alternative but to affirm the presiding examiner's ruling insofar as it directs Cities Service, *et al.*, to supply the requested Federal Income Tax data.

Although we have determined that the data requested by the Municipal Distributors Group are relevant and should be furnished, we have considered the manner in which the data should be handled, preserving confidentiality to the degree possible, consonant with the carrying out of the Commission's functions. To this end, we shall require that the data be furnished to the Commission staff and that a composite of such data shall be prepared by the staff and made available for examination by the parties in the Office of Public Information. Thereafter, the underlying data shall be made available for examination only upon written application to the presiding examiner made by the counsel of record for the party, setting forth the basis for requesting the data, the use proposed to be made of the same, and the names of authorized representatives of the party who would have access to such information. Upon a finding by the presiding examiner that good cau e has been shown, the under-

lying data shall be made available in the offices of the Commission to the counsel of record of the party involved and to its authorized representatives.

The disposition we have made of the appeal of Cities Service, *et al.*, is dispositive of the appeal filed by Hunt, *et al.* Upon a proper showing to the presiding examiner, the underlying data will be made available as above set forth. Accordingly, their appeal is dismissed.

On October 11, 1963, Cities Service, *et al.*, filed a motion requesting, among other things, withdrawal from the Commission's Public Reference Room and from the public files of the Commission of the documents entitled "Schedule Q" to the Appendix B questionnaires filed by Cities Service, *et al.*, pursuant to the Commission's order herein of May 25, 1962. The Schedule Q data, along with the rest of the original Appendix B filings, were heretofore placed in the Office of Public Information in compliance with the Commission's said order. In view of our disposition of the appeal by Cities Service, *et al.*, we shall order withdrawal of the Schedule Q filings from the Office of Public Information but such filings shall be retained in the files of the Commission and shall be available for examination on the same basis as the tax data required to be furnished to the staff by this order.

Concurrently with the filing of the motion respecting the Schedule Q data, the movants also moved for a stay of the effectiveness of certain rulings by the presiding examiner in these proceedings dealing with the data requests of the group of municipality interveners. The movants had tendered for filing an appeal from the presiding examiner's rulings. The stay was requested pending action by the Commission on the appeal and on the motion relating to the Schedule Q data. The Commission on October 18, 1963, ordered stay of the presiding examiner's rulings pending action taken with respect to the filed appeal. The Commission in disposing of the appeal is terminating the stay. With the action taken on the motion relating to the Schedule Q data, the motion for a stay is being denied.

The Commission orders:

(A) The appeal of Cities Service, *et al.*, is accepted for filing and the ruling of the presiding examiner requiring Cities Service, *et al.*, to furnish certain tax data is affirmed. Cities Service, *et al.*, are directed by November 4, 1963, to furnish such data to the Commission staff which shall prepare a composite of such data by November 14, 1963, and make such composite available for examination in the Commission's Office of Public Information.

(B) The underlying data furnished by Cities Service, *et al.*, and utilized by the staff in preparation of the composite shall be available to the parties on the basis hereinabove set forth.

(C) The appeal of Hunt, *et al.*, is accepted for filing and is dismissed.

(D) The motion filed by Cities Service, *et al.*, for withdrawal of documents and for other relief is granted to the extent hereinabove set forth, and otherwise is denied.

(E) The stay of operation and effectiveness of the rulings of the presiding examiner directing disclosure of income tax data issued by the Commission October 18, 1963, is terminated and the motion for a stay filed by Cities Service, *et al.*, on October 11, 1963, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; GRARIDGE CORPORATION (OPERATOR), ET AL., DOCKET NO. G–19246, ET AL.; SINCLAIR OIL & GAS COMPANY, DOCKET NOS. G–17917, CI61–390, CI61–1257 & CI63–463; SINCLAIR OIL & GAS COMPANY (FORMERLY JOSEPH M. RAULT, JR., INC.), DOCKET NO. CI61–670

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT AGREEMENTS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 28, 1963)

On May 1, 1963, Sinclair Oil & Gas Company (Sinclair) and certain interested intervenors[1] filed a settlement agreement and motion for severance of four of the above-captioned Sinclair dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, (hereafter referred to as the Union Texas Proceeding), for severance of Docket No. CI63–463 from the consolidated proceeding, Graridge Corporation (Operator), *et al.*, Docket No. G–19246, *et al.*, (hereafter referred to as the Graridge Proceeding); for approval of the attached settlement agreement and for the expeditious issuance of certificates of public convenience and necessity in each of the Sinclair dockets.

On May 8, 1963, the Pennsylvania Public Utility Commission (Pennsylvania) filed an answer in opposition to the Sinclair, *et al.*, motion. In view of the expressed opposition, we denied the Sinclair, *et al.*, motion by order issued in the above-captioned proceedings on May 23, 1963. On June 18, 1963, Sinclair filed a motion for reconsideration of our order denying the motion for severance. The motion for reconsideration was denied by order issued July 15, 1963. In denying the motion for severance and the motion for reconsideration, the Commission did not pass on the merits of the settlement agreement. On July 31, 1963, Pennsylvania withdrew its opposition to the motion for severance and settlement agreement and subsequently, on August 1, 1963, Sinclair filed a motion for further reconsideration of our order denying motion for severance filed by Sinclair, *et al.*, noting that the only opposition had been withdrawn.

On September 9, 1963, Joseph M. Rault, Jr., Inc. (Rault) filed an offer of settlement in Docket No. CI60–670 proposing that Rault's sale in Docket No. CI61–670 be settled on the same terms and conditions as proposed by Sinclair in Docket No. CI61–670 because, effective August 1, 1963, Rault had sold the property to Sinclair and Rault's F.P.C. Gas Rate Schedule No. 1 has been superseded by Sinclair's F.P.C. Gas Rate Schedule No. 235. Thus, Rault and Sinclair request that Sinclair be substituted as Applicant and that a certificate be issued to Sinclair in accordance with the settlement agreement.

[1] The Brooklyn Union Gas Company, Consolidated Edison Company of New York, Inc., Long Island Lighting Company, Philadelphia Gas Works Division of the United Gas Improvement Company, Public Service Electric and Gas Company, South Jersey Gas Company, The United Gas Improvement Company, the New England distributors group (consisting of 41 distributors), the East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Company, New York State Natural Gas Corporation, The Peoples Natural Gas Company, and the River Gas Company.

In general the terms of the proposed settlements conform to previously approved settlements emanating from the Union Texas Proceeding [2] and provide for a maximum initial service rate of 20.625¢ per Mcf,[3] a five year moratorium on rate increase filings (subject to the usual exceptions), extension of make-up periods to four years and refunds of amounts above the settlement rates collected for gas delivered since the proposed effective date of the rate reductions, April 1, 1963.[4]

The temporary authorization issued to Sinclair in Docket No. CI61–1257 on May 12, 1961 (R.S.–213) contains an express refund condition and Sinclair proposes to make refunds to the purchaser in that docket, Trunkline Gas Company, together with interest of 7% per annum to accrue through March 31, 1963. This is the only temporary authorization issued to Sinclair which requires refunds.[5]

The settlement initial rate in Docket No. CI61–670 (Rault R.S.–1 and Sinclair R.S.–235) is the contractual initial rate of 20.50¢ per Mcf.

Sinclair's Docket No. CI63–463 (R.S.–236) concerns an application to continue the sale previously authorized for Sinclair's predecessor in interest and is consolidated in the Graridge Proceeding. The total initial rate of Sinclair's predecessor, Earl G. Bateman, d/b/a Bateman Drilling Company in Docket No. G–15141 (certificate issued August 7, 1959) was 20.75¢ per Mcf. Sinclair has agreed to a settlement initial rate for this sale of 20.625¢ per Mcf, effective April 1, 1963.

The proposals of Sinclair and Rault are generally in the public interest and we shall approve them subject to the following reservations and conditions.

In the context of the proposals we interpret the term "delivered" as used in Paragraph 1. of the agreement to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

We shall require that interest on the amounts to be refunded accrue through the last day of the month in which the settlement agreement was filed.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

---

[2] See orders issued August 7, 1963, (Humble Oil & Refining Company) and October 9, 1963, (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979 respectively.

[3] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[4] See Appendix for further details.

[5] Our order conditionally approving Sinclair's general rate settlement, in Docket No. G–9291, *et al.*, issued July 1, 1963, required Sinclair to reduce its rates under all of the instant rate schedules to 21.25¢ per Mcf effective as of the date of that order. The July 1 order also required that Sinclair be liable for refunds of amounts collected above the rates determined to be proper in the Union Texas Proceeding for gas delivered since July 1, 1963. Sinclair has not yet complied with these requirements but since Sinclair proposes an effective date of April 1, 1963, in the instant settlement proposal, the above described requirements of the July 1, 1963, order have lost their effectiveness.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

As shown in the appendix the purchasers are Southern Natural Gas Company (Southern), Trunkline Gas Company (Trunkline), United Gas Pipe Line Company (United) and Tennessee Gas Transmission Company (Tennessee).

The flow through provisions of our orders in the recent Southern rate case[6] do not refer specifically to Docket Nos. CI61–390, or CI63–463. Therefore, in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and reductions in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Southern to report to the Commission the amount of refund and interest that it receives as a result of this settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Southern to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of the settlement of Docket Nos. CI61–390 and CI63–463 in a special account subject to further orders of the Commission.

Trunkline, the purchaser under Rate Schedule No. 213 (Docket No. CI61–1257) should be subject to the same holding and reporting requirements for the same reasons. As noted above, the temporary authorization issued in this docket on May 12, 1961, contains an express refund condition.

United, the purchaser under Rate Schedule No. 172 (Docket No. G–17917) has a rate case, in Docket No. RP63–1, presently pending before the Commission. Any adjustments necessary to reflect Sinclair's reduced rate will be effected in that proceeding.

The rate under Rate Schedule No. 235 (Docket No. CI61–670) in which Tennessee is the purchaser will remain 20.50¢ per Mcf.

In accordance with the above we shall sever Docket Nos. G–17917, CI61–390, CI61–1257 and CI61–670 from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, sever Docket No. CI63–463 from the consolidated proceeding, Graridge Corporation (Operator), *et al.*, Docket No. G–19246, *et al.*, omit the intermediate decision in regard to these dockets[7] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Sinclair Oil & Gas Company is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

[6] *Southern Natural Gas Company*, Docket No. G–20509, *et al.*, Opinion No. 379, issued February 18, 1963, 29 FPC 323, Opinion No. 379–A, issued April 19, 1963, 29 FPC 779.

[7] The hearings in the Union Texas Petroleum, proceeding concluded July 25, 1963, and the hearing in the Graridge proceeding concluded May 14, 1963.

(3) Sinclair is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Southern and Trunkline be required to submit the reports and account for the refunds, interest and purchased gas cost reductions as ordered below.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

(B) The matters in Docket Nos. G–17917, CI61–390, CI61–1257 and CI61–670 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, and the matters in Docket No. CI63–463 are hereby severed from the consolidated proceeding Graridge Corporation (Operator), *et al.*, Docket No. G–19246, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Sinclair Oil & Gas Company for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Sinclair's applications and settlement proposal herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Sinclair comply fully with the terms of the settlement proposal as modified, which settlement is expressly approved, under the conditions of this order.

(E) The refunds required by the settlement proposal and this order, together with interest thereon computed at a rate of 7% per annum and accruing through May 31, 1963, shall be paid within 45 days from the date of issuance of this order.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Sinclair shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the basis used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(G) Upon full compliance of Sinclair with all the terms of this order and of the settlement proposal, Sinclair and Rault shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as Sinclair continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(J) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Sinclair or Rault, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Southern and Trunkline shall each submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein each does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to Sinclair's rate reductions, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Southern and Trunkline shall each hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account (without interest obligation).

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-345

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 29, 1963)

On June 14, 1963, as supplemented on June 20, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP3-345 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 24.97 miles of pipeline loop, and the construction and operation of metering and regulating facilities together with several transmission line taps for the transportation and sale of volumes of natural gas to The Gas Service Com-

pany (Gas Service) for resale to four communities in the State of Missouri, all as more fully set forth in the application.

Applicant seeks authority specifically to (1) loop approximately 9.87 miles of its Welda-Ottawa 20-inch pipeline with 30-inch pipeline, located in Franklin County, Kansas, (2) loop approximately 7.10 miles of its Ottawa-Sedalia 12-inch pipeline with 20-inch pipeline, located in Miami County, Kansas, and Cass County, Missouri, (3) loop approximately 8 miles of its Marshall 6-inch pipeline with 10-inch pipeline, located in Lafayette and Saline Counties, Missouri, (4) tap its existing Marshall 6-inch pipeline and construct a meter setting with appurtenant regulator equipment for the sale of natural gas through such facilities to Gas Service for initial distribution and resale in and about the City of Slater, Missouri, (5) tap the above mentioned Marshall 6-inch pipeline and install the necessary metering and regulating equipment for the sale of natural gas to Gas Service for initial distribution and resale in and around the City of Mt. Leonard, Missouri, (6) tap its existing East Kansas City 20-inch pipeline and construct the necessary metering and regulating equipment for the sale of natural gas to Gas Service for initial distribution and resale in and about the City of Lake Lotawana, Missouri, and (7) tap its existing Independence 12-inch pipeline and install metering and regulating equipment for the sale of gas to Gas Service for initial distribution and resale in and about the Town of Raymore, Missouri.

The proposed construction on Applicant's Ottawa-Welda and Ottawa-Sedalia pipelines is required in order to deliver the 1963–1964 peak-day requirements of its existing customers on the pipelines extending north and east of Applicant's Ottawa pipeline junction, serving primarily those customers residing in the greater Kansas City area and also the requirements of the customers in the aforementioned communities. Applicant's experience on the peak-day of January 23, 1963, revealed that the peak-day firm demands for this area exceeded its 1962–1963 peak-day estimates by approximately 38,000 Mcf. The 1962–1963 firm peak-day demands served in this area increased 50,000 Mcf over the 1961–1962 peak-day demands. This increase in demands was greater than the estimated firm peak-day increase for Applicant's entire system, and was the second consecutive year an increase of this magnitude was experienced. As a result, Applicant revised its estimates of demands for the peak-day of 1963–64, 1964–65, and 1965–66. Applicant states that the new Ottawa-Welda and Ottawa-Sedalia pipeline facilities will enable it to deliver the estimated peak-day resale demands of 733,639 Mcf @ 14.73 psia in 1963–64 necessary for the greater Kansas City area.

Gas Service will construct and operate transmission and distribution facilities required to render service to the communities of Slater, Mt. Leonard, Lake Lotawana and Raymore. Gas Service has received appropriate authorization from the Missouri Public Service Commission and has obtained franchises from these communities.

The estimated peak-day and annual requirements during the third year of service for the communities proposed to be served are as follows:

	Mcf at 14.73 psia	
	Peak-day	*Annual*
Slater	1,535	140,000
Mt. Leonard	80	5,400
Lake Lotawana	2,550	196,800
Raymore	200	12,805

Applicant estimates the total cost of its proposed facilities to be $1,544,141, which will be financed from treasury cash.

Temporary certificate authorization for the construction and operation proposed under this application was issued to Applicant on October 8, 1963.

Pursuant to due notice a public hearing was held in Washington, D.C., on October 17, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed facilities and to sell and transport natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale and transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

OPINION NO. 407

MORRIS MIZEL, ET AL., DOCKET NO. RI63-205

MEMORANDUM OPINION AND ORDER ADOPTING EXAMINER'S ORDER

(Issued October 29, 1963)*

Syllabus

1. Commission *rejects* contention that favored-nation clause in contract was triggered by gas "purchased" pursuant to farm-out agreement. P. 1104.
2. Differences between a farm-out agreement and standard gas purchase contract *discussed*. P. 1104.
3. Even if buyer's action could be considered "a purchase" of gas as required by contract, quantities taken were insufficient to initiate escalation. P. 1104.
4. Commission *denies* Producer's request for substitution of corrected billing statement in proceeding under Sections 4 and 16 of the Natural Gas Act. PP. 1104; 1120.

Lambert McAllister, Francis J. Walsh and *Max G. Cohen* for Morris Mizel and Sam Mizel.

Ray W. Richards for Henderson Trusts

Francis J. Gilmore for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

O'CONNOR, *Commissioner:*

The basic issue in this case is whether the favored-nation clause in the contract of Morris and Sam Mizel (Mizel) with the Frank C. and Elizabeth P. Henderson Trusts No. 2 (Trusts) was "triggered" by a "purchase" of gas by Trusts pursuant to a farmout agreement between Trusts and Edwin W. Pauley (Pauley).

The contract between Mizel and Trusts provided for the purchase by Trusts from Mizel of the maximum allowable gas production from certain wells in Hutchison County, Texas, at a price of 11 cents per Mcf, with the additional provision that if Trusts "shall purchase gas from any well located in Hutchison County, Texas, in quantities of 100,000 cubic feet daily, or more, for which it pays more than eleven cents (11¢)" per Mcf, Trusts "shall increase the price provided for herein to equal the price so paid."

The farmout agreement between Trusts and Pauley provided for Pauley to transfer interests in oil and gas leaseholds covering certain tracts in Hutchison County to Trusts. Trusts was required to drill wells on the tracts at its own expense, and operate the wells. If the wells proved productive, Trusts was to be reimbursed for its expense out of the gas or oil produced. Pauley retained an overriding royalty interest until one-half the cost of a well had been recovered; thereafter the gas was divided between the two parties, with Pauley being entitled to payment for its porportionate share of the gas produced. Although nowhere was a price of 15 cents per Mcf set forth in the contract, the amounts to be paid Pauley, both on its royalty and on its later ownership of part of the gas produced, were such that it can be mathematically calculated that the full compensation to Pauley would be a proportionate share of a price of 15 cents per Mcf.

*Initial decision appears on p. 1105. Rehearing denied, 30 FPC 1652.

Mizel now contends that the Pauley-Trusts farmout agreement constituted a "purchase" sufficient to activate the price escalation clause in the contract with Trust. In the absence of any provision in the Mizel-Trusts contract to the contrary, we must assume the word "purchase" is used as it is commonly employed in the industry, *i.e.*, in reference to the standard gas purchase contract. The farmout agreement is decidedly different. First, unlike the ordinary gas purchase contract, it is not primarily a marketing device; it is primarily an exploration and development device utilized when an owner or lessee is either unable or unwilling to develop his property. In these cases, the owner or lessee, retaining an overriding royalty, "farms out" his interest to another, who, at his own risk, attempts to establish production. Secondly, farmout agreements contemplate the assignor and assignee having at any point in time, respective overriding royalty rights and working interests rights in the gas produced. Under the standard gas purchase contract, however, once gas is sold to the vendee no such rights are reserved by a vendor. Thirdly, as control over the aspects of production lies with the operator of the lease, gas purchase contracts and farmout agreements again differ markedly. Under the former, control lies with the vendor; under farmout agreements, however, control lies with the assignee. Fourthly, farmout agreements are often brought into being because a formidable risk factor makes it impracticable for the assignor to drill. This risk is thus "farmed out" to the assignee-operator who thereupon incurs drilling expenses that may result in only negligible production. This possibility of expensive efforts producing no returns is absent in the standard gas purchase contract wherein the purchaser is assured of a specific quantity and quality of gas. Accordingly, it is clear to us that the price escalation clause was not triggered by a "purchase" as required by the contract.[1]

Even if we were to hold otherwise, it is clear that insufficient quantities of gas were taken by Trusts prior to June 7, 1954 to initiate escalation. The contract provides for escalation only if Trusts "purchases gas from any well * * * in quantities of 100,000 cubic feet daily, or more, for which it pays more than eleven cents (11¢) per one thousand cubic feet. * * * "During the twenty-six day period pointed to by Mizel as activating the clause, Pauley had only a 35/256 interest in produced gas. This proportionate share of the gas was in excess of 100,000 cubic feet from any one well on only four days. We conclude that such sporadic excesses are not the type envisioned by the "daily" requirement, and are insufficient to trigger the escalation clause.

The Commission finds:

(1) Henderson Trusts did not purchase gas in quantities of 100,000 cubic feet daily, or more, on or prior to June 7, 1954, under the Pauley-Trusts farmout agreement.

(2) The escalation clause in the Mizel-Trusts contract was not triggered on or prior to June 7, 1954.

(3) The correct rate, effective as of June 7, 1954, for the sale of natural gas by Mizel to Henderson Trust under Morris Mizel, *et al.*, FPC Gas Rate Schedule No. 2, is eleven cents (11¢) per Mcf, as reflected in the original billing statement filed by Mizel with the Commission on December 6, 1954.

The Commission orders:

(A) The presiding examiner's order in the above-entitled proceeding is hereby adopted as the order of the Commission.

(B) Mizel's exceptions to the presiding examiner's order are hereby denied.

[1] *Cf., Pure Oil Company*, 25 FPC 383, aff'd. 290 F. 2d 370 (7th Cir. 1962) and *Shell Oil Company*, 29 FPC 498, Opinion No. 382.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON A HEARING TO DETERMINE THE CORRECT RATE EFFECTIVE JUNE 7, 1954

(Issued May 8, 1963)

ZWERDLING, *Presiding Examiner:* This proceeding arises upon a corrected billing statement filed with the Commission by Morris and Sam Mizel (Mizel), with a request that the Commission issue an order making such substitute billing statement effective to reflect a price of 15 cents per Mcf as the correct price as of June 7, 1954 for gas sold to the Frank C. and Elizabeth P. Henderson Trusts No. 2 (Trusts) in Hutchinson County, Texas under Morris Mizel FPC Gas Rate Schedule No. 2.

Pursuant to Section 154.92(a) of Regulations under the Natural Gas Act, Mizel on December 6, 1954 filed with the Commission its said FPC Gas Rate Schedule No. 2, covering the sale of gas in Hutchinson County, Texas (Railroad Commission District No. 10) by Mizel to Trusts pursuant to a December 31, 1953 contract.[1] The December 6, 1954 filing was accompanied by an October 1954 billing statement reflecting a price of 11 cents per Mcf for all gas sold and purchased under that contract as of June 7, 1954.

On July 21, 1959 Mizel filed with the Commission a revised and corrected billing statement reflecting a price of 15.0016 cents per Mcf as the correct price due and payable as of June 7, 1954 for such gas. In an attached Statement of Reasons supporting such corrected billing statement, Mizel alleged that a favored-nation provision in its contract with Trusts had been activated on May 11, 1954 by virtue of the fact that on that date Trusts had commenced the purchase of gas from Well No. 1, Tract No. 3, and Well No. 1, Tract No. 1, in Hutchinson County, Texas, from Edwin W. Pauley at a rate of 15.0016 cents per Mcf under a contract dated January 28, 1954 between Edwin W. Pauley, Seller, and Trusts as Buyer.[2] Trusts filed a protest to such revised billing statement in which it contended, among other things, that the favored nations clause in the Mizel contract had not been activated prior to June 7, 1954 because Pauley's interest in the production from the wells covered by the Pauley-Trusts agreement was not sufficient to meet the 100,000 cubic feet minimum daily volume requirement contained in the Mizel escalation clause.

By letter dated August 20, 1959 the Commission rejected Mizel's submittal of such revised and corrected billing statement, on the basis that the volume data submitted did not constitute proof of the alleged triggering of the favored-nation escalation clause in the Mizel contract.

No further filing was made with the Commission until three years later, on July 3, 1962, when Mizel submitted a new corrected billing statement for May 1954, reflecting a price of 15 cents per Mcf for the gas sold under its contract with Trusts, in substitution for the originally filed October 1954 billing statement which had reflected a price of 11 cents per Mcf. In this document, entitled "Request for Substitution of Corrected Billing Statement to Reflect the Effective Contract Price as of June 7, 1954", Mizel alleged that the favored-nation provision in its contract with Trusts was activated by virtue of the purchase by Trusts on May 11, 1954 of 469,000 cubic feet of gas at a price of 15 cents per Mcf from Well No. 1, Tract No. 3 under the Pauley-Trusts agreement, *supra*, and by virtue of the further fact that for the period from

[1] A copy of this contract is attached as Exh. C to the Stipulation of Facts, Exh. 1 in this proceeding.

[2] Edwin W. Pauley, Jr., FPC Gas Rate Schedule No. 1, attached as Exh. D to the instant Stipulation of Facts.

May 11 through May 31, 1954 Trusts purchased a daily average quantity of 491,381 cubic feet from the said well. In both its 1959 filing of a revised billing statement and in its 1962 filing Mizel alleged that it was not aware of the alleged triggering until early in 1959.

On July 20, 1962 Trusts again filed a protest to Mizel's most recent corrected billing statement. The Commission thereupon by order issued November 23, 1962 directed that a hearing be held concerning the issues connected with Mizel's July 3, 1962 tender of its corrected billing statement. The Commission noted that Mizel's proposed correction, if approved, would change its legally effective June 7, 1954 rate for the sales under its contract with Trusts from 11 cents per Mcf to 15 cents per Mcf, increasing Trusts' purchased gas costs by approximately $36,822 annually, based upon the volume sold in May 1954.

Pursuant to such order, a prehearing conference was held before this Examiner on December 17 and 18, 1962, followed by a hearing which opened on February 26 and concluded on February 27, 1963. The prehearing conference culminated in a detailed Stipulation of Facts, which was agreed to on the record by all parties and received in evidence as Exh. 1. In addition certain other evidence was offered at the hearing, some of which was received and some excluded, as will be noted in more detail at a later point.

The sole parties to the instant proceeding consist of Mizel, Trusts and the Commission Staff. Final briefs were filed by April 22, 1963 and the matter is now ready for decision.

The single issue to be resolved in this proceeding is whether the favored-nation escalation provision in the Mizel-Trusts contract of December 31, 1953 was activated, or "triggered", on or prior to June 7, 1954, with the result that the legally effective rate as of that date was 15 cents per Mcf, as claimed by Mizel. The resoluition of this question in turn requires a determination as to the proper meaning of the Mizel escalation provision, and the proper construction and effect of the Pauley-Trusts agreement of January 28, 1954.

The favored-nation escalation provision in the Mizel-Trusts contract appears in Article VII, Section 7.01, which provides as follows:

> As the full consideration for the gas and all components thereof delivered by Seller to Buyers hereunder, the price shall be eleven cents (11¢) per one thousand cubic feet, measured as herein provided. If Buyer shall purchase gas from any well located in Hutchinson County, Texas in quantities of 100,000 cubic feet daily, or more, for which it pays more than eleven cents (11¢) per one thousand cubic feet, measured herein provided, then Buyer shall increase the price provided for herein to equal such price so paid.

In order to place this case in its proper context, it is important to note at the outset that the actual price being paid by Trusts under the Mizel contract on June 7, 1954, and since that time, has been 11 cents per Mcf. It is also of interest to note, as already indicated, that it was not until July 1959, some 4-1/2 years after Mizel filed 11 cents per Mcf with the Commission as its legally effective rate, that Mizel for the first time made the contention, in its Corrected Billing Statement filed July 21, 1959, that its legally effective rate under this contract was actually 15 cents per Mcf. It is also pertinent to note, as already indicated, that after the Commission rejected this 1959 filing as not be sufficient to sustain the burden of proof, Mizel waited another three years before filing its final Corrected Billing Statement of July 3, 1962.

It is true that it is well established that the question of an independent producer's legally effective rate as of June 7, 1954 is not necessarily governed by

the actual price which was being paid on that date, but is to be determined on the basis of the price which the purchaser was legally obligated to pay to the seller under the terms of the contract at that time.[3] However, in so holding the Courts certainly did not contemplate that the price being paid and collected by the parties to the contract as of June 7, 1954 would be casually ignored and would give way to a totally different price proposed years later in a self-serving effort by the seller, based upon a fanciful and strained interpretation devised by the seller for a totally different contract, to which he was not even a party. Yet that is precisely the type of situation presented to us in the instant proceeding.

It is concluded that the flavor of this entire proceeding is such as to impose a very heavy burden of proof upon Mizel to establish that *any one* of its many differing and inconsistent theories as the proper construction to be given to the Pauley-Trusts agreement, and to the escalation clause in the Mizel-Trusts agreement, should be adopted here.

Before proceeding to summarize the various shifting positions and theories which have been presented by Mizel at various stages of the instant proceeding, it will be useful to review the factual background which gave rise to these theories. The Mizel position that the escalation clause in the Mizel-Trusts agreement was triggered on or prior to June 7, 1954 rests entirely upon its contention (1) that the Pauley-Trusts agreement constituted a *gas purchase contract* and therefore the delivery of gas into Trusts' gathering lines from these wells constituted purchases of gas by Trusts from Pauley within the meaning of the Mizel escalation clause; (2) that Trusts purchased gas under the Pauley-Trusts agreement at a price of 15 cents per Mcf, in quantities of 100,000 cubic feet daily, or more, prior to June 7, 1954.

The total volume of gas produced and delivered into Trusts' gathering lines from Well No. 1, Tract No. 3 prior to June 7, 1954 was 13,347 Mcf (measured from 7:00 a.m. to 7:00 a.m.), or an average daily volume of 494,300 cubic feet; while the total volume from Well No. 1, Tract No. 1 was 2,271 Mcf, or an average daily volume of 454,200 cubic feet (3:188–9; Exhibit A attached to Stipulation of Facts, Exhibit No. 1).

Par. XIII, Art. I, Sec. 1.01 of the Pauley-Trusts agreement provides that:

> Seller agrees to sell and deliver to Buyer and Buyer agrees to purchase and receive from Seller at the prices and on the terms and conditions herein set forth, *Seller's proportionate part* of the maximum allowable production of said wells . . . . [Emphasis supplied.]

Under the assignment of the oil and gas leases covering Tracts No. 1 and 3, executed by Pauley to Trusts on January 28, 1954 pursuant to the contract, and made a part of the contract by reference,[4] there was reserved to Pauley, as an overriding royalty interest, an undivided 5/32nds of 7/8ths (or 35/256ths) of the total production of oil and gas, casinghead gas and casinghead gasoline produced, saved, and marketed from such leases. The assignment further provided that when Trusts

> * * * shall have been repaid, out of the net working interest herein assigned and conveyed to Assignees, certain cost and expense of developing and equipping wells drilled upon the above described lands, the overriding royalty interest herein reserved by Assignor shall be converted into and shall thereupon become a working interest in and to the above-described oil and gas leases equal to 105/256ths of the total production of oil and

[4] Exh. G attached to Stipulation of Facts, Exh. No. 1.

gas, casinghead gas and casinghead gasoline produced, saved and marketed from the lands described in said leases.

On the face of the Pauley-Trusts agreement and the concurrent assignment referred to above, it appears that until termination of the cost-reimbursement period Pauley's "proportionate part" of production was 35/256ths. Furthermore, it is clear that the cost-reimbursement period had not been terminated on or prior to June 7, 1954. Par. XI of the Pauley-Trusts agreement provided that 4.717 cents per Mcf of gas marketed from each well was to be assigned to the reimbursement of 1/2 of the cost of such well. The record shows that the cost of drilling and completing Well No. 1, Tract No. 3 amounted to $27,897.30, and the cost of drilling and completing Well No. 1, Tract No. 1 amounted to $30,641.42. Pursuant to the contract, Trusts paid these costs in the first instance. Since a total of only 13,347 Mcf. of gas was produced from the well on Tract No. 3 prior to June 7, 1954, and a total of 2,271 Mcf was produced from the well on Tract No. 1 during the same period, it is clear that prior to June 7, 1954 Trusts had been reimbursed to the extent of only $620.57 (4.717 cents x 13,347 Mcf) of the costs applicable Well No. 1, Tract No. 3, and $107.12 (4.717 cents x 2,271 Mcf) of the costs applicable to Well No. 1, Tract No. 1. (1:188-9) Thus, it is beyond dispute that Trusts had not been reimbursed for 1/2 of the costs applicable to either of the above wells on or prior to June 7, 1954. Mizel counsel in fact conceded this, stating:

> Anybody can take the total number of Mcfs of gas produced from the times the wells started producing until June 7th and say that there wasn't enough gas to pay off half the gas well—[3:224.]

Accordingly, if we were to assume *arguendo* that the deliveries of gas from these wells into Trusts' gathering lines did constitute purchase of gas by Trusts from Pauley, and if it were concluded that Pauley's proportionate part of the total production from these wells was only 35/256ths, it would follow that the *average daily volume* of gas "purchased" by Trusts *from Pauley* prior to June 7, 1954 from Well No. 1, Tract No. 3 was only 67,580 cu. ft. (35/256ths x total average daily volume of 494,300 cu. ft.), and 62,098 cu. ft. from Well No. 1, Tract No. 1 (35/256ths x 454,200 cu. ft.) — substantially lower than the 100,000 cu. ft. minimum daily volume requirement of the Mizel escalation clause.

In the context of these facts the shifting theories and positions espoused by Mizel have taken the following course from the inception of this proceeding:

(1) In its original Corrected Billing Statement filed July 31, 1959, Mizel contended that Pauley had a 0.13671875 interest *i.e.*, 35/256ths) "in all gas produced" under the Pauley-Trusts agreement, as follows:

> . . . Edwin W. Pauley has a 0.13671875 interest in all gas produced under Edwin W. Pauley FPC Gas Rate Schedule No. 1 . . . [p. 4 of Statement.]
>
> * * * * * * *
>
> These two assignments by Edwin W. Pauley to Edwin W. Pauley, Jr., reiterate the fact that Edwin W. Pauley retained and reserved to himself an overriding interest equal to 5/32nds of a 7/8ths interest[5] in the lands and leases assigned by Edwin W. Pauley to the Henderson Trust . . . [p. 6 of Statement.]

Throughout this Statement, Mizel made no contention or reference whatsoever to any Pauley interest greater than 35/256ths.

(2) Trusts subsequently filed a protest to the Corrected Billing Statement, contending that if Pauley's fractional interest of 35/256ths were applied to the total volumes of gas produced from these wells prior to June 7, 1954,

[5] *i.e.*, 35/256ths.

Pauley's proportional interest in such production volumes clearly fell far short of the minimum daily volume required to trigger the Mizel escalation clause. The Commission thereupon rejected this Mizel filing on August 20, 1959, on the ground that it did not sustain the burden of showing that the minimum volume requirement of the Mizel escalation clause had been satisfied.

(3) It was only *thereafter*, in its second Corrected Billing Statement filed on July 3, 1962, that Mizel *for the first time* made the contention that Pauley had an interest of 105/256ths from the inception of the Pauley-Trusts agreement. If this theory were adopted, of course, 105/256ths of the 494,300 cu. ft. average daily volume produced from Well No. 1, Tract No. 3, prior to June 7, 1954 would have amounted to 202,700 cu. ft., or substantially in excess of the 100,000 cu. ft. minimum daily volume requirement of the Mizel escalation clause.

(4) In addition, in the Corrected Billing Statement of July 3, 1962 Mizel for the first time advanced the alternative theory that the Pauley-Trusts agreement was a *joint venture*, with Trusts in an individual capacity agreeing to purchase from the joint venture all jointly owned production from these wells—so that Trusts allegedly was "purchaser" of the entire gross production from these wells.

(5) In a still further evolution of its theory in this case, Mizel's initial brief states:

> Thus, after the execution of the Assignment, Pauley retained legal and equitable title to 35/256ths of the production, which was labeled as an overriding royalty, *together with an equitable title to 70/256ths of the production*, associated with the 161/256ths of the production for reimbursement of well costs. [top of p. 13; emphasis supplied.]

However, bewilderingly, at the bottom of the very same page of its initial brief Mizel states:

> In short, Pauley at all times had 105/256ths interest in the production, but during the period of reimbursement for the costs of the wells, Pauley's interest was divided into 35/256ths legal title *and 105/256ths equitable title*, 70/256ths of legal title having been assigned as collateral. [emphasis supplied.]

Similarly, at pages 16 to 17 of its initial brief Mizel states:

> . . . Pauley has always had *an equitable title of 105/256ths* in the production in addition to the 35/256ths which, during the period of reimbursement was an overriding royalty. [emphasis supplied.]

In its second Corrected Billing Statement filed July 3, 1962, Mizel put its position as follows:

> Pauley's interest and that of Henderson has always remained the same under the contract—105/256ths for Pauley and 91/256ths for Henderson Trusts, but however with Pauley during the period of drilling and development receiving 35/256ths in cash from the proceeds of sale of gas and assigning 70/256ths of his working interests to the cost of the wells. When the cost of the wells is fully paid, Pauley's cash receipts from the proceeds of sale of gas automatically revert to 105/256ths . . . No words or argument can destroy that fact.[6]

(6) To add to the confusion, Mizel counsel at the hearing attempted to present still another theory as to the nature and extent of Pauley's proportionate interest, in the proposed testimony of witnesses Rorschach and Lepley. (Exhs. 2 and 3) This testimony was excluded by ruling of the Presiding Examiner, on the ground that it represented an improper attempt to vary the

[6] Similarly, see pp. 15–16 of Mizel's initial brief.

unambiguous terms of the Pauley-Trusts contract by extrinsic parole evidence. However, it is of interest and quite appropriate to note that in witness Rorschach's proposed testimony he stated:

> The cost of each well was to be repaid by crediting Pauley's account with 1/2 of the proceeds derived from the sale of gas from the net working interest, or 1/2 of the 161/256, and in addition thereto, Pauley received an overriding royalty interest of 35/256, which together with the proceeds derived from the gas amounted to *115.5/256* of the total gross production in oil and/or gas. [Exh. 2, p. 4; emphasis supplied.]
>
> * * * * * * *
>
> . . . when Pauley's part of the oil or gas production coming from the well had retired the cost of the well, then Pauley's interest in the returns to him decreased *from 115.5/256 to 105/286.* [Exh. 2, p. 5; emphasis supplied.]

Similarly, witness Lepley's proposed testimony included the following statement:

> During the payout period, it is thus apparent from an accounting basis that Pauley's interest in the gas purchased from each of the wells in question was *115.5/256* (one-half (1/2) of 161/256 plus 35/256). [Exh. 3, p. 9; emphasis supplied.]

This proposed testimony by Mizel witnesses Rorschach and Lepley that Pauley's interest during the cost-reimbursement period amounted to *115.5/256ths* is completely at variance and inconsistent with the various theories advanced in Mizel's two Corrected Billing Statements of 1959 and 1962, and in Mizel's initial brief, *supra.*

(7) In its initial brief (pp. 5–6) Mizel contends that even if it should be concluded that Pauley's proportionate interest was only 35/256ths, with the result that Pauley's proportionate part of the total production from Well No. 1, Tract No. 3, prior to June 7, 1954, exceeded the minimum volume requirement of the Mizel escalation clause on only four days during that entire period, nevertheless this was sufficient to satisfy the said minimum volume requirement.

It is of interest to note that no such contention was made by Mizel in either of its two Corrected Billing Statement filings in July 1959 and July 1962. In the July 3, 1962 Corrected Billing Statement, Mizel summed up its total position (at p. 7) as follows: (1) that the Pauley-Trusts agreement constituted a *joint venture,* with Trusts in an individual capacity agreeing to purchase *all* production jointly owned under the joint venture; (2) that in the alternative, if it were assumed *arguendo* that Trusts merely purchased Pauley's interest of 105/256ths, that fractional interest when applied to the total daily average production exceeded the 100,000 cubic feet minimum daily volume requirement.

At the prehearing conference in the instant proceeding on December 17, 1962, the question was expressly raised as to whether Mizel counsel took the position that Trusts' purchases from Pauley at volumes exceeding the minimum volume requirement on only three or four days out of the entire period would be sufficient to trigger the Mizel escalation clause. At that point, Mizel counsel stated: "Three or four days would trigger." (1:17) At a somewhat later point, when the Presiding Examiner requested an explanation as to why Mizel counsel had not taken any such position in its Corrected Billing Statements, Mizel counsel replied as follows:

> But the contract is so clear with respect to the major amounts that we were not relegated to a point where we were forced to rely on this minimus of three or four days as they appeared up to June 7. [1:29.]

A substantial portion of the effort made by Mizel counsel throughout this entire proceeding has been directed toward raising all manner of alleged doubts, uncertainties and complexities with respect to the nature, purpose and effect of the Pauley-Trusts agreement. The result was to create the impression at times that a truly simple case, invloving a simple limited issue, was enmeshed in complications rivaling those of a major rate proceeding. This approach provided no solution to the heavy burden of proof which rests upon Mizel here to establish that the 11-cent price which it filed with the Commission in December 1954 as its alleged legally effective rate as of June 7, 1954 was in fact erroneous, and that its correct legally effective rate was 15 cents per Mcf.

Although by far the biggest portion of the hearing and of the briefs filed by all parties has been devoted to the problems outlined above, it is concluded that these questions are actually quite irrelevant for the reason that the Pauley-Trusts agreement was in fact *not* a *gas purchase contract* at all; that the deliveries of gas under that contract into Trusts' gathering lines did *not* constitute *purchases of gas* by Trusts from Pauley, within the meaning of the Mizel escalation clause; and that accordingly the Mizel escalation clause was not "triggered" by anything which occurred under the Pauley-Trusts agreement.

Before proceeding to develop this point, it is of interest preliminarily to note that the Mizel briefs have devoted major attention to arguing that the Pauley-Trusts agreement constituted a joint venture, or a "mining partnership". This position was developed by Mizel as a foundation for one of its alternative theories—*i.e.*, that Trusts in an individual capacity agreed to purchase from the joint venture all jointly owned production from these wells, and that accordingly Trusts was "purchaser" of the entire gross production from these wells. If this theory were adopted, there would of course be no problem as to the Trusts "purchases" satsifying the minimum daily volume requirement of the Mizel escalation clause. In order to rebut this theory, Trusts and Staff have devoted equal energy in their briefs to arguing that the Pauley-Trusts agreement did *not* constitute a joint venture.

This would appear to be much ado about nothing, because even if we were to agree *arguendo* that the Pauley-Trusts agreement *did* constitute a joint venture and that Trusts *did* "purchase" gas from Pauley under that agreement, the very provisions of the contract upon which Mizel relies to support its theory of "purchase" (*i.e.*, Par. XIII, Arts I, VI, and X) expressly provide that Trusts shall "purchase" only *Pauley's "proportionate part"* of the gas produced by these wells. This is totally and fatally inconsistent with the Mizel theory that Trusts in an individual capacity agreed to purchase from the joint venture *all jointly owned production* from the wells.[7]

It is concluded here that Pauley's proportionate interest on and prior to June 7, 1954 was 35/256ths, and no more; that this is clear from the express and unambiguous provisions of the Pauley-Trusts agreement and the concurrent assignment; and that the various shifting theories advanced by Mizel to establish a greater interest are fanciful and unsupported by the contract. On the basis of Pauley's 35/256ths interest, the alleged "purchases" of gas by Trusts from Pauley reached the level of 100,000 cubic feet per day

[7] Furthermore, since the opening paragraph of the contract defines Edwin W. Pauley as "Seller", it is difficult to see how Mizel can seriously contend here that Trusts agreed to "purchase" gas "from the joint venture". (Mizel initial brief, p. 16.)

on only four days out of the total 26-day period that Well No. 1, Tract No. 3 was producing prior to June 7, 1954. It is concluded that the term "daily", in the "100,000 cubic feet daily" minimum volume requirement of the Mizel escalation clause, connotes consistency on a day after day basis; that it was utilized to avoid the possibility of triggering by mere sporadic production in execess of 100 Mcf per day; that accordingly in order for triggering to occur under the Mizel contract it was necessary for Trusts to purchase gas for a sustained period of time at levels in excess of 100 Mcf per day; and that this requirement was not satsified by "purchases" which in terms of Pauley's interest met the level of 100 Mcf on only 4 days out of the 26-day period.

However, entirely apart from these difficulties, it is concluded that the fatal defect in Mizel's entire case is that the Pauley-Trusts agreement in fact did *not* constitute a standard gas purchase contract, of such comparability as to trigger the escalation clause in the Mizel-Trusts gas purchase contract; that it instead represented a *sharing arrangement*, under which various considerations and obligations flowed from each of the parties, in return for which they agreed to divide up the proceeds from the operation in a stated manner.

"Sharing arrangements" are discussed in *Oil and Gas Law*, Williams and Meyers (1959), Vol. 2, Sec. 433, pp.490–1, as follows:

> The term "sharing arrangements," as in the case of so many other terms employed in the oil and gas industry, is used in a variety of ways. Included among the relationships which have been described by this term are those arising from a joint venture, a purchase letter, a carried interest arrangement, a net profits interest, a farm-out agreement, and a checker-boarding arrangement. The essential feature of a so-called sharing arrangement is that one party makes a contribution to the acquisition, exploration or development of an oil and gas property for which contribution he is given some share of the gross or net production from the property to which the contribution is made. The contribution may be of acreage, money, goods or services; the share of production transferred to the contributor may be in the form of a share of the working interest, a carried, net profits or per cent interest, an over-riding royalty or an oil payment.

For the purpose of our instant analysis it is not necessary or important to determine whether the Pauley-Trusts agreement represented the particular type of sharing arrangement involving *partnership aspects* of a joint venture or mining partnership. It is sufficient for our purpose here to conclude, as we do, that the general nature of the Pauley-Trusts agreement was that of a sharing arrangement, rather than that of a gas purchase contract. However, an examination of the various key provisions of the contract amply supports the Trusts contention that the agreement constituted "a farmout contract, primarily for exploration and development purposes". (initial brief, p. 12)

"Farm-out agreements" are described as follows in *Oil and Gas Law*, *supra*, Vol. 2, Sec. 432, pp. 487–9:

> A farm-out agreement is a contract to assign oil and gas lease rights in certain acreage upon the completion of drilling obligations and the performance of any other covenants and conditions therein contained.
>
> * * * * * * *
>
> The primary characteristic of a farm-out is the obligation of the assignee to drill one or more wells on the assigned acreage as a prerequisite to

the completion of the transfer to him. The benefit of such covenant to drill made by the contracting assignee may be all the consideration desired by the assignor for one of several reasons. * * * Frequently, however, the assignor will retain, as additional consideration for the transfer, an overriding royalty, an oil payment, and undivided share of the working interest * * * or an option to acquire some interest in the assigned premises.

The basic and controlling facts with respect to the Pauley-Trusts agreement are as follows:

(1) Pauley owned certain oil and gas leases in Hutchinson County, Texas.

(2) Trusts owned a gas gathering system, together with necessary pipe line equipment for the marketing of natural gas in Hutchinson County.

(3) Pauley and Trusts entered into an agreement to exploit this resource, under which their respective contributions and obligations were spelled out in detail.

(4) Pauley assigned the leaseholds to Trusts.

(5) Trusts undertook to drill and develop wells on these leases, and to market the gas produced from such wells, using the facilities of its gas gathering system.

(6) Pauley and Trusts were to share the costs of the wells equally, in the sense that Trusts was to apply the sum of 4.717 cents for each 1,000 cubic feet of gas marketed from such wells to the reimbursement of 1/2 of the cost of such well.

(7) In return for Pauley's respective contribution, he retained a 35/256ths overriding royalty interest until the cost-reimbursement period was completed, with such interest to be converted into a 105/256ths working interest thereafter.

(8) Pursuant to this division, 35/256ths of the contemplated proceeds from the marketing of the gas produced by these wells was to go to Pauley during the cost reimbursement period, and 105/256ths thereafter. In short, the Pauley-Trusts agreement constituted a sharing arrangement under which Pauley provided the leaseholds, Trusts was to undertake the drilling of the wells, plus production and marketing of the gas, and the proceeds therefrom were to be split between Pauley and Trusts on the basis and in the manner outlined above.

The basic relevant provisions of the contract are set forth below:

(1) The purpose and intent of the contract is expressed in the preamble (p. 1) as follows:

> WHEREAS, Seller owns and holds or is negotiating for certain oil and gas mining leases covering lands located in Hutchinson County, Texas; * * *
>
> WHEREAS, Buyer has a gas gathering system, together with the necessary pipe line and equipment for the marketing of natural gas in Hutchinson County, and whereas Seller desires to avail itself of the marketing facilities of Buyer, and the Buyer desires to acquire an interest in the said leases and the merchantable natural gas that may be produced from the properties above referred to in the manner and to the extent hereinafter provided,
>
> NOW, THEREFORE, in consideration of the premises and the sum of One Dollar ($1.00) paid by Seller to the Buyer, receipt of which is here acknowledged, and of the other payments and covenants hereinafter set out, and subject to the terms, conditions, royalties, reservations hereinafter set out, Edwin W. Pauley, the Seller, hereby sells and agrees to

convey and assign unto the Buyer the outstanding oil and gas leases covering Tracts 1, 3 and 5 described in Exhibit 'A' attached hereto and made a part hereof by reference, which assignment shall be upon the form (and subject to the same reservations and conditions contained in) Exhibit 'B' attached hereto and incorporated herein by reference, * * *

(2) As a part of the consideration, Trusts agreed to drill initial wells for the production of oil or gas on Tracts No. 1 and 3, and also on other tracts not here involved. (Par. I and III) Provision was also made for the drilling of additional wells by Trusts at its election. (Par. VI)

(3) Operation of the leaseholds was to be by Trusts, "for the joint account of Seller and Buyer and the costs of operation shall be borne equally between Seller and Buyer as hereinafter provided * * *" (Par. V)

(4) The cost of each well was to be recovered from production from that well, except that the cost of dry holes was to be spread over all producing wells. As to each producing well, Trusts was to apply an agreed amount (161/256ths in the case of oil wells, and 4.717¢ per Mcf in the case of gas wells, less production taxes, occupation taxes, pipeline and gathering taxes) to the reimbursement of 1/2 of the cost of the well plus operating costs, plus the proper portion of any dry hole costs. (Par. XI and VII)

(5) Pursuant to the terms of the agreement Pauley on the same date executed an assignment to Trusts of the oil and gas leases covering Tracts No. 1 and 3.[8] The parties stipulated that the oil and gas leaseholds thus assigned to Trusts "were valuable undeveloped leasehold estates prior to and on January 28, 1954, and have continued to be valuable leasehold estates subsequent to development". (Stipulation of Facts, Exh. 1, p. 5) The assignment contained the following provision:

> *There is expressly excepted from this assignment and reserved unto Assignor, his heirs and assigns, as an overriding royalty interest, an undivided 5/32nds of 7/8ths of the total production of oil and gas, casinghead gas and casinghead gasoline produced, saved and marketed from the lands described in and covered by the above-described oil and gas leases,* or under the terms of any renewals or extensions of said oil and gas leases, which overriding royalty interest shall be in addition to the royalty and overriding royalty interests reserved by the lessors in said oil and gas leases and shall be free and clear of all costs of development, equipment and operation except taxes which may be levied or assessed upon said overriding royalty interest herein reserved, or upon the production allocable thereto.
>
> Contemporaneously with the execution and delivery of this assignment Assignor and Assignees have entered into the Agreement referred to above, of even date herewith, to the provisions of which Agreement reference is made for all purposes. Under the terms of said Agreement, *when Assignees, their successors or assigns, shall have been repaid, out of the net working interest herein assigned and conveyed to Assignees, certain costs and expense of developing and equipping wells drilled upon the above described lands, the overriding royalty interest herein reserved by Assignor shall be converted into and shall thereupon become a working interest in and to the above-described oil and gas leases equal to 105/256ths of the total production of oil and gas, casinghead gas and casinghead gasoline produced, saved and marketed from the lands described in said leases.* [Emphasis supplied.]

[8] Exh. G, attached to Stipulation of Facts, Exh. No. 1

(6) Par. XIII of the Pauley-Trusts agreement, entitled "Marketing of Gas", set forth the obligation of Trusts to market the gas from completed gas wells, and the manner and extent to which Pauley should be compensated from the proceeds of such marketing.

The opening paragraph provided:

> In event any well is completed as a gas well under the terms of this contract then Buyer shall be obligated to lay at its sole expense the necessary gathering and transmission lines for the delivery of the gas from said well or wells into its Sanford Plant gas system and shall gather and deliver said gas from said well or wells and market the same in accordance with the following provisions:

Art. 1 of Par. XIII provided:

> 1.01 Seller agrees to sell and deliver to Buyer and Buyer agrees to purchase and receive from Seller at the prices and on the terms and conditions herein set forth, Seller's proportionate part of the maximum allowable production of said wells as the same may be established from time to time by the Texas Railroad Commission.

Art. VI provided:

> The full consideration to be paid Seller for Seller's proportionate part of the gas and all components thereof delivered from each gas well into the pipe line of Buyer shall be 2.051¢ multiplied by the gross number of MCF's of gas removed from each gas well, during the period in which Buyer is receiving reimbursement for its well costs as provided for in Paragraph VII and Paragraph XI. When Buyer shall have received reimbursement for a particular well then the price to be paid Seller for Seller's proportionate part of the gas marketed thereafter from such well shall be 6.153¢ multiplied by the gross number of MCF's of gas removed from said well for the balance of the term herein provided.

It is important to note here, as will be explained shortly in detail, that at the time of the Pauley-Trusts agreement the parties understood and contemplated that the gas to be marketed from these wells was to be purchased by Colorado Interstate Gas Company *at a price of 15¢ per Mcf.* Accordingly Art. VI, *supra*, set forth Pauley's proportionate share of the proceeds to be derived from marketing of the gas as 2.051¢ per Mcf during the cost-reimbursement period, *being 35/256ths (or Pauley's fractional share) of the purchase price to be paid by Colorado Interstate.* Similarly, Art. VI provided that Pauley's proportionate share of the proceeds *subsequent* to termination of the cost-reimbursement period should be 6.153¢ per Mcf, *being 105/256ths of the purchase price to be paid by Colorado Interstate.*

The marketing of the instant gas to Colorado Interstate at a price of 15¢ per Mcf was brought about by two contracts, executed in early 1953—(1) a contract dated January 29, 1953 between Henderson Trusts and Combined Carbon Company;[9] and (2) a contract dated January 30, 1953 between Combined Carbon Company as Seller and Colorado Interstate as Buyer.[10] The nature, purpose and effect of these transactions is helpfully summarized in a statement filed by Trusts with the Commission on December 31, 1958, as Supplement No. 7 to Trusts' FPC Gas Rate Schedule No. 1. It is rec-

[9] Item C by reference, being Supplement No. 1 to Henderson Trusts FPC Gas Rate Schedule No. 1.

[10] Item F by reference, being United Carbon Company, Inc. (Maryland), FPC Gas Rate Schedule No. 1. United Carbon Company, Inc. is successor to Combined Carbon Company.

ognized that this particular statement is not a part of the record in the instant proceeding. However, the facts set forth therein, which will be outlined below, are evident from the face of the two contracts referred to above, which *are* a part of the instant record.

Trusts had for many years been the owner of a natural gas processing plant located in Hutchinson County, Texas, being the Sanford Gasoline Plant. It purchased gas from producers, extracted the liquids therefrom, and sold the residue gas in natural gas markets. (3:191, 206–7) On January 29, 1953, and for some time prior thereto, a controversy had existed between Trusts and Combined Carbon as to the respective rights of the latter with regard to the residue gas at the outlet of Trusts' gasoline plant. The total volumes of raw gas entering that plant included gas produced from lands in Hutchinson County, Texas as to which Combined Carbon asserted dedicatory rights and claims under former contracts with Trusts.

An opportunity arose in the early part of 1953 for the sale to Colorado Interstate, over a long period of time, of the total quantities of gas available at the outlet of the gasoline plant—such sale to be made at a price of 15¢ per Mcf for the first 5-year period, and 16¢ per Mcf for the second 5-year period. Trusts and Combined Carbon decided to enter into such an agreement for sale of the residue gas to Colorado Interstate, and it was agreed that the differences between them should be adjusted through a division of the sums to be paid by Colorado Interstate for such gas, in the following manner. Out of the total 15¢ price to be paid by Colorado Interstate for gas delivered during the first 5-year period, it was agreed that Trusts should receive 9¢ per Mcf and Combined Carbon 6¢ per Mcf on all deliveries up to 10,950,000 Mcf per year, and that Trusts should receive the full purchase price of 15¢ per Mcf for all additional gas delivered. It was further agreed that out of the total 16¢ price to be paid by Colorado Interstate for gas delivered during the second 5-year period, Trusts should receive 10¢ per Mcf for all gas originating from sources on which Combined claimed dedicatory rights, up to 10,950,000 Mcf per year; but that Trusts should receive the full purchase price of 16¢ per Mcf for all gas which it might dedicate to this contract thereafter.

Although the parties undertook to achieve the results outlined above in the form and mechanics of two separate contracts (*i.e.*, the January 29, 1953 Combined Carbon-Trusts agreement, and the January 30, 1953 Combined Carbon-Colorado Interstate agreement), these two contracts together represented, in fact, a sale by Trusts and Combined Carbon to Colorado Interstate at a price of 15¢ per Mcf for the first 5-year period and 16¢ per Mcf for the second 5-year period, plus a division of the proceeds of such sale between Combined Carbon and Trusts in the manner indicated. By such arrangement for division of the proceeds, Trusts and Combined Carbon undertook to settle their existing differences.

It is clear that when the Pauley-Trusts agreement was executed one year later on January 28, 1954 the parties were operating in the context of a situation where they understood and contemplated that the gas produced from the instant wells would be marketed to Colorado Interstate at a price of 15¢ per Mcf, as a result of the two contracts referred to above; and that such gas *was* in fact subsequently delivered to Colorado Interstate at that price. It is sufficient to note the following in this connection:

(1) The January 29, 1953 contract between Combined Carbon and Trusts provided, Art. II, Sec. 2.02:

> Henderson agrees at all times to make available to Combined for delivery to Interstate under and according to the terms of said Sales Contract[11] all the gas produced from wells located in Hutchinson County, Texas, classified as follows:
>
> (a) Wells on lands or leases owned or controlled by Henderson; * * *

Art. VI provided:

> * * * Henderson may at its option at any time during the term of said Sales Contract, dedicate to the performance thereof any gas leases, gas wells or gas purchase contracts hereafter obtained by it.

(2) The January 30, 1953 contract between Combined Carbon and Colorado Interstate provided, Art II, Sec. 2.01:

> Seller agrees to sell and deliver to Buyer, and Buyer agrees to purchase and receive from Seller * * * a minimum quantity of residue gas during each 6-month period * * * equal to all casinghead gas processed through the Henderson Trust Gasoline Plant. * * *

(3) The Pauley-Trusts agreement itself provided that the gas from these wells should be delivered, via Trusts' gathering lines, into its Sanford Plant gas system, whence it should be marketed after processing. (Par. XIII of contract; also see 3:206–7)

(4) Trusts witness Dickinson testified as follows:

> Q. What disposition was made by Henderson Trusts of the gas produced prior to June 7, 1954 from the two wells described in your original testimony?
>
> A. It was delivered to United Carbon Company, Inc. (Maryland) under contract between the Henderson Trusts and Combined Carbon Company, Inc., (now United Carbon Company, Inc. (Maryland) dated January 29, 1953, * * * and was delivered by United to Colorado Interstate Gas Company under a contract dated January 30, 1953 between Combined Carbon Company, Inc. * * * and Colorado Interstate Gas Company, ratified by the Henderson Trusts * * *. [3:190–1.]
>
> * * * * * * *
>
> THE WITNESS: . . . The gas from the gasoline plant after it has been processed is delivered to the compressor station of Colorado Interstate Gas Company where it is sold under contract between United Carbon Company and Colorado Interstate Gas Company. [3:207.]

It is thus clear that at the time when the Pauley-Trusts agreement was executed the anticipated proceeds of the venture (here found to be a sharing arrangement) were known to the parties, in the sense that it was understood that the gas from these wells was to be marketed to Colorado Interstate at a price of 15¢ per Mcf. Under these circumstances it was not necessary to state Pauley's share of the proceeds in terms of a fractional interest in an unknown amount, but the parties were able instead to identify Pauley's share as 2.051¢ per Mcf during the cost-reimbursement period, derived by applying his 35/256ths fractional interest to the 15¢ purchase price to be paid by Colorado Interstate.[12]

---

[11] The term "Sales Contract" was used here to refer to the concurrent contract between Combined Carbon and Colorado Interstate.

[12] It is recognized that although this gas was to be marketed to Colorado Interstate at a price of 15¢ per Mcf, the Combined Carbon-Trusts contract provided that Trusts was actually to receive only 9¢ per Mcf out of this amount on all deliveries up to 10,950,000 Mcf per year, with Combined Carbon to retain the remaining 6¢ per Mcf.

[Footnote continued on page 1118.]

For the reasons set forth above, it is concluded that the Pauley-Trusts agreement was not a *gas purchase contract* at all; that instead it was a sharing arrangement under which the proceeds were to be split on the basis of 35/256ths going to Pauley during the cost-reimbursement period; that Pauley's share of the 15¢ price at which this gas was to be marketed to Colorado Interstate was accordingly stated in Par. XIII as 2.051¢ per Mcf.

However, even if we were to assume *arguendo* that there was a "purchase" of this gas by Trusts from Pauley, in view of the "purchase" and "sale" terminology used in Par. XIII, there is no basis whatsoever for Mizel's contention that "purchase price" paid by Trusts to Pauley was 15¢ per Mcf.

Mizel concedes, of course, that the Pauley-Trusts agreement nowhere expressly mentions a price of 15¢ per Mcf. However, Mizel's entire case rests upon the theory that the parties nevertheless truly contemplated and intended that the price *would* be 15¢ per Mcf, but that for mysterious reasons of their own they carefully avoided referring to any such figure on the face of the agreement. This conspiratorial theory was suggested by Mizel counsel during the prehearing conference on December 18, 1962, as follows:

> Mr. McAllister: As a matter of fact, through a witness, if it is not stipulated, I propose to offer to prove that they had 15 cents and these various derivatives of 15 cents to hide the fact that they were paying 15 cents for this. I don't think the trustees or anybody who formulated this contract will be able to say under oath that it is not a fact.
>
> * * * * * * *
>
> I wouldn't expect him to agree that it was devised to hide it. That is the way they got at it. That is what Pauley said, we must have 15 cents, and I don't care how you spell it out.
>
> * * * * * * *
>
> Presiding Examiner: You made certain suggestions. I want to make sure I don't misunderstand you. Are you suggesting that trust said something to Pauley of this type, that 'We have a contract to purchase gas from Mizel at 11 cents and that contract has an escalation clause which says if we buy gas in volumes of 100,000 cubic feet daily or more at a price of (higher than) 11 cents, we will then pay you that higher price under the escalation, pay Mizel that higher price,' and the trust said to Pauley, 'I want to buy some gas from you for 15 cents per Mcf and we don't want Mizel to find out about it,' and the trust said to Pauley, 'Let's work out a complicated contract which will look as if I am not buying gas from you at 15 cents, but instead you are assigning leaseholds to me because you want me to be the operator because I have the gathering lines and experience and so on and will make the contract read in terms of your having 35/256 interest until the cost are reimbursed, and then will reconvert to 105/256'?
>
> Mr. McAllister: That is a plain, ordinary fantasy. They had to have 15 cents in mind. Every fact they have there is a derivative of 15 cents. I am not saying why they did it, but they did do it.
>
> Presiding Examiner: You made a couple of statements yesterday——
>
> Mr. McAllister: I may have said they were paying 15 cents for that gas. I never said it was an attempt to defraud anybody. I don't know

[Footnote continued from page 1117.]
However, this represented simply an arrangement between Combined Carbon and Trusts, designed for settlement of their long-standing controversy. Pauley was not involved in any way in that controversy, and had no interest in the settlement formula between Combined Carbon and Trusts. Accordingly, Pauley's share of the proceeds was expressed in terms of a fractional interest of the total 15¢ price at which the gas was to be marketed to Colorado Interstate.

why they did it. I do say that this contract and agreement on its face definitely shows a purpose to pay 15 cents for that but to conceal it in the contract by the way the terms are set up.

Why, I don't know. I don't propose to try to find that out. * * * [2:116–118.]

Similarly, the Mizel reply brief states:

* * * as respects Henderson Trusts' obligation to take the gas from the Pauley-Henderson Trusts wells as therein specified, it is as clear and distinct as any gas purchase contract could be, *except as to price, which is not stated as forthrightly as it might have been.* However, as to price, Henderson Trusts knew at all times what price was being paid for the gas taken from the Pauley-Henderson Trusts wells and that such price was 15¢ per Mcf. [P. 36; emphasis supplied.]

It is Mizel's theory that the hidden and carefully concealed 15¢ price can be ferreted out and deduced from the fact that the 2.051¢ per Mcf price set forth in Par. XIII, Art. VI of the Pauley-Trusts agreement is actually 35/256ths *of 15¢—and not of any other figure.*
